WM. M. THORNTON, Chairman of the Faculty. P. O. University of Virginia, Va.

School Trustees,

Principals,

Teachers,

And others interested, are invited to consider the advantages offered by the *Nation* as an advertising medium. School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especially ordered displayed on other pages.

The *Nation*, in its special field of political and literary criticism, is unlike any other periodical, American or foreign. About 9,000 copies are circulated weekly, but these figures do not accurately represent the number of its readers. It is taken by reading-clubs and literary associations in a large number of places, and may be found on file in every library of importance in the country. There are probably few weekly periodicals whose columns offer so favorable an opportunity for reaching an audience interested in educational matters.

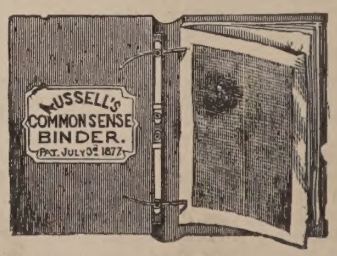
Rate per year for 3 lines, $23.40; 4 lines, $31.20; 5 lines, $39.00, etc. Any term less than one year at same rates —15 cents per line per week.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

THE NATION, 208 Broadway, N. Y.

Reading Case for the Nation,



To receive the current numbers in a convenient (temporary) form. Substantially made, bound in cloth, with *The Nation* stamped on the side in gold. Holds about one volume. Papers easily and neatly adjusted. Sent, post-paid, on receipt of 75 cents.

DO YOU READ YOUR BIBLE with a copy of A. Schultze's (Pres't Moravian Theolog. Sem'y) THE BOOKS OF THE BIBLE ANALYZED? Just published. Send 20c. at once for it. THE BOOK ANTIQUARY, Easton, Pa.

SCHOOL BOOKS IN FOREIGN LAN- guages. Miscellaneous Books in Foreign Languages. Catalogues on application. Foreign Periodicals. CARL SCHOENHOF, Importer, 144 Tremont St., Boston.

To All Who May Be Interested in

THE REFORM OF THE TARIFF:

The best time to arouse the people to an understanding of the fallacies of protection is the present. During a political campaign politicians appeal to party prejudice, and few men's minds are then open to conviction. THE WEEKLY POST, therefore, is engaged in the campaign for revenue reform now.

THE WEEKLY POST holds that any law which seeks to divert one man's earnings to another man's benefit, under whatever guise or plea, temporarily or permanently, is an act of spoliation and an infringement of human liberty. In principle it makes no difference whether such spoliation is at a high or at a low rate, whether it is 47 per cent., or 40 per cent., or 1 per cent. We are opposed to it altogether, for the same reason that we are opposed to forced loans, confiscation, slavery, and robbery. We intend to fight against it wherever we find it.

The experience of men who have been working for this reform contains the best lessons for others. THE WEEKLY POST, therefore, invites reformers in every part of the country to report the progress of popular opinion and to describe the best methods of work. Our wish is to make the paper the mouthpiece of the people who are oppressed by taxation. As soon as the people themselves become aroused they will make short work of the present tariff; and we believe that the best service a paper can render is to put its columns, as far as practicable, at their command.

We are preparing a directory of organizations of every kind that are doing, or preparing to do, work, and that will not wait for the approach of another political campaign; and the facts about every such organization are desired for this purpose.

We are preparing also a directory of the work that is in progress for the reform, which will show, by charts and maps and statistics, the results of the discussion of the subjects in the last campaign; the work that reformers are now doing; the industries of particular communities that in especial ways are affected by the tariff; the subjects that could most profitably be discussed in particular communities; and the growth of tariff-reform sentiment in every Congressional district.

The tables and maps and diagrams by which this information will be set forth, will be a chart for reformers during next year's Congressional campaign, and will do much also, it is hoped, to enable them to anticipate the usual effects of a party campaign by educational work in the meantime.

Every reader of the *Nation* who is disposed to aid in this work is requested to send for a copy of THE WEEKLY POST, shortly to be published, containing a blank form for filling in the desired information. Sent free on request.

A special correspondent and agent is desired in every community, and correspondence with reference to such an engagement is invited. Subscription price, $1.00 per year, with liberal discounts for clubs and agencies.

THE WEEKLY POST, NEW YORK.

Teachers, etc.

A GRADUATE OF SMITH COLLEGE just returned from Europe desires a fall engagement. Specialties, Literature and Rhetoric. Eight years' experience. Address "M.," 45 West St., Northampton, Mass.

AN EXPERIENCED TEACHER, translator, and University graduate in Science, well acquainted with Ancient and Modern Classics, especially the Scandinavian, desires a situation as teacher, private tutor, or translator in a publishing house; seaside preferred. Best of references. Address F. B. A., 29 Mellen St., Cambridge, Mass.

A PH.D. (YALE) IN PHILOSOPHY (mental and moral) and Social Science, wants work as teacher, for a moderate salary, in his specialties or other branches. Best references. Address V. P. O. Box 114, Stacyville, Iowa.

A PROFESSOR OF ENGLISH LITERATURE, M.A., having ten years' successful experience in a State institution, seeks an engagement in college or university for the coming year. Speaks German. E. J. M., care of *Nation*.

CHARLES W. STONE, Tutor for Harvard, 68 Chestnut Street, Boston.

HOLMES HINKLEY, A.M., PRIVATE Tutor, Cambridge, Mass., will receive into his family a few boys preparing for the fall examinations.

School Agencies.

HAVE JUST PUBLISHED:

I.

Education in the United States

ITS HISTORY FROM THE EARLIEST SETTLEMENTS. By RICHARD G. BOONE, A.M., Professor of Pedagogy in Indiana University. Volume XI of "The International Education Series," edited by W. T. HARRIS, LL.D. 12mo, cloth. Price, $1.50.

This work, which is the first noteworthy attempt at a general history of education in the United States, forms a tolerably complete inventory of what exists, as well as an account of its origin and development. It includes: I. The Colonial Period; II. The Revolutionary Period; III. The Period of Reorganization; IV. Current Educational Interests.

II.

Stellar Evolution and its Relation to Geological Time.

By JAMES CROLL, F.R.S., author of 'Climate and Time,' 'Climate and Cosmology.' 12mo, cloth. Price, $1.00.

A treatise upon the probable origin of meteorites, comets, and nebulæ, upon the age of the sun's heat, and upon the pre-nebular condition of the universe.

III.

Appletons' General Guide to the United States and Canada.

With numerous Maps and Illustrations. New edition, revised for the present season.

In three separate forms: one volume complete, 12mo, morocco tuck, flexible, $2.50; New England and Middle States and Canada, one volume, cloth, $1.25; Southern and Western States, one volume, cloth, $1.25.

IV.

AMERICAN COIN.

A NOVEL.

By the Author of 'Aristocracy.'

APPLETONS' TOWN AND COUNTRY LIBRARY. 12mo. Paper cover, 50 cents. (Also in cloth, 75 cents.)

'American Coin' is a satirical picture of impecunious English peers in search of fortunes, and of the daughters of American millionaires in search of titles.

*** *For sale by all booksellers; or by mail on receipt of price.*

1, 3, & 5 Bond Street, New York.

The Mother's Register.

*In any family, whether large or small, but es*pecially where the number of children is large, a record of the constitutional peculiarities of each one, and the whole course of its physical development in sickness and in health, is certain to be instructive and may prove invaluable. Such a record is Prof. J. B. Fonssagrives's 'Mother Register,' consisting of a series of tables scientifically arranged for brief and convenient entries. A separate volume for boys and for girls. Price, post-paid, 75 cents per volume, or $1.25 for two volumes.

"By far the most practical record for the period of childhood that I have seen, . . . a separate part being devoted to the girl, in which are points of great importance as references in her after life. The completeness of its items and its convenient arrangement insure the entry of important events."—*C. E. Warren, M.D., in Babyhood.*

For sale at the office of the *Nation*.

The Nation.

NEW YORK, THURSDAY, JULY 4, 1889.

The Week.

MR. ROOSEVELT has established a fresh claim upon the admiration of civil-service reformers by the summary and public manner in which he has brought to book an offending Republican spoilsman out in Michigan. Observing the open contempt displayed for civil-service reform by such high officials as Assistant Postmaster-General Clarkson, Mr. Geer, the new Collector of Customs at Port Huron, Mich., was no sooner installed than he began to express his own similar feelings. In an interview which has not been repudiated, Mr. Geer was reported as strenuously condemning the Civil-Service Law, and as stating his belief that the proper theory to adopt in the management of his office is that implied in the old adage, "To the victors belong the spoils." Mr. Roosevelt saw this interview, and immediately resolved to give Mr. Geer a lesson. The Secretary of the local Board of Civil-Service Examiners at Port Huron had asked that the Board be allowed to hold a competitive examination for inspectors in the Custom-house, but had not accompanied the request with a statement of the number of names on the eligible list. The Commission accordingly refused the request, and demanded a complete statement of all the names on the eligible list. Mr. Roosevelt, speaking in behalf of the Commission, quotes Mr. Geer's interview, and says:

"Mr. Geer being an appointive officer of the Custom-house, whose duty it is to administer the law which he thus condemns, his expressions render it especially incumbent upon the Commissioners to see that no chance whatever is given for an evasion of the law. The Commission have, of course, no control over the expression of any public officer, but they intend to make it their particular duty to prevent any administration of the law in accordance with the theories enunciated by Mr. Geer. They will tolerate no violation and no evasion of the statute. The examinations are open to all, Democrats and Republicans alike; all can apply who choose; all those applying in proper form will be examined and marked with positive impartiality, and will be certified in their order to the appointing officer."

Of course the Republican spoilsmen are growing very angry with Mr. Roosevelt for the utter recklessness with which he is treading on their corns. Even the Indianapolis *Journal*, which had been getting to be a pretty good civil-service-reform newspaper, was so much offended by the vigor and impartiality of Mr. Roosevelt's asasults upon the abuses committed under the Republican Postmaster in its city that it has backslidden, and begins to talk about the "injudicious acts of the Civil-Service Commission," and says that while it "is composed of able and honest men, they are no more able and honest than Postmaster Wallace"—whose ability was illustrated by his confession that he knew next to nothing about the way things were managed in the office of which he is the nominal head. Another Republican organ in Indiana complains that Mr. Roosevelt is "trying to exalt himself at the expense of the Administration," and accuses him of being a "Mugwump in disguise." Fortunately Mr. Roosevelt does not care a particle what the spoilsmen say about him.

The consular appointments made on Monday, so far as we are able to judge, are respectable, but rather of a personal than of a political caste, illustrating the adage that kissing goes by favor. The assignment of Mr. Eugene Schuyler to Cairo is exceptionally good, and his is perhaps the only name that is likely to be "held up" by the Senate. His work on 'American Diplomacy' is held by some influential Senators to be un-American. This does not mean that he has been untruthful, but that he has exposed too freely the blunders made and the injury done by some of our diplomatic agents in the past. The error which he committed in his allusions to the late Elihu B. Washburne was amply apologized for and corrected in the second edition of his work. It would seem that there was room here for the exercise of magnanimity on the part of Mr. Washburne's relatives and friends.

The reappointment of "Joe" Manley as Postmaster of Augusta, Me., though a Democrat had to be removed before his term had expired in order to give him the place, is the theme of a despatch from Augusta to the New York *Tribune*, so complacent that "Joe" himself may be the author of it. It says that there is general satisfaction over the change, and that "a nephew of Mr. Blaine will be assistant postmaster." There is probably nowhere in the country a more thoroughly solidified Blaine man than "Joe" Manley. His chief occupation for years has been to travel about the country and be interviewed on the question of Blaine's strength with the people. No other man ever knew the exact whereabouts and dimensions of so many "Blaine cyclones" and "prairie fires" as he. He was always prepared to give assurance that "Blaine would sweep the country" at any given time, and we have not the slightest doubt that he is making a prediction of that kind at this moment. His chief exploit since Harrison's election has been the defeat of a ballot-reform bill in the Maine Legislature. There is no "reform nonsense" of any kind about him.

The sympathies of all right-minded people will go out towards that eminent Republican Boy "Bob" McCord, who has been twice within reach of a good office, and has in each case lost it because his "pull" on the President was not so good as that of the President's son. McCord, soon after the President entered upon his duties, picked out the office of Postal-Stamp Agent in this city as the place which suited him. It had a salary of $2,500 and there was little or no work to do. He told Senator Hiscock and "Tom" Platt of his choice, and they promised him he should have it. He was waiting confidently for it to come, when he read in the newspapers one morning the announcement that it had been given to a gentleman in Pittsburgh who had been a college chum of Russell Harrison. Bob was indignant, and so were Messrs. Platt and Hiscock, who assured him that he should have something "equally as good" without fail. They finally agreed with him upon a similar place, that of Postal-Note Agent, and went to Mr. Wanamaker and requested it. Mr. Wanamaker informed them that it had just been given to a friend of Russell Harrison's business partner. Bob's wrath when he heard of this second disappointment was naturally great, but as Russell Harrison has now sailed for Europe, he is in hope of getting something "equally as good" before long.

We do not see upon what principle of law or equity a customs tax is levied a second time on an oil portrait which has been returned to the foreign artist to be retouched. The ruling quoted in justification of the levy says, that "dutiable merchandise imported and afterwards exported, although it may have paid duty on the first importation, is liable to duty on every subsequent importation into the United States." If an oil portrait can be justly termed merchandise when it is not intended to be sold, about which there may be doubt, it seems certain that the word "exportation" does not apply to it if is not sent out of the country for a commercial purpose. If Mr. Vanderbilt had ordered a picture from Bonnat, and, after paying duties on it and keeping it some time, had sent it back to Paris for sale, and had bought it in at the sale, the picture would have acquired a new commercial character. It would have been exported and reimported. But the case recently decided at the Treasury Department, by which Mr. Vanderbilt is fined $3,000 for having his portrait retouched by the artist who painted it, is very different. It looks like a case of inexcusable extortion.

At the sale of M. Secrétan's pictures, Millet's "Angelus" was bought for the gallery of the Louvre for $110,600, after spirited competition by Americans, who had bid $110,000. Upon the face of things it would appear that the French bid was the highest, but in reality the American bid was $33,000 higher, the duty on works of art being 30 per cent. The price which the New York bidders were willing to pay for the picture was $143,000—that is, $110,000 to the owner and $33,000 as a fine levied by our Government upon higher education, cultivation, and taste. Something like $15,000 was paid by Mr. William Schaus as a penalty for bringing Rembrandt's

"Gilder" into the country. There has been a large distribution of fines on our most public-spirited citizens for offences of this nature, and the infliction goes on all the time. It is something to reflect upon that in every competition for the highest works of art in Europe, American bidders are handicapped 30 per cent. by the tariff. Perhaps the French Government were resolved that Millet's "Angelus" should not go out of the country. Perhaps they would have bid more than $143,000, but perhaps not. We have the satisfaction of reflecting that *our* laws gave *them* the advantage of $33,000 in the bidding.

On the 7th day of March last the Pennsylvania Legislature passed a resolution reciting that the Hon. Simon Cameron would, on the following day, have reached the ninetieth year of a life "unexcelled in public interest and importance in the history of the State and nation," and that, in view of this fact, they (the Senate and House of Representatives) would proceed in a body to his residence and pay their respects to him. This plan was carried out with all the outward marks of admiration and regard that could have been paid to any aged philosopher or statesman. The resolution, be it observed, did not affirm that Mr. Cameron's career had been useful to the State or nation, or that it had been respectable, but merely that it had been interesting and important. In what ways it had been of interest and importance was left to the recollection or the imagination of each member voting for or participating in the ceremony. The Philadelphia *Evening Telegraph*, in a full-page review, recalls the principal events in Mr. Cameron's life. It is the picture of a man who had rare qualifications for playing upon the selfishness and greed of his fellow-men, and who so used the baser passions of others as to advance himself to high position, and maintain himself during a long life as a party "boss."

Among the incidents called up by his death is the trifling circumstance that, during his brief career as Secretary of War, he put the sum of $2,000,000 of public money into the hands of one Alexander Cummings, a political henchman of his, and a delegate to the Chicago Convention of the previous year, to spend as he (Cummings) might see fit for the prosecution of the war. The money was nominally in the hands of three respectable citizens of New York; but as it was subject to Cummings's draft without any restrictions, it became evident that the use of the names of Messrs. Dix, Blatchford, and Opdyke was intended to turn suspicion away from Cummings and Cameron. A committee of Congress, of which Mr. Dawes of Massachusetts was chairman, soon got after Cummings, and scared him and his chief so that they redeposited in the Treasury $1,750,000 of the money. There was a long and tedious effort to find out what had been done with the balance. At last it was found that Cummings had made a contract for 75,000 pairs of shoes at $2.20 per pair, being 30 cents above the market price, and that he had freighted a schooner, appropriately called the *Catiline*, with a lot of miscellaneous goods, for Annapolis, which were neither hospital stores nor army rations, embracing among other things twenty-five casks of Scotch ale and ten casks of London porter. This was, of course, a private speculation. When Cummings was questioned about the loading of this schooner, he denied all knowledge of it, and repeated his denial several times under oath. Finally, a letter from him was found addressed to Cameron, stating that he had loaded the *Catiline* with the goods at Cameron's own order.

A week's discussion of their new secret-ballot law by the Connecticut press has resulted in showing that the measure is so crudely and clumsily drawn, and so filled with contradictions, that nobody can tell definitely whether it will amount to anything in practice or not. The chief merit which it was supposed to have was in securing a secret ballot, yet the Hartford *Courant* (Rep.) unites with the New Haven *Register* (Dem.) in the belief that under its provisions secret voting will be optional. The latter authority says: "You can vote secretly if you choose; you are expected to vote straight, and you may let the men in the polling-place see your ballot if you want to." If this be the correct view, the law is worse than useless—it is an aid to dishonesty. A more perfect system for keeping track of bribed voters all the way to the ballot-box could not be devised. Under the law, the State is to supply the official paper upon which all ballots are to be printed. The printing is to be done by the political organizations. There is here no obstacle whatever to printing "split" or "crooked" tickets, but rather a help towards printing them. A voter can get a ballot outside the polling-place or inside, as he pleases. This will permit him to have his ballot marked for him to suit a boss or briber before he enters, to take it in with him, and to bring out the one he receives inside as proof that he has voted the first one and kept his bargain. The law provides an envelope in which he may place his ballot, but is clumsily worded in respect to the use of this envelope, which it does not make compulsory. The provision at best is of doubtful value. The envelopes could easily be imitated, the ballots obtained and marked outside could be placed in them and sealed outside, and the official envelope received inside could be used as proof that the first envelope was deposited. Finally, it was supposed that workers of all kinds were prohibited from coming nearer than 100 feet of the polls. The law merely says that "No person shall peddle or offer any ballot to another person" within that distance. This allows all "workers," except ticket-peddlers, the same liberty as heretofore.

The *Evening Post* published on Thursday an examination of the Behring Sea question by Mr. Robert Rayner of Salem, Mass., which strikes us as the clearest statement yet made by any one. It is the only one we have happened to see which points out the fact that Behring Sea was not mapped at all when the treaties of 1824 and 1825 were made, and was not distinguished and separated from the North Pacific Ocean by any authority in any country until 1873. Obviously, it is easier for us to set up an exclusive claim to Behring Sea than to the North Pacific. There was no apparent design in giving a new name to this segment of the ocean; but this is a case where names are things, or are made to serve the purpose of things, and they have served to create the impression very widely among us that we have more rights in Behring Sea than we should have if there were no such division of waters on the map. Mr. Rayner's communication is well worth study in other particulars also.

A good example to county-fair managers is afforded by the Sussex County (New Jersey) Agricultural Society, which, in the prospectus of its annual fair for next September, offers four special premiums amounting to $100 (with entrance fees added) for "best and fastest walking team, to be exhibited and driven in farm-harness to farm-wagon." This is an unusual provision and one very worthy of imitation. It will result in more direct practical good to a farming region than many "agricultural horse-trots" between fourth-rate animals imported for the occasion, which tend very little, if any, to "improve the breed of horses" of the neighborhood, and do tend somewhat to deteriorate the breed of men. And even if the road-horse be, in fact, slowly improved through the stimulus to breeding afforded by the trotting exhibitions, still, that is of less consequence than improvement of farm-horses. It is pleasant, and sometimes very convenient, to be carried swiftly along the road (though for this you must have good roads, and they are few), but that is only an affair of now and then, while the farm-horse is at work every day and all day, so to speak, and half-a-mile an hour increase in his speed means dollars in bank for his owner.

The Boston *Commercial Bulletin* publishes some statistics regarding the production of sugar from sorghum in the State of Kansas, from which it appears that with buildings and machinery costing $38,500, about 100,000 pounds of sugar, 36,000 gallons of molasses, and 6,000 bushels of seed were turned out at Conway Springs, which sold for $13,820. The cost of producing the same was $14,836—net loss, $1,016. A bounty of two cents per pound was paid by the State for the sugar produced, which gave the sugar-producers a profit of $983 for the season's operations. The tariff bounty of two cents per pound added to the State bounty of two cents amounts to more than the price of good West India sugar in bond in the New York market in ordinary seasons. The *Bulletin* does not find much in the figures to warrant the belief that sorghum will crowd the Sugar Trust to the wall very soon.

Mr. Robert P. Porter recently addressed a letter to the editor of the Albany *Argus*, complaining that the latter had misrepre-

sented him. Among other things Mr. Porter said: "Since I have had any opinions whatever on the subject of the tariff, I have been an earnest believer and advocate of protection." The *Argus* reminds Mr. Porter that he contributed to the *Galaxy Magazine*, vol. xxiv., No. 6, for December, 1877, an article over his signature, entitled "The Truth about the Strike," in which he said:

"The mistaken system of imports has done much to limit the field for our production. The Government, in attempting to protect American industries, has introduced into our tariff laws many features that oppress our manufactories, close important markets, and thereby diminish the healthy demand for labor. It is not necessary to call attention to the prostration of the woollen mills. What has all the Government nursing done for them? Mr. Mitchell, the British judge at Philadelphia in the class of 'wool and silk fabrics,' in his recent report, says: 'The hours of labor in America are sixty-six per week, against fifty-six and a half in England, and the wages average 25 per cent. more than in this country. But the cost of living in America is considerably higher, and I do not think the operatives are in any better position at present than with us.' And yet for years the mistaken cry has gone up that American operatives wanted protection against the pauper workmen of the Old World!"

In his letter to the *Argus* Mr. Porter said that "of the twenty experts thus far decided upon to aid in the census work, fifteen were employed on the tenth census *in the same capacity* by Mr. Walker," and that "of the five new appointments made by the present Superintendent of the Census, *not one represents manufacturing associations*." The *Argus* points out that Mr. S. N. D. North, who had charge of the newspaper statistics under Gen. Walker, has been appointed the expert in charge of wool and woollen statistics by Mr. Porter; and that at the time he was appointed by Mr. Porter as census expert he had been appointed Secretary of the National Association of Woollen Manufacturers, being paid $5,000 a year to furnish brains for the Association and plead the cause of high taxes upon clothing. On the whole, it appears to have been a mistake of judgment on Mr. Porter's part to have written a letter to the editor of the *Argus*.

The *Sun* has a series of letters hitherto unpublished relating to the political campaign of 1864, showing that the "Frémont movement" of that year was a very serious matter, and that it did really put the Presidential ticket of Lincoln and Johnson in serious peril—contrary to the jaunty treatment of that subject by Messrs. Nicolay and Hay in the June number of the *Century Magazine*. The truth is that, although the Cleveland Convention which nominated Frémont and Cochrane was thinly attended, the division in the Republican ranks was just cause of alarm. Mr. Lincoln knew this quite as well as anybody. The defection of the Germans in the West was especially alarming. The final withdrawal of Frémont averted the danger, but even after this the State of New York was carried by only 6,749 votes, and Connecticut by only 2,406, while New Jersey was lost by 7,301. In Pennsylvania the Republican majority of 89,000 in 1860 was whittled down to 20,075. These figures are more decisive than anybody's random recollections of the state of the public mind in the autumn of 1864. The question has often been asked, how it happened that Montgomery Blair resigned as a member of Lincoln's Cabinet on the same day that Frémont withdrew from the Presidential contest. The common talk at the time was, that Frémont made Blair's withdrawal the condition of his own. He looked upon the Blairs as his enemies and as the cause of his misfortunes. Perhaps no evidence can be found to show the existence of a bargain of which Blair was the victim. Perhaps Blair did not look upon himself in the light of a victim. He published a letter in which he said that he had tendered his resignation in order to restore harmony among the friends of the Union cause. That might mean much or little, but the coincidence between his withdrawal and Frémont's, and the great importance of the latter event in the pending campaign, certainly lent plausibility to the current rumor that the one thing hinged upon the other.

Public opinion in Italy was greatly concerned during the first part of June with the action of the Italian consul at Trieste. By the terms of a convention between Italy and Austria made in 1884, Italian subjects living in Austrian territory can dispose of their property in accordance with the Italian laws of inheritance. In accordance with this, an Italian notary undertook to preside at the opening of the will of a deceased Italian, and to take charge of the distribution of legacies, but was excluded by Consul Durando. When the affair became known in Italy, it stirred up the Irredentists mightily, and they at once launched a motion of censure in the Chamber. This gave Crispi a chance to make a speech on the whole subject of Italian foreign politics, and particularly on the subject of the Italian consular service, in which he made some surprising statements. He fairly rivalled Bismarck in denunciation of the officiousness of many foreign consuls, saying that the whole body was more or less infected with the *morbus consularis*. Obsolete and senseless methods he declared to be common in the conduct of consular business—for example, he had found that all the cipher despatches were written in French. He said that many of Italy's consuls, a few years ago, owed their appointment to the Pope, and that even now a few had been named by that dignitary. Naturally, he promised thorough reforms in this branch of the public business. What he had to say about the new prestige of Italy due to her foreign alliances was probably as flattering to national pride as he meant it to be. He even went so far as to adopt Minghetti's phrase, "In any reconstruction of the map of Europe, Italy has everything to gain and nothing to lose." This could be taken as a glance either at the old Italian provinces now under Austrian jurisdiction, or at Nice and Savoy.

A political and historical document of much interest and some importance has just been discovered in the archives of the Ministry of Public Instruction at Rome. This is the rough draught of a speech delivered on the 9th of June, 1848, by Count Mamiani, at that time First Minister of Pius IX., on the occasion of the opening of the Roman Parliament. Count Mamiani, speaking for the Pope, told the Roman Deputies that the Holy Father really made but little account of the temporal power. He preferred to live in the high sphere of his spiritual realm, in the calm atmosphere of dogma, and be connected with the lower world only by dispensing to it the word of God, and by his prayers for it, and his blessing and his absolution. This statement of his attitude was not long afterwards disavowed by Pius IX. in an allocution which he delivered at Gaeta, in which he denied expressly that any authority had been given to Count Mamiani for such an expression. It is, therefore, rather interesting to find that the rough draught of Mamiani's speech had certainly passed through the Pope's hands, since it shows a number of annotations and corrections in the well-known handwriting of Pius IX. The Italian Government considers the new-found document of so much importance that it has had it photographed, the *Temps* says, and sent a copy to every public library in the kingdom. Doubtless Signor Crispi feels some satisfaction over the detection of an almost sainted Pope in a piece of practical politics.

The resignation of his office on May 19 by President Rójas Paúl of Venezuela and its subsequent recall, in obedience to the great popular desire, are facts suggestive of considerable change in the political affairs of that country. As is well known, Venezuela has long been considered by Guzman Blanco as a private possession of his own. In easy alternation he has held the office of President and Minister to England or France for many years, and has been in reality a dictator of the most pronounced sort. Until recently, it has been nothing for him to direct the administration of domestic affairs from Paris, where he has negotiated a perfect cloud of contracts for internal improvements. His prestige was somewhat impaired, however, by his bad management of the dispute with Great Britain over the Guiana boundary. Conceding the justice of his claim, it was little short of ridiculous for him to threaten England with war, as practically he did; and the suspension of diplomatic relations between the two countries, which has lasted for more than two years, has certainly not fallen out to the advantage of Venezuela. Moreover, President Paúl has been administering the Government with vigor and economy, greatly to the satisfaction of the people, and has been understood to be decidedly in revolt against Blanco, his supposed creator. His resignation was probably intended to test the popular sentiment, and his resumption of the Presidency seems to mean an attempt to throw off the fetters of Guzman. The President's term expires in the fall, and he is not eligible to reëlection, but it is probable that some champion of his policy will be found to contest the field with the country's feudal lord.

REACTIONARY POLITICS.

THE reactionary drift in Republicanism is strikingly illustrated by the action of the Ohio State Convention last week. A candidate for Governor was to be nominated, and, despite the strong prejudice against a third term, the honor was given to Foraker, as cheap a demagogue, with the exception of "Dave" Hill, as has of late years attained high office in this country. As the *Tribune* very happily says, "the platform matches the candidate." After endorsing the Harrison Administration generally, it says: "Especially do we commend the just *and liberal* policy of the Pension Bureau in carrying out the pledges of the loyal people to the soldiers of the Union." The Pension Bureau is a branch of the Government conducted under certain laws which the Commissioner is sworn to execute. The Commissioner has no right to have either a "liberal" or a stingy policy. His only policy is to take care that the laws relating to pensions be "faithfully executed." Corporal Tanner has usurped the power to go beyond this, and do what he thinks the laws ought to justify him in doing, whether they do or not; and for this usurpation of power he is commended. Of a piece with this is the plank which declares that "we favor the passage by Congress at its next session of a proper and equitable service pension bill for all honorably discharged Union soldiers and seamen of the late war." This is the first time that a State convention has ever advanced such a demand, and it marks a pitch of extravagance that was not dreamed of a few years ago. There are nearly a million veterans not now receiving nor entitled to pensions who would be put on the pay-roll by such a bill. The rate usually proposed is $8 a month, or $96 a year, so that the carrying out of this policy would mean an addition of *nearly one hundred million dollars a year* to the expenditures of the Government—an amount far beyond the existing surplus, and so, of course, requiring increased taxation of all the people to pay annual stipends to hundreds of thousands of men who are in good health, abundantly able to earn a living, and in a large proportion of cases as "well off" as their neighbors.

The one appointment by the President which is picked out for praise is that of Patrick Egan. Here is the resolution in question:

> "We congratulate the people of Ireland on the progress of their struggle for home rule, and in this Convention we endorse the course of President Harrison in the selection for honorable position in the diplomatic service of worthy and representative Irish-American citizens."

No word of commendation for German-American citizens who have been appointed to represent the country abroad; not a syllable of praise for Americans, pure and simple, without any prefix, like Robert T. Lincoln, for example; but praise only for the man, but recently naturalized, who was appointed at the request of leading members of the murderous Clan-na-Gael organization.

No feature of the platform is more significant than the planks which are missing, and which were used by the men who prepared the platform of four years ago. In June, 1885, the Ohio Republicans held a State convention and adopted these resolutions:

> "The Republican party, which enacted the present Civil-Service Law, will faithfully maintain it, and cheerfully aid in all needed amendments to give it full force, and it is committed to extend the law to all grades of service to which it is applicable.
>
> "Ample appropriations should be made to enforce it in letter and spirit, and all laws at variance with the objects of existing reform legislation should be repealed. Having accomplished this much, the party pledges itself to still further and higher reforms; it looks with the deepest regret upon the failure of the present Administration to promote the reform of the civil service, so auspiciously begun under Republican Administration."

The platform adopted on Wednesday week has not one word to say upon the subject of civil-service reform. A Republican Civil-Service Commission has just been overhauling the administration of the Indianapolis Post-office by a Republican Postmaster, and insisting upon his discharge of a Republican gambler and other Republicans appointed in violation of the Civil-Service Law; but the Convention has not one word of praise for Mr. Roosevelt and his associates. The question is now pending at Washington whether the hundreds of clerks to be appointed in the Census Bureau shall be appointed under the spoils system, or by competitive examination under the Civil-Service Law—in other words, whether the President shall "extend the law" to a "grade of service to which it is applicable"; but the Convention does not ask such extension. Gen. Thomas M. Browne of Indiana, one of the most prominent Republican Congressmen from the West, recently came out strongly in favor of abolishing the Civil-Service Law; but the Convention does not even endorse the law. The Commissioners have recently explained that their work is greatly hampered by lack of funds; but the Convention does not call for "ample appropriations to enforce it in letter and spirit," or pledge the party to "still further and higher reforms." This silence is more significant than words could be, for it is known that an attempt was made to secure the insertion of a plank endorsing the reform.

A formal commendation by a State convention of a Treasury customs decision against a taxpayer, on his appeal from a ruling by local taxing officers, is quite unprecedented, and for the reason, among others, that such commendation has been looked upon as an intervention between litigants who have gone to the courts, and, in effect, an attempt to put outside partisan pressure on the judges who are to decide finally. The Ohio Convention, nevertheless, unanimously adopted this resolution:

> "We heartily endorse the decision of the Secretary of the Treasury whereby the duty on worsted is made dutiable at the same rate as upon woollen goods, thereby benefiting our manufacturing and wool industry."

The naïveté of the resolution is very taking. The Treasury did not decide that worsted goods are dutiable as woollen goods, but that the fabrics entered by the importers as worsteds were, in fact and in law, woollens. The Secretary said the proper customs officers had found and decided that those goods were *woollen* cloths and manufactures of *wool*, and he would not disturb the finding and decision. He upheld an error of fact and law, thereby altering the law and, by such error, making worsted goods dutiable as woollen goods.

Why was such exceptional and unfamiliar action taken by the Ohio Convention? It strengthens greatly the suspicion that the Treasury change in the name of the fabric was the result of an ante-election intrigue which Mr. Windom executed, because constrained by the Republican leaders, and which, being executed, needs a party endorsement. An alternative hypothesis is, that word has been passed around among the Republican leaders to try to drop agitation of tariff taxation in Congress, and rely on such an increase of rates by Treasury order as will content the manufacturers and the tariff beneficiaries. But, whatever the motive, the Republican party of Ohio has committed itself to upholding the decision of Secretary Windom that the law of 1883 made worsted goods dutiable as woollen goods, and to upholding the reasons therefor assigned by him in his opinion of May 27, 1889. We shall probably see other Republican conventions committing themselves, one after another, in the same way. The Republican "bosses" will thus serve formal notice on the Federal judges, and on all aspirants for places on the Federal bench, that no judicial interference in an increase of customs taxes by Assistant-Secretary Tichenor will be tolerated by the party chiefs. The decision in 1887 that worsted was not, *in law*, woollen, was made by a Western magistrate, an Illinois Federal judge, and a Republican of the purest type; and yet the Republicans of Ohio, under the whip of the lords of the loom, formally condemn it, and significantly warn the Supreme Court at Washington that it must reverse Judge Blodgett's decision.

THE SOUTH CAROLINA IDEA.

THE acquittal of Dr. McDow for the killing of Capt. Dawson, although very shocking to the moral sense of the country, ought not to be considered surprising. Due process of law in South Carolina, and in the South generally, would require that some near relative of Capt. Dawson should kill McDow, in which case he would be acquitted because he had a strong feeling against McDow. Then, if a near relative of McDow should kill the near relative of Dawson, he, too, would be acquitted on the same grounds. There are no assignable limits to a vendetta of this kind, short of the extinction of the families. It is a drawback to the due execution of law, in the present case, that the Dawsons, being English, have been bred to other ideas regarding the processes of law. In order to get yourself up to the state of mind for killing on sight, or shooting your enemy in the back, it is necessary that you should have breathed the right atmosphere when you were young, and have had the genuine strain in your blood. If McDow had done to a South Carolinian what he did to this naturalized Englishman, he would have been acquitted just the same by a South Carolina jury, but the chances are ten to one that

he would bite the dust before the end of a twelvemonth. And if the girl whom he tried to seduce, and whom he reviled in his testimony, had been a native of South Carolina, and had had brothers, McDow's life would be a risk that no insurance company would look at. It is not unlikely that he took account of both these circumstances, the one when he did the shooting and the other when he gave his testimony. A person who would shoot another in the back, and revile a woman whose affections he had sought to gain, would calculate the chances of private vengeance to a nicety. The prospect of punishment in pursuance of the statute law he must have known was next to nothing.

Repulsive as is the case in its judicial aspect, that is not the worst part of it. McDow was elected surgeon of a military company while he was still on trial. Military companies in South Carolina represent society, as they did before the war. Public opinion in South Carolina, therefore, seems to require that courts and juries should be advised *aliunde* not to deal hardly with one who shoots his fellow-man in the back, and makes jests publicly concerning the virtue of a woman whom he pretended to love, and to whom he had confided the secret that he hated his own wife and had married her for money. So much baseness has perhaps seldom been assembled in one character in the criminal dock, for when we compare McDow with other villains, we must remember that he is an educated one—no low-browed product of the bogs of Ireland, or the hills of Calabria, or the gutters of New York. He is a Southern gentleman, the member of a learned profession, the scion of a respectable family. The members of this military company have distinctly advertised themselves savages. They have put the same hall-mark on the city and State in which they live. There might be some excuse for a jury perplexed by the cunning of lawyers, but there can be none for these "soldiers." If any body of men in a really civilized State had so sought to influence a jury sitting on a case of life and death, the judge would have issued an attachment against them, and sent them to jail as fast as the Sheriff could gather them in.

One peculiarity of this trial was that half of the jury were colored men, but this really signifies little. The blacks of Charleston had some prejudice against Capt. Dawson, but it is idle to suppose that they had any, even the smallest, influence on the white men of the jury. The decision rested with the whites as the social superiors. The negroes as well as the whites have been taught that killing is not murder unless it is accompanied by robbery. They have had some experience that killing for purposes of lust is punishable with death if the murderer is one of their own color and the victim one of the opposite color, but not that the penalty should be inflicted by a jury. Due process of law in such cases is lynching, and it is doubtful whether they have any idea of law except as superior force. They generally desire to stand well with the whites, and will always do what they think will tend that way, provided the rights and privileges of their race are not in question. If South Carolina white men think that you have a right to kill neighbors who make themselves disagreeable to you, South Carolina black men will think the same.

Capt. Dawson was a man of noble qualities, and the act for which he was put to death was one which challenges the admiration of all right-minded men. He made himself disagreeable to McDow by interfering with his hellish designs upon a young woman in Dawson's employ. South Carolinians are as fully alive to the high qualities for which Dawson was distinguished as any people can be. They have as much regard for the virtue of women (if they are white) as any people; indeed, they may perhaps be regarded as more sensitive on this point than most communities. But the conviction that homicide is a venial offence, if not committed for purposes of gain, is the ruling sentiment. It found abundant expression on the Lord's Day, when McDow went to church, where, the despatches say, he "was quite overwhelmed with congratulations from his friends and patients, among whom were many ladies." The whole affair shows us a community only half emerged from barbarism. It is part of the barbarism of slavery, surviving after the lapse of a quarter of a century the institution that nursed these shocking ideas of the relations and duties of human beings towards each other.

SUNDAY OUTINGS.

President Harrison's practice of taking a Sunday outing from his White House workshop every week during the hot season, and the equanimity with which this method of recreation is accepted by the religious public, illustrate in a most striking manner the change that has come about in the observance of the first day of the week. Mr. Harrison's plan has usually been to board a yacht on Saturday, spend the next day in ease on the vessel down the river, or perhaps put outside the Capes at the mouth of Chesapeake Bay towards night, and get back to his desk some time on Monday. A fortnight ago he introduced a variation by taking a trip to Cape May on Saturday, giving the next day to enjoyment of the beauties of that resort, and returning to Washington on Monday. In every case the main feature of the outing has been the opportunity to spend Sunday away from the scene of the week's work, and where there would be no imperious demand of other duties, like attendance on religious services, which a Presbyterian elder might feel bound to discharge if he were within sound of the bell on the church which he regularly attends.

A quarter of a century ago it would have been impossible for a President to pursue this course without provoking severe criticism. The war, of course, introduced a solemn element which would have made Lincoln's indulgence in a weekly yachting trip over Sunday grate with uncommon force upon the public mind; but if there had been no war, Lincoln could not have done twenty-eight years ago what Harrison does now, except at a loss of public respect which he could not safely have incurred. The religious newspapers would have overwhelmed him with long lectures on the dreadful example he was setting the young, ministers would have preached about his bad conduct, Sabbath-observance societies would have printed tracts on the pernicious character of such "Sabbath" outings. On the other hand, nobody whose opinion is entitled to weight enters any complaint against Mr. Harrison for the way he spends the day, and so straight an organ of New England Puritanism as the Boston *Congregationalist* makes the following editorial comment upon the matter: "President Harrison is reported to be annoyed at the criticisms of his yachting trips from Saturday to Monday. They are sensible excursions, and will do him needed good, and we trust that his critics will hold their peace."

The change thus illustrated is a change for the better. Ancient Sabbatarianism had transformed Sunday into a day which it was a ghastly sarcasm to call a "day of rest." Long sermons three times a day, with an hour of Sabbath-school somewhere interspersed, and a strong dose of the catechism administered by force, if necessary—such was the repose for the mind; while for the body there was the tranquillity produced by the substitution of "cold victuals" for the ordinary hot dinner; and for the spirit the peace flowing from the denial of even a walk through the fields to enjoy the beauties of Sabbath-breaking flowers, and hear the melody of Sabbath-breaking birds. Such a régime could only survive while unquestioning obedience to an accepted order was the rule, and it was bound to yield before the first onset of common-sense criticism.

Ancient Sabbatarianism would have said to President Harrison on Saturday: "What if you are tired with your week's work? So much the more reason why you should stay in Washington on the holy Sabbath, go to church, read the Bible, the catechism, and the Religious (but not the Secular) Department of the New York *Observer*, and behave generally like a good Christian, as you claim to be; instead of going off down the Potomac, where you don't expect (and don't want) to find any church, sitting around on deck enjoying the breeze, when you ought to be in your pew; viewing the sunset from a yacht at sea, when you ought to be 'going to evening meeting'; or eating a good hot dinner of several courses at Cape May, and then taking a drive along the beach." Modern common sense, with the endorsement even of the religious press, says to him: "You are tired, and Sunday was intended for a day of rest. Spend the day as you think will rest you most—dropping lazily down the Potomac or outside the Capes, if you like, taking a drive along the beach, or strolling through the fields—only being careful that you do not disturb others."

In referring to some unreasonable criticisms of his Sunday outings, President Harrison recently said that he had "no other time for rest," and that he "must rest if he was to keep on with his work." This is precisely the situation with the overwhelming

majority of his fellow-citizens. They have no other time for rest than Sunday, and they must rest on Sunday if they are to do good work the other six days of the week. Few of them are so fortunate that they can get off for the weekly outing early in the day on Saturday, and need not be back at their tasks before noon on Monday. The masses of city population can only leave home on Sunday morning, and must be back there by Sunday night. The poor Philadelphian, for instance, who wants to enjoy a glimpse of Cape May on Sunday, cannot take a boat or train thither on Saturday and another home on Monday, but must crowd the whole trip into the one day. This is not so pleasant nor so well in any way as the more leisurely method open to the President, but it is much better for the tired worker than to go without a whiff of salt air all summer. So of the masses in New York and Brooklyn with reference to Coney Island, and of poor folks in the *Congregationalist's* city with reference to Nantasket Beach. There are, to be sure, people who still affect to draw a line between the Sunday outing on which one starts Saturday evening and from which he returns Monday morning, and that on which he starts Sunday morning and from which he returns Sunday evening; but any such distinction is abhorrent to the sense of justice, and cannot be maintained.

President Harrison's example will undoubtedly give an impetus to the movement in favor of making the restful feature of "the day of rest" its chief feature, for it will open the eyes of many to the truth that this is the great blessing of the break between two sets of working days. That this movement makes in the direction of public health, public content, and public morality cannot be doubted by any candid observer. The most rigid Sabbatarian, with the most violent prejudices against Sunday concerts, for example, only needs to view the wonderful spectacle presented in Central Park on a Sunday afternoon in midsummer to feel—and confess, if he is honest—that he has not understood what he has been talking about in his ignorance. There is more happiness, better order, and less crime among the poorer people of New York since cheap Sunday excursions enabled them to take a trip up the river or down the harbor, than when necessity kept them cooped up through the day in tenement-houses far less comfortable than the Executive Mansion, despite all the faults which its occupants find with that place of residence. A Presbyterian elder may justly resent the stigma of being called "a Sabbath-breaker," but Mr. Harrison need not care for such attacks, since he is throwing the weight of his influence on the side of those who have the best authority for believing that "the Sabbath was made for man, and not man for the Sabbath."

THE GROSVENOR GALLERY AND ALMA-TADEMA.

LONDON, June 17, 1889.

THE general impression of the Grosvenor Gallery exhibition this year, as one glances through the splendid rooms, is that it is devoid of any work that would strike or arrest one's attention particularly. There is no lack of good work, by well-known artists, but no one has sent anything of surpassing merit, although by the appeal Sir Coutts Lindsay made to his contributors at a banquet shortly before the sending-in day, it would seem to be understood that the exhibition would stand or fall by the merits, or the reverse, of the present show. The painters of the poetic school who in years gone by always exhibited here, have now all deserted; the impressionists, too, are scarce, and it is chiefly the Academicians and young painters as yet not well known who have sent anything this year. We note among the contributors the names of Millais, Keeley Halswelle, Briton Rivière, Heywood Hardy, Boughton, Tuke, Jacomb Hood, Clausen, and Hennessey. The work of such men, even if not at their best, must needs be interesting.

The centre of the principal gallery is held by Sir John Millais's "Girl Shelling Peas"—a picture he means to present to Sir Frederick Leighton in return for a wax-modelled figure from the hand of the President. The subject is simple, and requires no effort of the imagination to grasp it. A fair-haired maiden in light dress is shelling peas in a china bowl in her lap. Her face is well modelled, the fresh, fair color and manner of painting very characteristic and pleasant; but the hands are very sketchy and without drawing. We should have expected more effort from a labor of love. No. 24, "A Fallen Monarch," by Mr. J. M. Swan, a name become so popular this year, is not as good a picture as either of his works at the Academy or the New Gallery. A dead lion is before us, tied to a rock, with the weapons which have killed him in the foreground. The bony structure is not sufficiently visible, and the pose of the lion and general arrangement are not successful. John Pettie sends a study of a head, No. 23, a fair lady with tawny locks, in a black hat and feathers, painted after the manner of Rubens. It is too much of a reminiscence of this master's work to count as a good original. Pettie sends also a portrait of Rider Haggard, which seems to be considered an excellent likeness: the eyes are looking out into the vague, and have an expression of seeing the weird.

A very poetic landscape is Moffat Lindner's "A Winter Sunset," No. 28—very full of cloud movement and transient sunset effects on a stormy evening across marsh land, with a distant castle and town. Anderson Hague, in "Feeding the Ducks," No. 72, has, out of a commonplace subject, produced a work full of beauty and color. He is one of a small group of Manchester painters known for dash and spirited execution. "Under the Harvest Moon," No. 71, by G. H. Boughton, has certain qualities of delicate color and refinement, but it is evident that Mr. Boughton's method of figure-painting is not at all suited to a life-size scale: it is too uncertain. The figure of the girl against a rock, with a sheaf of golden corn on which she is leaning, relieved against a background of pale evening sky and sea, is not much of a subject.

The full-length portraits of fine ladies are the most noticeable feature of the exhibition. Mr. Shannon's "Marchioness of Granby," No. 17, is gracefully posed; the head is well painted and modelled, and the distribution of light and shade is excellent. It is in the painting of the white satin dress that the picture fails: the folds are mechanical, and the execution is wanting in spirit. In "Mrs. Tower," No. 81, the dress is treated with less hesitation, and the light fur boa round the neck is very well done. No. 206, by the same artist, has a confused background of flowers in vases which interferes with the general effect. No. 114, by Mrs. Waller, a young girl with flowing locks and short black dress, resting on a fleuret, a visor in her hand and fencing gloves on the ground, is excellently posed, well drawn, and firmly painted. Mr. Jacomb Hood has a portrait picture of a lady in amber satin, with a gray-blue Indian scarf, turning towards the spectator, on a flight of stone steps which she is ascending. He calls it "Pauline in the 'Lady of Lyons.'" The action of the outstretched arm is too momentary to be pleasant in a portrait. A harmonious arrangement of color and good flesh painting is to be found in Percy Bigland's portrait of Mrs. George Rhodes, No. 175, a lady in brown velvet dress with pink trimming, resting her head on her hand. We pass over many portraits, having only space for those which strike us as being most remarkable.

"Ploughing" (No. 174), by George Clausen, one of the last elected members of the old Water-Color Society, is rather devoid of interest in the choice of type of the horses, and their legs are not carefully drawn; yet there is such true rendering of nature in the fields and ploughed lands, such good keeping in the values of this picture, that, despite its shortcomings, it cannot be said to be without charm. "The Fisherman," by Mr. Tuke, is a very empty canvas, the design being quite unworthy of the clever painting expended on it. Miss Clara Montalba's Venetian water-piece (No. 68), "Fishing Fleet, Venice," has all the dash and brilliancy she is famed for—a luminous sea and sky, with a group of light-sailed fishing-smacks, with the Island of San Giorgio and the Ducal Palace in the far distance.

It is in the subject pictures of ambitious aims that this Exhibition is so particularly unfortunate; for instance, in Briton Rivière's "Prometheus," in which a very commonplace nude model is seen dangling on a rock, suspended by the wrists—a mere Academy study, and not even good at that—without any of the heroic qualities the title suggests. Keeley Halswelle's "Macbeth and the Weird Sisters" is another very poor attempt to make a picture out of a mere study: the landscape has no reference to the figures, and they are so small in size and so unimportant that they may be said not to interfere with the landscape.

Among the sculpture there is very little of interest: we notice a child's head in bronze by Conrad Dressler—"Non Angli sed Angeli," very beautiful in tender modelling and very refined in type. Further on in Bond Street, this young sculptor has an exhibition to himself of the portrait busts of men of note who have sat to him, among them Ruskin, Swinburne, Madox Brown, the painter, William Morris, the poet and Socialist, and Stanley, the explorer, besides children's heads of great beauty. To return to the Grosvenor, it is very evident from the want of interest in its contents that three exhibitions are too many for London.

Alma-Tadema's new picture, "A Dedication to Bacchus," is exhibited by itself at Lefevre's Gallery, King Street, St. James's, in the stately isolation the importance of the work deserves. There has been much preliminary advertisement for this picture: it has been said that so large a price has never been given to any artist for any single work of art on record; and as the exact sum has not been stated, imagination is allowed every license in fixing it, helping itself with the known facts that Holman Hunt received seven thousand for his "Finding of Christ in the Temple," and Frith ten thousand for his famous "Railway Station." The work is to be engraved in pure line by

Aug. Blanchard for £2,000, and the essay by F. G. Stevens, critic of the *Athenæum*, in pamphlet form, offered to each visitor who has paid his entrance fee of one shilling, contains all the historical information of which the spectator who does not happen to be an archæological scholar stands in need, in order to understand the detail thoroughly. The pamphlet in question, besides abounding in high panegyric on the superlative excellence of this picture, contains a complete description of all the works of Alma-Tadema illustrating Greek and Roman religious festivals, episodes in their daily life, and the Merovingian subjects, dealing with the conflict of barbarism with civilization. It would seem that, in the choice of Greek and Roman scenes, it was not a matter of architecture, marble-painting, and flowing draperies that prompted Alma-Tadema: his principal object was to show in a sequence of pictures how greatly religion among the ancients favored morality, and how this reverence and gratitude for the gifts of the gods pervaded and beautified ancient life in every phase.

The figures in "A Dedication to Bacchus," sixty in number, are grouped on the white marble platform of a temple on a height beyond which sea of the deepest blue meets the blue sky. White clouds are seen floating on the horizon, against which on one side appear the summits of distant mountains, on the other, an island scintillating in azure distance. On the right hand we see an altar of Bacchus, richly sculptured in white marble tinged with purple from the light coming through the purple awning spread over it, supported by ropes in the foreground; beside the altar, on a high pedestal, is the bronze statue of a centaur, one of the chief dark points of coloring in the design. The high priest and priestess stand, clad entirely in white togas tinted with purple light, in front of the altar, holding vessels of silver in their hand, ready for the libation. The maiden choir, also in white, ivy-wreathed, are behind them chanting in honor of Bacchus and of the dedication of the young child who is the centre of interest of the subject.

The procession, drawing near from the left, forms a dark mass of varied color distinctly outlined against the sky. These people have just ascended to the platform, and are being conducted by a maiden harbinger, who, in white with a tiger skin round her, with flowing locks ivy-crowned, carrying a thyrsus headed with silver hemlock flowers and silver bells, which she is jingling with arms thrown up, is welcoming and encouraging the newcomers to approach. Two girls, carrying long garlands of branches of fir needles tied with yellow ribbons, are dancing and bowing low before the procession; four men in green togas are carrying a hog's-skin full of wine on a red litter. The old father, white-haired and white-bearded, stands supported by his daughter-in-law. Near her, the young child who is to be dedicated to the wine god is naked but for a diaphanous purple veil. She turns with questioning face to an elder girl, who, gracefully bending towards the child, is explaining the ceremony to her. Behind, one sees the players on musical instruments of different kinds—the double pipe, the tabor, the timbrel—the torch-bearers, and the maidens jingling their tambourines with uplifted arms and heads wreathed with vine and ivy. In the extreme foreground, in erect attitude, profile towards us, is a servant of the temple clad in white, a tiger skin wound round her. Before her stands a silver vessel. This impassive figure is evidently waiting for a signal to carry it to the altar. Just beside her a pier of red-veined marble supports a porphyry group of a young man lighting a fire under a vase, making a dark red mass of color against the sky.

The composition is very well massed. All the figures on the right around the altar are in white, varied by their respective shadows, different textures, and the sun shining through the purple velarium, tinging their draperies. The three singing maidens to the right of the priests are very gracefully grouped. In the extreme foreground is an altar covered with ripe fruit. The white marble of the ground is in shadow from the temple, excepting beyond the procession, where bright sunlight falls on it. The procession has the brightest color in the varied garments of its members, and the deep peacock-blue sea behind it makes the greatest dark in the picture. It is precisely in this extreme dark of the sea that the aerial effect is to our mind spoiled. If the light were as great as everything indicates, the sea could not be so dark. The sky, too, which meets it is not distant enough: it is of too opaque a tint. We grant that it is admissible to sink realism in order to obtain a beautiful effect of color, and the dark of the sea is needed; but the sky is neither in accord with reality nor with the exigencies of art. The dancing figures of the advancing priestesses are very full of movement and grace, and the faces have less rigidity and a nearer approach to beauty than in any of Alma-Tadema's pictures. There is more of life, and simpler action, and a greater variety of type. The draperies are quite beautiful in execution, and the painting of accessories as usual unsurpassed in finish. Dexterous touches of color on the wreaths, ribbons, and ornaments give variety throughout.

The keeping of this complicated design is quite marvellous. At first the apparent simplicity of the design strikes one, but closer inspection shows that it is the consummate skill with which the composition has been worked out to which this impression is due. The fulness of color in the figures, the wide spaces of white marble, always abounding in variety of tint and painting, are very striking, even to those who are used to wonder at Alma-Tadema's unrivalled skill where marble and textures are concerned.

IBSEN IN ENGLAND.

LONDON, June 13, 1889.

No theatrical event in London for many months has been so talked about, and given rise to such animated discussion, as the performance of Henrik Ibsen's "A Doll's House," which is now in its first week at the little Novelty Theatre. It has been performed in London before, but only in a carefully conventionalized version by Messrs. Jones and Herman, when it was a complete failure. Though that was but five years ago, even Mr. William Archer, who is to a great extent responsible for the present performance, and altogether (I believe) for the translation, then thought and declared Ibsen impossible on the English stage. It is therefore somewhat remarkable that in his version, which is scrupulously faithful to the original, with all its undisguised preaching and satire and dramatic unconventionalities, it is having a success. According to the first scheme, but a one night's performance was to be given; then a week's run was arranged for; and now, when the week is but half over, it is announced that it will be kept on at the Novelty for several weeks, subsequently perhaps to be carried to a larger and more popular theatre.

That which makes it doubly interesting, and its success peculiarly significant, is the fact that it is not only a dramatic but a social and moral experiment. Ibsen is a moralist first, and only then a dramatist, and this is the true explanation of the failure of his play when adapted to the accepted dramatic requirements: with its morality, its very life was taken from it. This also accounts for the discussion which the present performance has aroused. If you consider Ibsen at all, you necessarily give him twice as much attention as you would an ordinary dramatist, since you are forced to judge his play first as a work of art and secondly as a moral lesson. Any one but a Robert Buchanan would feel this on reading "A Doll's House"; to see it on the stage is to realize still more forcibly its double value.

The plot of this special play is so well known that it is useless for me here to give more than the merest outline of it. *Nora*, the heroine, has been for eight years married to *Thorvald Helmer*, and, though during that time she has borne him three children, she has never become to him more than his "lark," his "little singing bird," his "squirrel," who plays pretty tricks for him; in a word, she is a doll, and their home, happy as it is, is but a doll's house. Before her marriage she had been treated in much the same way by her father, from whom, moreover, she had inherited nothing but frivolity and irresponsibility. Her circumstances had never encouraged self-development; thanks to them, she had lived entirely unconscious of the serious side and of the duties of life. That, despite her childishness, she has a certain strength of character—decided possibilities of development—is shown by the step she had taken in a crisis which demanded immediate action on her part, several years before the play begins. Her husband was very ill; the doctor would not answer for the consequences unless he was taken at once to Italy and kept there, enjoying complete rest for many months. For the journey £300 was needed; there was no one from whom to obtain it, and the *Helmers* themselves were without money. It was then that *Nora* acted for herself, and borrowed it from a man who made a secret business of money-lending; but even while she thus accepted a great responsibility, she showed her complete ignorance of the meaning of right and wrong. She forged a name in order to secure the sum without further delay.

This forgery is now used by the man from whom she borrowed the money to further his own interests with her husband, who has in the meantime obtained a position of importance. The discovery of her crime suddenly reveals to her the intense selfishness of the latter, whose love for her she had thought his ruling passion; for he, being but an average man, in the horror for what she has done and the threatened consequences, remembers only that his own good name is involved, while she also appreciates for the first time his complete indifference to her moral responsibility, since when, almost at the same moment, the danger to him is averted by the return of the forged paper, he at once assures her of his forgiveness and his readiness to forget everything. Her moral nature is suddenly awakened; she finds not only that she no longer loves her husband, but that she has never known him, and for all these years has been living with a strange man. She realizes that she has duties, not only to husband and children, but first of all to herself; that she has rights—not exactly the political rights for which women now clamor, but rights as a human being. She leaves her husband to devote herself to that self-education which should really have begun with her life.

This is briefly the plot of a very extraordinary play, and certainly there is nothing in the dramatist's stock-in-trade to warrant it; it is as original as it is striking. To consider it first of all as a work of art: though I had read "A Doll's House" before going to see it on the stage, I was astonished to find how intensely dramatic it is in conception and in arrangement. Few plays written nowadays are as successful in holding your attention and arousing your interest. It is full of movement, and the plot is admirably worked out. The first act perhaps drags a little, a defect which can easily be remedied by judicious cutting down; but no fault of this kind is to be found with the second, the action of which carries you along with it from the moment the curtain rises until the almost sensational dance of the *tarantella*, with which it falls. In the third act, also, there are plenty of fine dramatic situations in the return from the ball—the music of the *tarantella* not yet hushed, *Helmer* flushed and excited, *Nora* pale and silent and ready for suicide, which seems the only escape from her misery; in the sad and tragic farewell of *Dr. Rank;* in the husband's discovery of his wife's crime; in the return of the paper which means freedom from the threatened ruin of peace and happiness. Up to this point the interest never flags; the dramatist proves himself a master of his art. But just here the moralist steps in, banishes the artist from the scene, and sets about preaching a regular sermon. *Nora's* talk with her husband—the first serious one they have ever had, she reminds him—is dangerously like the moral tagged on to a fable. Ibsen attaches far more importance to the promulgation of his gospel than to the perfecting of his work of art. He is determined that no one, not even the most obtuse, shall miss the full meaning of the lesson he has given. The whole case is neatly summed up by *Nora*, woman's claim to the right of self-development and moral independence established, and art sacrificed to morality.

That moral and social problems are not legitimate subjects for the stage, few would find it easy to maintain. Ever since the days of Æschylus and Sophocles, there have been dramatists whose only inspiration has come from the great moral problems of humanity. But even were this not so, it is as inevitable to day that the drama should begin to deal with social and moral questions as it was that the comedy of Charles II.'s time should be licentious, the novel of Fielding's coarse. This is a day of social and moral revolutions—mistaken, perhaps, but that is for future generations to decide—just as Charles II.'s was one of terrible revolt against an over-exalted moral code, as Fielding's was one when no gentleman was worthy of the name unless he knew how to take his pleasure, and with him pleasure meant wine and women. As time goes on, our stage, like our novel, is bound to be more and more concerned with the great problems which preoccupy the civilized world. The prospect may not be pleasant, but it is not to be averted. We are simply what previous generations have made us. We may mourn over the fact that we are not as picturesque or gay as our forefathers, but our mourning will not bring back their picturesqueness or gayety.

Ibsen is only one of the first of many who are to follow, in his choice of subjects as in the realism (or naturalism the French would call it) with which he presents them. Just as he is not willing to place a set of conventional puppets against a realistic background, as is still the prevalent fashion on the English stage, but must show real men and women, so he cannot rest satisfied with the melodramatic standard of virtue and vice, or the convenient doctrine of chance, but must govern stage life by the same laws which govern real life. This is all as it should be. His characters are but the more interesting because they are genuine human beings; his plots the more impressive because they touch upon those things with which we are just now most deeply concerned. But the play itself should express its own moral, should teach its own lesson; it should no more need a final explanation, or summing up, or moral, than a story by Daudet or Zola, or a picture by Whistler or Manet. It is chiefly because of the reality of all that has gone before that the last scene in the "Doll's House" jars upon one; you feel there must have been a flaw somewhere if the play, with all its action and power, has failed to explain itself. Of course, in reading it, this is not so noticeable, since one reads Ibsen the moralist rather than Ibsen the dramatist. But on the stage I thought it artistically a serious defect. I left the theatre asking myself whether, after all, the pulpit or the platform was not Ibsen's proper sphere.

And now for the moral: The whole drama is, as Mr. Archer has written, "a plea for woman's rights—not for her right to vote and prescribe medicine, but for her right to exist as a responsible member of society, 'a being breathing thoughtful breath,' the complement and equal of man." This is a subject of seemingly paramount importance to the Scandinavian dramatists. Ibsen touches upon it in other of his plays, in "Ghosts" for example, just as in "A Doll's House" he recurs to the doctrine of heredity, which is the main theme of "Ghosts"; Mrs. Anne C. Edgren treats it with much bitterness and satire in her "True Women"; Björnson presents some theories relating to it, startling enough to the conventional man, in "A Gauntlet." They all seem to feel it to be their mission to proclaim woman's rights as a human being. It is curious to turn from them to Anglo-Saxons who have also written on the woman question. Take Karl Pearson, for example, one of many whom I have not space to mention here; he, with Ibsen, is conscious of the number of dolls existing in the world to-day—"shopping dolls," he calls them—and yet what is the right he demands for women? Not merely the right to common sense and self-development, because he sees that the average woman cares as little to develop herself as the average man, but the right to industrial, social, and moral equality, because he realizes that there are already as many women as there are men who would know how to profit by it.

In other words, the Scandinavian dramatists demand that which the English or American moralist takes it for granted has already been obtained. English women have less freedom in many ways than American; but even in England, if a woman, after eight years of married life, and after having given birth to three children, were to remain a childish, irresponsible *Nora*, I am sure she herself, and not her circumstances, would be blamed. "A Doll's House" is really a protest against the existing state of affairs in Ibsen's own country, and therefore cannot impress an English or American audience as it would a Scandinavian. I know this seems like a flat contradiction to the opinions held by English enthusiasts who are looked upon as authorities on the woman question. Miss Schreiner's declaration that Ibsen and George Meredith are the two writers who best understand women, has lately been going the rounds of the press. But I think the great trouble hitherto has been that the leading advocates of woman's so-called emancipation have failed to grasp the fact that, given to the average woman all the advantages of the average man, she will still remain an average woman, as he has continued for many generations an average man. The moral, therefore, to which the drama is sacrificed—however valuable in Scandinavia—here seems scarcely worthy of the sacrifice. Moreover, it would be difficult to justify a woman who ranked duty to herself higher than duty to her children. *Nora* without hesitation leaves her children to the very fate from which she is rebelling. From the moral standpoint, I think "Ghosts" or "An Enemy to Society" would appeal more strongly to an English or American audience.

I have said little about the acting, because there is really little to be said. It is not, as with the company of the Théâtre Libre, the result of modern theories—the striving after modern ideals. Actresses and actors are merely those who happened to have the time and inclination to devote to the experiment. Miss Achurch, who plays the part of *Nora*, has been highly praised, as she deserves to be, for undertaking so serious a task. She is not, however, an actress of great ability or promise, though with careful study she may yet do better things. The actors call for no special criticism.

A RUSSIAN SATIRIST.

ST. PETERSBURG, May 17-31, 1889.

THE attention of the public here has recently been directed afresh to the most interesting question of the day in the field of literature. Who is to succeed to the throne of letters? Since the death of Turgeneff and Ostrovsky, very little has been written by the three survivors of the group who have rendered contemporary Russian literature famous. The seven pillars upon which Russian literature has rested for the last thirty years are Tolstoi, Turgeneff, Dostoyevsky, Nekrasoff, Gontcharoff, Ostrovsky, and Saltykoff. The state of affairs at the present time is as follows: There are numerous dramatic writers, but no one to take Ostrovsky's place. There is a swarm of poets, varying in calibre, but, with the exception of Maïkoff (who has celebrated the fiftieth anniversary of his literary activity, and who, therefore, belongs rather with a past generation), there is no poet whose preëminence is acknowledged as was Nekrasoff's. Gontcharoff, who has produced one capital work, although he can hardly be reckoned as strictly first-class—A2 would perhaps express it—is still alive. But he is nearly eighty years of age, almost completely bedridden, and has contributed nothing of importance for so long that he may be set aside in a consideration of the live forces in literature, although his short sketches of servant types, published last year, showed no falling off in his powers. Tolstoi, also, is practically out of the field, for the present at least. Among the various reasons for his silence, abstinence from tobacco and his conviction that too much is written and printed may, I believe, be reckoned as the chief. He thinks that smoking formerly stimulated his brain and prompted him to write, and he believes that if he shall write anything in the future without such stimulus, it will come from a healthier inspiration. This disposes of the school of romance. There are plenty of aspiring authors, it is true, but of most it may be said: Had there been no Turgeneff, no Tolstoi, these writers would never have been able to see their way to the light of print. In fact, Russian literature, like the literature of other countries, just now is filled with echoes.

The only member of this distinguished group who remained alive and active, wholly independent, original, and unechoed in his peculiar field, was Saltykoff. Echoes there undoubtedly were, in the early days of his fame, but they were too feeble to hold their own, and he remained alone in the field of satire. Now he is dead, and there is no one who is even hinted at as his successor. Mikhail Evgrafovitch Saltykoff was born on January 15, 1826, in the Government of Tver. On completing his education in the famous Tzárskoe Seló Lyceum, in 1844, with the tenth-class rank (*i. e.*, Collegiate Councillor), he entered the Chancellery of the Minister of War. He had written poetry and articles for the journals during his school-days, but he soon perceived that poetry was not his work, and devoted himself to prose. His second novel, 'A Complicated Affair,' first attracted special attention to him, by its satirical traits, and resulted in his being sent into a sort of exile on service in the Government of Viatka, at the orders of the Governor. This exile, however, allowed him to advance in the service, and gave him an opportunity to make some studies which appeared afterwards in his 'Governmental Sketches.' The first of these 'Sketches,' which touched every rank, from members of the administration to peasants and religious beggars, appeared in 1856 signed "Shtchedrin." This *nom de guerre* he retained until his death. Saltykoff returned from his polite exile in 1855, and did not quit the service until 1868, having in the meantime been Vice-Governor in Riazan and Tver, administered other offices in several places, and risen to the rank of Actual Councillor of State. In 1868, when Nekrasoff became the editor of the *Contemporary*, Saltykoff took charge of the department of belles-lettres, and, after Nekrasoff's death, he became the editor of the journal *Annals of the Fatherland*, to which Nekrasoff had passed when the *Contemporary* was prohibited. Of late years he has written in various journals.

As a satirist, Saltykoff-Shtchedrin is the direct successor of Gogol, but he lacks the latter's poetic and romantic touch. What little he possessed of those elements was early exhausted, and his style is dry and biting. One laughs at his sharp thrusts, but the laugh is bitter, not genial, like that evoked by Gogol. The 'Governmental Sketches' have lost, through change of general circumstances, that special attraction which caused them to be eagerly awaited when they were in course of publication in a periodical journal. What then seemed unprecedented audacity, in his dealing with officials and the oppressive relations of the bureaucracy to the people, now passes as a matter of course. For the same reasons, imitations which dared not carry their attacks higher than a chief of police, and which halted dumb in the presence of governors, have utterly vanished from the scene. At the time, however, the general mental and social quickening, the feverish hopes and aspirations in literature, as well as in other directions, were particularly favorable to Saltykoff and the combative character of his writings, even setting aside their artistic and humorous qualities. That he is not always artistic even at his best is proved by what is usually regarded as the most important and characteristic of his novels, the 'Golovlyóffs.' Were it not for the too frequent and too minute diversions from the main thread of the story, this volume might be cited as one of the best, if not the very best, full-length portrait extant of a hypocrite. This excess of detail dulls the outlines of the portrait, but, at the same time, it proves the delicacy of the author's observation. In order to appreciate the book fully, one must be a Russian or well acquainted with the Russian Church and Russian views of that and of other things. It is precisely this quality which renders Saltykoff's writings highly specialized and difficult of access to foreigners, even in the original.

The Golovlyóff family may be briefly described as gentry gone to seed. The father is weak and vicious, but is rendered harmless by his wife's strength of character. She not only retrieves the losses caused by sloth, mismanagement, and so forth, but renders the position of the family financially brilliant from a rural point of view. Between the hardness of the mother and the weakness of the father, the children fare badly, as might be expected hereditarily. The daughter makes a runaway marriage, and, dying, leaves her daughters to the stern mercies of their grandmother, who takes so little heed of the lesson already bestowed upon her as to training that the young girls end, as provincial actresses, with drink and a suicide's grave. Two of the sons also yield, in their prime, to the inherited vice of drunkenness, and the picture is darkened by the mother's harsh treatment of the eldest, and by the treatment received by the mother, after her husband's death, at the hands of the two remaining sons. The second of these also dies a drunkard's death, leaving his mother unprovided for and at the mercy of her last son. The character of the latter is sufficiently defined by the name which his brothers had conferred upon him in childhood—Judas Iscariot. So far the book is not cheerful, and the remainder, which has Judas as its hero, is even more depressing. Indeed, it is urged as an objection to Saltykoff by many that he sees only the dark side of life.

"Judas" is a very religious man, strict in the observance of all fasts and festivals—which does not in the least interfere with the indulgence of any vice or passion that suits his taste. Nothing daunts the man, nothing disturbs his power of casuistry even for a moment. As a masterpiece in this line, which I do not remember ever to have seen excelled, I may cite his bland argument on the occasion when he had forgotten to order a requiem service on the anniversary of his son's death. His son, who inherited the family traits, had got into a money scrape, from which his avaricious and heartless father had refused to extricate him. The result was disgrace and suicide. The pious father, who had refused a single kopeck to rescue his son from despair, had expended rubles freely on the customary church services, in return for which he expected his dead son to intercede for him in heaven. On this occasion, when he recalls, in the evening, too late for service, that he has omitted due observance of the anniversary, with more than Chadbandian sweetness and unctuousness he lays the blame upon his dead son. The son has, forsooth, neglected his duty in praying for his father in the other world; hence, the Almighty has allowed the latter to forget the anniversary, and the son is wholly and solely at fault in the matter! If he is uncomfortable in consequence, let him bear it! Judas's dealings with his mother, with his remaining son, whom also he drives to disgrace and death, with his housekeeper, his niece, and his servants, furnish vivid pictures of moral perversion, ever increasing in blackness, until his own miserable death, in a fit of partial aberration of mind, extinguishes the direct line of the Golovlyóffs, and allows the property which has been accumulated with so much cruelty to pass to another branch.

Such, in general outline, is a book which does not make upon the mind, as a whole, the powerful impression which should result from the combination of so many strong parts. On the other hand, some of Saltykoff's short sketches are incisive and telling in the extreme. For instance, to select at random, the brief satire entitled 'How One Peasant Supported Two Generals,' is irresistible, and might be used effectively as a Tolstoyan tract. This fantastic tale begins with the statement that these Generals had been in the service all their lives, and "consequently" they knew "nothing whatever." They did not even know that food, in its natural state, grew, flew, walked, or swam; and when they beheld it in its natural state only, they nearly starved because they knew not how to handle it. A peasant took charge of them, fed, clothed, and worked for them, and when they could dispense with his services, they presented him with the munificent sum of five kopecks. This satire on red-tape officialism strikes home.

For the last year Saltykoff-Shtchedrin has been in such ill health that he seemed, in ordinary life, to have lost his faculties. But writing was his real life; when he took up his pen, his intellect was as clear as ever, and his last work, completed shortly before his death, shows no signs of failing power, although, like his other productions, it has weak parts. He finally developed an allegorical style, in which the really significant reading was between the lines. This "Æsopian" style, as the author himself happily called it, greatly delighted the Liberals, but not the Radicals; and it is precisely this, together with the necessity of being prepared by a knowledge of the Russian at home, which renders Saltykoff-Shtchedrin an eminently national writer, never to be comprehended abroad and upheld as the peer of the few universal satirists, in spite of the precedent furnished by Dante's political hints.

The funeral of a Russian writer offers an occasion for speeches, hence for "demonstrations." I wished to take advantage of Saltykoff's, partly for the sake of observing some points in it in contrast (on account of its nearly coinciding) with that of Count D. M. Tolstoi. Count Tolstoi had a brilliant, official civic funeral, and small official deputations from various gymnasia and so on marched in the procession. But "students," *i. e.*, university students, there were none, nor did I see any among the crowd collected to gaze. The tradition still lingers of Easter, 1880, when Count Dmitry Tolstoi ceased to be Minister of Public Instruction, and when the Easter greeting ran, instead of "Christos voskrés!" "Christos voskrés, Tolstoi iskrés!" (Christ is arisen, Tolstoi has vanished!). The spectators who joined the group of relatives, friends, and officials behind the splendid hearse, hung with thirty or more wreaths, were not of the "reading class," who would take sides either for or against the ex-Minister of Public Instruction, and evidently fell into line to accompany the body a short distance out of respect for death in general.

I went out to observe this point and also to see how the Emperor was received by the crowd. People knew that he and the Empress would come to the funeral because they and the Crown Prince had already attended one of the services at the house, on the day after the death of the Minister of the Interior. Yet he had not been present at the services or funeral of General Pauker, a short time before; not because General Pauker lived in a small lodging on the fifth floor (whence he had never felt inclined to remove to his grand official mansion, during his brief reign as Minister of Public Ways), nor because the funeral was held in a Lutheran church. Rumor asserted that it was because of the then fresh arrests, of which I

need not speak here. Russian newspapers did not mention the matter; but as the foreign papers came in with "the black mask," or "caviare" (the Russian names for cancellation of paragraphs), my readers are probably sufficiently informed already. I stationed myself where the imperial party must pass. The guards were the same as are always used to keep a path open for show processions, and they interfered not in the least when the crowd rushed forward with a hearty greeting round the imperial carriage. I mention this incident for the benefit of those who assert that the Emperor's movements are never known. They can often be very accurately timed and placed. That day Saltykoff died. For three days the house stood open to all comers; and thousands, friends and strangers, streamed through it to take leave of the dead man as he lay facing a lifelike portrait of himself in oil colors, which hung on the wall in the only beam of light which was admitted into the room. Twice a day, as is customary, prayers were read, in the presence of dense masses of people; but one was forced to flee before the heat, crush, and atmosphere. At the prayers ordered by the Literary Society, in the great Cathedral of the Kazan Virgin, the great audience was distinctly composed of what the Russian journals call "the motley middle—the reading—the intelligent class." There were even some soldiers, who may have strayed in by accident, although, after seeing quite a rough-looking soldier engaged in buying some of Pushkin's poems in the edition which costs about eight cents a volume, I think that I may be wronging them, and that these men were there as literary admirers. Literary St. Petersburg was well represented. Near me stood a tall, large but alert-looking old man who was surrounded and greeted by a constantly renewed company, until he would have appeared to the uninitiated the hero of the occasion. It was P. A. Pletneff, the editor of the journal in which the dead man's first literary efforts saw the light, nearly fifty years ago, when he was still a schoolboy in the Lyceum which beheld the dawn of Pushkin's genius. At the time when Dostoyevsky was in exile in Siberia, Pletneff was in the disciplinary battalion.

Saltykoff had asked that he might be buried in the Volkhoff Cemetery, close to Turgeneff. It was announced that the body would be taken from the house at ten A. M. I was told that the family were requested to have it done at nine o'clock for fear of disorder. Perhaps this was true, as the procession set out at 9:48. More than two hundred students from the various educational institutions organized themselves into a guard to march in front of the hearse, and sang: "Holy Lord, Holy Almighty, Holy Immortal One, have mercy upon us!" all the way to the cemetery, a distance of several versts. It is courtesy to accompany the hearse on foot for a longer or shorter distance; but the day was rainy, the mud deep, and some who had walked the longer distance to Nekrasoff's grave in midwinter twelve years ago, dropped out of the line. Of wreaths in metal, artificial and natural flowers, there were more than a hundred on the hearse.

The Volkhoff is the third of the St. Petersburg cemeteries in point of fashion and popularity, I believe. It lies on the extreme southern verge of the city, and is much crowded. Many of the monuments take the form of small stone or iron chapels, or the lots are roofed in and protected by wire netting or glass. Bielinsky, the critic, Kostomaroff, the historian, Garshin, the promising young writer who died last year, all lie here. Turgeneff rests close to the wall of the large church. I could not help thinking that Shtchedrin would have enjoyed describing his own funeral. The crowd was sufficiently great, but not to be compared, I am told, to the countless throngs which came to Turgeneff's funeral. Many arrived before the body and took up positions of vantage, and most extraordinary some of them were. I saw one student nearly crack his skull on Turgeneff's tomb, while it took four men to extract his leg from the tall iron pickets of the enclosing fence. Many, some of them women, climbed the trees and perched there for four hours or more.

A Russian crowd is usually quiet. This one was very cheerful and rather noisy. The rain descended at intervals, and the odor of damp soil mingled with the fragrance of the birches and of the roses, lilies, and hyacinths which people had torn from the wreaths on the coffin. One man had taken advantage of the opportunity to have prayers in his family lot near by. The chanter looked up at the mourner as he gave the censer its last swing, and made a laughing remark; then gave a shiver, thrust his hands into his overcoat pockets—he had not even donned his vestment—and went off with the censer dangling at his heels, and his Derby hat on one side, to explore the crowd. The handsome old priest clasped a Gampish cotton umbrella to his brocade bosom, made a smiling comment, and retreated to the vestibule of the church, where he continued to smile and bustle as he attended to the various demands upon him, and set a good example of cheerfulness under depressing surroundings. Mass and the funeral service were going on in the church, where the coffin, almost invisible beneath the mass of wreaths, lay under a canopy of gold brocade and white plumes. The crowd shifted constantly. Those who had good places near the grave outside clung to them tenaciously. The rest flowed in or out of the church at the dictate of the rain. As I listened to the sympathetic chanting of the choir, the mass ended, trays of candles for friends to hold during the death service were brought out, and a quiet scramble for them ensued, as there were comparatively few. One was handed to me by a pale neighbor, who did not look as though he had a spark of humor or satire in his composition wherewith to grieve. Many people seemed to have private preoccupations, and to be present in that purely formal spirit which the dead author was fond of holding up to ridicule. He would probably have described me as laboring under suppressed anxiety to avoid the gutterings of other people's candles and my own, and to observe the ways of my neighbors. There was a general sense of unrest among the audience, the only persons utterly unconcerned being apparently a number of poor children who had certainly never read Saltykoff, if indeed they even knew their letters.

Our candles were taken away, the service ended; the students joined hands in a cordon round the coffin, the wreaths were removed, the coffin-lid unscrewed, and the relatives and friends began the final farewells. At this point I beat a retreat. At the gate of the cemetery I was surrounded by an eager throng of cabmen, who hailed my appearance as a sign that their weary wait was at an end. Perceiving that it betokened nothing of the sort, they cried, "Bárinya, *isn't* that funeral over yet?" When I told them what stage it had reached, they groaned gently, in their good-natured way, laid in a fresh supply of sunflower-seeds from a neighboring peddler, and chewed away patiently in the rain, as they leaned up against the shops for the sale of gaudy wreaths and the loan of hot water and crockery for thrifty visitors from a distance. The funeral ended after three o'clock, making over six hours in all that it had lasted. Not all funerals here are as fatiguing as this one. But certainly a Russian funeral in general, with the services twice a day in the house of the deceased, the crowd, the close atmosphere, the walk of respect behind the hearse, for a longer or shorter distance, often in inclement weather, and the long services at the church and grave, must suggest a wonder that one or two deaths more do not follow immediately in the same family. And the funeral of a literary man is even more of a strain to relatives and friends.

ISABEL F. HAPGOOD.

Correspondence.

CHAUCER SOURCES.

TO THE EDITOR OF THE NATION:

SIR: The statement made in the review of Professor Skeat's edition of Chaucer's Minor Poems, that translation from an author might be used in the sense of translating him, leads me to the consideration of a question which may be of interest to Chaucer scholars.

The prologue to the "Legend of Good Women" contains, as is well known, a partial list by Chaucer himself of his own works. An earlier version of this prologue was printed by the late Mr. Bradshaw in 1864, which differed in many particulars from the standard one. It was remarkable among other things for mentioning the title of a hitherto unknown work, of which the poet claimed the authorship. After saying that he had translated Boethius in prose, he adds:

"And of the Wrechede Engendrynge of Mankynde,
As man may in pope Innocent I-finde."

This is assumed to be a lost prose translation of the treatise of Pope Innocent III., entitled 'De Contemptu Mundi, sive de Miseria Conditionis Humanæ.' My purpose is to show that the probabilities are that this translation, so far as it ever existed at all, exists now.

In Chaucer's great work, the "Man of Law's Tale" (a tale, it may be added, utterly unsuited to the character to which it is assigned) is introduced by a proem on the evils of poverty. It is attached to the poem of which it forms a part by the slightest of ties, and has indeed no real connection with it. Now, four of the five seven-line stanzas of which this proem consists are really a translation of part of the sixteenth chapter of the first book of Pope Innocent's treatise, which has for its heading the title "De Miseria Divitis et Pauperis." As this treatise is not usually accessible outside of large libraries, I subjoin the Latin text, which will enable all students of the poet to see clearly how closely he followed the original:

"Pauperes enim premuntur inedia, cruciantur ærumna, fame, siti, frigore, nuditate: vilescunt, tabescunt, spernuntur, et confunduntur. O miserabilis mendicantis conditio; et si petit, pudore confunditur, et si non petit, egestate consumitur, sed ut mendicet, necessitate compellitur. Deum causatur iniquum, quod non recte dividat; proximum criminatur malignum quod non plene subveniat. Indignatur, murmurat, imprecatur. Adverte super hoc sententiam Sapientis: Melius est, iniquit, mori quam indigere (Eccli. xl). Etiam proximo suo pauper odiosus erit (Prov. xiv). Omnes dies pauperis mali, fratres hominis pauperis oderunt eum. Insuper et amici procul recesserunt ab eo (Prov. xix)."

"The Man of Law's Tale" is itself a translation from the French; but to the immediate original Chaucer added about 350 lines. Some of these were taken from this same treatise of Pope Innocent. The stanza beginning with line 323 (edit. Morris) is translated directly

from the twenty-third chapter of the first book, as the following extract shows:

"Semper enim mundanæ lætitiæ tristitia repentina succedit. Et quod incipit a gaudio, desinit in moerore. Mundana quippe felicitas multis amaritudinibus est respersa. Noverat hoc qui dixerat: 'Risus dolore miscebitur, et extrema gaudii luctus occupat.' . . . Attende salubre consilium: 'In die bonorum, non immemor sis malorum.'"

Again, the stanza beginning with line 673 is translated from the following passage in chapter xix of book ii entitled "De Ebrietate":

"Quid turpius ebrioso? cui fetor in ore, tremor in corpore, qui promittit multa, prodit occulta, cui mens alienatur, facies transformatur? 'Nullum enim secretum ubi regnat ebrietas.'"

The stanza beginning with line 828 is taken from chap. xxi of the same book, entitled "De Luxuria," though portions of it are adopted from phrases in other chapters. The following sentence, however, is directly translated:

"O extrema libidinis turpitudo, quæ non solum mentem effeminat, sed etiam corpus enervat, non solum maculat animam, sed foedat personam."

Finally, the first part of the stanza beginning with line 1,037 is a translation of the following sentences in chap. xxii of book i, entitled "De Brevi Lætitia Hominis":

"Quis unquam vel unicum diem totum duxit in sua delectatione jucundum, quem in aliqua parte diei reatus conscientiæ, vel impetus iræ, vel motus concupiscientiæ non turbaverit? Quem livor invidiæ vel ardor avaritiæ, vel tumor superbiæ non vexaverit? Quem aliqua jactura, vel offensa, vel passio non commoverit?"

But this is not all the obligation which Chaucer is under to this treatise. Much of the discourse upon gluttony and the appetite delivered by the Pardoner in his tale is taken from the second book of this same work, especially from the seventeenth chapter "De Gula." Even the somewhat singular phrase "turnen substaunce into accident" is nothing but a translation of the Pope's phrase, *substantiam convertit in accidens.*

It seems to me that the weight of evidence is in favor of these scattered versions being the translation of which the poet spoke. It is, of course, possible that he may have made a prose translation of the whole as he made a verse translation of a part. This he actually did in the case of Boethius. But the fact that in his revised version of the prologue to the "Legend of Good Women" he withdrew all reference to any translation at all, seems to militate against the view that he had ever produced a complete version of the work.

I may be permitted to add that unsuspected sources of Chaucer's text can doubtless be found by examining carefully the authors to whom he makes most frequent reference. In the 'Parlement of Foules,' for instance, occurs the following verse upon the subject of dreams:

"The wery hunter, sleping in his bed,
To wode ayein his mynde gotn anoon;
The juge dremeth how his plees ben sped;
The carter dremeth how his cartes goon;
The riche of gold; the knight fight with his foon;
The sike met he drinketh of the tonne;
The lover met he hath his lady wonne."

This is taken very largely from the preface of Claudian to his Panegyric upon the sixth consulship of Honorius, as will be seen by comparing it with the following extract:

"Venator defessa toro cum membra reponit,
Mens tamen ad sylvas et sua lustra redit.
Judicibus lites, aurigæ somnia currus,
Venaque nocturnis meta cavetur equis.
Furto gaudet amans, permutat navita merces,
Et vigil elapsas quærit avarus opes.
Blandaque largitur frustra sitientibus ægris
Irriguus gelido pocula fonte sopor."

T. R. Lounsbury.

New Haven, June 29, 1889.

THE SOUTH FORK FISHING CLUB.

To the Editor of The Nation:

Sir: In a communication relating to the South Fork Fishing Club, published in the *Nation* of June 20, "E. C. V." says: "If they [*i. e.*, the members of the Club] are at all responsible for this horrible destruction and woe, it can only be because they are not educated civil engineers, and have consequently been obliged to accept the statements of those who are as to the safety of the dam." In justice to the engineering profession, will you kindly state that neither in the reconstruction nor in the maintenance of the dam was there *any* engineering supervision whatever? The above statement is made on the authority of the *Engineering News* of June 15, 1889. C. E.

Cincinnati, June 26, 1889.

Notes.

Funk & Wagnalls have in preparation a new 'Encyclopædia of Missions,' with maps, diagrams, and a copious index.

Houghton, Mifflin & Co. announce that Mrs. S. J. Higginson is writing a book on Java for their "Riverside Library for Young People." They will begin their biographical series of "American Religious Leaders" with Prof. A. V. G. Allen's 'Jonathan Edwards,' which is to be published in the fall. During the present month the same firm will bring out a new edition of that deserving work, 'Colonial Times on Buzzard's Bay,' by William Root Bliss, which the public rapidly took up. New matter and new illustrations are promised.

On July 20 D. C. Heath & Co. will issue 'An Introduction to the Study of Shakspere,' by Prof. Hiram Corson.

Ginn & Co. have nearly ready 'Fractions: A Teacher's Manual of Objective and Oral Work,' by Helen F. Page of the Connecticut State Normal School.

Dr. William Edward Simonds of Cornell University publishes a monograph upon 'Sir Thomas Wyatt and his Poems' (Boston: D. C. Heath & Co.), in which he endeavors to set the poems in a true order, and to extract from them confirmation for the theory that Queen Anne Boleyn was the object of Wyatt's love. He gathers first all the meagre notices of the poet's career and makes a biography, then examines the state of the text, and finally passes to the uncertain ground of interpretation. The work is done in the spirit of German scholarship, and if it should lead to a proper editing of the text of the poems, which is in a very unsatisfactory condition, it would have its best result. That a poet historically so important as Wyatt should have been so long neglected, is discreditable.

The late Mr. William D. O'Connor wrote before his death a paper upon 'Mr. Donnelly's Reviewers,' which is now issued as a pamphlet (Chicago: Belford, Clarke & Co.). It takes up the critical notices of leading journals and replies to them—in some cases, notably that of Mr. Appleton Morgan—with some success, but with more pungency. The author makes his subject an occasion for falling upon the reviewer's business without mercy, and calls upon the publishers to abolish it altogether.

Rabbi David Philipson, D.D., has collected in a small volume his lectures upon 'The Jew in English Fiction' (Cincinnati: Robert Clarke & Co.), in which he reviews the Jewish characters of Marlowe, Shakspere, Cumberland, Scott, Dickens, Disraeli, and George Eliot, and attempts to show wherein these writers are correct or fanciful in their delineations. The burden of the volume, however, seems to be that the Jew is characterized as such by his religion, and not by evil passions which he shares with men in common. He asserts that the Jew has now become nationalized in the liberal lands where he is born, and should not be regarded as more distinct from the community than Protestants or Catholics. Of the noticeable virtues of the Jews he has much to say; their vices, on the other hand, are not different from those of the Gentiles. The position is well defended, and the argument makes strongly for toleration.

'That Unknown Country: or, What Living Men Believe concerning Punishment after Death; together with recorded views of men of former times. The whole field explored, every source of wisdom, past and present, made tributary to this theme—Man's Final Destiny. A standard book for all time. Illustrated with a full-page engraving of each author. Sold only by subscription. C. A. Nichols & Co., Springfield, Mass.' We quote the above title at full length because itself serves some of the purposes of a notice, though the book is not so entirely bad as the title is. The volume, which is naturally enough a bulky one, is the result of the expression by fifty or more eminent scholars and divines of their imperfect knowledge of everlasting punishment. One is tempted to apply to it Mr. Lincoln's immortal criticism—that people who like that kind of a book will doubtless like this one very much. How far they are identical with the "general reader," we will not attempt to say.

Of Sir George Grove's 'Dictionary of Music and Musicians (1450-1889)' (Macmillan) we have spoken repeatedly in the course of its protracted publication, and we need not renew our commendation of it as the best in our own or in any language—an invaluable accession to our works of reference. It is but just now completed by the issue of volume iv, which contains an Appendix of some 300 pages, embodying a great number of new articles, corrections, and additions. New, for example, are the biographies of Gottschalk, Adelaide Phillipps, Stephen C. Foster (author of "Old Folks at Home" and so many other American popular songs), Campanini, and Dvořák; and these general articles: Part-writing; Carol; Dance Rhythm; Coronach; Episodes; Humorous Music—a very interesting view of a narrow field dominated by Beethoven; Negro Music, with special indebtedness on the writer's part to the pioneer collection, the 'Slave Songs of the United States'; Histories of Music, in four pages of fine print; Collections of Musical Instruments, in which New York does not figure, though it has a good beginning; English Metrical Psalter, treated in 13 pages; Gregorian Tones, etc. The "Harmonious Blacksmith" is recalled for a discussion as to its authorship, which Handel's free borrowing makes à priori not improbably another's. Important additions and revisions are given to the article on Musical Libraries. Boston Musical Societies and the Boston Mendelssohn Quintette Club are noticed for the first time. Under Beethoven we now get a catalogue of his printed works; under Mozart, a consideration of works falsely attributed to him; under Chopin, a list of his piano-forte solos; under Liszt, a deal of fresh and agreeable information, not omitting reference to that monument to his generous character, the 'Correspondence with Wagner.' A few columns of "Final Additions" are chiefly occupied with obituaries, as late as April 6 of the present year. Dr. Grove tells us in the preface that we have yet to expect a copious index of the whole four volumes, which has

been prepared by Mrs. Wodehouse, and will make a separate volume.

T. Y. Crowell & Co., pursuing their plan of popularizing Tolstoi, have just put forth, in paper covers, 'My Confession' and 'Ivan Ilyitch; Family Happiness,' etc.

The supplement to Cassell's *Magazine of Art* called 'Royal Academy Pictures' presents, in the main, excellent process memoranda of between eighty and ninety paintings and sculptural pieces of the late exhibition, the 121st. No artist is allowed more than one example. As there is no text by way of criticism, though the editor ventures to designate Mr. Orchardson's "Young Duke" as "the finest work in the whole collection," our readers may like to compare these plates with our recent London letter on the Royal Academy. It will then appear how restricted is the rôle of "process"—form being all it can be depended on to preserve. Its breakdown on the color side is well exhibited in the case of Mr. Wauters's "Seamew's Nest."

The July number of the *Andover Review* will contain an article by Mr. A. Taylor Innes of Edinburgh, giving an account of the progressive movement in the Scotch Free Church which has just culminated in the election of Dr. Marcus Dods to the New Testament chair in Edinburgh College, and the appointment of a committee to report on a revision of the standards.

The adaptation of Central Asia to Russian colonization was the subject of a recent address before the Russian Geographical Society, published in *Petermann's Mitteilungen* for June, by Gen. Annenkoff, the builder of the Transcaspian Railway. It is of importance as indicating the policy of the Government in respect to its new territory. After dwelling upon the physical characteristics of the country, with special reference to the changes of its river beds, the writer states that investigations have shown that a very considerable part of the soil in the old basin of the Oxus is composed of the loess which covers nearly the whole of northern China and has proved of such extraordinary fertility. Borings have been made to the depth of sixty feet without reaching the bottom of the loess, which is identical in its chemical elements with that in China, and only needs irrigation to be as fertile. The desert sand in places is diminishing, especially along the line of the railway, where vegetation is increasing. This is partly owing to the setting out of plants, and partly to the order prohibiting the cutting of any plant within three miles of the railway on either side. Gen. Annenkoff proposed in conclusion that the following measures should be carried out: the publication of all necessary information in regard to this region for the use of intending colonists; the study of the best systems of artificial irrigation and their application to Central Asia; and the establishment of agricultural schools in which instruction should be given in the cultivation of cotton, silk, the vine, hops, and wheat. Among the other articles in this number is one on erosion by the tides, with a map of a part of the Bay of Fundy, and one on Oklahoma, with an excellent map of the Indian Territory.

Dr. F. Nansen, the hardy explorer who made last fall the first successful attempt to cross Greenland, arrived in Copenhagen about a month ago, and has published a brief account of his expedition. This has been translated into French, and appears in a supplement to the *Temps* of June 8. It is a most modest recital of only the chief events that marked a difficult and dangerous journey. The party set out from Christiania on a sealer which left them on the ice off the east coast of Greenland on July 17, 1888. It was twelve days before they could make a landing, and in that time they had drifted south about 280 miles. It was not till the 10th of August that they made their way back again to Umivik, the point from which they intended to start. Here they packed their provisions and instruments into five sledges, to be dragged by hand, and set out inland. The country rose slowly till at about the 1st of September they reached an elevation of 9,000 feet. They were now on "an extensive plateau, like a frozen sea." Much hardship was encountered in traversing this, the temperature being as low as 50° centigrade at times, and the weather severely stormy. On the 19th of September they reached the edge of the western slope, and started on a rapid descent, which was full of danger from the numerous hidden crevasses. On September 26 their goal was reached: the inland ice had been crossed. They had traversed 300 miles in about forty days. By the 12th of October all the members of the party had arrived at Godthaab, and the expedition was finished.

Richard Kiepert has charted for the *Journal* of the Berlin Geographical Society the routes of the late African traveller, E. R. Flegel, and three sheets are given in No. 140–141. Flegel was, as Kiepert tells us, an untrained observer, and, feeling his deficiencies, attempted to make up in abundance what he lacked in accuracy of details. His diaries have been used in making the maps here given of the Benué, the eastern tributary of the Niger.

La France Littéraire, the *filia pulchrior* of the lovely and reputable *Décadent*, is dead—dead ere its prime. It may also be said that it has not left its peer, and that the literary atmosphere of France is all the clearer on this account.

—The July *Century* utilizes as a frontispiece a beautifully engraved cut of Mr. Cole's from Gentile da Fabriano. It is a "detail" from his picture of the Adoration of the Kings in the Florence Academy, but, as the portion selected is the heart of the painting, it is more completely illustrative than the description suggests. Mr. Stillman's accompanying text is admirable, though Mr. Cole's own note shows better the enthusiasm of the artist in the work before him, independently of all historical and critical questions. Public attention cannot be too repeatedly drawn to these remarkable reproductions of early Italian art, in which everything but color is so sympathetically rendered. The cuts which accompany in this number Mrs. Van Rensselaer's article upon Winchester Cathedral are also noticeably beautiful. Mr. Kennan exhibits a good deal of pleasure at his success in outwitting the military official stationed at the Kara mines, and draws his portrait with unsparing power; he sets the man's weaknesses before the reader almost with malicious reality, but deservedly, and with a lifelikeness that might be the despair of the realistic novelist. What he learned from the political prisoners, however, he does not tell, but only describes the night meeting which he attended in one of their cabins; the effect of their revelations upon his own acute sympathies is made plain almost unconsciously. The decoration of the steamer *Puritan*, the general subject of presentiments and visions, the early Irish, the Indians as they appear on their reservations, and the renomination of Lincoln, are the remaining topics.

—It is with regret that we note the last of Miss Preston's papers upon Cicero in the *Atlantic*. In this number we have the story of the last days and the death, told with the same grace and penetration of character on its refined side which have made the series at once attractive and valuable. Such essays are best fitted to give the non-classical reader a taste of the spirit of what was noblest in old Rome, and of the interest which makes Latin literature charming to the lover of cultivation; nor do we call to mind any interpreter among ourselves whose work has been so successful as Miss Preston's. Agnes Repplier contributes a pleasantly humorous piece upon the "Books that have Hindered Me," in which satirical spirits will find something to their mind. The author's gain in lightness of touch since her first appearance is particularly evident in this paper. Miss Jewett, whose hand we look for with most certainty in this magazine, especially when her story is of the best, contributes a brief character and wayside sketch, in which she puts into a little space an astonishing amount, outdoing herself in conciseness and completeness of expression. Her work artistically is work to be modelled after. Mr. Nelson raises the common question of the abuse and danger lying in the Speaker's power in Congress, with a side glance at the filibuster. Mr. Downes continues his previous artistic papers with one upon the old masters in the Metropolitan Museum, and Prof. Shaler writes with cheerfulness about college discipline, in the new scheme of which at Harvard he has a ready faith.

—*Scribner's* is devoted, with the exception of an article on the telegraph, to fiction. There are six short stories, and a comedietta in one act which may be regarded as a seventh. As a whole they are not likely to fill the discerning critic with superfluous pride in the resources and power of the American school. It is likely that in preparing a special fiction number the magazine would make some effort to obtain unusually excellent stories; but these are distinctly the work of mediocrity. There is, too, in several of them, a lack of finish and of compacting in the narrative which is not so easily excused in our days. We expect the manner to be correct, however dubious we may think the prospect of matter in what is said. The subjects are sufficiently varied, and range from a Kentucky horse-race to the glaciers of the Alps, from the quiet of the Redwood Library at Newport to the violence of a cyclone which tears a train apart and steals a carload of silver bricks. These excursions of the imagination are interleaved with bits of poetry, five in number, of the same commonplace character, which may also be reckoned as fiction. The reader, somewhat cloyed by the unchanging diet, turns to Mr. Stevenson's romance with relief, and finds at least something to interest him. With that he may best rest content, and not permit himself to experience what the Howellsian comedy can become in the hands of the last contributor.

—A too tardy tribute has just been paid to Douglass Houghton in a memoir of 300 pages by one of his associates, Alvah Bradish. Houghton was a martyr of science, being drowned forty-four years ago in Lake Superior, the shores of which he was well-nigh first to explore. As early as 1832 he was with Schoolcraft at the source of the Mississippi. As the first State geologist of Michigan, which is now foremost in the production of copper, salt, and iron, he discovered her wealth in these staples. His revelations were at first discredited by Silliman and other wise men of the East, but were confirmed wherever miners followed his lead. His career early illustrated the value of the Rensselaer Institute, which, when he studied there, was the only scientific school in the

country. The arduousness of early surveys comes over us with cumulative force as we trace the manifold and year-long perils and privations of Houghton. His death was only after scores of hair-breadth 'scapes. He was lost in October, 1845, and his remains were not found till the lake opened in the spring. They were buried in Detroit. He has a cenotaph on the University grounds at Ann Arbor, where he was a professor. His chief geographical monument is his name given to the county on the shore of which he perished, as well as to its capital, which is one of the two largest copper-mining towns. But whoever would understand the merit of the man must read not only his memoir, but the reports of his surveys, which fill more than half the volume. His years were thirty-six, but, as was said of Enoch, the most short-lived antediluvian, "being made perfect in a short time he fulfilled a long time."

—MM. Hachette & Cie., publishers of the great 'Atlas Universel' of MM. Vivien de St.-Martin and F. Schrader, the preparation of which is now finished and its publication going on, have just begun the issue in monthly parts of a smaller 'Atlas de Géographie Moderne,' which will contain sixty-four maps, thirty by forty centimetres in size. This will be edited by M. Schrader, with the assistance of M. F. Prudent, of the Service Géographique of France, and M. E. Anthoine, Chief Engineer of the Service de la Carte, who will use in its preparation the collections that were made for the larger work. The first *livraison* is just out, and two of its maps—those of Switzerland and of the Russian Empire—have been given as supplements to the *Temps* and the *Figaro*. These seem to us excellent, especially the map of Switzerland. Tints and shadow are so cleverly used as to give a very clear and striking impression of the physical geography of the country, as well as its outline and the position of towns and rivers and mountains, which is all that one finds on an ordinary map. Another thing worthy of praise is, that the editors have not made their map a maze and labyrinth of proper names. Not too many place-names are given, and these seem to have been chosen with judgment and carefulness.

—At the annual meeting of the Société d'histoire diplomatique, which was held in Paris on the 29th of May, the Marquis de Gabriac read a very interesting account of a journey into France which his maternal grandmother, the Duchesse de Guiche, made in the year 1801. This account was written by the Duchess herself. She was living in London in 1801, and was one of the body of French nobles who formed a sort of little court for the Comte d'Artois. The princes sent her over to France charged with the delicate mission of trying to find out whether the First Consul was well enough disposed towards the monarchy to be willing to assist in its restoration. The Duchess tells the story of three interviews that she had on this subject, with Maingnaud, Fouché's commissary at Calais, with Fouché himself, and with Josephine, the wife of Bonaparte, at Malmaison. Fouché and Maingnaud humored the royalist sentiments of the noble lady, but told her plainly that the choice of England for a place of refuge by the royal princes had had a very bad effect in France; that the country was not pleased to see them consort with its worst enemies, and especially that it found the intimacy between the Comte d'Artois and the bloodthirsty Duke of Portland very offensive. The Duchess replied that the Duke of Portland was a stupid and sensual person, who cared a good deal more for wine than he did for blood. Whereupon Fouché: "On n'a pas besoin d'être spirituel pour être sanguinaire!" "Oh, nous le savons bien," the Duchess retorted, looking at him fixedly. Before this, Fouché had said: "The French have always been brave, but just now they have completely fallen in love with military glory. They absolutely require a soldier for their head. The restoration of the legitimate monarchy at this moment is impossible. *Moi et Bonaparte*, we should like it, but we could not do it." Josephine showed herself very royalist; she assured the Duchess that Bonaparte would repulse with horror the thought of being a usurper. But she complained, as Fouché had done, of his bad surroundings. The parvenu generals and officers would fear, in case of a restoration, that they would be sacrificed to the noblesse. She also pointed with pride to the efforts her pious husband had made to inspire his lieutenants with correct religious sentiments. She said that Lannes, in particular, professed a thorough conversion.

—One can well imagine the thrill of surprise and incredulity that must have run through the audience at the reunion of the Société de Biologie in Paris on June 12, when its President, the illustrious Dr. Brown-Séquard, mounted the tribune and began his address thus: "Gentlemen, I believe that henceforth the question of the rejuvenation of existence may be studied and resolved by the aid of the present data of science." But even a vivid imagination can hardly picture the mingled emotions with which his hearers must have listened as he went on slowly and gravely to unfold his story of the studies and experiments in the renewal of life and youth that have occupied him now for more than twenty years. Dr. Brown-Séquard believes that he has discovered the secret of perpetual youth—nay, more, that he himself is experiencing rejuvenation, and is become ten years younger than he was when he made the first trial of his method upon himself on May 15. We will not even try to sketch the outline of the discovery till we have received the full text of his address in the *Bulletin Médical*. The whole first issue of the number which contains it was sold almost instantly, and no copy was to be had at the time of the last mail. It shall be enough to say that Dr. Brown-Séquard's process consists in the subcutaneous injection of a fluid containing particles of the living organs of certain young animals, like guinea-pigs, etc. As yet, of course, nobody has a right to any opinion whatever on the announced discovery. Dr. Brown-Séquard's authority is of the greatest, but until the personal equation in his experiments and observations has been determined one cannot tell what weight they carry. It is possible that even a very great savant may have been self-deceived and been self-cured of age by "faith," or what Feuchtersleben calls "the dietetics of the soul." But the new theory will at once be tested by many men and in many ways, and the world will watch intently to see whether it shall prove true or not.

—A couple of months ago we noticed at some length the report of Dr. Dujardin-Beaumetz upon hydrophobia in the Department of the Seine, and its successful treatment by the method of M. Pasteur. This report showed that under Pasteur's treatment the death-rate in hydrophobia had been lowered from the 14 to 16 per cent. reported some years ago by Drs. Brouardel and Leblanc to only 1.04 per cent. The statistics of the Institut Pasteur for the year ending May 1, 1889, have just been presented to the Académie des Sciences, and they show a considerable reduction even of the last low figure. During the year, 1,673 patients who had been bitten by animals believed to be mad received inoculation at the Institut; of these only thirteen died—three after treatment, and ten while the treatment was still going on. This brings the rate of mortality down to a little less than .78 per cent. If this success shall continue (and there seems to be no reason why it should not), the panegyric on Pasteur which M. de Vogüé delivered the other day in his address at the Academy reception will not be thought extravagant.

RECENT MUSICAL LITERATURE.

Chopin, and Other Musical Essays. By Henry T. Finck, author of 'Romantic Love and Personal Beauty.' Charles Scribner's Sons. 1889.

The History of German Song. An account of the progress of vocal composition in Germany from the time of the Minnesingers to the present age, with sketches of the lives of the leading German composers. By Louis C. Elson. Boston: New England Conservatory of Music.

Lessons in Musical History. By John Comfort Fillmore. Philadelphia: Theodore Presser.

Operatic Tales. By F. R. Chesney. Scribner & Welford. 1889.

THE rapid growth of our nation's musical literature is one of the most interesting as well as significant features of the progress of the art in America. The current number of the London *Musical Times* makes the frank acknowledgment that "American musical critics are beginning to be read in England," and extends a cordial welcome to Mr. Finck's essays and to Mr. Krehbiel's annual record of musical performances in New York. Other writers whose works have appeared during the past three or four years might well have shared the same welcome. It is equally if not still more gratifying to know that these works are meeting with extraordinary favor in the United States, all of which demonstrates a steady and healthy growth of American musical taste and scholarship.

Mr. Finck's volume of essays is marked by an originality of thought and boldness of treatment, particularly in the sketch of Chopin, which will be sure to challenge attention on all sides, and perhaps to invite criticism from some who do not go as far as he in their admiration of the great genius of the piano-forte. His work includes, besides the Chopin essay, a paper showing "How Composers Work," "Schumann, as Mirrored in his Letters," "Music and Morals" (which is refreshing reading after Haweis's rhapsodical and watery treatment of the same theme), "Italian and German Vocal Styles," and "German Opera in New York." The Chopin essay was not needed to revive an interest in that master, and it is evident this was not the object Mr. Finck had in view. The Polish composer still dominates the programmes of piano recitals, and the test question applied to every prominent player is, "How does he play Chopin?" Mr. Finck's purpose was rather to establish a title to the exalted place which he claims for the great tone-poet in the musical Pantheon, and he leaves the reader in no uncertainty on this point.

"No doubt Chopin is in some respects inferior to Bach and Beethoven, but in other respects he is quite as unquestionably superior to them." "Chopin was the piano-forte genius *par excellence*, and in his field he stands above the greatest of the German composers, what-

ever their names." "Some years ago I wrote in the *Nation* that if all piano-forte music in the world were to be destroyed, excepting one collection, my vote should be cast for Chopin's preludes." "Chopin is the composer for the few, and he is the composer *par excellence* for musicians. From him they can get more ideas, and learn more as regards form, than from any one else, except Bach and Wagner."

This is high praise, but why is Beethoven omitted, from whom Wagner himself derived both ideas and form? Mr. Finck not only states his claim, but propounds his reasons with an audacious enthusiasm which will be sure to enlist the attention even of those who may consider them heterodox. The latter will not relish his onslaught upon what he styles "æsthetic Jumboism," or the proclivity to admire productions and results simply because they are mammoth. He dwells upon this point with great force and at considerable length, and it is sound, healthy doctrine. He also finds that the German tendency to depreciate Chopin grows out of Teutonic and Slavic antipathies, which is also a point well taken. In following the natural drift of his subject he also throws many side-lights upon Chopin and his works which are of extreme interest. He particularly calls attention to many of his compositions which are almost unknown to modern répertoires, and makes a scholarly criticism in declaring against the practice of arranging his piano-forte pieces for the orchestra. His remarks upon Chopin's use of the pedal and of the *tempo rubato* and his innovations in accent will command the approval of all thoughtful musicians.

Some, however, will not be so quick to accept his strictures upon the sonata form and Chopin's relations to it. We shall readily agree with him that Chopin did not write sonatas *con amore*, but can hardly concede that "the sonata form could not master him." Even if Haydn and Beethoven had not exhausted that form, Chopin's temperament was not in touch with it any more than it was with the orchestral or with any form requiring severe study of polyphony, much as he needed it for his complete expression. Chopin was more unacademical and unconventional even than Beethoven. We doubt if it was so much the form of the composition as the form of the composer himself that stood in the way. As to the general dictum which underlies this essay, however, namely, that Chopin is the greatest genius of piano-forte music, there can be little doubt of its strict correctness. Mr. Finck evidently shares the opinions of George Sand, who was in a position to speak with authority. Somewhere she says:

"The day will come when his music will be regarded as superior to anything in the piano partitur, and then everybody will know that this genius, as vast, as complete, and as learned as the greatest masters whom he resembled, preserved an individuality more exquisite than that of Sebastian Bach, more powerful than that of Beethoven, still more dramatic than Weber. He is all three united and he is still himself. The whole of Mozart alone is superior to him, because he has more of the calmness of health, consequently more of the fulness of life."

In this individuality of Chopin lies his power as well as his greatness. More than any other composer, he individualized the piano, recognized and developed the organ of speech which belongs to it, and made it speak its own language. Mr. Finck has fully recognized this, and he states his beliefs with an enthusiasm, boldness, and suggestiveness which, while they will offend no one, may at least have the result of setting those to thinking who cannot fully agree with him.

We have devoted the most space to the opening essay because its importance warrants it, and because it is destined to open up a profitable discussion upon the true place of Chopin in the musical world; but at the same time the reader will not do wisely to neglect the remaining essays, which, though briefer, are charmingly written, and extremely interesting in subject. The last two, on "Italian and German Vocal Styles" and "German Opera in New York," show that the writer is as ardent a lover of Wagner as of Chopin, notwithstanding the radical dissimilarity in personality and style, as well as in theories, of the two. He is a most zealous champion of German opera, but let him not exult too heartily. Italian opera, English opera, opéra bouffe, even "Pinafore," have had their day when they eclipsed all other forms, only in turn to be eclipsed themselves by some new comer. It is German opera now. What will come next?—for it is the fate of opera in this country to be governed by the laws of fad. Nevertheless, Mr. Finck has written a book which will command admiration in all quarters, though it may fail to command assent in some. It is an exceptionally valuable contribution to American musical literature.

In the 'History of German Song,' another exceedingly creditable contribution has been made to our musical literature by Mr. Louis C. Elson, the accomplished critic of the Boston *Advertiser*, whose industry, ability, and scholarship find numerous opportunities of employment in criticisms, essays, correspondence, magazine contributions, and active work in connection with the New England Conservatory of Music. Notwithstanding his many occupations, he has found time to write a well-considered and discriminating treatise on German song, dedicated to Robert Franz, and not without significance, for in one of his letters Franz writes: "There is no doubt that the basis of all musical forms is the vocal and not the instrumental style." The title of Mr. Elson's book is somewhat of a misnomer, though the sub-title satisfactorily explains it. It is in no sense a history of the German *Lied*, as one might fancy at the first glance. It has a much wider scope, and aims in a general way to cover the ground of vocal composition in Germany from the time of the Minnesingers, and their successors, the Mastersingers, to the present. He begins with Wolfram of Eschenbach, and closes with Wagner, and the journey leads to many pleasant discursions, such as the etiquette and habits of the Minnesingers, and the instruments employed by them; the contests of the Mastersingers, and their pedantries, which Wagner has burlesqued; the ancient dances of Germany; organ-playing, especially as it was developed by Sebastian Bach; the influence of Goethe and Heine upon music, and Wagner's operatic innovations and reforms.

The main subject of the book, however, is always kept in view, and the discursions do not mar its continuity. The history of the Minnesingers and their influence upon the art, considering the necessarily brief space devoted to it in the general scheme, is excellently treated, though it would have added to its completeness had the distinction between the *Minnelied* and the *Spruch*, or the love songs that were sung and the didactic poems that were spoken, been clearly indicated, since the latter are among the finest instances of the art of the representative Minnesinger, Walther von der Vogelweide. The chapter devoted to the Mastersingers is an admirable statement of the artificial and pedantic methods of the Tabulatur and of the practices of the musical guild, which, alas! produced but one really great name, Hans Sachs, the cobbler of Nuremberg. The disappearance of the Mastersingers is followed by the folk-songs, the *Marienlieder*, and the chorales, and these bring our author down to the rise of secular and operatic music in Germany, leading up to Handel, Mattheson, Bach and his sons, Haydn, Mozart, and Beethoven. The chapters devoted to these composers are in the form of excellent condensed biographies, which are specially noticeable for their accuracy of statement and the absence of the romantic and rhapsodical speculations which are so often found in sketches of this kind.

In his statement of the origin of operatic composition in Germany, Mr. Elson says: "It was the Italian opera of 'Daphne,' by Rinuccini, which had the honor of first representing the new school in Germany." This is hardly exact. Rinuccini only wrote the poem of "Daphne." The original music to it was written by Jacopo Peri (1597). The version of this poem of "Daphne" which was produced in Germany was entirely German. The text was translated by Martin Opitz, and the music was set by Heinrich Schütz, chapelmaster to the Elector of Saxony, who also revised, if he did not entirely rewrite, the text. It was, as Mr. Elson says, the first opera performed in Germany, and it was also the first opera written by a German, though not the first genuine German opera, as it was clearly a reflection of the Italian.

The remainder of Mr. Elson's essay is devoted to the Lied composers, Schubert, Schumann, Franz, Mendelssohn, Brahms, Rubinstein, Jensen, and Karl Loewe, the ballad composer, closing with an excellent sketch of Wagner and his works. Whether we consider the biographical or critical contents of these sketches, they are alike admirable, and deserve to be carefully digested by the musical student. They show the conscientious work of a true scholar and the skill of the trained critic. A short paper on "The Last Hours of Great Composers," which seems to be apart from the main purpose of the volume, though it has an interest of its own, closes the book.

Mr. Fillmore has been identified with the cause of musical education, especially at the West, for many years. His name has long been a familiar one at all gatherings of instructors and in the annual national conventions of teachers. His little volumes have also been educational in character, the latest addition to which is 'Lessons in Musical History.' It is, as its name indicates, a text-book, not only compiled for purposes of reference, but designed for class work, as is shown by the lists of questions following each chapter, and might be utilized for grammar or even high-school and academy purposes. The general scheme of the author has been to present in a compact space a history of music from the earliest times to the present, with necessarily brief biographical sketches of the prominent composers, and passing references to others, as well as notices of their work. Mr. Fillmore's book presents only the outlines of this history, and yet it is far from being a primer or a bald statement of generalities. Its information is well digested and singularly accurate, and interwoven with it are pithy criticisms, which must prove of value to musical pupils, and suggestions of a highly practical nature. One such is contained in the preface, in which, after enumerating various works which the student should read, he pays a well-deserved tribute to Riemann, the German historian, essayist, and theorist. We can heartily endorse his commendation. Every one of Riemann's numerous works deserves to be carefully translated into English, and should be in every student's library. We

cannot follow Mr. Fillmore, however, in his recommendation of the Rev. H. R. Haweis's utterly useless disquisition on 'Music and Morals,' or his 'Musical Memories' as "excellent reading." A very important and altogether praiseworthy feature of the volume is the comparative table of chronology which forms its appendix. It is very neatly arranged, and correlates with the history of music the most important events in art, science, literature, religion, politics, and sociology. It was a very happy thought, and is highly creditable to Mr. Fillmore's scholarship. The contents of the book are presented in very neat form, which makes one regret all the more that the proof-reading is now and then defective; the errors, however, being mainly typographical.

It is not exactly clear why Mr. F. R. Chesney should have written his 'Operatic Tales,' or what useful purpose they can subserve. The author, who is an Englishman, has selected twenty-three operas, nearly half of which are already shelved, and tells the story of them in a rambling way. It is not easy to discover the standards of his choice. Why, for instance, should he have selected "Lohengrin" and "Die Meistersinger" of Wagner, and "Aïda," "Louisa Miller," "I Vespri Siciliani," and "Un Ballo en Maschera" of Verdi, and left other and still more important works of these composers unmentioned? Perhaps his answer is contained in the preface: "It has been suggested that a series of tales on which operas are founded might supply a want in current literature. Those which have been selected in this volume have, it is believed, never before appeared in a similar garb." The answer, however, is not creditable to Mr. Chesney's musical reading. The story of every one of these operas (and many more) will be found in the sumptuous work, 'Beauties of the Opera and Ballet,' published in 1844 by Charles Heath, or in Annesley's 'Standard Opera-Glass' (1888) —both English books; as well as in Pardon's 'Tales from the Opera' (1864), 'Operas: their Writers and their Plots,' by Notelrac (Carleton), (1882), and Upton's 'Standard Operas' (1886), published in this country, the last-named of which contains not only the stories, but analyses of the music of the operas.

The field which Mr. Chesney covers so meagrely and in such desultory fashion had, as will be seen, already been completely occupied by the above writers. Everything about the book is an enigma. Even before he opens it, the reader will be astonished at finding Lohengrin on the cover in black coat of mail and barred helmet, standing on the back of his swan, apparently knee deep in its plumage, and with his huge sword jabbed well into the body of the unfortunate bird. Evidently the engraver had not "followed copy," which would have informed him that "a swan appeared on the waters of the Schelde, guiding a little barque in which stood a knight clad in resplendent armor and who held the swan by a golden chain attached to his neck." Perhaps the artist belongs to the realistic school, and preferred to have the hero arrive at Antwerp swanback.

ENGLISH IN THE NEW WORLD.

Americanisms Old and New: A Dictionary of Words, Phrases, and Colloquialisms peculiar to the United States, British America, the West Indies, etc., etc., their Derivation, Meaning, and Application. Compiled and edited by John S. Farmer. London. 1889.

Now that the American Union, with everything pertaining to it, has come to attract so largely the study of Englishmen, a competent exhibition and exposition of the peculiarities of phraseology noticeable among us, the predominant subject of this book, would be an achievement that might reckon on a warm welcome in our ancestral home. Unmistakably, however, Mr. Farmer, in essaying to supply a desideratum, has undertaken an enterprise for which he is in no respect whatever adequately qualified. At most, one has merely to read any half-dozen of his pages to light on evidence beyond all gainsaying in establishment of this conclusion. A certain expression, according to his account of it, is "a survival in New York State and on the Hudson River." Whether things analogous to this are not, with him, when under guidance of the *intellectus sibi permissus*, the rule rather than the exception, may, indeed, be questionable. At any rate, where he is not simply copying, it is but slight exaggeration to say that, save in blundering, or in doing worse, he is hardly himself. In literal truth, only by the addition of something like a perpetual commentary, corrective and supplemental, could his compilation be transformed so as to satisfy any but the most uncritical.

These are no unweighed judgments. The merits of his book, in its present form, even the most favorably disposed reviewer will find it a problem to discover, whereas its demerits obtrude themselves at every turn. One of these, conspicuous enough, and yet not more so than a variety of others, is its accounting as Americanisms words that can on no rational ground be so denominated. Among words of this description are *alcoholism*, *alligator*, *Anglo-Saxendom*, *argufy*, *asininity*, *atremble*, *ballyrag*, *bam*, *banana*, *bandanna*, *beaverdam*, *being* (for *since*), the verb *best*, *betweenity*, *biddable*, *blowen*, *bolero*, *bothersome*, *bruiser* (for *prize-fighter*), the phrases *to save one's bacon* and *to talk like a book*, the slang *to do brown*, and so on. All these, and much besides, reference to Dr. Murray's Dictionary, which is cited under *betterments* and often elsewhere, evinces to be misleading surplusage. Such reference would, for instance, have precluded the statement that *authoress* was "first coined in America"; Dr. Murray giving quotations for it dated 1645 and 1654, with others, dated 1583, 1603, 1632, and 1724, for the contracted *authresse*. And again it would have kept the compiler from calling *attitudinize* "an American creation," and from saying that it "is given in Worcester, . . . but by no other authority"; seeing that, as Dr. Murray shows, Boswell puts it into the mouth of Dr. Johnson in 1784, and that Miss Hannah More is quoted for it by Dr. Webster's editors. *Blatancy*, further, though Dr. Murray proves its existence in 1610, "has not," it is alleged, "yet been admitted to the dictionaries." We are told, too, that *biblioklept*, *bibliolarty* (*sic*), "the worship of books," *bibliopegist*, *bibliophile*, *bibliopole*, and *bibliotaph* "can fairly claim American birth"; a notion wholly gratuitous, unless, as is most improbable, Dr. Murray is to be corrected regarding those expressions. But we have dwelt more than sufficiently on a single class of misrepresentations.

Nor can we help censuring the recognition, in the work before us, as Americanisms, of nonce-words, devices of personal whim or playfulness, which their originators did not intend seriously, or else ventured ignorantly, and which have met with no appreciable acceptance indicated by adoption. Of these coinages are, with plenty more of their congeners, *angeliferous*, *appetitical*, and *balditude*.

The compiler's observations on genuine Americanisms may next be slightly touched on. *Aunt*, he says, is "a familiar name often given, in the States and West Indies, to negresses of advanced age." With its exceptional application in the interior of New England, and likewise with that of *uncle*, he has no acquaintance. Of the antiquity of the substantive *avails*, as still current in parts of the United States, mention should have been made by him, but is wanting. *Back and forth* he pronounces to be "a New England Puritan survival"—a reckless guess; it being, in all likelihood, a slight alteration of the *back and fore* of Scotch immigrants. *Bank-bill*, on his warrant, "is the name by which Bank of England notes are generally known throughout the States." What name, then, can he suppose that Americans give to the paper money of their own banks? *Boost*, he has it, with his headlong hardihood as to facts, is "an old English word." Worse still is this: "At Harvard, 'To have no *bowels*' is to be poor, destitute, or without means. Of Scriptural derivation; the word being used in a somewhat similar sense in the Bible." Where? "The use of the word with this signification has arisen, probably, from a jocular reference to a quaint Scriptural expression," says an American glossarist to whom he is here, as frequently, indebted. *Bubby* is expounded to be "a pet name for a baby"—an evolution from the inner consciousness of the expounder, for whose second edition *bub* and *sis* must wait to receive due attention. "A fire is *built*, instead of made, probably from the piling up of logs, one upon another, for that purpose [*what* purpose?], in the backwoods." From a man presumably new to old-fashioned hearths and the mystery of andirons, some such conjecture, if he did not prefer judicious silence, was, of course, to be expected.

In the matter of linguistics and etymology Mr. Farmer shines with phenomenal lustre: "The prefix A is an Anglo-Saxon survival"; "the old Anglo-Saxon prefix A"; in this we have the revelation of a discoverer. Under *allottee*, mistakenly reckoned an Americanism, we read: "This class of words, during late years, has become increasingly numerous; the form of termination being American in origin." Miserable as is here the style of expression, it is nothing to the demand made on our credulity. *Legatee* and *referee* are adduced in illustration, notwithstanding that Dr. Johnson vouches Dryden for one and Roger L'Estrange for the other. And what of *absentee*, *appellee*, *appointee*, *assignee*, *bargainee*, *cognizee*, *committee*, *covenantee*, *devotee*, *donee*, *feoffee*, *grantee*, and a host of their fellows? If Americans have, with the exception of *employee*, any term of the species to which these belong that is not acknowledged English, it escapes us at this moment. So much for *allottee*, and only briefly; for we hasten on to the masterpiece of the compiler's philology, elicited by *billiardist*. In connection with this we are told: "Words terminating in *ist* (an 'agent') are multiplying on every hand. One of the earliest introductions was 'scientist.' . . . Except in very rare instances, the combination is intolerable to educated ears, and little enough can be said in defence of the usage." Looking to the enormous number of our derivatives in *-ist*, the great age of scores of them, and their many divisions and subdivisions, it is all but incredible that this should have been written. The veriest tiro just entering his teens could explode such ridiculous sciolism.

After what has been shown above, it is no surprise to see the abbreviations *A. V.*, *Ph.D.*, and *S. T.D.* set down as Americanisms; nor could we count on different Latin from "boves per dolum *amtas*," with "*Torgnum* saccharatum" as the botanical appellation of *broomcorn*.

Pretty constantly, however, the compiler has his "head in Coventry" (*sic*), if we may have recourse to what he cites, to our enlightenment, as "an English slang phrase." As to his critical discrimination of the vesture of English literature, significant of it is his "stately, rounded, yet pedantic periods of *Addison*, *Steele*, and Johnson." Once more, where, characterizing us physically, he is pleased to say that "already the American type is a distinct one," we have a strong suspicion that he is beholden, for his idea of that type, to the cartoons in *Punch* or else to some equally scientific authority.

Wholly apart from the purpose of his book, and with unconscious supererogation, Mr. Farmer furnishes, in the course of it, a notable anthology of the kind of grammar and English which a pedagogue is wont to lay before his younger pupils for syntactic and other emendation. In the effusion of a recent penny-a-liner whose studied elegances have attracted us, some one, in the fulness of time, was moved to "*partake of* a wife"; and, in the dialect of his literary compeer with whom we are engaged, "to take a big or long drink is to *partake of* liquor from a large glass." A few more samples of his proficiency in composition, leading off with the perpetration of the suspensive participle, here follow:

"Broadly *viewing* slang as a possible element of the grammar of the future, and grammar as accepted slang, this fact is, of itself, significant." (P. viii.)

"The language of the Older England of the Seas and [that of] the Newer England of the West is [are] essentially the same." (P. xiv.)

"To foretell its coming *or* forecast its course *are* alike impossible." (P. 38.)

"Base-ball. The American national game, taking, with *them*, the position that cricket holds with us." (P. 42.)

"One who will *neither* allow others a voice in any matter, *or* permit dissent from his own views." (P. 53.)

As the compiler has acquitted himself under A and B, so, and neither better nor worse, he has acquitted himself to the end of the alphabet. A slovenly collection of pillage it is impossible to commend. Of relevant materials at his disposal there was no lack, while, on his part, the lack is deplorable of success in turning them to appropriate account. Moreover, it should have occurred to him, on the slightest reflection, that, in default of an intimate personal familiarity with this country, it must be indispensable, towards the avoidance of all sorts of errors, to submit the outcome of his labors, before putting it in print, to the criticism of some one on this side the Atlantic. As the result of neglecting this obvious precaution, we find him even transcribing, with or without acknowledgment, what he does not himself understand, and what will not be understood in England. For example, under *ball up*, *barney*, *blood*, and *bull*, his borrowed "recite" and "recitation" have, among us, senses which, in Great Britain, are entirely unknown. As regards his style, only in rare cases does it rise above that of a third-class newspaper. And here, with apologies for our prolixity, we conclude our appraisal of a quarto which, by the contrast of its comeliness of aspect with its peculiar contents, recalls the venerable simile extorted by the Scribes and Pharisees from their denouncer. What with its imposing pretensions, its wretched shortcomings, and its costliness, we are not conscious that we deviate from even-handed justice in summing it up, compendiously, as a portentous catchguinea, if an aggravated catchpenny may be so designated.

The Banquet (Il Convito) of Dante Alighieri. Translated by Katharine Hillard. London: Kegan Paul, Trench & Co. 1889.

To Miss Hillard belongs the honor of having made the first satisfactory translation of the 'Convito' into English, for that published in the "Universal Library" in 1887 scarcely deserved the name of a translation. That the 'Convito' should be so late in taking its place among the English versions of Dante's writings is not to be wondered at. The 'Divine Comedy' and the 'New Life' will always be the two works of Dante most read and most prized. The 'New Life,' a young lover's story of his love, written in large part for a single friend, is distinctly personal in its charm. All true lovers find their love repeated in it, but it is in itself the narrative of a completely individual experience, without the slightest attempt at generalization. The 'Divine Comedy,' on the other hand, written for all mankind, the sum of Dante's final convictions in their final form, is, perhaps, the most tremendous generalization on the facts of a single human experience that has ever been made. The 'Convito' stands between the two, lacking the sweet, lyrical charm of the 'New Life' and the architectural unity and completeness of the 'Divine Comedy.' But it has a charm and an interest of its own.

Dante's 'Banquet' was a feast which he spread liberally before the unlearned but inquiring minds of his time and his nation, served in their own way and in their own language. The texts which he used for the discourses that make up this feast were certain of his poems which had been much misunderstood; but Dante's real object was higher than a mere personal explanation. He meant to benefit his people, to encourage noble virtues, to check the wrangling of parties, the insolence of the foolish, and the hypocrisy of false learning. The method of his discourse is rambling and diffuse; it is full of citations of learned authorities, and excels in the gymnastics of logic in which schoolmen were expert. Hence its form as well as its subject-matter has made it one of the least read of Dante's writings. Of late years, however, in the effort to explain Dante by Dante, more and more attention has been given to the 'Convito,' and scholars see that they can look to it not only for a collection of Dante's opinions on ethics, physics, and metaphysics, but for a glimpse into the workshop of his mind. The 'Banquet' is to the 'Divine Comedy' what an author's commonplace book is to his novels. We often find in the former the same opinions—in germ or already developed, the same point of view, even the same figures of speech, that we find in organic form in the latter.

But, in spite of many beautiful passages, the 'Convito' is hard reading even for the adept, and for this reason students of Dante of almost every grade will welcome Miss Hillard's translation. Unfortunately, the text of the 'Banquet' is extremely corrupt, and no translation of it can be called final which is based on an edition like that of Giuliani. After making this allowance, however, one has nothing but praise for this careful and idiomatic rendering of a work involved and often obscure both in thought and in expression. Here and there, to be sure, there are words and phrases about the rendering of which one might differ from the translator; but in the passages which we have tested, we have not found a single instance of mistranslation. The notes at the bottom of the page, too, are usually excellent, sometimes original and suggestive, and especially definite in points of historical allusion and in parallels between corresponding passages in the 'Convito' and in the 'Divine Comedy.' A fuller commentary, amounting at times to a running paraphrase and summary of the line of thought, is often needed, and this the translator has unfortunately not attempted to supply; an index, too, would have added greatly to the value of the book. These lacks, however, do not impair seriously the general adequacy both of the translation and of the notes.

The introduction, of some sixty pages, which Miss Hillard has prefixed to her work, bears signs of much careful thought. We differ, however, widely from certain opinions which she expresses on points of some importance because they involve the chronological sequence and actual date of Dante's writings. In the first place, Miss Hillard follows Fraticelli, Scolari, Selmi, Renier, D'Ancona, and others in giving to a portion of the 'Convito' a date before 1300. Here the question of Dante's whole intellectual development is involved. The proof depends somewhat upon the resemblance in matter and in style between parts of the 'Banquet' and parts of the 'New Life.' Much of the comparison which Miss Hillard makes is suggestive, and might perhaps lead one to suspect a closer chronological connection between parts of the two works than is ordinarily acknowledged, were it not that all other considerations either fail to corroborate such a supposition or go directly against it. There are certain instances, to be sure, in which Dante is supposed to correct in the 'Commedia' statements with regard to physics and the like which he had made in the 'Convito.' Hence Miss Hillard supposes (p. xxiv) that the treatise of the 'Convito' which contains statements thus corrected must have been written before 1300, the date at which Dante set the vision of the 'Comedy.' But the obvious reply to this is, that, although Dante feigned himself in the year 1300 with regard to the chronology of births, deaths, and historical events, the opinions of the 'Comedy' about physics, astronomy, and philosophy were those of the moment in which he wrote. For Dante to carry the fiction so far as to express in the 'Divine Comedy' only the opinions with regard to such matters which he held in the spring of 1300, would have been impossible, and a correction in the 'Paradiso' of any statement found in the 'Convito' merely shows that the 'Convito' was written before the 'Paradiso,' not that it, or any part of it, was written before 1300.

Another argument which Miss Hillard uses is drawn from allusions in the 'Convito' to persons as living who were really dead at the ordinary date given for the composition of the book. Of the three instances of this which are most often alleged, Miss Hillard makes use of only two. In the first of these, the reference to Gherado da Camino (iv, 14), she contradicts herself. In the 'Convito,' she says, he is mentioned as dead, but he is known to have been alive in July, 1301 (p. xxxi). Hence (p. xxxii) the fourth treatise of the 'Convito' is supposed to have been written *before* July, 1301. But if that treatise of the 'Convito' mentions him as dead, it must have been written *after* July, 1301. As a matter of fact, Gherado was alive even later than that, and the argument, if it proves anything, proves precisely what Miss Hillard does not wish it to.

Again, in the case of Asdente, the cobbler and prophet of Parma, the allusion does not point to a date before 1300. Asdente, says Miss Hillard, is mentioned by Dante in the 'Convito' (iv, 16) as alive, "while he is spoken of in the *Inferno* (xx, 118) as among those recently dead; most of the critics consider,

therefore, that he died in March, 1300." But in the 'Convito' Asdente is spoken of rather as a notorious character than as a living man; in the "Inferno" he is not spoken of as recently dead; and furthermore he probably died long before 1300, for Salimbene mentions him in 1239 as already famous. At all events, then, to sum up, the burden of proof still rests with those who try to set an early date for the 'Convito' by arguments drawn from historical allusions, for, without exception, these allusions are either indefinite in character, or point to a date in the first decade of the fourteenth century (probably 1306–8).

Another important point about which Miss Hillard seems to us to be mistaken is the date at which Dante first saw the Lady Philosophy, love for whom led him to forget Beatrice for a time. Upon that date depends the date at which the 'New Life' was written, and it is therefore necessary to determine it precisely. Dante tells us that he first saw her (p. 56), when two revolutions of Venus (in that circle of hers which makes her appear as evening and as morning star at different times) had been completed after the death of Beatrice. The question is, how long is a revolution of Venus in that circle. On this point Miss Hillard is not explicit. Once (p. 56, n.) she says 180 days; again (p. xxiii), 365 days; and still again (p. 59), 348 days, basing her opinion on a passage from Witte which he afterwards expressly retracted. Now, Dante wrote according to the Ptolemaic system of astronomy, and it would be natural to suppose that he referred here to the period in which Venus appears to revolve about the earth—a period of almost exactly a year. But the revolution of Venus around the earth is not that which makes her appear as morning and as evening star, as may be seen from any simple explanation of the Ptolemaic system. The revolution in question is, then, the revolution of Venus in her epicycle, a period of about 225 days, and Dante first saw the *donna pietosa* in September, 1291.

Such slips as these with regard to the exact determining of certain important dates will not detract from the reader's appreciation of the earnest care with which Miss Hillard has prepared the introduction to her excellent translation. One can only wish that in these instances and others she had consulted the more recent works which touch the subject she treats; and that she had sometimes been less rash in accepting without investigation plausible statements in matters about which most writers have a theory to prove at any cost.

The War of Independence. By John Fiske. Boston: Houghton, Mifflin & Co.

George Washington. An Historical Biography. By Horace E. Scudder. Same publishers.

THESE two very elegant little volumes are the first instalments of the "Riverside Library for Young People." The publishers announce that it is their aim to raise the standard of juvenile literature by producing books which shall attract and interest young people, and yet have a permanent value and be really fitted to form the foundation of a library. The books before us are undoubtedly an excellent beginning of the enterprise. Mr. Fiske and Mr. Scudder are both learned historical scholars, who write pure English, and also who write what people like to read. It would be entirely out of place to discuss these productions of theirs at length. We can and we do commend them heartily, as eminently worthy both of writing and publishing at a time when such a flood of publication has been and continues to be poured over the history of that period which these books comprehend. To a certain extent they invite comparison, and we must in justice pronounce Mr. Fiske's the superior of the two. His hand is stronger on the events, his eye for historical perspective is truer, his tone rings firmer in marshalling, ordering, and deploying his facts. It is never well to be too positive on a matter of taste, but Mr. Scudder gives the impression of being much too fond of the pictorial side of history. He talks excessively of how Washington looked on important occasions, as if the writer were one of a crowd that ran to see him, rather than a friend who shared his counsels or pondered his achievements. In Mrs. Oliphant's capital novel, she tells us how "Lucilla Majoribanks's friends always spoke of her as a large girl." Mr. Scudder dwells on Washington's stature and hands as if their size had absorbed his thoughts, as they might a casual spectator's. So the battle of Monmouth is detailed to the disproportionate sinking of the other battles in the Middle States, apparently because Washington's personal gestures and tones on that occasion have been more elaborately depicted than on any other. Yet Mr. Scudder leaves out not a few very notable personal anecdotes. We have failed to find President Davies's prophecy.

The style of both works is in general unexceptionable; but Mr. Scudder must go back to his *Autocrat*, and learn of Dr. Holmes to say a "blood" horse and not a "blooded" horse. The maps in Mr. Fiske's book are very helpful; the pictures of events in Mr. Scudder's will just do, but the portraits of Washington and Samuel Adams, with all the advantages of admirable originals, are coarse and stiff as we could hardly have believed the publishers could consent to issue.

Prisoners of Poverty Abroad. By Helen Campbell. Boston: Roberts Brothers. 1889.

THIS book is, for several reasons, of less value than the author's account of the condition of workingwomen in this country. Her investigations in France and Italy were not extensive enough to make her conclusions authoritative, while the condition of the London poor has within the last two years been described by such competent observers and with such scientific accuracy as to put Miss Campbell's more sentimental—not to say hysterical—methods at a disadvantage. Nevertheless, a book of this kind will be read by many persons who would be repelled by anything in the nature of a scientific investigation, and it is well that the ignorance of one-half the world as to how the other half lives should be removed. It is a dismal theme, but that is no reason why well-to-do people should avoid it, for if there is to be any reform, they must originate it. On the other hand, it is not necessary to exaggerate the evils of the existing state of affairs, and Miss Campbell clearly exaggerates. To say that 500,000 women in London live by certain industries "not one of whom has ever received, or ever will receive, under the present system, a wage which goes beyond bare subsistence," is to use strong words with feeble effect. So, to declare that "the story of labor to-day for the whole working world is one of degradation," is simply to discredit the judgment of the person making the statement.

What we find most discouraging in the book and in the situation is the character of the remedies that suggest themselves to so many benevolent persons. So far as deserving workmen are concerned, it may be possible for the purchasers of goods to improve their condition by patronizing shop-keepers who are known to deal fairly with their employees, although it can be no easy matter to find out who they are. But this is the only practical suggestion in the book. The scheme of a general union of all poor women is shown to be visionary by the collapse of the Knights of Labor. The proposals of Henry George, which Miss Campbell seems to favor, will not be carried out without a revolution in which workers for wages must be the greatest sufferers. Coöperation is only for the better class of workmen, and industrial education would tend to promote the cheapness of products, which the author regards as an evil. The real problem is how the drunken, lazy, untrustworthy, improvident, and feeble, and their offspring, shall be provided with the rewards of sobriety, industry, truthfulness, prudence, and strength. But though this book furnishes no solution of the problem, it throws light upon the conditions, and it is, therefore, worthy of consideration.

Prince, Princess, and People. An Account of the Public Life and Work of their Royal Highnesses the Prince and Princess of Wales. By Henry C. Burdett. Longmans, Green & Co. 1889.

IT is related of Rowland Hill that at a certain council held in the Post-office Department he explained to his subordinates that official phraseology was a good thing in its way, but very often did not describe the actually existing state of affairs. "For instance, in writing to you, gentlemen, I am accustomed to describe myself in official phraseology as your obedient humble servant, whereas"—sitting back and glaring savagely through his spectacles around the board—"whereas, I am nothing of the sort." If there are any who doubt the existence of human beings of such simplicity as to take these conventionalities in their literal sense, they will be converted by the perusal of this book. The ingenuous author has actually been at the pains to construct an ideal Prince of Wales out of his official utterances and donations, and in good faith offers this buckram creation to his readers as veritable flesh and blood. He sincerely believes that the Prince lies awake at night meditating the foundation of new charities, and draws his check every morning before breakfast for some benevolent enterprise. His Royal Highness opens an exhibition, visits an hospital, inspects a factory, or attends an agricultural fair, and very appropriately declares that he has long taken the deepest interest in those matters respectively; whereupon his loyal subject will have it not only that this is literally true, but also that these enterprises are, to a great extent, the result of the comprehensive wisdom and indefatigable industry of their eminent patron. Thus, after describing the Fisheries and Colonial Exhibitions, he remarks that he wishes "to emphasize the fact that the whole of them are due to the initiative of the Prince himself, and may be attributed in great part to that self-education in all matters relating to the best interests of every class throughout the British Empire, the progress of which this narrative has aimed at recording." Verily 'Sartor Resartus' was written in vain.

There is, however, a serious side to all this, and Mr. Burdett's foolish book is not altogether without value. The social and ornamental functions are now all that is left of monarchy in England, but they are important functions in every community, and are of more convenience and even necessity than we are apt to suppose. The Prince of Wales is, we may say, *ex officio*, presiding officer of every gathering at which he is present, and the very

existence of such a functionary adds dignity to the gathering. Whatever we may think of him as a man, this book plainly shows that he attends decorously and assiduously to his public duties. The list of his donations is long enough to prove that much of his money is not ill spent, and the record of the charities and public institutions in whose founding he has participated is in itself instructive. There is little to be found in the book concerning the Princess Alexandra; but the beautiful photograph which serves as a frontispiece is sufficient to win her more regard than the record of many gifts and speeches. The book can interest only a limited class of readers in this country. It is elegantly printed.

American Resorts; with Notes upon their Climate. By Bushrod W. James, A.M., M.D. 8vo. Philadelphia: F. H. Davis. 1889.

A CERTAIN inconsecutiveness is a familiar trait in most treatises on watering-places and climate. It is, indeed, almost a necessity where such different themes are described as climatic features, the chemistry of mineral springs, and the merits of hotels and boarding-houses. Dr. James's book is no exception to the rule. His main themes are the theories of climatology and of climatotherapy, the brief description of American health resorts by the seaside, upon the lakes, and in the mountains in winter and in summer; and there are chapters upon Mexican and South American resorts. The concluding chapter relates to North and South American climate and the Atlantic Ocean, and is translated from Dr. Woeikof's 'Die Klimate der Erde'; it occupies more than one-third of the entire work, and is perhaps its most interesting portion. It is not, indeed, a very practical chapter from the invalid's point of view, for it describes the climate of the highest northern latitudes, as far as atmospheric pressures and currents have been studied in the Arctic zone. It is interesting to learn that in the European part of the Arctic Ocean the month of January is considerably warmer than December, February, or March, and nearly as warm as November and April, and that this is true of most of the Arctic islands. The author seeks for the cause of this curious circumstance, and ascribes it to the fact that the centres of cyclones pass northward near the points mentioned more frequently in January than before or after.

"In West Siberia," he adds, "the severest cold usually occurs in calm and clear weather; that is, under conditions favorable for strong local refrigeration. . . . On the islands of the Arctic Ocean, under the meridians of Europe (Bear Island, Spitzbergen, west coast of Nova Zembla), the winter is not so much remarkable for its cold as such as for the continuity with which the temperature remains below zero during periods ranging for about eight months on Bear Island, and seven on Jan Mayen, up to nine months on Spitzbergen and Nova Zembla. It is obvious that neither agriculture nor tree-growth is possible under such conditions. . . . The sea and the islands north of Siberia and east of the meridians of the Yenisei are, as yet, a *terra incognita* to climatology."

Dr. Woeikof gives many points that will interest climatologists; but the invalid, looking for a winter climate, will turn to Dr. James's too brief description of Florida, Southern California, and, best of all for nervous and pulmonary troubles, the more genial latitudes of the Hawaiian Islands. A chapter upon mineral waters does little more than name the leading springs of the United States, classifying them under the accepted heads of alkaline, saline, sulphur, chalybeate, calcic, sulphated, and thermal. One of the most needed features in a book of this sort is lacking—that of a careful description of the accommodations for visitors at the respective places. In any given case, the mineral water is but half the cure; the rest comes of proper food, surroundings, and medical supervision. But Dr. James's book will serve a good purpose in the physician's reference library.

Report on the Custody and Condition of the Public Records of Parishes, Towns, and Counties. By Carroll D. Wright, Commissioner. Boston. 1889. 8vo, pp. 379.

THE commonwealth of Massachusetts is doubly fortunate in possessing records, and in a public spirit which cares for their preservation and utilization. That there has been a period of neglect, even within the last century, is undeniable and deplorable; but the present generation has done its duty, and is repairing past injuries both by care of documents and, still better, by their publication. The records of Massachusetts and of Plymouth down to 1692 have been printed. The Laws of 1660 and 1672 have been reprinted by the city of Boston; those from 1692 to the Revolution are printed or prepared for the press. Cities and towns have found that the cheapest and best method of preserving their records is to put them in type, and are rapidly following the example set by Boston. In 1884 the State appointed a commission to report on the condition of its archives, and in 1888 Mr. Wright was directed to report also on the public records of parishes, towns, and counties. He appointed as his deputy Mr. Robert T. Swan, and this report is the consequence.

It is impossible to give even an abstract of the book, except to say that it covers classified lists of church records, town records, county records, and court records. That the work will be found to have a few errors and many omissions is no reflection upon the evident care and diligence of Mr. Swan. The first edition of such a book is really to be considered merely as proof-sheets issued for correction. Information is often withheld, from ignorance, laziness, or a disbelief in the project; but when the work has taken shape, corrections are freely given. So we trust and believe it will be in this case, and we congratulate Mr. Swan sincerely on his present success.

Mr. Wright's large experience in such matters gives great weight to his suggestion that the information desired can never be obtained by correspondence. He recommends that a paid official should make the perambulation of the State and examine personally into the facts, especially into the condition of records and the enforcement of the statutes regarding them. We are not aware whether this Legislature paid any attention to his report; but the disgraceful persecution of Mr. Goodell, the editor of the Provincial Laws, by a clique of prominent politicians makes us fear that nothing was done.

The Sleeping-Car, and Other Farces. By William D. Howells. Boston: Houghton, Mifflin & Co.

The Mouse-Trap, and Other Farces. By William D. Howells. Harper & Bros. Illustrated.

IN the course of the past ten years Mr. Howells has written eight little stories in dialogue, and these he has now collected into two volumes, calling them farces. These pieces are each in one act, and are in dialogue. They lack the dignity and the variety of comedy, but they are not farces—unless the word is to change its meaning wholly. Sheridan's "Critic" he called a farce, and Garrick's version of "Katharine and Petruchio" is a farce, and Mr. Pinero's "Magistrate" and Mr. Bronson Howard's "Saratoga" are farces; and if these are all farces, Mr. Howells's dialogued sketches are not. Perhaps more than any other form of dramatic composition, the farce demands a practical knowledge of the stage and a solid skeleton of constructed situation. Now, the winds of whim and the breezes of fantasy blow through the loose joints of Mr. Howells's scenarios, and his knowledge of the stage is but a younger brother's portion. Two adaptations of his, "Yorick's Love," from the Spanish, and "Saul," from the Italian, have been publicly performed, together with two plays, one dramatized from his story, "A Foregone Conclusion," and one written originally for the theatre, "A Counterfeit Presentment"; but the author's apprehension of the inevitable needs of the stage does not seem to have been increased by this experience. The earliest of these little pieces, "The Parlor Car," was written for Mr. Daly, so we have understood, and it is by far the best of them. It is really actable; it is, in fact, a slight but interesting comedietta, with genuine movement; we can see in it the *action* which is the essence of dramatic art. The companion piece, "The Sleeping Car," is also theatrically possible, and although quite unconventional in form, no doubt it would bear acting and reward the great carefulness of production needed to make it effective. But, of the other six, hardly one even pretends to be playable. In the "Register," for example, there is a perfectly wanton change of scene, easily to have been avoided with a little ingenuity. It is as though Mr. Howells, disappointed in the theatrical success of the first of the series, had abandoned all thought of the stage, and had paid less and less attention to the technic of playmaking. This is greatly to be regretted. The stage needs recruits as keen-sighted, as ingenious, as witty, and as aggressive as Mr. Howells; but they can take rank there only after they have learned the manual of arms and practised the goose-step. There is no need to say that some of Mr. Howells's cleverest writing is to be found in these two volumes.

The Poets of Essex County, Mass. By Sidney Perley. Salem: Published by the Author.

"NEARLY all of the great American poets have some connection with Essex County," writes Mr. Perley in his General Sketch. Whittier, of course, is a native of that weightiest corner of Massachusetts soil. But, "at Newbury, in an old mansion lately standing, the great-grandfather of Longfellow was born; and at the Jonathan Johnson house at Nahant his 'Song of Hiawatha' was written. James Russell Lowell also traces his family back to old Newbury, where his lineal ancestors lived for several generations; and Ralph Waldo Emerson is a direct descendant of the Ipswich family of that name." The list of minor poets born in the county is not inconsiderable in quantity or quality: Joseph Story and his son, W. W. Story, Jones Very and his sister Lydia, Alonzo Lewis, George Lunt, Epes Sargent, W. L. Garrison, Charles T. Brooks, Samuel Johnson, John W. Chadwick, Lucy Hooper, Lucy Larcom, William Winter. Add George E. Woodberry, whose Gibraltar sonnets (reproduced from the *Atlantic*) show that the poetic strain is renewing itself with a high promise. Mr. Perley takes account of all these, and likewise of some, not native,

like Anne Bradstreet, Hannah Gould, and Albert Pike, who had their characters formed in Essex County; as well as of mere sojourners like J. Q. Adams, John Pierpont, Mrs. Stowe, and T. W. Higginson. The selection from Mrs. Bradstreet's seventeenth-century "Contemplations" is much the most striking piece in the book, and has a distinct Wordsworthian flavor:

"Under the cooling shadow of a stately elm,
Close sate I by a goodly river's side,
Where gliding streams the rocks did overwhelm;
A lonely place, with pleasures dignified.
I once that loved the shady woods so well,
Now thought the rivers did the trees excel,
And if the sun could ever shine, there would I dwell."

Mr. Perley has not sought to mass his poets so as to make the greatest impression. He strings them along in alphabetical order, with neither table of contents nor index, mingling the best with the poorest on the most democratic footing. The critical will find fault with the catholicity which thus rescues from oblivion many names and performances that merit (and will yet obtain) it. Still, there is something instructive in the repetition of biographical notices which tell how this one courts the muse while cashier of a live-stock company in Nebraska; another while manufacturing morocco in his birthplace; another as a book-binder, another as a life-insurance agent, etc. We know that these are not conditions favorable to the production of enduring verse, but the endeavor is pleasant to observe, and, we suppose, may be set down to the undeniable poetic spirit of Essex County. Mr. Perley's sketches are modest, and often very felicitous, and will be referred to hereafter for their data. Twenty pages of appendix give a summary account of a still larger number of writers, with occasional specimens of their poesy. In the body of the work, a single piece is the rule by way of example.

Du régime conventionnel des fleuves internationaux. Par Ed. Engelhardt, Ministre Plénipotentiaire. Paris: Pichon. 1879.

Histoire du droit fluvial conventionnel, précédée d'une étude sur le régime de la navigation intérieure aux temps de Rome et au moyen âge. Par Ed. Engelhardt. Paris: Larouse & Forcel. 1889.

THESE two works treat of a subject of practical importance which has given rise to many able diplomatic discussions in which the Government of the United States has borne an honorable and influential part. In the first work, which bears the marks of laborious preparation, the author has endeavored to set forth and explain the general laws which, in our day, govern the enjoyment of the great arteries of three continents. The second is an argumentative and painstaking historical review of the law of rivers in respect of its origin and gradual development. In it the author reviews the correspondence that took place in the latter part of the last and early in the present century between the United States and Spain in regard to the navigation of the Mississippi. He also gives an account of the dispute that arose at the beginning of the present century between the United States and Great Britain in reference to the use of the St. Lawrence, in which this Government maintained and contributed to the establishment of the principles sanctioned by the Congress of Vienna in 1815, in respect to the navigation of the Rhine and other European rivers, under which such navigation was to be free, as that of a common river, as between the States bordering upon it, at least for commercial purposes.

In his instructions of the 19th of June, 1826, to Mr. Gallatin, who was authorized to negotiate at London on the subject of the St. Lawrence, Mr. Clay, in a passage which the author prefixes to his second work, said: "These regulations—the transactions at Vienna—relative to the navigation of the European rivers, and other analogous stipulations, should be regarded only as the spontaneous homage of man to the superior wisdom of the paramount Lawgiver of the Universe, by delivering his great works from the artificial shackles and selfish contrivances to which they have been arbitrarily and unjustly subjected." It was not, however, until the Reciprocity Treaty of 1854, signed by Mr. Marcy and Lord Elgin, that conventional provision was made for the navigation of the St. Lawrence by the citizens of the United States. This treaty was terminated March 17, 1866, under resolution of Congress of January 18, 1865. But, in the Treaty of Washington of May 8, 1871, it was finally stipulated (Article xxvi) that "the navigation of the river St. Lawrence, ascending and descending, from the forty-fifth parallel of north latitude, where it ceases to form the boundary between the two countries, from, to, and into the sea, shall for ever remain free and open for the purposes of commerce to the citizens of the United States, subject to any laws and regulations of Great Britain, or of the Dominion of Canada, not inconsistent with such privilege of free navigation." A reciprocal provision was inserted in the same article for the navigation by British subjects of the rivers Yukon, Porcupine, and Stikine, which take their rise in British territory and flow through Alaska into the sea.

The same principles partly prevailed in the negotiations opened between the United States and Mexico in regard to the Rio Grande and the Colorado. The United States also participated in the Berlin Conference which placed the Congo and the Niger under international control. These precedents, as well as others which might be cited, touching important water courses of South America, such as the Amazon, the Orinoco, and the Rio de la Plata, disclose the interest which the works above mentioned possess from an American point of view.

It is proper to advert to a recent case which, at the time of writing those works, had not come under their author's notice. By a treaty concluded on the 24th of December, 1886, the Governments of Nicaragua and Costa Rica agreed to submit to the arbitration of the President of the United States certain questions as to the validity and interpretation of the boundary treaty between Nicaragua and Costa Rica of April 15, 1858. By the sixth article of this treaty it was provided that the Republic of Nicaragua should have exclusive dominion and jurisdiction over the San Juan River from its source to its mouth, but that the Republic of Costa Rica should have the perpetual right of free navigation of the waters up to the point where they ceased to constitute a common boundary between the two countries and flowed wholly within Nicaraguan territory, "for the purposes of commerce either with Nicaragua or with the interior of Costa Rica." One of the questions submitted to the arbitrator was whether, if the treaty of 1858 should be held by him to be a subsisting engagement, Costa Rica had "the right of navigation of the River San Juan with vessels of war or of the revenue service." An award upon the various questions submitted was rendered by President Cleveland on the 22d of March, 1888. He held that the treaty of 1858 constituted a valid and binding agreement; and as to the navigation of the San Juan, his decision was as follows:

"The Republic of Costa Rica, under said Treaty and the stipulations contained in the 6th article thereof, has not the right of navigation of the River San Juan with vessels of war; but she may navigate said river with such vessels of the Revenue Service as may be related to and connected with her enjoyment of the 'purposes of commerce' accorded to her in said article, or as may be necessary to the protection of said enjoyment."

La Société française au Dix-septième Siècle. By T. F. Crane, A.M., Professor of the Romance Languages in Cornell University. G. P. Putnam's Sons.

PROFESSOR CRANE'S 'Tableaux de la Révolution française' and 'Le Romantisme français' have had a deserved success, yet it is doubtful whether these books possess a degree of usefulness equal to that which will be found in his 'La Société française au Dix-septième Siècle.' No period in the literary history of France is fraught with so much interest as that famous seventeenth century which French historians have proudly dubbed *le grand siècle.* It saw a radical change in the language, which attained a degree of perfection since unsurpassed, and its literature has remained a standard seldom reached by more modern writers. The style may have become more terse, unnecessary pomposity and redundancy may have been done away with, but for purity and correctness, for elevated thought, nobly expressed, we still seek our models in the great masters of the seventeenth century.

The student who, not satisfied with accepting the effect, must seek the cause of this superiority, traces it to certain influences which, exerted for the purpose of modifying the manners and improving the morals of a society long disturbed by foreign and civil wars, achieved also a complete reform in the language and created a new literature. The study of the progressive action of these social influences is indispensable if one wishes to enjoy thoroughly the works of the best authors of that time, and Prof. Crane justly remarks that, without some knowledge of them, Corneille, Molière, and Boileau are often incomprehensible. This study, however, presents a difficulty which the majority of students cannot conquer: hundreds of works, many of them very rare, and not a few unattainable in this country, should be consulted ere the knowledge is gained. This laborious research Prof. Crane has accomplished with the most gratifying results. Many valuable works—from Mlle. de Scudéri's 'Grand Cyrus' to the rarest "Recueils" and "Mémoires" that throw light on the subject—have been laid under contribution to make up these excerpts; and the student, with the aid of this little volume, may obtain a very satisfactory glimpse of that society which had its birth in the Hôtel Rambouillet, whence its influence spread until it prepared the mind for the literary marvels of Louis XIV.'s reign. The Introduction and the copious notes at the end of the book contain much valuable information. They should be studied and frequently referred to, as giving the key to much that may puzzle the student in some of the extracts.

Up and Down the Brooks. By Mary E. Bamford. (Riverside Library for Young People, No. 4.) Boston: Houghton, Mifflin & Co. 1889. Pp. 222.

THIS is a book which it is a pleasure to read and a duty to praise. Miss Bamford tells us of her rambles by the Californian brookside, and of her acquaintances made there; of their habits, their transformations, death and burial, or happier release after a period of observation by the captor. The book is not a manual of

collecting, nor a monograph of the brook animals, but a narration of the experiences of the author with several of the more common animals, chiefly insects, intermixed with a spice of literary allusion and half-serious, half-jesting allegory, difficult to characterize, but which makes very pleasant reading. This sort of thing is easily overdone, and then becomes silly or tiresome, which should be borne in mind by this author when she has another book in hand. On the present occasion she has kept herself on the right side of the line which separates natural liveliness from a straining after effect, but her dangers evidently lie in this direction.

If one were to venture any criticism, it would be that the classical allusions are sometimes aimed rather high for "young people"; but it will perhaps be all the better for them if they have to turn occasionally from the brook or vivarium to the library and the classical cyclopædia. The illustrations are almost too crude for the quality of the book. In these days of easy photo-relief reproduction, the insertion of a mere sketch, apparently made with a stub pen, is hardly warranted when we consider the slight cost of a drawing which should be at once clearer and more artistic. But here again there is a certain harmony between the breezy naturalness of the text and the off-hand scratchy diagrams which illustrate it. On the whole, we do not know among recent books any more likely to give pleasure to the nature-loving boy or girl, or more calculated to stimulate the taste for healthy recreation and good reading.

Incidents of a Collector's Rambles. By Sherman F. Denton. Boston: Lee & Shepard. 1889. Pp. 272, 8vo.

THE author of this book is a son of William Denton, formerly well known as a lecturer on geology and spiritualism. While on a collecting and lecturing tour in New Zealand, Australia, and, finally, New Guinea, it became necessary for his sons to join him with as little delay and expense as possible. The story of that journey, in emigrant train and steerage, and of wanderings after the family was reunited—closing with the death, by fever, in New Guinea, of the elder Denton—forms the subject-matter of the volume, which is illustrated with effective though rather coarse process-cuts from pen-drawings by the author. Some of the illustrations are very good, others not so good. The text would have been benefited by the revision of some literary friend who might have corrected a few errors of taste and eliminated some unnecessary profanity.

There is nothing of serious importance in these 'Rambles,' but they may serve to convey some slight idea of the life and experiences of a collector of objects of natural history for commercial purposes, in the region described. There is no map or index.

The Progress of Religious Freedom as shown in the history of Toleration Acts. By Philip Schaff, D.D., LL.D. Chas. Scribner's Sons. 1889.

IN this little volume of 124 pages Dr. Schaff has undertaken to trace the history of the progress of the idea of religious liberty from Galerius to the Constitution of the United States. He has not tried to be original, nor to do more than arrange in convenient order these bits of history, which, so far as we know, cannot be found elsewhere in just this connection. At the close of the volume is given a complete text of the Edict of Constantine and Licinius in 313, the public articles of the Edict of Nantes in 1598, the Edict of Revocation in 1685, the Toleration Edict of Potsdam in the same year, the English Act of Toleration in 1689, and the provisions of our Constitution securing religious liberty. Worth noticing is the distinction, not always clearly perceived, but emphasized by Dr. Schaff in his short introduction, between religious liberty and religious toleration. It is well worth pointing out to every American that his is at present the only country of the world in which religious liberty, in the full sense of that term, exists.

Readings in Church History. By the Rev. James S. Stowe, D.D. Philadelphia: Porter & Coates.

DR. STOWE has written a book which neither has nor pretends to have any claim to thoroughness or profundity. It is a series of disconnected sketches, eighteen in number, dealing with certain picturesque episodes in the life of the Church, selected mainly for their poetic or dramatic interest. The style is readable, a little too elaborate for a severe taste, but likely to please the average reader, for whom the book is intended. The theological point of view is the orthodox Protestant, but this is not made offensively prominent. The author has evidently read a good deal of original material, and shows considerable skill in extracting therefrom such passages as will prove entertaining to the reader. The book may be commended as pleasant reading for any one who does not wish to go into very serious study of the life or institutions of organized Christianity.

Indoor Studies. By John Burroughs. Boston: Houghton, Mifflin & Co. 1889.

MR. BURROUGHS'S refined and appreciative criticism is well known through his papers in the periodicals, and in being bound into a book they do not come before us for the first time. In writing of Thoreau and Gilbert White he is upon his own preserves, and it is interesting to learn that his appreciation of the latter writer came late; of the former none has written more favorably. The book deals largely with Arnold, Emerson, and Carlyle, each of whom is acknowledged master in his own domain; generally, however, Mr. Burroughs pleads against Arnold and the academical, and calls for more generous recognition of the substance in Emerson and Carlyle which makes them, he says, great writers in spite of their defects in literary form. He speaks as a disciple of Emerson, whose influence is perceptible upon every page of these essays in the literary handling, if not in the thought. His remarks seem to us the best that have been made, both in substance and temper, by any of the apologists whom Arnold's lecture upon Emerson called out. He closes the volume with several brief essays of the nature of literary editorials, and an autobiographical chapter, in which the special qualities of his style and temperament have the best field for their play.

BOOKS OF THE WEEK.

Bailey, P. J. Festus: A Poem. Fiftieth-anniversary edition. Geo. Routledge & Sons. $1.50.
Drage, G. Cyril: A Romantic Novel. 3d ed. London: W. H. Allen & Co.
Horsford, E. N. The Problem of the Northmen. Cambridge, Mass.
Morley, Prof. H. Tales of the Seven Deadly Sins, being the Confessio Amantis of John Gower. Geo. Routledge & Sons. $1.50.
Morley, Prof. H. The Earlier Life and the Chief Earlier Works of Daniel Defoe. Geo. Routledge & Sons. $1.
Perry, G. B. Uncle Peter's Trust; or, Following the Drums. Harper & Bros.
Pfeiffer, Emily. Flowers of the Night: Poems. London: Trübner & Co.
Philippi, E. Schiller's Lyrische Gedankendichtung. Augsburg: Adelbert Votsch.
Postgate, J. P. Sermo Latinvs. A Short Guide to Latin Prose Composition. Macmillan & Co. 60 cents.
Putnam, E. A Woodland Wooing. Boston: Roberts Bros. $1.
Roberty, E. de. L'Inconnaissable: sa Métaphysique, sa Psychologie. Paris: F. Alcan.
Rubáiyat of Omar Khayyám. Translated by Justin H. McCarthy. London: David Nutt.
Ryan, M. E. Merze: The Story of an Actress. Chicago: Rand, McNally & Co.
Sauveur, L. Les Chansons de Béranger. F. W. Christern.
Schultze, A. The Books of the Bible Analyzed. Easton, Pa.: *The Book Antiquary*. 20 cents.
Scudder, V. D. Macaulay's Essays on Lord Clive. Leach, Shewell & Sanborn.
Sergeant, L. The Government Year-Book for 1889. London: T. Fisher Unwin; Philadelphia: J. B. Lippincott Co.
Southworth, Mrs. E. D. E. N. The Changed Brides. Philadelphia: T. B. Peterson & Bros. 25 cents.
Stables, G. Hints about Home and Farm Favorites. Frederick Warne & Co.
Starcke, Dr. C. N. The Primitive Family in its Origin and Development. D. Appleton & Co. $1.75.
Stedman—Hutchinson. A Library of American Literature, from the Earliest Settlement to the Present Time. In 10 vols. Vols. VII. and VIII. Charles L. Webster & Co. $3 per vol.
Stevenson, R. L., and Osbourne, L. The Wrong Box. Chas. Scribner's Sons.
Stone, Dr. J. S. Readings in Church History. Philadelphia: Porter & Coates. $1.50.
Stowell, T. B. Syllabus of Lectures in Anatomy and Physiology. 3d ed., revised and enlarged. Syracuse: C. W. Bardeen.
Sunderland, J. T. The Liberal Christian Ministry. Boston: George H. Ellis.
Sunflowers: Poems Written by Various Hands in the State University of Kansas. Lawrence: Journal Publishing Co.
Sweetser, M. F. King's Handbook of Newton, Massachusetts. Illustrated. Boston: Moses King Corporation.

To All Who May Be Interested in

THE REFORM OF THE TARIFF:

The best time to arouse the people to an understanding of the fallacies of protection is the present. During a political campaign politicians appeal to party prejudice, and few men's minds are then open to conviction. THE WEEKLY POST, therefore, is engaged in the campaign for revenue reform now.

THE WEEKLY POST holds that any law which seeks to divert one man's earnings to another man's benefit, under whatever guise or plea, temporarily or permanently, is an act of spoliation and an infringement of human liberty. In principle it makes no difference whether such spoliation is at a high or at a low rate, whether it is 47 per cent., or 40 per cent., or 1 per cent. We are opposed to it altogether, for the same reason that we are opposed to forced loans, confiscation, slavery, and robbery. We intend to fight against it wherever we find it.

The experience of men who have been working for this reform contains the best lessons for others. THE WEEKLY POST, therefore, invites reformers in every part of the country to report the progress of popular opinion and to describe the best methods of work. Our wish is to make the paper the mouthpiece of the people who are oppressed by taxation. As soon as the people themselves become aroused they will make short work of the present tariff; and we believe that the best service a paper can render is to put its columns, as far as practicable, at their command.

We are preparing a directory of organizations of every kind that are doing, or preparing to do, work, and that will not wait for the approach of another political campaign; and the facts about every such organization are desired for this purpose.

We are preparing also a directory of the work that is in progress for the reform, which will show, by charts and maps and statistics, the results of the discussion of the subjects in the last campaign; the work that reformers are now doing; the industries of particular communities that in especial ways are affected by the tariff; the subjects that could most profitably be discussed in particular communities; and the growth of tariff-reform sentiment in every Congressional district.

The tables and maps and diagrams by which this information will be set forth, will be a chart for reformers during next year's Congressional campaign, and will do much also, it is hoped, to enable them to anticipate the usual effects of a party campaign by educational work in the meantime.

Every reader of the *Nation* who is disposed to aid in this work is requested to send for a copy of THE WEEKLY POST of July 11, containing a blank form for filling in the desired information. Sent free on request.

A special correspondent and agent is desired in every community, and correspondence with reference to such an engagement is invited. Subscription price, $1.00 per year, with liberal discounts for clubs and agencies.

J. B. LIPPINCOTT COMPANY,
715 and 717 Market St., Philadelphia.

Epochs of American History.

Messrs. Longmans, Green & Co. have the pleasure to announce that they have made arrangements to supplement their series, EPOCHS OF MODERN HISTORY, by a short series of books treating of the history of America, which will be published under the general title, EPOCHS OF AMERICAN HISTORY.

The series will be under the editorship of Dr. Albert Bushnell Hart, Assistant Professor of History in Harvard College.

Each volume will contain about 250 pages, similar in size and style to the page of the volumes in the EPOCHS OF HISTORY series, with full marginal analysis, working bibliographies, maps, introductions, and index.

The volumes will be issued separately, and each will be complete in itself. Those already arranged for will, it is hoped, provide a continuous history of the United States from the foundation of the Colonies to the present time, which shall be suited to class use, as well as for general reading and reference.

The volumes in preparation are as follows:

1. *The Colonies* (1492-1763).

   By Reuben Gold Thwaites, Secretary of the State Historical Society of Wisconsin, author of 'Historic Waterways,' etc.

2. *Formation of the Union* (1763-1829).

   By Albert Bushnell Hart, A.B., Ph.D., the editor of the series.

3. *Division and Reunion* (1829-1889).

   By Woodrow Wilson, Ph.D., LL.D., Professor of History and Political Economy in Wesleyan University, Middletown, Conn., author of 'Congressional Government,' etc., etc.

The Nation.

NEW YORK, THURSDAY, JULY 11, 1889.

The Week.

THE ballot law which has been enacted in Michigan is in many respects unlike any of those which have been put upon the statute-books of nine other States. It provides for exclusive State ballots of uniform size and color for general Congressional, State, and county elections, no other ballots to be legal. Each political party is to adopt a vignette to distinguish its ballots from those of other parties. Provision is made for a secret ballot by means of booths and a railing at each voting place. The inspectors are to place a rubber band around each ballot when it is deposited so as to detect when the votes are counted whether a voter deposits more than one ballot. There are careful provisions about counting the ballots so as to avoid any possibility of manipulating them. Severe fines and punishment are provided in case any one attempts to influence voters. These provisions are somewhat like those of the Milwaukee law which has worked so well in practice. The candidates' names are not grouped upon one ballot, as they are in the laws of the eight other States which have adopted that principle of the Australian system, but in other respects the law is in accordance with the Australian idea. An exclusive official ballot and absolute secrecy in voting are most important principles, for they do away with the worst evils of our politics. The effect of the Michigan law is likely to be the same as that of the Milwaukee law—to create a demand for its extension and amplification into the complete Australian method.

Only a few days before the Civil-Service Commission visited Milwaukee and made its report censuring Mr. Paul for disregarding the Civil-Service Law in making appointments, President Harrison removed the Collector of Internal Revenue at Milwaukee, Mr. Edward C. Wall, and appointed in his place Mr. Henry Fink. The letter which the President sent to Mr. Wall is as follows:

> EXECUTIVE MANSION, June 13, 1889.
> You are hereby removed from the office of Collector of Internal Revenue for the First District of Wisconsin, to take effect upon the appointment and qualification of your successor.
> BENJAMIN HARRISON.

It will be observed that the President assigned no reason for this act. We believe no one has ever been heard to question the fidelity or efficiency of Mr. Wall's administration of his office. That he was competent to discharge, and did in fact honestly discharge, every duty of his office is attested by all. Every dollar that was due the Government was economically collected and accounted for. Besides conducting the business of the office to the entire satisfaction of all, he had regard for the "spirit and purpose" of civil service reform, and this, too, without the sanction of a law or the solemnity of a promise. The Commission, in reporting upon Postmaster Paul, do not charge him with having violated the law for political purposes. It would be gratifying if this could be said in extenuation of the President's removal of Mr. Wall.

Assistant Postmaster-General Clarkson has already appointed as postmaster in one town of this State a burglar, and in another a convicted keeper of a disorderly house, so that nobody will be surprised to learn that he has commissioned in an Arkansas town a man who had been convicted of sending obscene letters through the mails. Henry E. Sharpe was arraigned and convicted on this charge in the United States District Court at Springfield, Mo., in September, 1887, and, in default of the fine imposed, was sent to jail. Upon his release he removed to Lead Hill, Ark., and it was recently announced that Henry E. Sharpe had been appointed Postmaster at Lead Hill, Ark. Of course Mr. Clarkson will plead that he made the appointment, after his usual fashion, "not knowing the facts." It seems that Mr. Clarkson also does not know the laws which govern the appointment of postmasters. He recently appointed as Postmaster at Covington, La., a negro who was not merely objectionable on the score of character, but who was not a resident of the place. The Revised Statutes, section 3831, declare that "every postmaster shall reside within the delivery of the office to which appointed."

The Washington *Post* gives a scrap of conversation between a chief of a division and his Senator, which contains a moral for the spoilsmen as well as for the civil-service reformers. The chief had obtained his position through the influence of the Senator, and then, instead of being "true to his party" by making as many places as possible for the other boys less fortunate than himself, he actually gave the menaced subordinates his protection. When reproached by the Senator for this, he said: "I have worked all my life like a slave for a bare living. Now I have an easy place with a lot of subordinates who know all the details of the business, who will do all there is to be done and save me the bother. Now, if you think I am going to throw them out, and put in a lot of greenhorns, and then work myself to death learning the business and teaching them, you don't know me." Whether this conversation really took place or not does not matter. That there have been chiefs in abundance who acted upon the principles indicated in it, there is no question. The real chiefs, of course, were the poorly paid clerks "who knew all the details," and who worked with double vigor when they perceived that their retention largely depended upon their saving the chief all "the bother." This is rather expensive—having a real and a nominal chief in each of the many divisions in the Washington departments—but, at any rate, the work is done, and well done. It is the plan which we have urged should be generally adopted, namely, a paid officer, with no functions to perform, rewarded with the place and the pay because of his political services, and another non-political, permanent, every-day, hard-working servant getting his pay on the principle of *quantum meruit*. We doubt not that the self-indulgence of such chiefs as the Washington *Post* tells of will so disgust office-peddling Senators as to hasten the day when their friends will be given the pay, but not the opportunity to befriend and protect the underlings of the office.

The Supreme Court Justices of this State appear to hold varying views in regard to the interpretation of the law declaring that preference in employment must be given to honorably discharged soldiers. A few days ago we had the decision of Justice Andrews of this city, upon the attempt of Mr. Gilroy, the Commissioner of Public Works, to get rid of a soldier in his department by declining to assign work for him. The Justice decided that while Mr. Gilroy might legally decline to give the man work, he violated the law when he assigned his work to some other man, and issued a peremptory mandamus for the soldier's reinstatement. Two other Supreme Court Justices have made decisions recently which appear to be somewhat opposed to this. Justice Williams, presiding at Watertown, was asked to issue an order compelling the trustees of the village of Little Falls to appoint a certain man Village Attorney under the law giving preference to honorably discharged soldiers. He denied the application, on the ground that the applicant for the place must not only be an honorably discharged Union soldier, but also fit, competent, and of sufficient business capacity to perform the duties of the position. As to these qualifications it is the duty of the trustees to determine. Such determination, if judicial, cannot be reviewed, reversed, or directed by mandamus. Justice Putnam, presiding at Saratoga, denied a similar application in the interest of a man who desired to compel the trustees to appoint him Superintendent of Streets, holding that the law should be carried out faithfully, but declaring that he could not properly interfere with the reasonable discretion of the trustees if it appeared that they had exercised that discretion in good faith. He also declared that, once appointed, an incumbent could not be removed except for cause.

An amusing report was telegraphed from Maine on Saturday, that when Secretary Blaine passed through Bangor on Friday on his way to Bar Harbor, Congressman Boutelle studiously avoided meeting him. It is added that this is the first time that Mr. Boutelle ever allowed Mr. Blaine to pass through Bangor unnoticed by him, and that there is a coolness between the two statesmen arising over a disagreement upon the distribution of Maine patronage. There is something very droll in the idea of a coolness

between Mr. Boutelle and the author of his political greatness, for if Mr. Blaine had not by main strength lifted him into politics and public life, he never would have been heard of outside of the State of Maine. Mr. Blaine did this service for him, as he has done it for many other men of similar calibre, because he wanted him for a personal agent in his own political schemes. First and last, Mr. Boutelle has been useful to him. He has sounded the praises of Mr. Blaine with great fluency and unction at all times and in all possible places for many years. In return for his efforts, Mr. Blaine had him elected to Congress, where he has simply emphasized by his conduct the great value of the service which his patron performed for him. That he should show coolness after all this is scarcely credible. The rumor must be a midsummer journalistic joke.

Mr. George O. Jones, who carries under his own hat almost the entire remains of the National Greenback party, has issued a call to himself to assemble in convention at Cincinnati on September 12. We do not know whether or not he has sent a copy of his call to Messrs. Randall and Dana, joint owners of the high-tariff-and-trust Democratic party, but he ought by all means to do so. They could "get together" with him, and thus they as well as he would be assured of a convention from 50 to 200 per cent. larger than would otherwise be possible. Father McGlynn and Gen. Butler, if approached in the proper manner, might also be induced to join, and a nucleus would thus be formed for a movement which might possibly attract a sufficient number of the disappointed and hungry of all parties to make it worth while for the National Committee of one or the other of the great parties to "buy it up" in 1892. It is very evident now that unless the rag-tag and bob-tail of politics do "get together" in this or some other way, none of them will be of sufficient consequence to "strike" a National Committee successfully three years hence.

The news comes from the South of the killing by "Dan" Alston of a quiet and law-abiding Scotchman, named Wilson, who, with many of his countrymen, has been for several years developing the stone resources of Lithonia, Ga. "Dan" Alston is the son, the only surviving son, of that Robert A. Alston who was killed about ten years ago in the Capitol building of Georgia by "Ed" Cox. Cox was found guilty of murder, but the jury recommended him to the mercy of the court, and the judge, under this recommendation—a piece of legislation of which Alston himself was the author—sentenced him to the penitentiary, or, more accurately speaking, to the chain-gang, for life. When Gov. Alexander Stephens subsequently pardoned Cox, the only man in Georgia, perhaps in the South, who had ever been subjected to really severe punishment for killing in a perfectly "gentlemanly" manner another man, was permitted to go free. "Dan" Alston, who was by nature rough and wayward, thus lost while yet a mere boy a father whose courage was devoid of all bravado, and whose bearing was high and honorable. In short, he lost the one person who could have managed him and who would have civilized him. Since that tragedy, "Dan" has run wild. He has lived among those who have perpetually reminded him that no Alston has yet died except in his boots. The ruffianly part of him has become each year more prominent. "Ed" Cox has had every reason to believe that "Dan" Alston was to be feared, for there have been many, it is said, to hint to the latter what he owed to the memory of his father. And now we see the product of this kind of education: "Dan" Alston, the rowdy, celebrating the Fourth of July in cowboy style, interfering with social reunions, disturbing the peace, breaking beer bottles over the heads of those who sought to eject him from their premises, and finally killing a respectable citizen who sternly rebuked him for his "dirty tricks."

The Buffalo *Commercial*, while approving of our recent comments on the McDow murder trial, thinks that there are too many miscarriages of justice in the North, and too many cases where the acquittal of assassins has been marked by the applause of men and women, to warrant us in visiting severe condemnation upon South Carolina society in this instance. If this had been a mere miscarriage of justice, the *Commercial's* caveat would be entirely proper, but it was nothing of the sort. It was the regular course of things in the South, as everybody knows. The prevailing idea is that the gallows and the State prison were never intended for gentlemen, because they never kill each other without strong provocation. A crucial test of the strength of this sentiment was furnished in Kentucky a few years ago, when a defeated suitor shot and killed the Chief Justice of the State for deciding against him in a case involving the title to land. It was something of a struggle to get this fellow clear, and it was even necessary to confine him a short time in a madhouse. But the underlying maxims and principles instilled and cultivated by the institution of slavery asserted their dominant force, and this cold-blooded murderer was finally acquitted. Can our Buffalo contemporary imagine a case in which killing, by a person in good society, and unconnected with robbery, would be punished by death at the hands of a jury? If no such case can be imagined, then the acquittal of McDow was not a miscarriage of justice, but a part of the normal social movement in South Carolina. That there are many good people in Charleston and in all parts of the South who deplore the verdict in the McDow case, and would have voted the other way if they had been on the jury, we have no doubt, but they are not sufficiently numerous to constitute society. If they were, we should have verdicts of a different kind.

There are some thousands of males in the country entitled to vote who would rather be the victor in Monday's prize-fight than be President of the United States. In fact, the honors of the Presidency are of small concern in their view compared with those that adorn the brow of John L. Sullivan. Of course every exhibition of this kind, where the fighting is real and not sham, and where money is staked on the result, makes an appetite for more. Yet there has been a sensible decline in the public interest in these brutal displays since the great Heenan-Sayers fight, which enlisted the attention of statesmen in England and of society in both countries. Although crowds went to the bulletin-boards on Monday evening, they were small as compared with those who struggled for the first news of that greater battle. Although Boston "went wild" on Monday, it was a lower Boston than that which bought the "extras" which told how Sayers was knocked around the ring like a wooden image, receiving little more harm than a billet of hickory under like treatment, until finally he closed both of Heenan's eyes and finished him off. The interest in the Sullivan-Kilrain engagement ran in a lower stratum decidedly. It is not to be supposed that any match, national or international, would now engage the thoughts of educated persons, unless the battle were fought in their immediate neighborhood. Moreover, it is quite certain that no such efforts would have been made by the public authorities in the South a quarter of a century ago, to prevent the fight, as were made by the Governor of Mississippi. He seems to have done his whole duty. If the Sheriff of Marion County disobeyed his orders, it is to be hoped that he will be punished according to the measure of the law.

The Minister of Persia to the United States is a victim of one of the most pernicious habits of our time—that of reading newspapers. By excessive indulgence in this practice he has lost his situation as Minister. The consequences are somewhat serious, or would be such if all Persians were addicted to the habit in the same degree. Not only is Mr. Hodji Hossein Ghooly afflicted in the manner described, but he furnishes matter for the newspapers also, having contributed a half-column interview to a Washington interviewer on the Fourth of July. Mr. Ghooly's bad practices do not end even here. He collects all the unpleasant things he finds in the newspapers and puts them in a scrap-book, so that he can refresh his grief if he finds himself at any time getting into a cheerful mood. Pointing to his scrap-book, "I tell you," he said, "that I cannot bear all these things to be said about my King, who in his heart has the kindness to favor the American Minister and all the American citizens in Persia. When I arrived in this country, I came by way of New York. I saw there the statue of Liberty Enlightening the World. I was glad, and I thought, 'Here one can live always without trouble or annoyance.' Now, after being here nine months, I go away as fast as I can, and like a prisoner escaping from his prison. For this purpose and to say these things I re-

sign my position as Minister from Persia, and speak as a private citizen of that country. As a Persian Minister I could not say this." The only cure for the evils described by Mr. Ghooly, and they are undoubtedly great, is to break off his bad habits gradually, if need be. He should first give up his scrap-books at whatever cost, and then limit himself to a certain number of newspapers per day, reducing the allowance according to some fixed rule. He might in the end conquer the habit entirely, but if he should not succeed so far, he would certainly be on the road to self-control. If any word from us could reach his master, the Shah, we should advise him to choose his next American minister by competitive examination in languages, the highest mark being given to those who cannot read at all, the next highest to those who can only read Persian. All who can read American newspapers with facility should be barred out.

A correspondent asks us whether it is true, as stated by Col. T. W. Higginson in a recent letter in these columns, that the Government administers a railroad when it is in the hands of a receiver. The answer is that the Government does administer the railroad, but not in the sense that Col. Higginson implied. He meant to say that if the Government could administer a railroad through a receiver, the presumption would be that it could take up railroad administration as a branch of its regular functions—not that it ought to, but that it could do so fairly well. Col. Higginson overlooks the fact that administration by receivership is really administration by opposing claimants of the property under the umpirage of the court. In the first place, if the claimants can agree upon a receiver, the person they agree upon is always chosen. If they cannot agree, the judge chooses one and puts him in charge, subject to the criticism of all the claimants. Then every order and every act of the receiver is open to review and argument at all times, in term-time and in vacation, by the parties in interest, no matter how small the interest. To establish the parallelism that Col. Higginson suggests, we must imagine all the railroads in the country operated by umpires who are bound to hear arguments from private persons whenever a new locomotive or a ton of steel rails is wanted or a bridge needs repairing.

The report made by Maj. Marindin to the Board of Trade concerning the introduction of the electric light into London seems to be of a very instructive character. It is proposed to divide the territory into districts, and to apportion them among a number of companies in such a way that only two companies shall lay their wires in any district. In order to provide facilities for operating motors, only one of these companies is to use the alternating current. A maximum charge for light is fixed at the outset, subject to revision at the end of seven years, and after forty-two years the local authority will have the right to terminate the concession and buy the property of the company. It is further provided that, after a 10 per cent. dividend has been paid, a portion of the profits shall be applied to reducing prices. While this scheme apparently extinguishes competition, our experience in this country shows that this may not be so objectionable as it sounds. As Stephenson said long ago, where combination is possible, competition is impossible; and lighting companies can always combine. As the expense to consumers is never permanently lessened by such competition as takes place, it seems wise upon the whole to recognize the teachings of experience, and at least prevent the streets from being dug up a number of times when once should suffice. The interests of the consumer should be protected when the concession is granted, as they seem to be by this plan. Its operation will be watched with interest from this side of the Atlantic.

A new process for the production of white lead from lead ore has been brought out in England, which may possibly deliver the American public from the tender mercies of the Lead Trust. The process follows, in the main, the Bessemer process of making steel, the oxidation being produced by air instead of acids. The process is not poisonous to workmen, as the old acid process is, and the product is said to be better as well as cheaper. There are two ways by which the American people can avoid getting the benefit of this discovery. One is for the Trust to absorb the new invention, and the other is to increase the duty on white lead so as to "equalize the conditions of production." The present duty on white lead is three cents per pound. If the new process lowers the cost three cents per pound, we can easily meet that difficulty by doubling the duty, and this would be the most obvious course to follow if Mr. Hanney, the inventor, should be unreasonable in his demands for the use of his invention. The precedents are in favor of the latter course, for when Mr. Siemens of Berlin invented a new and cheaper method of making glass bottles, and offered it to the American manufacturers, they refused to take it, but went to Congress and got the duty on bottles raised to a figure sufficient to neutralize Mr. Siemens's discovery. This was much cheaper than paying Siemens for his invention.

Vague notices have reached this country of the treaty negotiated between several South American Powers, to establish an international law of procedure in civil cases. This treaty was signed at Montevideo January 11, and its text has now been published. The countries taking part in the conference for the discussion and settling of its terms were Paraguay, Uruguay, the Argentine Republic, Chili, Brazil, Bolivia, and Peru. The great aim was to secure uniformity of law touching the innumerable and vexing cases of commercial litigation arising between citizens of different countries. While it has not been possible to secure this entirely, yet much has been gained by the final agreement in which the delegates from all the Powers united. The contracting States bind themselves to recognize the legal processes of each other, and to recognize and enforce, each within its own limits, decisions made in the courts of any of the others affecting its own citizens. The establishment of boards of arbitration, in certain cases, is also provided for, and their decisions, when arrived at under conditions named, are to be held as binding by all the States. All this marks a great advance in the simplification of the business relations of the merchants of these various countries. It indicates, also, decided progress in the appreciation and adoption of civilized methods of settling international controversies on the part of Governments which we have been too much accustomed to regard as barbarous. The Pan-American Congress at Washington next October will be a much more pretentious affair, but it may well be doubted if, at the end of all the palaver, so definite and valuable a document as this of the Montevideo conference will get the signatures of all the delegates.

The concern of the French Government at the preference shown by French emigrants for the countries of South America over the colonies of France finds its latest expression in a letter of M. Étienne, Under Secretary of State for the Colonies, to the President of the Chamber of Commerce of Paris. The object of the letter is to show the great opening for laboring men in some of the French colonies, New Caledonia for example, and to express an opinion as to the best means to be employed to turn the tide of French emigration away from lands of alien speech and institutions to the new settlements which France is pushing in various parts of the world. M. Étienne thinks that France must learn from other countries: if they provide free passage for the emigrant, so must she; if they guarantee him wages and tools and a sure location, so must she. He admits that the right of the State thus to act has not yet been clearly fixed; it is one of the questions to be referred to an International Congress at the Exposition. But it is clear to his mind that, unless France warns intending emigrants against the deceptive statements made by the agents of other governments, and bestirs herself in pointing out desirable locations in her colonies and giving needful aid in reaching such points and in becoming established there, she will fail to see many of her sons going to those "national sheep-folds," as he calls them. It is evident, however, that it is something more than ignorance that leads French emigrants to shun French colonies. To go to them would be their obvious course, and they must have good reasons for adopting another. What the reasons are may be inferred, at least in part, from a letter which the *Temps* recently published from a French colonist. He represents the new community as prosperous enough if only it could be let alone; but it is weighted by French officialism, so that "when we earn four sous, the local government takes from us at least three and a half."

OUR DIPLOMACY.

ALL of our countrymen ought to welcome heartily an exposition of the needs of our diplomacy by one who has been the diplomatic agent of their Government at London during four years, and especially by one who achieved such well-earned eminence in the office as did Mr. Phelps. In his recent utterances before the Harvard Phi Beta Kappa Society he said, "The time has come when we need to have established a distinctive, definite, wise, grand, and, above all, a consistent American policy in our international relations." It is not to be inferred that he intended to imply that heretofore the United States has not had such a policy, as consistent as changing circumstances would permit. Heretofore it has been the rule among us, fairly well observed, that party politics ceased at the ocean's edge. When the President is of one party, and a majority of the Senate is of an opposite party, there is naturally a tendency on the part of the Senate to hamper the President in the conduct of foreign affairs, or rather to postpone action on matters which can be postponed, in the hope that the next turn of the wheel will give the Presidency to the party which has the Senate. And foreign governments are quick to discern and take advantage of a conflict of opinion and purpose between the President and the Senate, and to yield when they discover concert of purpose between all the branches of our Government. Mr. Phelps indicates his appreciation of this fact in the following sentence:

"Changing hands so often as our Government does, we can have nothing worthy the name of a foreign policy, nothing that will either be respected abroad or effectual for its purpose, unless by the establishment of principles, of traditions, of modes of procedure such as shall stand the test of experience and the criticism of mankind, and that shall pass on unimpaired from Administration to Administration, from party to party, the common property of all, the inheritance of each from its predecessor."

But the establishment of what principles, traditions, and modes of procedure would, or could, have relieved the friction of the last four years between the State Department and the Senate in regard to the Extradition Treaty and the fisheries? The country was hampered by the hostile purposes of the President and Senate, which, of course, impaired our diplomacy. Every one will say that our foreign policy during the last four years should have been founded "on the highest morality and justice," but the impediment came of divergence in that regard between the two independent Powers to whom the Constitution had committed the making of treaties. Mr. Phelps adds:

"It is idle to expect that a foreign policy of this kind—kind, elevated, just, consistent, and resolute—can be maintained by our country unless the subject can be withdrawn from the field of party politics. That the contests of the party must continue is inevitable. They are the curse of free government, but are a part of the price of it. In questions between other nations and our own in measures that involve not the success of the party, but the interests and honor of the whole country, we should present the same united front in the controversies of peace as in those of war, and give a generous support to the Administration, of whatever politics, that is charged for the time being with the support of the common cause."

Is not that ideal politics? Can it be seen in England, or anywhere else, under representative institutions and universal suffrage? Indeed, could Mr. Phelps, if he were a Senator, avoid voting with his party friends, if, for example, a new fishery arrangement were sent to the Senate by Secretary Blaine? Is it not true that, when the President and a majority of the Senate are of opposing views in party matters, the office of President calls for the very highest and best sort of diplomatic work to bring about a *modus vivendi* between opposing leaders in the Senate, and to help along the purposes of the Department of State?

But we began our references to the suggestive views expressed by Mr. Phelps at Harvard in order to invite attention to what he tells us is needed to enforce our "*policy*" on foreign governments *after* it has been formulated in Washington—which formulating by the President and the Senate seems to us to be, as we have indicated, the critical part of the business. Mr. Phelps said that

"to enforce such a policy, a navy should be created that would leave nothing to fear from any other naval Power. Naval strength, he remarked by way of an epigram, is the right arm of diplomacy, and if necessary he would wipe out the surplus in the construction of a suitable navy, and would build strong coast fortifications. He also advocated the sending of an ambassador to each of the first-class Powers instead of a minister plenipotentiary. The American representative in the great capitals of Europe should not only have his proper rank among his diplomatic colleagues, but he should be provided with an official residence becoming the dignity of his country. Our representative should likewise be provided with a sufficient pecuniary allowance to enable him to maintain with credit the position in which he is placed and return suitably the hospitalities he cannot decline."

What Mr. Phelps advocates is a raising of the titular rank of our diplomatic agents at the great European capitals; an increase of their salaries; an appropriation of money to be expended by them in social hospitality; the purchase and maintenance for them of a house for an official residence. We are quite certain that Mr. Phelps will agree that if such things should be done for our diplomatic agents abroad, they should be (excepting increase of titular rank) done at home for our Vice-President, our Supreme Court judges, and the heads of departments. He has also meditated, no doubt, on the question whether or not our State Department, or, indeed, our Government at Washington, is now equipped to deal satisfactorily with the ceremonies and formalities which must come if we send, and then, of course, receive ambassadors as ours will be received at Berlin, St. Petersburg, Vienna, Madrid, and possibly at Paris and London? Really, would the increased rank and salary, an official residence, and the allowance of an entertaining fund, have given an iota of added power to the pen or tongue of Mr. Phelps in his contention with the British Foreign Office in the fishery matter? The country should be glad to listen to Mr. Phelps whenever he has a fitting opportunity to consider that question.

But what Mr. Phelps says of the need of a great navy, in addition to increased rank and salary, as the "right arm" of our ambassadors, is most important of all. He defines "a suitable navy" as one that "would leave nothing to fear from any other naval Power." To that end he would "wipe out the surplus." Those opinions, coming from such a source, cannot be put aside as inconsequential. They will receive cordial approbation from the political leaders and party workers now in the ascendancy at the White House and in Congress. The building of a great navy is already on their cards. They have a quick eye for all that such a building implies in the way of expenditure and employment of "workers." But, quite apart from all that, has any foreign government ever, from 1778 at Paris to 1889 at Berlin, and in our most successful foreign diplomacy, yielded anything to us on account of fear of our naval thunder? Is it worth while now to increase our taxes merely and solely in order to build a great navy to be the "right arm" of our ambassadors, and to rival the colossal naval equipments of England, Germany, and France? Did the recent success (as represented) of our Samoan diplomacy at Berlin depend at all on our navy, or even on the rank or salary of our diplomatic representatives? Would our success have been a whit greater if we had possessed the whole navy of Great Britain, and had been represented by three dignitaries each equal in rank to a mandarin of the red button?

"PROTECTION" FOR ARTISTS.

No one doubts that a protective tariff, whether or not it be a good thing for the country at large, is a very good thing for the protected manufacturers themselves. No one doubts that Mr. Carnegie, for instance, finds his interest in the duties upon iron. Yet there is a body of producers engaged in a single "industry" in this country who are almost unanimous in their opposition to a duty imposed, presumably, for their benefit, who have repeatedly protested against its continuance and petitioned for its removal, and who have recently formed a national organization solely for the purpose of procuring its abolition. These producers are the artists of the United States, and this organization is the National Free Art League.

Are we to believe that these men are actuated altogether by altruistic motives, and are so raised above common humanity that they are indifferent to the appeals of self-interest? It seems to us more probable that they are as human as their neighbors, and that if they do not desire "protection" for the industry they are engaged in, it is because they are convinced that their interest does not lie that way, and that, in their own case at least, protection does not protect. Let us see, then, what they have to say for themselves, and why it is that they are found in the unique position of a body of men protesting almost unanimously against a tax levied for their own benefit.

In the circular issued by the National Free Art League may be found the following sentences:

"The present tariff upon works of art *is not in the nature of a protective tax.* The price of a work of art depends upon the individual reputation of the artist, and a cause which enhances the price of foreign works of

art *has no beneficial effect* upon domestic production."

This is the gist of the whole matter. The artists who are enrolling themselves as members of the League are not self-sacrificing heroes, bent upon immolating themselves for the public good; they are not, as a body, free-traders or even revenue-reformers. Many of them are as good protectionists as Mr. Carnegie himself. They are simply men who believe that in their own trade, owing to peculiar differences between it and other industries, protection is not a benefit. A man is presumed to be the best judge of his own interest, and the reasons the artists give for their belief are therefore worth some examination.

"The price of a work of art depends upon the individual reputation of the artist." There is no such thing as a market price for pictures. At the same sale a picture by Millet may bring many thousands, while a picture by some little-known American sells for as many dollars. The big price is not given because the picture is larger or handsomer or better, but because it is painted by Millet. We must have coats and shoes and steel rails, and if we cannot, for any reason, get them from one manufacturer, we must get them from another, but we can do quite well without pictures, and if we cannot afford Millet's or Meissonier's, we do not therefore buy Jones's or Robinson's. Jones's pictures or Robinson's pictures are not the same thing and do not supply the same want. If we want a picture by Meissonier, and cannot afford to buy it, we go without, but we do not buy a picture by some American artist instead. The essence of the marketable value of a picture is that it is unlike all others and that *the same thing* cannot be produced. A copy might, doubtless, be made of Millet's "Angelus" so closely resembling the original that it would deceive good judges; but it would not *be* the original, and its value in the market—unless it were fraudulently sold for the original—would be insignificant. Nay, even in the case of a replica by the master's own hand, the second picture would be worth less than the first, while the value of both would be lessened by the fact that there were two of them. The fact is that, commercially speaking, there is no such thing as "a picture"—there is only this or that particular picture by this or that particular artist. You cannot tax a picture, as such, and thereby raise the price of all pictures; you can only tax a particular picture, and thereby raise the price of *that* picture or of other pictures by the same hand. The only person you can possibly benefit directly by levying a 30 per cent. duty on pictures by Corot is the American manufacturer of Corots; and as, if such a manufacturer exists, his whole trade is forgery, he is not a person we need be concerned to protect. The honorable American artist who is not engaged in producing fraudulent Corots, but in painting genuine Smiths or Browns, has gained nothing, and he knows it. The enhanced price of Corots has not raised one penny the price of Smiths, and, *the difference in price between a Smith and a Corot having been increased*, he finds himself, in popular opinion, marked more clearly than before as an inferior artist. The same self-interest that prompts the wool-grower or the iron-manufacturer to desire an increase of the tariff leads him necessarily to demand its abolition.

Strangely enough, while our artists thus find themselves opposing the continuance of the tariff upon works of art, some of the dealers in foreign art works are on the other side. We said above that the only person directly benefited by this tariff was the forger of imitation foreign pictures, but there is an indirect benefit to the dealer in genuine foreign pictures also. The ordinary picture-buyer knows little of the artistic merit of a painting, and the dealer can always point to the fact that he has found it worth his while to pay a 30 per cent. duty upon it as proof positive of the superiority of the foreign work over that of domestic production. In many cases he deducts the duty from the buying price, while he adds it to the selling price, thus receiving twice what he pays once, and making the price of the veriest daub respectable enough to seem a guarantee of merit to the uninstructed buyer. The present ad-valorem duty of 30 per cent. encourages rather than discourages the importation of the cheaper products of foreign studios, and only tends to keep out those better works that every true artist would wish to see imported in greater numbers. It swells the profits of picture-dealers without benefiting either our own or foreign artists, while it increases the cost of works of art to the purchaser. Is it any wonder that the artists of this country find that protection does not protect *them*, and that they energetically protest against being "protected" in this way?

The Republican party now has control of the Government in all its branches. It is committed to the doctrine of protection, and cannot reduce the duties on manufactures without alienating the influence of the protected industries. Yet there is the surplus. Why not reduce it by taking off the only tax of them all "the abolition of which," to quote the League's circular again, "is not only not objected to, but is demanded, by the class sought to be protected, the artists of America"?

THE SUGAR DUTIES.

The Boston *Advertiser* has a leading article entitled "A Calm View of the Sugar Situation." There is danger, it thinks, lest passion and prejudice should get the upper hand and cause serious injury to one of the most important business interests in Boston. It is glad to observe that the Sugar Trust "is making some concessions to public sentiment," by charging a little less for refined sugar than the tariff allows. It would prefer that there were no such thing as a Sugar Trust, but it cannot sympathize with those who would like to see the refining business "destroyed" simply because it is controlled by a Trust. Accordingly it opposes the plan of the Boston *Herald* to make the duty on sugar uniform at two cents per pound, and recommends instead that raw sugar be put on the free list, and that the duty on refined be fixed at one-half cent per pound. While making this recommendation, it says that "the Sugar Trust needs no especial protection." A duty of one-half cent per pound would amount to a bonus of $15,000,000 per year to the refiners on the present consumption of the country—or say, 3,000,000,000 pounds. This, in the judgment of the *Advertiser*, is not "especial protection."

If the Trust has made some concessions by charging a little less than the tariff allows, that result is due to the fact that a high price curtails the demand. The advance in raw sugars, not the conscience of the Trust, has cut down in some small measure the profits of the refiners. Conscience has nothing to do with prices anyway, in sugar or in anything. With or without Trusts, the price of an article is what the law of supply and demand establishes. Society would be in perpetual turmoil if we were in the habit of expecting the producers of goods to abate their charges as a matter of kindness and hospitality. When the price of raw sugar falls to its former level, the Trust will pocket the whole of the margin between raw and refined as fixed in the tariff, and ought to. If they have anything to give away, they will give it as other charitably disposed persons do, like Mr. Andrew Carnegie, for example. The country has voted this margin to them, and there is not the slightest reason why they should not pocket it.

The margin is between 1¼ and 1½ cent per pound, depending upon the grade and quality of the sugars imported. The bulk of the sugar which came in last year tested between 92° and 96°. The duty on each hundred pounds of raw testing 92° is $2.08. The duty on the same quantity of refined is $3.50. The margin of protection is the difference between these figures, viz., $1.42. At 96° the duty on raw is $2.24 and the margin of protection is $1.26. This is what the law doth give. If the refiners take any less, they must do so either because the maximum price lessens the demand, or because they see in the public impatience, which the Boston *Advertiser* deprecates, a threatened repeal or reduction of the discriminating duty.

It is not likely that the latter consideration enters into their business arrangements at all. They may have it in view as a theorem or abstract conception, like a future state of existence, but they would be very foolish to give up a present profit for a future uncertainty. What Congress may do is doubtful. Among the things least likely to have weight would be a plea that the Trust had been, on the whole, generous, and had not taken all that it might have taken. To any Congressman who wanted to repeal the duty, such a plea would be a laughing-stock. To any one who wanted to adhere to the Chicago platform, the difference between a cent and a cent and a half in the margin of protection would be perfectly immaterial. Any good business man—and the Sugar Trust is certainly composed of such—would prefer to make hay while the sun shines, taking his chances of the rainy day hereafter.

The significance of the *Advertiser's* article

lies in the fact that one of the deafest protectionist newspapers in the country has heard that there is thunder somewhere around the horizon. Others had heard it before. The proposition to reduce the tax for the benefit of the monopoly to about $15,000,000 per year is an encouraging symptom. How it is to be reconciled with the Republican national platform, which demands the repeal of the whiskey tax rather than the reduction of any protective duties whatsoever, we leave to the *Advertiser* and others like minded to explain. We do not think, however, that any half-measures will be adopted with reference to the Trust. To cut down the margin between raw and refined to half a cent per pound would call attention to the fact that the Trust has its fingers in every sugar-bowl in the country, and that the half cent is a sheer gratuity differing from the present tax only in amount. The Boston *Herald's* proposal to make a uniform duty on all sugars is much more reasonable, but the duty ought not to exceed one cent per pound. At this rate the tax would yield nearly $30,000,000, and this is quite sufficient to be imposed upon an article of food used by all classes and conditions of people, and paid chiefly by those in humble circumstances, because they are the most numerous body of consumers. The *Advertiser's* glib assumption that the sugar-refining industry would be "destroyed" if the protection were taken away, calls to mind the similar pretence of the quinine manufacturers when theirs was repealed. "The boy lied."

THE PRICE OF LIBERTY.

In the *Popular Science Monthly* for July, Prof. Sumner gives a severe shaking to the various isms whose aim is that some men shall live at the expense of others, viz., anarchism, socialism, nationalism, State absolutism, and compulsory altruism. All these things require that personal liberty shall be first overturned, because under the régime of liberty each man is charged with his own support. The right to pursue happiness is conjoined with the necessity of using one's powers with intelligence and industry. Society can go back to servitude, from which it has, after much pain and struggle, emerged, but it cannot have liberty and servitude at the same time. If there are such things as natural rights and equal rights, they are incompatible with a system which requires one man to support another against his will, whether the system be called socialism or feudalism.

There is perhaps no phrase that stands more in need of definition and defence than that of "natural rights." It is made to do a great deal of service on the stump, in Congress, and in the press, by persons who have never asked themselves what are the rights that nature has conferred upon man. To answer this question it is necessary to observe what rights men in the state of nature enjoy and what they have enjoyed in the past. When we enter upon such an inquiry, we find that they are not the rights which we mean when we use the phrase natural rights. Among Australian savages, these being by common consent nearest to the state of nature of all existing tribes, the right of a young woman is to be brained with a club if she does not follow the man who first takes a fancy to her. Among Terra del Fuegians the right of an aged person is to be eaten instead of the more useful dogs of the family. In general the right of the strong man in the state of nature is to take the weaker man's property, his wife, his life, or his liberty. The right of the weaker man is to submit.

The state of nature is the last place to search for "natural rights." Least of all is it the place to look for the right to liberty, a right which was denied even in our own country down to the year 1865. If there is any one thing in the world's history that denies and stultifies the right to liberty as being "natural," it is the almost universal prevalence of slavery, and its persistence down to our own time, even among the most highly civilized races. The republics of Greece in their palmy days enslaved each other's free citizens with no more compunction than Tippo Tib feels in his present operations in Central Africa. Our ancestors in Massachusetts thought it not wrong to sell the children of Quakers into slavery, and they made no distinction between Indians and Africans in that regard, as, indeed, there was no reason why they should. The *natural* right of a prisoner of war is to be killed or made a slave of. The right to life and the right to liberty, as they now exist, are artificial and conventional rights evolved from the painful experience of ages. Such they are historically, and no man can affirm that they are different in any other sense, except by taking refuge in theological dogmas which have no more foundation in the Bible than they have in the natural state of man.

What are commonly called natural rights are ideal rights, the product of ideas gradually accepted by mankind and moulded into the form of law. "The most important fact in regard to the history of the dogma of natural liberty," says Prof. Sumner, "is that *that dogma never had an historical foundation*, but is the purest example that could be brought forward of an out-and-out *à-priori* dogma; that this dogma, among the most favored nations, helped and sustained the emancipation of the masses; and that by contagion it has, in the nineteenth century, spread liberty to the uttermost parts of the earth." By dint of calling these rights natural when they are in the strictest sense artificial, having been forged by the sweat of ages, minds have been opened to believe that a lot of other things follow as corollaries, such as the right to a living, the right to labor (*i. e.*, the right to be provided with suitable employment), and the right to marry (*i. e.*, the right to have one's offspring taken care of). These things are inseparable from the right to pursue happiness, and if this be a natural right, the others cannot be denied. If it is only an artificial right, hammered out by painful effort, the others are in like manner to be won by toil and patient mastery of the conditions in which man's lot has been cast on earth.

The right to liberty having been gained by slow effort, protracted certainly through the whole historic period of the race, the presumptions are mightily in favor of its being beneficial, of its being something worth clinging to at all hazards—as is the common understanding of all who enjoy it. Those who advocate Government control of the means of existence, generally speak of it as a larger liberty than is now vouchsafed to any people, since it offers, in their opinion, opportunities for the enjoyment of life, and freedom from anxiety, to larger numbers of human beings. The common answer—and it is a true one—is that such opportunities for enjoyment, and such deliverance from anxiety, are won only by labor conjoined with intelligence, and that the question at bottom is whether governments can direct the labor of men more intelligently than they can direct it themselves, supposing for the moment that all are as willing to work for common ends as for their own ends. "But you must," says the socialist, the nationalist, the compelling altruist. Ah, then you begin by subverting liberty. Your first step is to overthrow and bring to naught something which your fathers and grandfathers wrought out with great effort and shed their blood that you might enjoy, and which, in a general way, you hold to be your most valuable earthly possession. More than ever does it seem true that the price of liberty is eternal vigilance.

COLOR PREJUDICE.

The recent appointments of black men as postmasters in some Southern towns where nearly all the mail matter is sent and received by white people, have aroused much local criticism, which in turn has provoked no little comment in the Northern press. In one case, at Covington, La., a negro was appointed who had never been a resident, who was unknown to the people of the town, and against whose character charges were made. But the most conspicuous case has been that of the office at Bay St. Louis, a summer resort for well-to do people of New Orleans, of which it is really a suburb. Here a negro was appointed Postmaster whose character is conceded to be good, but whose selection is complained of solely on account of his color. The men of the families being generally absent in the city during the day-time, the postal business is done almost exclusively by the women and children, and the local press complains that it is disagreeable for these white women and children to find a black man in control of the office.

When such complaints by the local papers reached the North, a number of the Republican organs were moved to expressions of the most violent indignation. "An insane prejudice," it was called by a Massachusetts paper, while the loud-mouthed Boutelle declared, in his Bangor *Whig and Courier*, that "this is simply monstrous." Why white people at a summer resort in Louisiana should object to taking their letters and buying their stamps from a black postmaster, was something which these New England people professed to believe past their

comprehension. "Why should a good colored man be offensive as a postmaster?" asked Boutelle, with the air of a man who knew that nobody living could answer his question. In the same line were the remarks of Assistant Postmaster-General Clarkson, who is quoted as having talked in this way to one party of protesting Southerners: "Does not a colored servant cook your meal, another wait on your table, another shave your face, and still another mix your toddy for you? You admit that. Well, then, I'm unable to see why it is that if you can take your breakfasts from black hands, you can't also take your letters and newspapers from the hands of negro postmasters. At the office in question, Senator, a colored man will be appointed before night."

There is, however, nothing extraordinary about this particular manifestation of the color prejudice. There are other exhibitions of the same feeling, North as well as South, which are even more remarkable. A newspaper conducted by colored men has recently been calling attention to the fact that the dry-goods merchants of Boston will not employ black men and women as clerks, salesmen, and saleswomen, no matter how deserving the applicants, simply because they are black. Another newspaper conducted by colored men mentions an incident which illustrates the fact that color prejudice is sometimes stronger among Northern men than among Southern. A correspondent of this journal who visited Knoxville, Tenn., not long ago, and observed the many large buildings in course of erection, was struck by the entire absence of negro mechanics. Knowing that many of the best houses in the city had been built by negro mechanics, and that less than twenty years ago but few white mechanics were employed, he asked a citizen the reason. "He told me that white mechanics had been imported from the North, and that they refused to work with negroes. The result was that the negro mechanic could not be employed." This is not an exceptional case. It would be hard to find a white man in the North who would consent to serve under a negro foreman, but such a sight is by no means uncommon in Southern cities.

Occasionally somebody like George W. Cable comes forward with a sad tale of color prejudice in the South—perhaps a lamentation that in Atlanta, Ga., the most refined and educated negro can only go to the theatre on condition of sitting in the gallery. But the same thing is true to this day in the city of Brooklyn. Even black members of the Grand Army of the Republic in that "City of Churches" are forbidden the privilege of sitting beside their white comrades in the body of the house at an entertainment for the benefit of their organization—and the reason is because the managers of the theatres complain that it would hurt their business to let negroes into any other part of the building than the gallery. Nor is this the worst manifestation of the prejudice. The Young Men's Christian Association of this city closes its doors to black men, simply and solely because they are black. At Asbury Park, N. J., colored men are not allowed to bathe in the ocean at the same time as whites. The feeling appears to be no less strong in other parts of the country. During a recent Congregational convention in Iowa a lady of Grinnell, a town distinguished for its educational institutions, in describing the work of the "Society of Christian Endeavor," told how the Society had extended its aid to a colored girl who was finely educated, but who, on account of her color, could find no employment except that of a life of drudgery, for which she did not have the required physical strength, and from the effects of which she died.

While such things are true at the North, it is arrant hypocrisy for Northerners to prate about the "insane prejudice" of Southerners against the negro. The truth is, that this color prejudice is entertained by most white people—by a great many who concede that it seems unreasonable, and yet who confess that they cannot get over it. How far this prejudice is the result, conscious or unconscious, of slavery; how far, if at all, it is really a race feeling which is permanent—these are questions which nobody can settle offhand. It is emphatically a matter which calls for patience and forbearance. We must remember that it is only about thirty years since Abraham Lincoln, in his famous joint debate with Douglas, in answering on the 18th of September, 1858, the question whether he was "really in favor of producing a perfect equality between the negroes and white people," replied:

> "I am not, nor ever have been, in favor of bringing about in any way the social and political equality of the white and black races. I am not, nor ever have been, in favor of making voters or jurors of negroes, nor of qualifying them to hold office, nor to intermarry with white people; and I will say in addition to this that there is a physical difference between the white and black races which I believe will for ever forbid the two races living together on terms of social and political equality."

Abraham Lincoln would not stand by that doctrine if he were living in 1889, when a white man is tried for murder in Charleston, S. C., before a jury half of whose members are negroes; but neither would Abraham Lincoln, in 1889, call it "monstrous" for Southern people still to entertain a prejudice of color which he had himself once so fully shared. He would be likely to suggest to the Boutelles and the Clarksons that they had better devote all their energies for the present to the task laid before them by a candid Iowa editor who says, apropos of the Grinnell incident: "Hadn't we better pick out some of the beams from our own eyes before we make such a fuss about the motes in the eyes of others?"

THEODORE DWIGHT WOOLSEY.

To President Woolsey belongs the rare honor of taking the lead in two great intellectual movements. He laid the foundations of American scholarship; he taught men to apply that scholarship to the social and political problems of the day. In each of these departments of his life work he was preëminent; in the combination of the two he stood alone and unrivalled.

He began his professorship of Greek at Yale College in 1831. In 1834 he published his edition of the "Alcestis" of Euripides. Fifty-five years have elapsed since that time, but Woolsey's "Alcestis" has not been superseded. It is to-day, for its purpose, the best edition in existence. In spite of the advances in philology and in textual criticism, we have nothing which so well meets the need of the student. No higher praise than this can possibly be given to his work. Yet it was done wholly without obtrusion of himself. The notes were not written to show the learning of the author, but to assist the learning of the student. Vast as is the range of knowledge which they display, in philology, in literature, and in politics, the self-restraint and self-effacement of the author are still more striking. His work was everything to him, his own share in its credit least of all things. Similar editions of classical authors followed in rapid succession. The "Antigone" appeared in 1835; the "Prometheus" and the "Electra" in 1837; the "Gorgias" in 1843. Side by side with his friend Prof. Felton, he gave the world tangible evidences of American scholarship which did not need to fear comparison with the best which Europe could produce.

His election to the Presidency of Yale College in 1846 interrupted his distinctively classical work, but only to give him a wider field of influence in the College and in the world. He at once raised the standard of quality in all departments, as he had previously done in his own. Nor was this result confined to Yale alone. At the time of President Woolsey's resignation, a leading Harvard professor truthfully said that all our colleges should share in honoring the man to whose work they were all alike indebted for their standard of scholarship, and for no small part of their progress towards its realization.

No direct comparison can readily be made between the work of President Woolsey's generation and that of President Eliot's. The two are essentially different in kind. The one was primarily an advance in quality; the other, in breadth and extent. The latter has more visible monuments to display, but the former was the necessary prerequisite to it. The man who laid the foundation accomplished what was in many respects the most difficult part of the task. To have done this, and to have done it well, is President Woolsey's highest honor. It is true that he did not foresee what Yale College and other colleges have since become. Our universities have developed on lines different from those which he expected, and in directions which he would in some instances have opposed. But it is none the less true that his work made subsequent development possible. Sound scholarship, vigorous teaching power, and the influence of a strong man on strong men were the vitally necessary basis for all healthful growth. These he furnished. That the subsequent development took a different line from what he expected is no discredit to him. To a man who cared so much for his work and so little for himself, it involves no shadow of failure, but marks rather the

highest success, to have builded better than he knew.

The completeness with which President Woolsey did his work has made it hard for the younger generation to realize its magnitude, while his complete absence of self-assertion in carrying it out has perhaps prevented his personality from taking so strong a hold on the general public as it might otherwise have done. Ten people have a definite idea of President Hopkins to one who has any such picture of President Woolsey. This is what President Woolsey himself would have wished. But it was not the result of any lack of strength of character on his part; it was rather from that excess of strength which could make him afford to be self-forgetful. Those who were under his influence could not for one moment be blinded to his greatness. His self-restraint was not the result of timidity, but precisely the reverse. He had so strong a sense of the importance of the work to be done that he knew no fear in doing it. In the days of his tutorship the most turbulent of the students who came under his eye were afraid of him. However reckless they might be in their wrong-doing, there was a recklessness in his right-doing which was more than a match for them, and which frightened those who otherwise feared neither God nor man. This quality he retained to the end of his life. He was ready to tell the truth regardless of consequences. Towards the close of his Presidency he was asked, under somewhat delicate circumstances, his judgment of a man with whom he had been brought in contact, and was assured that if he gave a hint of his opinion, it would be used in such a way as not to compromise him. Scorning all such concealment, he openly replied: "You may tell people that I think very little of the man." Some years later, when a prominent politician tried to frighten President Woolsey into a retraction of certain expressions of which he had made use, the only reply was a reassertion of the same views, with such added force that the politician was only too glad to let the controversy terminate without another word.

His modesty alone prevented the world from knowing the vastness of his range of information. At a time when breadth of education was far rarer than it now is, he had read both law and theology, and had pursued a course of classical and philological study in Europe lasting several years. Nor did he allow the duties of his college office to narrow his range of subsequent work. Let one instance suffice. In the year 1864 the *New Englander* published a series of articles on the revival of learning in the fourteenth and fifteenth centuries. Knowledge of the Italian Renaissance was not at that time so easy to acquire as it has been since the appearance of Mr. Symonds's work. Such articles as these could only be the result of hard individual study at first hand. Yet the author was none other than President Woolsey himself, who, in the midst of his classics and his politics, his interest in the duties of his office, and his equally absorbing interest in public affairs, had found time to carry out, almost as a diversion, what would have exhausted another man as a specialty by itself.

The influence of President Woolsey's character on those who came in contact with him can never be adequately described. He served as a model to those who worked with him, as well as to those who worked under him. Though strong in will, he was so scrupulously truthful that those who differed from him always had a fair chance to make their views known. They might complain of opposition, they never could complain of unfairness. His character was an ever-present force. His sermons—which to many Yale graduates formed the most impressive part of his teaching—were not mere essays, however full they might be of accurate knowledge and sound reasoning; they were the outgrowth of his life and his personal experience, and their words had the whole weight of his personal character behind them. He was a religious man in the best sense of the word—one to whom the supreme importance of moral questions was an ever-present fact, and who had fully learned the lesson of self-renunciation and the strength which comes from it.

President Woolsey's political work began when his educational work culminated. As President of Yale College, he felt the necessity for more vigorous teaching of history and politics. Not that he had ever in his earlier years lost sight of this fact—his notes to the Greek classics are full of allusions to profound questions of law and public morals. But his position as President gave him a wider opportunity for these teachings, of which he was not slow to avail himself. The first and most important published result of these labors was his 'International Law,' which appeared in 1860. It is a most characteristic book, in which it is as hard for the casual reader to see the amount of effective work which it represents, as for the casual observer to do justice to President Woolsey's influence on the cause of American education. But the more thoroughly the careful student knows the difficulties of the subject, the more he will appreciate the book. The men who rate it highest are those, like Sir Henry Maine, who themselves stand highest and see clearest.

In 1869 President Woolsey published his 'Essays on Divorce,' a leading event in an agitation which has already borne practical fruit. His 'Political Science' appeared in 1887. It was a much larger work than any of its predecessors, but a less successful one. The author originally intended to write on a more limited topic—the theory of the State and the doctrine of rights. It would have been better if he had done so; but he allowed himself to be over-persuaded by friends, and gave the book its present scope in deference to their advice. It is a work of wonderful learning, but out of harmony with the political and ethical thinking of the time. It has been a monument of the author's knowledge rather than a living influence upon others.

It is rare that a man stands so high that an obituary notice can tell the whole truth, and record his limitations as well as his achievements, his less successful deeds as well as his more successful. But President Woolsey was such a man. He told the truth without respect of persons; he wished others to do the same about himself. A smaller man might need to be set on a pedestal. President Woolsey requires no such artificial enhancement of his greatness. He could afford to scorn exaggeration or concealment, and stand before the world for what he was. Thus he did in his life, and thus we have tried to do in this imperfect sketch of his career.

OFFICE-HOLDING IN THE COLONIES.

WASHINGTON, July 1, 1889.

THE recent publication of the letter-books of Horatio Sharpe, Proprietary Governor of Maryland during the French and Indian war, throws much light upon the internal management of the province at that time; and among the many interesting points covered is that of Government patronage and the distribution of offices in those days. To say that the conditions are the same to-day would be claiming too much; and yet the principles that controlled the bestowal of positions in 1755 were essentially the same that control the distribution of spoils in 1889. I have before me some unpublished letters of Richard Henry Lee, a man to whom history has not yet awarded his full due, and the two volumes of Governor Dinwiddie's correspondence, from which illustrations will be drawn. In Virginia, a royal colony, and in Maryland, a proprietary government, the use and abuse of office-holding were similar, and by no means inapplicable to the conditions of to-day. If a well-ordered system could be looked for anywhere in the British colonies of America, it ought to be found in these tobacco-growing colonies, the "brightest jewels" of the English crown, because the highest examples of the wisdom, justice, and power of the selfish and costly mercantile system.

In the royal colony, Virginia, all honor flowed from the King. The Governor was appointed by his Majesty, but usually resided in London, Lord Botetourt being the first to reside in Virginia since Lord Culpeper's time; an interval of nearly a century intervening between the two administrations. The burden of government thus fell on the lieutenant-governor and a council, whose members were appointed by royal mandamus, and usually on the recommendation of the lieutenant-governor. The judges in the higher courts were members of the council, and those of the county courts held their office of the executive, while nearly all minor offices were at its disposal also. The House of Burgesses, composed of two members from each county, represented the popular branch, and with the Governor and Council formed the General Assembly. It is curious to find R. H. Lee lamenting in 1766 the absence in the Virginian Constitution or form of government of some balance like the House of Lords in England. "All the executive, two-thirds of the legislative, and the whole judiciary powers are in the same body of magistracy"; and he quotes Montesquieu to show that such a condition means the worst of slavery.

More than this, the Assembly was a popular branch only in name, as it was subject to the will of the Governor. There was no law directing the calling of new assemblies; there was none appointing any time for the meeting of the representative body when chosen. The

Assembly did pass an act, modelled after the English statute adopted after the Revolution, directing that a new assembly should be called once in seven years at least, and should hold a session at least once in three years; but the royal approbation was not granted, and so the question of holding sessions remained a prerogative possession. The laws of this body were not final, but were subject to the King's veto, which will account for the poverty of the statute-books in what may be called real legislation. Petty matters of detail, entails, rents, formation of counties, erection of townships, and establishment of ferries, were the leading subjects, and it is only when a proposition to form a "bank," that is, to issue a paper currency, arises that any indication of the struggle between royalty and the people which gradually developed into the Revolution, is encountered.

The position of a royal governor was no sinecure; that of a proprietary governor was even more laborious, as it represented rather a business than a political interest. He was the land agent of the proprietor, controlling the disposition of lands within the colony, and collecting the quit-rents; he was the civil and military head of the province, and responsible for the defence and safety of the colonists. But between the conflicting interests of Proprietary and colonists, the means obtained from the people by various charges or rents, and jealously guarded by the Legislature, were not commensurate to the ends, and the refusal of a grant of money by a "levelling House of Burgesses, too much of a republican way of thinking," reduced the Governor to a state of powerlessness in which he easily became a vulgar scold. In Pennsylvania, in Maryland, and in Virginia the relations of the Governor to the Legislature were so strained that it was difficult for them to obtain money even for the most pressing emergencies.

That the Proprietary or the Governor was, too often, to use a vulgar phrase, "on the make," using his powers and his patronage to further his own ends, is merely the bald truth. In Pennsylvania, no important act of the Assembly could receive the sanction of the Proprietary Governor without a "present," which amounted to as much as £500 a law, and was divided between the Governor and the Proprietary. "It is a happy country," wrote Franklin in regard to this abuse, "where justice, and what was your own before, can be had for ready money. It is another addition to the value of money, and, of course, another spur to industry. Every land is not so blessed."

If legislation was brought to such a market, it is reasonable to expect that places of honor and profit should be subject to the same system of disposition. Col. Plater, when offered the office of Secretary of Maryland, looked into the profits of the place, and concluded to refuse should he have to "pay more than one-fourth part of the income," and a like proportion of what money or presents he might receive on the nomination of county clerks; though Sharpe thought he "ought to have offered one-third of the profits at least." Richard Henry Lee, in 1772, requested his brothers, William and Arthur, to use their influence with the Ministry to "fix the profit of some place" with him.

"Have an eye to the deputy secretary's place. I suppose more than £1,000 per annum cannot be paid the principal [*i. e.*, the secretary, an absentee], and I really believe 'tis worth £3,000 per annum this currency. Suppose, then, £1,000 sterling was paid the principal, this, at 25 difference of exchange, would leave £1,750 currency for the deputy. One-half of this I would undertake most readily to do the business for, and remit the rest. In this view, it might be well to give a pretty good sum for the deputyship besides the annual composition."

Was ever bribe more openly offered for an appointment?

The Governor's Council should have been composed of good executive ability, and in Virginia a high order of talent was obtained, the King's representative being anxious to gain the influence of men of property and spirit. In Maryland the Governor was pestered with recommendations, although he wrote more than once that "to be free from fault, or to be a worthy man and good companion, is not, in my opinion, sufficient at this time [1755, the year of Braddock's expedition] to recommend a person to a seat at the Council Board."

"I think I have already hinted to you that I am not permitted to dispose of any of the most honorable and lucrative offices, because another person loves to have all the applications made to himself. This perhaps is of itself sufficient to lessen the weight and influence that a governor would otherwise have; but as it has been thought proper of late to saddle these offices with about £550 per ann., and I am charged with the care of making the most advantageous bargains, I submit to your own judgment whether it is possible for a person in my situation to continue always popular. Anybody that can get introduced to Mr. Calvert, is sure to bring me an open letter desiring I will appoint him to this or that, or the first vacant office. Should I have any objection to the person so introduced and recommended to me, or for any other reason neglect to comply with the terms of such letter, that man thinks himself hardly dealt by, and immediately commences my enemy."

"I begin to see," he wrote to Calvert on another occasion, "that the art of disposing of places so as to avoid offence is one of the most difficult parts of government"; and, after an experience of three years, to Lord Baltimore, "Any privilege or power of nominating to vacant offices is one that, in my opinion, no governor has reason to be very fond of. For my own part, I can assure your Lordship that it has made me many enemies, and that, on account of the recommendations that I have been obliged to accept, it has been very rarely in my power to make a friend by that means." Still, office was sometimes used for political effect, and the position of councillor was offered to a member of the lower house to abate his "virulency," and the profits of the surveyorship were considered a fitting instrument to make a "useful tool" of a member of the House who, by his "cunning and capacity," might lead or "impose on" some of the Burgesses. Church-livings were dispensed in the same way, and the revenue of the colony mortgaged through pensions given to gentlemen for whom the Proprietary had a great regard, although the recipient of a favor was not required to remove to and reside in the colony.

The governors were, however, only too anxious to extend their own influence; and honor, place, and profit were the easiest and least expensive means offered. Dunmore, in making nominations to a vacancy in the Council in 1772, reminded the Earl of Dartmouth, in terms of deference, that Lord Hillsborough had promised that "no one not nominated by him [Dunmore] should be appointed." So Sharpe, in spite of his complaints, would much have liked to distribute the plums of patronage:

"I have before hinted to you what channel all preferment has gone through since I have been honored with his Lordship's commission, and if a reformation be not shortly made, the authority of a governor in this province will be a very shadow. . . . I hope you will be able to convince him that a governor without power to oblige or reward, as well as to punish, can never make many friends, and that it is more than likely that a majority of those who obtain favors without my approbation or interest, set light by my power or commence my enemies."

But the Proprietaries were bent upon retaining the function for themselves; and when the Pennsylvania Assembly recommended to the Governor a person for the trivial office of receiving a lighthouse duty, it was characterized as "an encroachment on the prerogative of the Crown."

All the offices being at the disposal of the Governor (as representing the King or the Proprietary), and the activity of the Legislature being curbed by the Executive, the sphere of action to one who did not happen to be in the good graces of the Governor was necessarily limited, and not likely to call out the best talents attainable. Sharpe complained that, owing to the short term of membership in the lower house, "few gentlemen will submit so frequently to the inconveniences that such a canvass for seats in that house must necessarily subject themselves to; by which means there are too many instances of the lowest persons, at least of men of small fortunes, no soul, and very mean capacities, appearing as representatives of their respective counties." Lee, as early as 1769, only a few years after his bold attack on the scheme of the defaulting treasurer of the colony, and the prominence he had gained in connection with the protests against the Stamp Act, found the "attendance on assemblies so expensive, and the power of doing good so rarely occurring, that I am determined to quit that employment." And a year later he wrote: "I have many reasons that are absolutely decisive against continuing a popular candidate any longer. . . . If, therefore, I am to continue in the public service, it must be in the Council, . . . the power of checking ill, and the means of doing good, occurring oftener in our upper than in our lower house."

The manner of conducting the elections and the expense involved were some of the reasons that made popular representation an undesirable effort. Those who were "in" did not hesitate to truckle to the people's views. Sharpe declared that, as an election approached, the Legislature would become perverse and obstinate, standing out for its rights, and catering, as it were, to the popular vote; full of its own opinions, and entirely deaf to argument and reason; seeking to cast odium on the Governor by passing bills speciously framed so as to comply with his recommendations, b[ut] only on the sacrifice of his duty to his maste[r], or so as to satisfy a popular demand that c[ould] be gratified only by the Governor's diso[beying] his instructions.

Those who were "out" were [forced] to seek the favor of the powerful. Was[hington], when only twenty-three, expressed a w[ish] to "stand a poll" and represent his county [in the House] if his "chance was tolerably g[ood]" and he asked his brother to sound his [friends] on the subject, and, should they seem i[nclined] to promote his interest, to beg the [assistance] "Conduct the whole till you a[re satisfied] of the sentiments of those I have m[entioned], with an air of indifference and un[concern]; after that you may regulate your conduct according to circumstances." Before he was twenty-six, this ambitious youth had run as a candidate to the Burgesses, and met with a bad defeat, receiving only 40 votes out of a total of 581. In 1758 he was successful, and his accounts give some light on the election methods of that day, for his friends expended nearly £39 in entertaining the freeholders (all but £3 went for liquor), and Washington wrote to his manager that his only fear was that the money had been spent in that way "with too sparing a hand." Being

absent at the time with Col. Bouquet in his march against Duquesne, Col. Wood, a local celebrity, acted as his representative, being "carried round the town in the midst of a general applause and huzzaing for Col. Washington." A "dull barbacue, and yet duller dances" were features of the election, and then the excitement subsided. All appeared to depend on the personal favor and address of the candidate, for, save in Pennsylvania, no definite issues were mentioned or discussed. Franklin recorded in 1764, doubtless with no little pride: "In none of the fourteen elections [he had won to the Assembly] did I ever appear as a candidate. I never did, directly or indirectly, solicit any man's vote." And he speaks of "double tickets" and "whole boxes of forged votes" as weapons used to defeat him by the Opposition—practices of which the present generation know somewhat.

The position of the Governor saved the colonies from one great abuse, an interference with the county elections. There might be "Government candidates," but the frequent elections (annual) made much of such local interference with a free choice too costly and nugatory, for the people would remain opposed to the Executive, and it was in the people that the choice of delegates ultimately resided. An unpopular representative was too easily shelved to make it an object to back him; and whatever favor and influence the Governor sought was in preference obtained by the distribution of the offices at his disposal, and not by an attempt to determine the complexion of the House. Every effort was made to extend this influence; but when the Revolution came, it was seen how hollow and unreliable it was. We have had in our day attempts to build up a party by the abuse of patronage that have been no more successful than were the attempts of these colonial governors. In short, we may find in the problems presented by the civil service to-day much the same conditions and difficulties that were met with 130 years ago.

WORTHINGTON C. FORD.

RUSSIA BEFORE EUROPE.

PARIS, June 27, 1889.

THE success of the French Exhibition has amounted to a sort of intoxication, and created a sort of optimism which has rendered us almost indifferent to the incidents of the politics of Europe. Some of these incidents, however, have been such as to attract attention, and even to create a sort of uneasiness, and almost of anxiety. The Emperor of Russia lately spoke of the Prince of Montenegro as "his only faithful ally." These words had the effect of a thunderbolt in a blue sky. To speak of a chieftain who can, in his mountains, arm from ten to twenty thousand men only, as his sole ally, is to say that Russia needs no allies, that she is strong enough to resist all the forces of the triple alliance of Prussia, Austria, and Italy. Russia repeats now what Charles Albert once said: "L'Italia farà da se."

There is no use denying the fact—the tension between Germany and Russia is increasing every day. Immediately after his father's death, the young Emperor Wilhelm II. made a visit to Cronstadt and to Peterhof. This visit has yet to be returned by the Emperor of Russia; it is stated that he absolutely refuses to return it with any pomp at Berlin: all that he is willing to do is to see the Emperor of Germany somewhere on his way to make his usual visit to the Danish royal family. There is little doubt that the advances made by Wilhelm to Alexander have had no result whatever; the Emperor of Russia is immovable in his determination to enter into no combinations, no alliances, no political arrangements with Prince Bismarck. He considers that his father made too many sacrifices to the ambition of Prussia, and was never rewarded for it; that the Treaty of Berlin robbed Russia of all she could expect in the East, after she had conducted her armies to the very gates of Constantinople. He is biding his time. Pacific, and determined not to engage in any war, he believes that time works for him, and that he has no need of entering into direct hostilities with Austria and with Prussia; that Panslavism is gradually doing the work of Russia, not only in the Balkan peninsula and in the newborn principalities of Rumania, Bulgaria, and Servia, but even in the Slavic provinces of the Austrian Empire. His policy has become a sort of masterly inactivity; and this inactivity helps him better than any direct interference. It is a curious fact that whenever there have been Russian delegates and generals in Bulgaria and Servia, there has been an outcry against Russia; as soon as the Russians leave these provinces the Russian influence again becomes uppermost. It is at the present hour predominant in Servia, though the Regents are apparently completely independent.

Panslavism is a mysterious force: it addresses itself sometimes to reactionary, sometimes to revolutionary passions; its chief support is the Greek religion; the metropolitans are everywhere the most powerful instruments of Russian ambition. Last September an incident occurred in Slavonia which made a great noise. The Emperor Francis Joseph reproved in strong terms, at the Castle of Bellovar, Bishop Strossmayer of Diakovar, who had addressed a telegram to Kiev, on the day of the anniversary of Saint Vladimir, who introduced Christianity into Russia. Bishop Strossmayer spoke in his telegram of the destinies of Russia and of her great mission in the world. The opposition to Prince Ferdinand in Bulgaria is headed by the Metropolitan. The Metropolitan of Servia was the chief adversary of King Milan, who represented the Austrian influence. The struggle between Austria and Russia in the Balkans is in reality a struggle between Catholicism and the great Orthodox Church; this rivalry underlies all the small incidents of daily politics.

The Emperor of Austria has found it necessary to make an indirect answer to the speech in which the Emperor of Russia asserted his friendship for the Prince of Montenegro. He has given a warning to all the Powers, in saying that "the situation of Europe continues to be little reassuring." While hoping that peace can still be long preserved, notwithstanding the great armaments which are continually increasing, he regrets that the resolution of King Milan of Servia has placed the power in the hands of a Regency during the minority of the young King. He expresses a hope that the prudence and the patriotism of the Servians will preserve their country from grave dangers, and he has some words of encouragement for Bulgaria, where order continues to reign and where great progress is making, notwithstanding the difficult situation of the principality.

Nothing could be clearer than this language, guarded as it is. It is evident that all the dangers to which the Emperor of Austria alludes, the difficulties he speaks of, have their origin in the policy of Russia and in the agitations of the Panslavist party. For a long time it seemed as if the word of Chancellor Gortchakoff after the Crimean war might be repeated: "La Russie ne boude pas, elle se recueille." The great Northern Empire had a merely negative and defensive policy. For a long time after the Treaty of Berlin, the old policy of the alliance of the three Emperors did not seem quite abandoned, but Russia by degrees assumed a more independent policy, and her independence now borders upon hostility. In vain has Prince Bismarck tried every means of conciliating the Emperor of Russia; all seems to be lost on his solitary will, his impenetrability and sullenness. The Emperor is influenced by the passions of his people, which feels an innate hostility to German culture and to Germans. In a country which has no parliamentary institutions, no free press, no chambers, the sovereign, while he seems autocratic, is nevertheless swayed by a sort of public opinion which finds its expression in a hundred ways. The order of the day in Russia is now a return to old Russian habits, costumes, institutions, prejudices, a total severance from all occidental influences. The Emperor leads the people, and the people leads the Emperor in this new crusade. A war between Russia and Germany would really be a war between two different civilizations.

Everybody has felt that France and Russia were drawn towards each other during the past few years by an almost irresistible instinct. There has never been a complete political understanding between them, no treaty of alliance has been signed; but the two nations have felt more interest in each other, they have made a sort of moral alliance. The Russian Government has several times intimated that Russia desired to see France make herself stronger. The instability of our cabinets, the character of our republican institutions, the conservative sentiments of the Emperor have prevented any definitive alliance. But the Emperor's advisers have persuaded him lately that too much importance ought not to be attached to the incidents of our parliamentary life; that beneath our political divisions there is a strong undercurrent of patriotism; that in case of war all party division would rapidly disappear, and that the chiefs of the army would play the principal rôle in the development of events. On the subject of the French army, the Emperor receives very special and complete information, and the conclusion which has been arrived at by his informants is, that the French army to-day is in excellent order, has very able commanders, and constitutes a political element of the greatest importance.

It was thought, at one moment, that the painful incident of Sangallo would make bad blood between Russia and France; Russian blood had been shed, and there certainly was much irritation manifested in the Russian press. On the first occasion when, after the affair of Sangallo, the Emperor met the diplomatic body, the French Ambassador, M. de Laboulaye, naturally felt some anxiety and his colleagues much curiosity. The Emperor approached M. de Laboulaye with his usual courtesy, and merely said, "I regret deeply the incident which has just taken place," and then, after a short pause, "But it will not embroil us" (*cela ne nous brouillera pas*).

Between the constellation formed by the three Powers of Central Europe, Prussia, Austria, and Italy, and the nebulous moral alliance of France and Russia, what will be the conduct of England? Her interests are at present in the hands of a very able man, Lord Salisbury, who has lost much of his old ardor, but has gained in diplomatic knowledge, in foresight, in true statesmanship. He fully understands the forces which are opposing each other, he feels keenly the great responsibilities of his post; he has, so far, not committed a single fault. England has her hands free; she is so

placed that she can observe the development of events, bide her time, and choose her hour. We regret that in the small matter of the conversion of the privileged debt of Egypt, the French Foreign Office should have shown some ill-will to England, at a time when it is essential that France should make no enemies. All the Powers had assented to this conversion, which would benefit the Egyptian fellah. France has asked some guarantees, and demanded the fixing of a date for the evacuation of Egypt. Our Foreign Office cannot be consoled for the diminution of our influence in the valley of the Nile. Time will show what effects this attitude of the French Government may have on the orientation of the English policy.

THE ITALY OF HAWTHORNE.—I.

Rome, May, 1889.

There are few books put so often into the hands of English and American visitors to Rome as Hawthorne's 'Marble Faun,' or, as it is more generally known here, 'Transformation,' from the cheap and widely circulated Tauchnitz edition, which has followed the English title. Pilgrimages are made to what is now generally known as Hilda's Tower; and when young ladies go to the Capuchin church to see the picture of Guido, they almost dread to find a dead monk laid out and bleeding from the nostrils. The book gives a strong impression of local color.

Like every one else in America, I read the book soon after its first appearance, and was naturally struck by the mysteriousness and fancifulness of the story, which, in my ignorance of Italy, seemed perfectly possible. I was deluded by this feigned impression of local color; and as Ruskin and the other art teachers of the moment were then decrying Raphael and all the more modern Italian painters, we were inclined to agree with Hawthorne that nothing better could be done with many frescoes and paintings than to whitewash or burn them, without reflecting that the works of art thus devoted to destruction were those so highly praised by the pre-Raphaelite school. Twenty years later the book came into my hand one day at a hotel in Perugia. I had some dim remembrance of the scenes laid there; but when I found that there had been given to the cathedral a wonderfully beautiful façade which does not exist and never has been built, the book was impatiently thrown aside. It is plain enough that the front of the great church at Siena is meant, as it is described in the romance in almost the same words as in Hawthorne's 'Italian Notebooks,' and the error may be due to a freak of memory.

Again, out of idle curiosity, I have read the book. But this time it amused me to make contemporaneously a study of all that is published under Hawthorne's name, including his 'Notebooks' as well as his various biographies. It is a sad confession to say that, after all, the book of his which I look back to with most affection, and which I have just learned that he chiefly wrote—'Peter Parley's Universal History'—was not published with his name.

It is interesting to study the manner in which Hawthorne's novels were made up; and for this the materials are ample. Few authors have been so thoroughly exploited by their family as Hawthorne: it would seem as if there were scarcely a scrap of his writing still remaining unpublished, except that, with a certain amount of deference to his feelings, some passages of his 'Notebooks' have been omitted which would be of the greatest interest to us, as they have admittedly been rewritten or used with slight changes as component parts of his finished works. It is impossible to agree with his latest biographer that it is idle and useless to study Hawthorne's life and books in connection. Whatever may be the case with his family, it is certainly not true for us, that "if he had never written a line, he would still have possessed, as a human being, scarcely less interest and importance than he does now." Nor has for us "his literary phase seemed a phase only, and not the largest or most characteristic." Indeed, for the world at large, this phase is the only important part of his life, and in general we care to know only so much of his biography as throws light on his books.

We wait with sympathetic impatience for the book of Mr. James Russell Lowell, who knew Hawthorne more or less intimately—so far as one could really know him. Of what has been published, the biography by his son Julian Hawthorne is too long and trivial, although it contains many interesting details. The best thing, on the whole, is the appreciative little book of Mr. Henry James, which does, in some sense, justice—although many Americans say injustice—to Hawthorne's surroundings during the first fifty years of his life.

For a study of the composition of the first two American romances the materials are scanty or have been withheld. The ideas of both plots come from old New England traditions, and the stories themselves are similar to those in 'Twice-Told Tales' and 'Mosses from an Old Manse,' although developed to far greater length and with more minuteness of detail. We know also that Hawthorne, when he wrote the 'Scarlet Letter,' was in a very gloomy state of mind, owing to his having recently been turned out of his position as Surveyor of the Salem Custom-house. This may account in part for the sad tone of the book. The 'House of the Seven Gables' was written in happier moments and amid brighter scenes—the charming landscape of the Berkshire Hills. But even Lenox was not always pleasing to him, for he says in a letter:

"This is a horrible, horrible, hor-ri-ble climate: one knows not, for ten minutes together, whether he is too cool or too warm; but he is always one or the other, and the constant result is a miserable disturbance of the system. I detest it! I detest it! I detest it! I hate Berkshire with my whole soul, and would joyfully see its mountains laid flat."

The 'Blithedale Romance' was written, after another change of residence, in West Newton, a rural suburb of Boston, where—as his son says—"the omnipresent ugliness compels a man to write in self-defence." The background of the book is, of course, Brook Farm, where Hawthorne spent a year as a participator in that absurd and fantastic socialistic experiment. Much of the charm of the book is due to personal reminiscence, and in Miles Coverdale Hawthorne treated himself in a humorous, semi-autobiographic way—much as he has done in his private letters and in the introduction to the 'Scarlet Letter.' In Zenobia we seem to have a glimpse of Margaret Fuller, as she appeared to the imagination of those who did not know her, in spite of the great want of likeness. But, as Mr. Henry James very well says:

"There is no strictness in the representation by novelists of persons who have struck them in life, and there can in the nature of things be none. From the moment the imagination takes a hand in the game, the inevitable tendency is to divergence, to following what may be called new scents. The original gives hints, but the writer does what he likes with them, and imports new elements into the picture."

It is on the whole to be regretted that President Pierce ever gave to his friend that Nessus shirt of the consulate at Liverpool. That productive artistic power which had culminated in the 'Blithedale Romance,' ceased for a long time; and neither 'Our Old Home' nor 'The Marble Faun' reached the level of the American novels. Hawthorne was greatest when on his native soil and writing about characters whose nature he could understand and appreciate. English life, notwithstanding its many resemblances and points of connection, was to him always a foreign one. In spite of his long residence at Liverpool and of his frequent trips to all parts of England, and the possibility of many and interesting acquaintances, he could never assimilate himself to English life, nor even thoroughly accustom himself to English surroundings. In Liverpool he lived in a second-rate or even fifth-rate boarding-house, confining himself chiefly to the society of American ship-captains. Although often in London for months at a time, he saw very little of London society, even of its literary coteries. He himself felt his isolation, for he several times mentions it—rather, however, as if it were a praiseworthy thing, and one to be proud of. In a London suburb, he says, "the preceding occupant of the house (evidently a most unamiable person in his lifetime) scowled inhospitably from above the mantelpiece, as if indignant that an American should try to make himself at home there." And again, in his journal, "I seem to myself like a spy or a traitor when I meet their eyes, and am conscious that I neither hope nor fear in sympathy with them, although they look at me in full confidence of sympathy. Their heart 'knoweth its own bitterness,' and as for me, being a stranger and an alien, I 'intermeddle not with their joy.'" And yet Hawthorne had two very good English friends, Henry A. Bright and Francis Bennoch—the former of whom, however, he had first met in America.

It is absurd to say, with Hawthorne's son, that few Americans ever journeyed thither "better equipped than they [his parents] for appreciating and enjoying what lay before them." Doubtless they had read many books, though the absence of allusions to reading or to interest in any book of the day in Hawthorne's extremely objective notebooks and journals is as curious as the lack of me[n]tion of any love of literature in his biograph[y]. Poetry and literary and historical associat[ions] had prepared their imagination for appr[e]ciating what they were about to see; but ver[y often] external circumstances interfered. Th[is] pecially noticeable in Italy.

The journey, chiefly by sea, from M[arseilles] to Rome was wretched. Genoa seeme[d] less; Leghorn and Civita Vecchia wer[e] During the early part of the stay at R[ome] weather was cold, though sunny; t[he] came on, and Hawthorne caught co[ld] finally had to sit shivering over a fire [in] of warmer weather. Even after this [he was] not comfortable nor happy. As he k[new] most no Italian, he could not enter into [the life] of the people, and his daily walks thro[ugh the] streets of Rome and in the Campagna could only show him the outside of things. As his son says, he cared less and sympathized less with Italy than he had done with England:

"Upon Italy, however, his eyes rested with no deeper sentiment than belongs to a respectful and intelligent curiosity. He had no personal stake in the matter; whatever faults or perfections Italy might possess were merely phenomenal to him, not vital. The Italian genius had no affiliations with his own; it was objective to his mind—something to examine and speculate about, not intuitively to apprehend. The Italian people might be what they

chose, and do what they liked ; his equanimity would remain undisturbed."

The journey from Rome to Florence was an agreeable change, and he wrote in his diary :

" I absolutely walk on the smooth stones of Florence for the mere pleasure of walking ; and, warm as the weather is getting to be, I never feel that inclination to sink down in a heap and never stir again, which was my dull torment and misery as long as I stayed at Rome. I hardly think there can be a place in the world where life is more delicious for its own simple sake than here."

Part of that summer and autumn he spent at the Villa Montauto, on the hill of Bellosguardo, which has one of the most beautiful views of the neighborhood, looking on one side over and beyond Florence towards Vallombrosa, and on the other over the valley of the Arno far off towards Pistoia. It was so near as to enable him to walk into Florence almost daily. Scarcely had he returned to Rome when one of his daughters was taken down with Roman fever, and for four months he was too anxious and despairing to enjoy the life of Rome. Perhaps from his ignorance of the language, Hawthorne apparently made no Italian acquaintances, and, with few exceptions, seems to have known no one outside the American and English colonies. He saw something of Mr. W. W. Story and something of the Brownings; had occasional glimpses of Mrs. Jameson, Miss Bremer, T. A. Trollope, Gibson, and Read, as well as of passers-by such as Mr. Bryant, of whom he always speaks very harshly; Mr. Hamilton Fish, Mr. John P. Kennedy, and his old friend ex-President Pierce. But his chief intimate friends were apparently a few American painters and sculptors, such as Brown and Thompson at Rome and Powers at Florence. Yet, although these sufficed to interest him and helped him to pass the time, he saw their shortcomings and felt their inferiority. Of one of them he wrote, and the description is applicable to more than one:

" Mr. —— has now been ten years in Italy, and after all this time he is entirely American in everything but the most external surface of his manners; scarcely Europeanized or much modified even in that. He is a native of ——, but had his early breeding in New York, and might, for any polish that I can discern in him, still be a country shopkeeper in the interior of New York State or New England. How strange! For one expects to find the polish, the close grain and white purity of marble in the artist who works in that noble material; but after all he handles *clay*, and, judging by the specimens I have seen here, is apt to *be* clay—not of the finest—himself."

He saw through all their little quarrels and jealousies, and remarks once: " I repeat these words only as another instance how invariably the sculptor uses his chisel and mallet to mar and deface the marble work of every one."

Mrs. Hawthorne had some notions of art. She had dallied with brush and pencil, and had once " copied so perfectly a highly finished landscape of Allston that (as Ellery Channing said), being framed alike, when the two pictures were seen together even Franklin Dexter did not know which was which." Having, therefore, some notions of art, her great delight in Italy was to visit the galleries and study the pictures, trying, like so many others who can be seen there nowadays, to discover their inward meaning, but not perhaps always succeeding. Hawthorne, on the contrary, had not the least feeling for art. There are persons who by experience and hard work can become good judges of pictures and learn to tell copies from originals; can even get to appreciate the possibilities of an artist from his early attempts, and whose opinion, therefore, as connoisseurs, is worth having. These in the end must get to be fond of pictures, if only in a technical way, although in point of fact they are only a finer kind of tea-tasters and wine-tasters. Hawthorne had not even this quality, but, because he thought it was his duty, he dragged himself wearily through miles of picture galleries, though admitting to himself that it was a great trial, as he could never take in more than a few objects at a time. Sculpture he thought he could appreciate, but he disliked the nude. " I do not altogether see the necessity of ever sculpturing another nakedness. Man is no longer a naked animal; his clothes are as natural to him as his skin, and sculptors have no more right to undress him than to flay him." But as to pictures he was in a hopeless state of confusion. He wanted the colors all strong, bright, and fresh, and even then they often lacked the charm of being in brilliant frames; just as he thought that the mosaic of the " Transfiguration " must give a better representation of Raphael's idea than the original picture in its present state, and just as he preferred the churches which had the most gaudy interiors of colored and polished marbles. While admitting his ignorance, he was somewhat astonished at Mrs. Jameson, who took him on a drive one day.

" She says that she can read a picture like a page of a book; in fact, without perhaps assuming more taste and judgment than really belong to her, it was impossible not to perceive that she gave her companion no credit for knowing one single simplest thing about art. Nor, on the whole, do I think she underrated me; the only mystery is how she came to be so well aware of my ignorance on artistical points." E. S.

Correspondence.

STILL ANOTHER.

To the Editor of The Nation :

Sir: A large audience was assembled in the Sanders Theatre at Cambridge on the 27th of June, to listen to an address by the Hon. Edward J. Phelps, our late Minister to England, before the Harvard Chapter of the Phi Beta Kappa Society. Sharing in the privilege, I was impressed with the fact that the whole discourse formed one long premise to the conclusion of which your readers are so tired.

Mr. Phelps says that foreign affairs should be kept out of party politics, for which domestic affairs furnish a more than sufficient field; that foreign policy should be firm and consistent, which it cannot be while it is the sport of changing parties, instancing the important case of the Fisheries Treaty rejected in the Senate by a strict party vote. He says, again, that other first-class Powers have ambassadors, while we have only ministers plenipotentiary and envoys extraordinary, who are regarded in the diplomatic hierarchy as only of the second rank, so that our men have to take lower places, and only second-class men are, as a rule, sent to us in exchange. He says that it is unworthy of a nation as great and rich as ours that diplomatic posts can be held only by men rich enough and willing to draw largely on their private resources; and, moreover, that while other first-class Powers furnish official residences for their Ministers, our Government leaves even Ministers to Great Britain to find lodgings as best they can. Obvious personal reasons prevented him from referring to the greatest disgrace of all, namely, that foreign embassies should be distributed as rewards for the services of party politicians—a practice to which, in his case as well as in others, Mr. Cleveland made a happy exception.

The explanation of all this is perfectly simple. Foreign affairs are especially the business of executive administration, but Congress has taken possession of administration, and reduced the Executive to impotence except in obedience to its commands. Congress is composed of local men, each of whom cares only for his own constituents and his own seat, and little or nothing for the national interest; or, if he does care, can do nothing about it, and, if he should attempt to, would only injure his party standing. No man can lift his voice in Congress who in any way officially represents the nation. How can a purely national interest be expected to receive any attention? Congress cares nothing what becomes of foreign ministers or of the national dignity abroad. It only knows that, such as they are, these places are good enough to stimulate the best party work at home. While ready to take fat salaries for its members, and to distribute with both hands pensions which are supposed to secure local popularity, it is so jealous of the Executive as to starve and pinch it in every possible way, knowing full well that it has no voice even for remonstrance. Much as it is needed in every department, in none more than foreign affairs is it imperative that the high executive officials should be heard in Congress before the country. Mr. Phelps praises the English because in foreign affairs they give up party discord and support the Government of the time. That is merely because they have somebody outside of party who stands for foreign affairs. Here nobody but party represents anything.

In this connection I may refer to the letter of your correspondent Ernest Bruncken. He admits that the Legislature has taken possession of and abuses the whole power of government, and suggests as a remedy that we should have a separate body, elected solely for administrative purposes. But this idea embodies two principles which are perfectly fatal to good administration—a numerous body with separately elected members. Instead of one set of committees, with anarchy, confusion, and intrigue, we should have two. All the secrecy, lobby work, and infirmity of purpose, with the absence of all responsibility, would be just doubled. If it is wanted to see how such a body, intrusted with executive power, would work, there is a plenty of examples in the school committees of cities and towns. And, after all, the legislative body would get the upper hand, because that branch is always the strongest which holds the purse. What is the need of any such expedient? We have already an ideal administrative organization—a President elected by the whole people, a Cabinet of individual heads of departments appointed by him, and down through the one hundred and twenty thousand or so of offices, single men in every post, and all radiating from the President. Nothing could be more perfect, and to this is owing the incomparable superiority of the Federal Administration over that of any State or city. The reason that it fails at all is because it is paralyzed by the usurpation of Congress. The Executive has no initiative, no guidance of policy, no power of appeal to his constituents, no weapon of defence. He has to feed out the offices to suit his masters of the party machine—except so far as the power of appointment is taken out of his hands by an irresponsible commission—and has to sit idly by while Congress carries on its schemes of local and private interest, with the poor privilege of veto if they get quite too outrageous.

The way to meet the overgrown power of Congress is to set the Executive on his feet, and let him stand or fall by his own strength.

G. B.

Boston, July 4, 1889.

THE SPOILS SYSTEM IN 1829.

To the Editor of The Nation:

Sir: An interesting illustration of your recent editorial on "Rotation and the Presidency" has just come to my notice. A biography of Joseph Duncan, fifth Governor of Illinois, has lately been written by his daughter, a resident of this city, and published in the Fergus Historical Series, Chicago. The book is enriched by many extracts from Governor Duncan's diary, from which I quote the following:

"March 6, 1829. Governor Kinney and E. J. W. wish me to request the removal of certain officers from office, which I declined, as I am opposed to removing competent and worthy men on account of a mere difference of opinion. They appeared to be dissatisfied, but that will make no difference in my conduct, as such a course would be adverse to all my notions of propriety."

"March 7, 1829. Kane, McLean, and myself went into McLean's room to consult about appointments, in the event of removals or vacancies. McLean and myself opposed removals, except for some good cause, other than political."

It is well known that these views of Governor Duncan's led to his final break with Jackson and his support of Clay for the Presidency in 1832. Illinois politics would be in a more hopeful condition to-day if politicians had more of Governor Duncan's independence and sturdy integrity, and more appreciation of the true character of public office as a public trust.

Illinois College, Jacksonville.

WITCH-BURNING.

To the Editor of The Nation:

Sir: I notice, in your charming review of Valera's 'Cartas Americanas,' the following sentence: "While we [*i. e.*, the New England colonists] were still in our witch-burning stage, Chili was laying the foundations," etc. This accusation of witch-*burning* is very often brought against the Puritans, and is generally received as true, but I have a strong impression that no "witch" was ever burned in New England, although at the period referred to they were so put to death in the mother country. I believe that they were *hanged* in New England, which was assuredly bad enough, but a long way removed from burning.

Can you or any of your readers to whose attention this may come, give authoritative information on this point? My own impression does not amount to knowledge.—Yours,

F. D. H.

Washington, July 4, 1889.

[We used the phrase somewhat loosely, without meaning to assert as an historic fact the occurrence in question. That our Puritan forefathers were in that "stage," we think cannot be questioned; and if burning had seemed to them as efficacious or convenient as hanging in the case of witches, they would not have been deterred by the cruelty of the punishment. On September 22, 1681, ten years before the witchcraft mania, two negroes were executed for arson in Boston—the man hanged, the woman (whose incendiarism had been attended with loss of life) burnt to death. As late as September 18, 1755, and in Cambridge, Mass., two other negroes were executed for poisoning their master—the man hanged, the woman burnt to death. (See Paige's 'History of Cambridge,' p. 217.) It would not be hazardous to affirm that not a decade passed from the date last mentioned to the outbreak of the civil war without one or more slave-burnings in some part of the country, North or South. The last which we happen to recall took place in Georgia in October, 1860. —Ed. Nation]

PHONETICS AND SPELLING REFORM.

To the Editor of The Nation:

Sir: Your correspondent, Mr. Mead, in the *Nation* of June 6, says, with regard to spelling, that "no inconsiderable obstacle in the way of reform is the inability to reach settled conclusions as to what sounds are in question." Is this really an obstacle? That practically phonetic methods of spelling are used in German and Italian would seem to indicate that, the reform once accomplished, there are no difficulties found on this account, for there can hardly be greater differences in the pronunciation of English than of these languages. Yet in these countries the children are, we may fairly say, saved years in education, and the problem of the mitigation of illiteracy is a very different one from what it is with us.

To a German or an Italian the alphabet represents the sounds used by him in his ordinary speech, and the question as to local differences in pronunciation is not necessarily raised at all, any more than it is with us by the methods of indicating pronunciation used in our standard dictionaries. These dictionaries, it would seem, form just the sort of standard of pronunciation necessary for a phonetic spelling. They do not tell us to pronounce a word as a native Londoner or New Yorker pronounces it, but tell us which of the (let us say) thirty-five sounds of our ordinary speech we shall use in uttering it. For example, let us say, "Pronounce the vowel of *yacht* as you do the o of *nŏt*, *ŏdd*, *resŏlve*." It is true, the dictionaries differ somewhat, and some differences of spelling would result. But differences of spelling exist now, especially as between England and America, and cause no difficulties, so far as I know. Why should they any more than differences of pronunciation?

The advantages of a reform in the spelling would accrue chiefly to children and the illiterate, and to foreigners attempting to learn English, and these are classes not likely soon to be heard from on the question, so that the outlook, it would seem, is not promising, it not being a moral question, like the abolition of slavery. But do not let us raise difficulties that do not exist.

It seems strange that the Anglo-Saxon race, so far ahead of the rest of the world in some respects, and especially in most practical matters (even the Germans say, "Die Amerikaner sind so praktisch!"), yet allow the slow-going Continental nations to get ahead of them in such very practical things as spelling and the adoption of the metric system of weighing and measuring, as well as, in the case of England, the matter of a decimal currency. Shades of the Revolutionary Fathers! Can it be that a mild despotism that will force men to seek their best interests, has its advantages after all?—Respectfully,

R. M. Bell.

Berlin, June 24, 1889.

NEPOS FOR STUDENTS.

To the Editor of The Nation:

Sir: The subject of elementary education has been receiving more attention throughout this country for the past few years than ever before. Much has been done, and is still doing, to make the school course not a mere drill for the mental faculties, but a broadening and humanizing influence as well. It has become a recognized end to fill, no less than to discipline, the mind. In view of these facts, and of the general revisal of school text-books consequent upon them, it seems strange that an author so eminently fitted for the use of schools as Cornelius Nepos should be so generally passed over, both in public and private schools, in favor of the commonly prescribed first books of Cæsar and the four Catilinarians, through which pupils are usually given their first acquaintance with classic prose. In order to be able to read either Cæsar or Cicero with enjoyment or profit, a not inconsiderable acquaintance with the spirit of Roman life is necessary, besides a knowledge of dry technical terms. Neither of these drawbacks exists in the case of Nepos. Any one with a tyro's knowledge of Greek and Roman history may read his 'Lives' with pleasure, while his vocabulary is of universal application. A contemporary of Cicero, and thus belonging to the best period of Latin literature, he is remarkable for simplicity of style and construction. At the same time, he is full of happy turns of phrase that lend themselves to repetition almost as well as the incessantly quoted passages of the Eclogues. He is read in all the German gymnasia, and is one of the three authors cited by Matthew Arnold as read in the elementary English schools.

A final reason why it seems worth while to try to call the attention of educators in this country to Nepos as an author to whom it would be well to give school-children an introduction, is, that his 'Lives' are full of moral lessons. The boys and girls of this day and generation, when there is no time allotted to moral instruction proper in an ordinary school course, are especially in need of such concrete examples of great and noble deeds as the lives of the best and bravest men of antiquity can give them.

G. A.

Notes.

Mrs. Maud Howe Elliott and Mrs. Florence Howe Hall have undertaken to write a full account of the life and education of their father's deaf, dumb, and blind pupil, the late Laura D. Bridgman. They will be very glad to receive any letters, papers, etc., relating to the subject. All documents should be sent to Mrs. Hall, at Scotch Plains, New Jersey; she will carefully preserve and return them to the senders.

A new series of works in American history is announced by Charles Scribner's Sons, who suggest an analogy to the "Epochs of History" series. The division announced is into the epoch of discovery and colonization; the French and Indian wars and the Revolution; the adoption of the Federal Constitution; the anti-slavery conflict, the civil war, and reconstruction. The respective writers will be made known shortly.

Meanwhile, Messrs. Longmans, Green & Co. announce as in preparation "Epochs of American History" in three main divisions—'The Colonies (1492–1763),' by Reuben Gold Thwaites, Secretary of the Wisconsin State Historical Society; 'Formation of the Union (1763–1829),' by Dr. Albert Bushnell Hart, Assistant Professor of History at Harvard College, who is the editor in charge of the series; and 'Division and Re-union (1829-1889),' by Prof. Woodrow Wilson, of Wesleyan University, Middletown, Conn.

Charles L. Webster & Co. have in preparation, by Alfred R. Conkling, the 'Life and Letters of Roscoe Conkling,' and 'A Yankee at the Court of King Arthur,' by Mark Twain.

Ginn & Co. publish next month 'The Irregular Verbs of Attic Prose; their Forms, Prominent Meanings, and Important Compounds, together with Lists of Related Words and English Derivatives,' by Addison Hogue, Professor of Greek in the University of Mississippi.

The same publishers have just added to their "Classics for Children" series 'The Two Great Retreats of History' and 'Tom Brown at Rugby.' Xenophon's retreat and Napoleon's from Moscow, after Grote and the Comte de Ségur, are the two in question in the former volume. Both narratives are moderately annotated, and it would have been well if the foreign proper names used by the French author had been given an un-French form, on some consistent principle of transliteration. The attempt seems to have been made, but it is not successful. *Kowno*, *Borowsk*, *Twer*, *Dombrowna*, *Malojaroslavetz*, *Mojaisk*, *Louja*, are certain to be mispronounced by children (and by most adults, for that matter). *Rostopchin* may not prove a stumbling-block, but elsewhere we have *Tchitchakoff*. Though it is the fashion to praise 'Tom Brown' as a great aid in the formation of a manly character, we are not aware that it has been previously edited for schools, and by a woman. Clara Weaver Robinson does not name the "few passages . . . omitted from the original text, in the belief that it will thus be better adapted for the use of American schoolboys," but, by retaining the chapter on Tom's fight with "the Slogger," she has been reduced to the necessity of making a glossary of the slang of the prize-ring. Moreover, she preserves this choice vocabulary in an index to the notes.

Three volumes in the so-called "Student's Series of English Classics" are on our table. They are published in Boston by Leach, Shewell & Sanborn, and are all edited by members of the corps of female instructors at Wellesley College. Their aim is to assist in preparing for college examinations in accordance with the entrance requirements adopted by the Association of New England Colleges. The texts are Coleridge's "Ancient Mariner," Macaulay's Essay on Lord Clive, and Webster's Bunker Hill oration. The editing is on the whole commendable, but one smiles at the opening questions—"How much does the 'Ancient Mariner' mean? Is it true, as is ingeniously argued by a contributor to the *Journal of Speculative Philosophy* (July, 1880), that this poem embodies a complete system of Christian theology, presenting 'the Fall from the innocence of ignorance, from the immediacy of natural faith; and the return, through the mediation of sin and doubt, to conscious virtue and belief'?"

Another of those text-books intended for East Indian students is Messrs. Rowe and Webb's edition of 'Essays Written in the Intervals of Business,' by Arthur Helps (Macmillan). The notes are so often beneath the intelligence of any one whose vernacular is English, that they may be disregarded by those who would profit by the text itself. The mere republication is a good thing, whether one regards the author's style or his high morality.

We can further recommend to teachers, as an aid in English instruction, the 'Political Orations, from Wentworth to Macaulay,' edited by William Clark for the "Camelot Series" (London: Walter Scott). It contains specimens of Wentworth, Cromwell, Chatham, Burke, Grattan, Pitt, Erskine, Fox, O'Connell, and Macaulay, with proper introductions. We may as well mention here, too, the latest volumes of the "Carisbrooke Library," edited by Prof. Henry Morley (Geo. Routledge & Sons). One is 'The Earlier Life and the Chief Earlier Works of Daniel Defoe'; the other Gower's 'Confessio Amantis,' "popularized," with the accentuation marked.

Mr. G. H. Wilson, Boston, brings out in a sixth volume his 'Musical Year-book of the United States,' for the past season. It is a very useful record of programmes and performances and of much else besides, with an index to the compositions enumerated.

The July Bulletin of the Hatch Experiment Station of the Massachusetts Agricultural College has a timely application to household pests, from the Buffalo moth or carpet beetle to ants, with identification and suggested remedies.

A photographic illustration or two one now expects with each number of *Appalachia* (Boston: W. B. Clarke & Co.). The May issue has two views of Sierra Blanca, in the Rocky Mountains, accompanying a clever account of the partial ascent of that peak, by Mr. Charles E. Fay. Other papers are on the Alpine flora of Colorado and the glaciation of mountains in New England and New York.

The late Jules Barbey d'Aurevilly is commemorated at length by the friendly hand of M. Octave Uzanne in *Le Livre* for June, and an etched portrait of this "excentrique" and "Duc de Brunswick de la littérature" (in the popular estimation) is the solitary pictorial adornment of the number.

For the fourth time M. Jules Lemaitre, the most delightful of French critics, the most amusing, and not the least learned or the least acute, has gathered into a volume his scattered studies, which he still sends forth under the title of 'Les Contemporains: Études et Portraits Littéraires' (Paris: Lecène & Oudin; New York: F. W. Christern), although chief among the subjects of his criticism on the present occasion are Stendhal, Baudelaire, Mérimée, Lamartine, and George Sand. But, better than any of these, it seems to us, are the two papers in which M. Lemaitre analyzes the quality of Victor Hugo's poetry, and points out that the title of Thinker, with which the poet was prone to deck himself, is perhaps that to which he has least claim. The critic draws attention to the penury of ideas from which Hugo suffered, and to the extraordinary opulence and variety of the literary forms in which he could clothe the few ideas he had. The first of M. Lemaitre's papers was published while Hugo was yet alive, and it was perhaps the first note of the inevitable reaction against the excessive veneration of the author of the 'Misérables.' M. Lemaitre has also included in this volume the two essays on M. Daudet's 'L'Immortel' contributed to the *Débats* last summer.

Ibsen's "A Doll's House" and "Spectres" have just been translated into French, "La Maison de Poupée" and "Les Revenants," with a preface by M. Édouard Rod, the acute Swiss critic. M. Rod contributes a sober appreciation of Ibsen's dramatic works, which he esteems as highly as some more perfervid admirers. The book is unfortunately disfigured by a repellent portrait of the Norwegian dramatist.

Refreshing it is to read about Goethe when a man of the late F. Th. Vischer's calibre has something to say about him. His son Robert has collected and recently published in 'Altes und Neues, Neue Folge' (Stuttgart: Bonz; New York: B. Westermann & Co.) Vischer's contributions to periodicals, speeches, and other minor essays, covering a wide range of subjects and the years 1847 to 1887. The fifty pages of "Kleine Beiträge zur Characteristik Goethe's" are worth five volumes of the *Goethe Jahrbuch*, the tenth volume of which has just been distributed to the members of the otherwise prosperous Goethe Society at Weimar. The aridity of the new volume keeps pace with its size. What a pity the old "Æsthetiker" could not have enlivened the pages of the *Jahrbuch* with some such *kleine Beiträge*.

The members of the Natural History Society in St. Petersburg have decided to publish a semi-monthly journal, after the form of the *Biologisches Centralblatt*, to meet the need for articles in Russian. Hitherto, two-thirds of the German zoölogical journals have been filled with Russian work, but the tendency is growing ever greater to publish in Russian and to found a national scientific literature and terminology. In connection with this, the management of the reports of current literature published at the Naples Station has refused to print in future, beginning with this year, any account of works issued in Russian, Polish, Hungarian, and "other barbarous tongues." Therefore, this new journal will contain reviews of Russian literature in all departments of biology, also of prominent foreign works, more general articles (but always of a strictly scientific character), and independent special contributions, which will form the foundation of the publication.

A volume recently published in Russia by the Geographical Society contains 676 songs, adapted to the various seasons of the year, and collected by Miss Zenaïde Radtchenko in the southernmost part of the Government of Mohilev, where it adjoins the Governments of Minsk and Tchernigoff. The locality is a curious one from the fact that the White Russians who inhabit it differ considerably from the general character of their tribe, both in their language, which has lost certain White-Russian peculiarities, in their customs, and in the contents of their songs, which reflect both Little and Great Russian. All these points are explained by the author in her introduction. A small collection of White-Russian proverbs is joined to it. She has furnished about 200 musical motives. Some of the songs have suffered from being influenced by the modern songs, the oldest being the most poetical and melodious; the modern songs—factory, soldier, and street songs—are vulgar in both words and air.

There are strong reasons for believing that Mr. Henry F. Waters has discovered the parentage of Roger Williams. The July number of the *New England Historical and Genealogical Register*, which has unavoidably been delayed, will contain the result of Mr. Waters's researches on this subject. The persons supposed to be his parents were residents of London, and not of Wales nor of Cornwall. The same number of the *Register* will contain two letters of Williams's, never before printed, written a few years before his coming to New England. He was then the private chaplain of a prominent Puritan family. It is probable that his early objections to the ceremonies prevented him from holding a living in England. He mentions having received the offer of two livings and a New England call.

—Dr. Mackay's 'Dictionary of Lowland Scotch' (Boston: Ticknor & Co.) was intended as a guide to Burns and Scott, but it grew upon his hands. There was room for such a work, and so far as definitions of words and illustration by quotations go, Dr. Mackay's book will fill it, but the unwary reader needs to be cautioned against following the author as an ety-

mological guide. We have to do with a genuine keltomaniac, who thinks that "philology is, at the best, but a blind and groping science," and who etymologizes as follows: "The true origin of the word 'Angles' is the Keltic or Gaelic *an*, the definite article, and *gaidheil* (in which the *dh* are not pronounced), which signifies the 'Gael,' or the *Celts;* whence *An-gael*, and not Angle." After that we are ready for anything, and we are not disappointed. The author affirms "that there is no real foundation for the confident statement that the name of 'Angles' was ever borne by or known to any German tribes"; that the epithet "'Anglo-Saxon' . . . was not known . . . until the second half of the eighteenth century"; and that "the southern English . . . are not half so much German as they think themselves," and more of the same sort. A little practical knowledge of the Northumbrian dialect and its descendant, the Northern dialect of Middle English, would have aided the author's etymologizing, for he perceives that "Scotch is for the most part Old English." An appendix on "Lost Scotch and English Preterites," which, too, must be read with caution, a "Collection of Scottish Proverbs," and a "List of Scottish Writers," complete the work.

—Our notice of Prof. Calvin Thomas's edition of Goethe's 'Tasso' (Boston: D. C. Heath & Co.) has been somewhat unreasonably delayed, but assuredly not for lack of appreciation, based on knowledge of its constant use for many months. It has proved itself highly serviceable. The text has been prepared with extreme care, important variants being given in Appendix ii. Appendix i is a brief but handy bibliography. The notes upon difficult passages are to the point and truly helpful—that is, they are not mere crutches to the halt and the lame. In some places we think the editor has been too chary of them, notably in the quarrel-scene between *Tasso* and *Antonio*. And in one or two instances we take exception to his interpretation. Thus we do not believe that in verse 39 Goethe is describing the blue haze of Sicily. The adjective *leisen* is rather to be construed as an adverb, *leise*, and the line is to be read: "The snow of the distant mountains is slowly melting" (more literally, evaporating). The note upon *wenn* (v. 444) should be cancelled, the word being used in its common sense of iteration, 'whenever.' The introduction is a careful discussion of the drama, its characters, and their relations to Goethe and his Weimar life. Nothing could be more scholarly in its tone and at the same time less dryasdust. One feels throughout that the editor reads his Goethe aright. At page xviii we think that "citizen class" would be better expressed by 'burgher' or *bourgeois*, and the assertion there made concerning Goethe's female friends ignores too bluntly Frl. v. Klettenberg and the Countess Stollberg, and the La Roche family. Besides, Lili's family scarcely rated themselves as Goethe's equals; they rather looked down upon him. Some few misprints (none serious) will be corrected, we are assured, in a second edition now in press. Would it not be better to set up verses 2,742-2,829 as scene 5? Schröer and the usual Cotta editions so treat it.

—In 'Hamersly's Complete Army and Navy Register,' 1888, as well as in a former edition, Fort Osage (p. 147) is described as "On the Missouri River, at the mouth of the Osage River in Jackson County, Missouri." This description is divided against itself, for the mouth of the Osage River is not at all in Jackson County, but forms the boundary between Osage and Cole Counties, and is removed from Jackson County by full half the vast breadth of Missouri. In 1811 Brackenridge (p. 217), though in a hurry, spent thirteen days in boating up the Missouri from the mouth of the Osage to Fort Osage. The post really took its name from the fact that the lodges of the Little Osage tribe, sixty in number, were within gunshot of the fort. On the day Brackenridge left Fort Osage he came within two leagues of the mouth of the Kansas River before encamping. Fort Osage was more than twice as far up the great river as the mouth of the Osage River. Its true position ought to be understood, or we shall underrate the distance in the far West to which our War Department early pushed an advanced post.

—We mentioned not long ago the "Billets du Matin," a series of short letters attributed to M. André Theuriet, one of which appears daily in the *Temps*. In a recent number M. Theuriet gives a curious and pretty Beauceron counting-out rhyme, which he says he remembers from his childhood:

"Lune, lune,
Coquelune,
Prête-moi tes souliers gris
Pour aller en Paradis.
Paradis il est si beau!
On y voit des p'tits jeannots.
"P'tit jeannot,
P'tit' jeannette,
C'est le temps de la violette,
Le Seigneur passant par là,
Il lui dit: Quoi qu'tu fais là?
Je garde mes p'tits moutons.
"Clin, clin!
C'est fait,
Va t'cacher dans ton p'tit coin!
Hirondelle,
Passez par la ruelle;
P'tit' souris,
Passez par ici."

Mr. Wm. Wells Newell, in his admirable 'Games and Songs of American Children,' quotes what seems to be a variant of this:

"Petite fille de Paris,
Prête-moi tes souliers gris,
Pour aller en Paradis.
Nous irons un à un,
Dans le chemin des Saints;
Deux à deux,
Sur le chemin des cieux."

—The recent execution in Paris of a soldier named Géomay, a miserable wretch who, for a few francs, murdered a woman who had been kind to him from his childhood, has opened again a question that was much discussed at the time of the execution of Prado, last December. Géomay, like Prado, had obtained a promise from the Abbé Faure, the much respected almoner of La Roquette, that his body should not be handed over to the surgeons for dissection. The Faculty of Medicine had a delegate, Dr. Poirier, in waiting at the cemetery, who claimed the body, but it was refused him by the Commissary of Police. Dr. Poirier did not insist upon his demand, out of regard, he says, for the Abbé Faure, who had given his word to Géomay, but he maintains earnestly that he has by precedent and in law a right to what he claimed, and that the Faculty of Medicine must assert this right in future, or else lose its best chance of solving some very important problems in pathology. The day after the execution of Prado Dr. Brouardel, the dean of the Faculty, expressed nearly the same opinion in an interview published in one of the daily newspapers, though he did not, as we remember, assert any prescription of law for what has hitherto been the general practice. Both doctors agree in regretting that considerations which are respectable but purely sentimental should stand in the way of what may possibly be most important scientific discoveries.

—It might, perhaps, appear to an inhabitant of Saturn that a body of men who had roused a fellow-mortal from sleep in the early morning, and had told him that in a few minutes they would kill him in recompense for his sins, and then had thrown him violently down upon a plank and cut his throat, and then had tumbled him, head and trunk, into a basket, and so sent him off at a smart trot to the cemetery, and, after this, had refused, out of a humane regard for his last wishes, to permit men of science to examine his body in the interests of the race—it might seem, we say, to a Saturnian that this last scruple was not well-timed. For why take the first step towards a dissection, and the only one that costs, by severing, not without some rudeness, the cervical vertebræ of a "subject," and then pause? And as to the subject's last wishes, doubtless one of them was that his body should not be dissected; but there was another and far stronger last wish of his that was completely disregarded—to wit, that he should not be killed. When one considers the comparative fervency of these two desires, not much can be said about the neglect of a dying wish. So a Saturnian might reason, for we could not expect an inhabitant of that dull planet to enter into the subtler thought and the more refined and delicate emotions of men.

HAYTI.

Hayti; or, The Black Republic. Second edition. Scribner & Welford.

When Sir Spenser St. John says that he has dwelt above forty years among colored people of various races, and is sensible of no prejudice of color, he reminds us of Nelson's protestation: "Thank God," said England's naval hero, "I have no prejudices, but I hate the French!" So with Sir Spenser St. John: he has no prejudice against black and colored people, but he hates the Haytians. When British Minister to Hayti, he appears to have manifested sympathy for a party in some of the numerous civil disturbances which occurred there from time to time. As a consequence, things were made somewhat hot for him when the chances of war turned against his party. In his own words (p. 113): "During the next three years I held a most difficult position. Having, by the action of our navy, expelled Salnave and his partisans from Cape Haïtien in 1865, they, on their return in 1867, treated me as their deadliest enemy." Smarting under the treatment he then received, Sir Spenser St. John did not wait for his enemy to write a book. He determined to write a book to show up his enemy. Let his readers compare the date of the genesis of the book as given by the author on page xvii of his introduction, with the date in the footnote above quoted, and they may find some explanation of the undoubted animus displayed in the book. Has anything appeared in any book or newspaper that is in disparagement of Hayti, the author inserts it in support of his prejudices. He even goes so far as to quote the dicta of those who have never been in Hayti. Thus, the exclamation of Napoleon III., "Haïti, Haïti, pays de barbares," does duty on the title-page, and reappears on page 187.

Perhaps the most ridiculous length to which the author has gone is to be found in his setting up of Mr. Froude as an authority upon Hayti. That distinguished novelist is, says the author, "a man of experience and observation, and not likely to allow a preconceived opinion to influence his judgment." Then follows the result of Mr. Froude's "inquiries as published in 1888," as to child-sacrifice and cannibalism being institutions of modern Hayti. The finding of that Quixotic littérateur is, *There is no room to doubt it.* On page 255 of 'The Black Republic,' Sir Spenser tells us: "Although I am not inclined in any way to shelter myself behind the authority of others, yet it is pleasant

to find so eminent a man as Mr. Froude converted to one's views." Now, by Mr. Froude's own showing, he "did" Hayti by spending an hour ashore at Jacmel, and perhaps one or two hours at Port-au-Prince, and he harks back to the original authority. "I could not," he says, "expect that I, on a flying visit, could see deeper into the truth than Sir Spenser St. John has seen" ('English in the West Indies,' pp. 127, 128). Froude quotes St. John, and St. John quotes Froude, and that's how it's done, as the sleight-of-hand man says when he successfully performs the trick.

A common inaccuracy in historical reference distinguishes both writers. The very first sentence in the first chapter of 'The Black Republic' attributes to an English admiral and George III. the story of the crumpling of a sheet of paper by way of giving a presentment of the conformation of Hayti, which story is told of Columbus and Isabella with regard to Jamaica. Again, just as Mr. Froude, when on his jaunt to Jamaica, "declined to be taken over sugar mills," so, when, in 1873, a Haytian proprietor invited Sir Spenser St. John to spend a fortnight with him in the country, promising to show the enemy who was writing a book "all the superstitious practices of the negroes," did her Majesty's present Minister to Mexico throw away a golden opportunity. "I regret," he says, "I did not accept; at all events I should not have been called upon to witness a murder, and might have seen something new" (pp. 207, 208). Surely, Sir Spenser here writes himself down as fathering many statements about the superstitious practices of the Haytians of which he has had no personal observation.

Aware, as he tells us, that people are so little interested in Hayti that books fall flat "unless they amuse their readers by caricatures of the people" (p. 254), Sir Spenser St. John does not fail to treat his readers to any and every story that will tell against the Black Republic. Like most spiteful people, our author can be very amusing, and professional diners-out will find in his pages some droll and mirth-provoking anecdotes, told without any regard whatever for the feelings of others. In fact, it is clear that the ex-Minister to Hayti was far too superior a sort of person for the place where his lot was cast. His feelings were no doubt the same as those of his predecessor, Sir Charles Wyke, who had been heard to exclaim, "Confound Christopher Columbus! If he had not discovered America, I should not have been here." Both these ungrateful diplomatists seem to have overlooked the fact that, but for the discovery of Hayti, they might have lacked employment—for a while, at all events.

Sprung from a servile revolt, and cut off by the necessities of the case from the elevating influence of a civilized government in its midst, the birth of the Haytian nation was undoubtedly premature. With such a disadvantage at the outset, is it wonderful that the country should so often have been afflicted with civil war? As if, however, poor Hayti had not enough troubles of her own making, the attitude of France towards the little state has been one of bullying mastery. Sir Spenser St. John says (pp. 86, 87) that the French agents, even after the independence of the Republic had been recognized, affected to treat Hayti as a dependency until the debt exacted by France should have been paid. He adds, further on, that this heavy debt imposed on Hayti by France nearly sixty years ago has been the principal cause of the financial embarrassments of the Republic (p. 30). And yet, despite all our author's gloomy forebodings, if the financial condition of Hayti be taken as a standard to try her by, what do we find? On page 387 of 'The Black Republic' we observe the budget for 1885-1886. Its figures show current expenditure estimated at £670,743, and current revenue at £1,068,842. From the latter there is a deduction of £398,081 for "payments of instalments of differents." To those of us who had not entertained the idea that Hayti paid her debts, this large amount seems a highly creditable endeavor to wipe off old scores. Then, when we go into the detailed headings of the expenditure, we find that, of the gross sum of £670,743 required, no less than £116,356 is set down for public instruction, while £52,700 is asked for justice, and £11,275 for public worship. The other items are: foreign affairs £14,845, finance and commerce £86,804, war £182,689, interior £163,579, agriculture £42,495. Even in highly civilized countries a budget of this kind would be deemed respectable, and especially so where internal strife had for years been rife, although Sir Spenser believes the mass of the people cared little except for tranquillity (p. 113). Hayti will in time emerge from the stage in which public questions are fought out with the sword instead of, as with us, with the pen. A little country that has already produced a Boyer and a Geffrard is not without hope of giving birth to a statesman who shall in due course make his country an orderly and prosperous State.

As Sir Spenser St. John's fame is founded upon his "show-up" of Hayti, in 'The Black Republic,' let us now consider the very serious charges which he has formulated against the inhabitants with regard to human sacrifices and cannibalism. With regard to the practice of Vaudoux, pure and simple, that is to say, the superstitions of heathenism, there would be reason for surprise if this were not the case. It was from a seething mass of barbarism that the Haytian nation originally sprang, and, as our author states (p. 149), "there are still many negroes in Hayti who were born in Africa, being principally the remains of certain cargoes of slaves which English cruisers captured and landed among their free brethren." Then, as he tells us elsewhere, the Roman Catholic priests in many cases, up to the time of his going to serve in Hayti, were worse than useless. They led disreputable lives. In the country parts of the Republic the inhabitants are more or less heathen, with a slight veneer of Roman Catholicism. But Sir Spenser St. John tells the world that there has of late years been engrafted upon the original Vaudoux practices the horrible rite of human sacrifice. In substantiation of his statements, he gives extracts from newspapers, for the most part, and his authority for one case, which he describes with dramatic effect, was the Archbishop of Port-au-Prince, who told the story at his own dinner-table. The odd thing about the story is, that the young priest from whom the Archbishop had learned the details was seated at the same table, but, so far as the book shows, never an inquiry did the author address to him upon the subject. In support of his charge of cannibalism, Sir Spenser tells of divers mysterious cases founded upon hearsay evidence. He has, moreover, one clear case, for which eight persons were executed on the 13th of February, 1864. The hideous details of this case are fully set forth in the book (pp. 210 to 221). But all Americans are not desperadoes because there have been Chicago Anarchists; nor are Englishmen all fiends because there has been a Whitechapel murderer. The people of Hayti, as a body, are no doubt in a very low state of civilization; but, without more proof than Sir Spenser St. John has adduced, we cannot accept his charges of human sacrifices and cannibalism as of general application.

As to the very origin of the term Vaudoux he seems to be in utter ignorance, although his reading has taught him that on the African Coast the word takes the form of *Vodun*. He apparently does not know that the persecuted Vaudois or Waldenses, for whom Milton invoked God's help, and in whose behalf Cromwell spoke out, were, by their Roman Catholic oppressors, falsely accused of some of the horrible charges now imputed to the Haytians. It is from a slander upon those "who kept Thy Truth so pure of old," that the term Vaudoux was originally misapplied to heathen rites. In a Roman Catholic country such as Hayti ostensibly is, priests would, of course, use the word as a term of reproach where persons did not belong to their communion. On the other hand, those of us who have lived in Africa know how one hears of cannibals somewhere "far inland," but one does not ever meet such people one's self. You are told that in a far-off part of the country, when your neighbor hears that some one lies dying in your hut, he makes early application after this fashion: "You must trust us this time, and when next one of our family dies you shall have him to eat." The people who tell you these things wish to inspire you with dislike for those whom they thus defame. May not the religious paper in Hayti, called *La Vérité*, from which Sir Spenser so often quotes, be carried away by its very zeal?

A distinctive feature of our author's character is indulgence in innuendo. This is not confined to individuals, but is extended to the Government itself. For example (p. 231), it is suggested by him as probable that, acting in unison with the primitive Vaudoux worshippers, the Haytian Government might succeed in destroying the new seat of the Vaudoux who are charged with human sacrifices. And this is how he puts it: "The Haytian Government might be able to do much, *if ever they seriously desire it*, to put an end to the shedding of human blood." The whole world has recently had evidence of the active steps taken by the Haytian Government for the repatriation of those of its citizens who, by the cessation of labor upon the Panama Canal, have been left destitute. Does this show disregard for life? But diplomatists, like their professional rivals, should have good memories. In the single case of which Sir Spenser makes so much, which came into their courts—that for which eight persons were executed on the 13th of February, 1864—the Government caused the sentence to be carried out in spite of urgent appeals for a reprieve, and this by Sir Spenser's own showing (pp. 220, 221). For the rest, there is urgent need for reform in the Police and Prison Departments of the Haytian public service, and in other respects, and these we may hope for when the sword shall at length have triumphed on the right side, whichever that may be.

Sir Spenser St. John must not be taken seriously. He is not an inquirer, but a *gobemouche*. He mistakes gossip for evidence. He writes with a strong prejudice against the people of Hayti.

GARIBALDI'S MEMOIRS.

Autobiography of Giuseppe Garibaldi. Authorized translation by A. Werner, with a supplement by Jessie White Mario. London: Walter Smith & Innes. 1889. 3 vols. 8vo.

THROUGHOUT his eventful and romantic career, Garibaldi had years of comparative inaction,

at least as respects public life. If nothing better offered, as after the unsuccessful Italian revolution of 1848-9, he would work in a candle factory on Staten Island, or command the Columbian bark *Carmen* on a voyage to China, and back around Cape Horn with a cargo of copper to Boston; or, with the good American bark *Commonwealth*, carry a cargo of flour from Baltimore to London, and thence with English goods proceed to Mediterranean ports.

During those years he wrote the first part of his Memoirs, comprising his youth, his joining the Mazzinian uprising in Piedmont, his exile to South America, his ten years' guerrilla warfare in that country, and the prominent part he took in the Italian revolution of 1848-9. This he did not publish at the time; but, after the eventful epochs of the Franco-Italian war against Austria, the Sicilian uprising against the Bourbons of Naples led by him and his one thousand red-shirted volunteers, the Prusso-Italian war against Austria, and, finally, the Franco-Prussian war, which ended in the dethronement of Napoleon III., Garibaldi, on retiring to his island home of Caprera, corrected and modified the first portion, and wrote the remainder without books or documents, or any assistance save from his own memory.

"Naturally," as Mme. Mario justly observes, "he has fallen into sundry errors of dates and facts. He has also deliberately passed over entire periods of his life, thus omitting some particulars very interesting to the English reader as well as to his own countrymen. He, moreover, withdrew certain manuscripts which he at first destined for publication, containing some graphic accounts of events and some severe strictures on prominent men which he wrote from time to time, because, from his later point of view, 'the least said, soonest mended.' . . . Again, in one of his letters to Alberto Mario, who had requested to be allowed, in his 'Life of Garibaldi,' to publish some facts which the General himself had related concerning the King, he answers: 'I wish that nothing confidential between the King and myself should be published,' and in his Memoirs he publishes nothing."

We have quoted this passage from Mme. Mario's preface to indicate the reason for her own Supplement, which constitutes the largest volume of the three. This she has done as very few could have done better; for, by her connection, through her husband, with the most eminent patriots of Italy, and as a member of Garibaldi's army ambulance throughout the campaigns of 1860-66-67, and inspectress of ambulances in the French campaign of 1870, she speaks with the authority of an eye-witness. As we gave some account of the Autobiography on its first appearance in the original Italian, and as the translation before us is accurate and faithful, we will dwell rather on Mme. Mario's Supplement, and principally on her "Historical Introduction," which precedes the work.

In this monograph Mme. Mario has condensed the historical evolution of Italy for the last thousand years in the most lucid form, pointing out the true cause of her servitude and division. She objects to the term "rebirth" of Italy, and the way in which European nations hail her as their last-born sister.

"Arisen, rearisen, are the right terms for this seeming miracle," she says. "To say reborn would imply preceding death, whereas *what was death for other nations was only sleep for Italy.* . . . To assert that Mazzini or Garibaldi or Victor Emmanuel 'created' Italy by their separate or united genius, prowess, and ambition, would presuppose her non-existence; would assign to one man or to three men the merit of an entire people of heroes and of martyrs, of thinkers and of doers—a people which had never ceased to be, but which, owing to intrinsic and extrinsic reasons, had refrained from merging their separate existences in one collective whole."

The above is the keynote to this most interesting study. The Italian people, and not one man, or three men, reawakened the new Italy. But to one alone of this trio—Mazzini—is due the credit of first *seeing* the true means of this reawakening in forgetting the old mediæval notion of a universal Roman Empire, and fusing the severed members of the Italian people into one. The Italian people, who, with the Roman Republic, had organized a grand system of government; with the Imperial power had permeated Europe with their institutions and laws; with the free communes of the Middle Ages had destroyed feudalism and created literature and art; and, leaping over the heads of religious reformers like Luther or Calvin, had alighted on the fountain-head of modern reason and science with Giordano Bruno and Galileo, nevertheless forbore to solve the problem of their own nationality by reason of the fundamental idea underlying centuries of their existence: the universal sway of the Roman Empire. This phantom supremacy, held up by the genius of Dante, was, down to the sixteenth century, the fixed ideal of every patriotic Italian.

When the Visigoths in the fifth century founded monarchy in Spain, Clovis laid the basis of it in France, and a heptarchy was instituted in England, the brave and wise Theodoric made himself master of all Italy. But he was only esteemed and obeyed as long as he stood in the character of general and viceregent of the Emperors Zeno and Anastatius. After his death, the Italians sided with the treacherous Greeks under Belisarius and Narses rather than with the monarchy of the Goths, under the idea that they were faithful to the Roman Empire. This ruling passion was still more apparent during the sway of the Longobards (568-773), "who," as Machiavelli states, "after two hundred and thirty years of Italian existence, retained nothing of foreigners but the name." But the Popes, fearing lest the Italianized Teutons should found with the Italians a free, strong, and united nation, instigated these latter against them; summoned first a new barbarian, Charles Martel, then Pepin, then Charlemagne, who finally defeated Desiderius, the last of twelve Italian-born kings, and was crowned by Leo III. Emperor of the Romans. Charlemagne paid him back by creating, for the first time, a Pope-King, by confirming all the territorial donations of Pepin, and adding many more to the patrimony of St. Peter, "and the Romans, seeing that a Roman Pope had crowned an Emperor in Rome, indulging in their dream of empire, never for a moment guessed that they had sacrificed the substance for a shadow—a Roman Italy, based on a popular constitution, for a visionary imperial sceptre which they were destined nevermore to wield."

For the next two hundred and fifty years and more there followed that confused kaleidoscope of Frank and German emperors, popes and anti-popes, kings of Italy, marquises, counts, and barons warring against each other, till the crown of Italy was adjudged to Conrad the Salic in the diet of Mayence. The Milanese and Pavians refused to accept him, but Pope John crowned him Emperor in Rome. Conrad besieged Milan, and the Milanese for the first time mounted their sacred *carroccio* to repel him, and instituted the Communal Government, the parent of the free communes of Italy, which for the next five hundred years stood out prominent in the path of liberty, culture, and art, ending with the Renaissance, and with the most glorious of those communal republics, the city of Florence. An emperor and a pope combined together, Charles V. and Clement VII., extinguished this last bulwark of liberty in 1530.

What a history is comprised in those eight hundred years! Hildebrand the monk, who, as Pope Gregory VII., with the assistance of Countess Matilda, brought the German Emperor Henry IV., in sackcloth and ashes, to his feet in the fortress of Canossa, was the first Pope who conceived the revival of the universal Roman Empire under the Christian religion. From that period Italy was divided into the two factions which assumed afterwards the names of Guelph and Ghibelline, partisans of the Pope or of the Emperor—yet with the old Roman phantom of universal empire under either of them. The free communes waged war against the feudal barons, razed their castles, forced them to live within the cities, disfranchised them so that a nobleman could neither vote nor hold public office, but they seldom demolished the Emperor's castles or refused allegiance to the Empire. Each commune, each city, quarrelled and fought for its own liberty, rights, and privileges; but when they could not settle their disputes, they called in the "natural umpire," the Emperor. When Frederick Barbarossa, profiting by their discords, descended into Italy to impose his despotic rule, the communes bound themselves together in defence of their rights and utterly defeated him at Legnano, May 29, 1176; yet in all their mutual treaties of defence and offence they employed the formula, *saving always fealty to the Empire.* They rebelled against the abuses of the Emperor, not against the rights of the Holy Roman Empire.

This fixed idea of empire was more solemnly vitalized by Dante in the fourteenth century. Dante is rightly styled the father of the Italian language, the first philosopher of the Italian people, the greatest poet of Christianity; but in politics he was an imperialist. A bitter adversary of Pope Boniface VIII., because he affected a supremacy over emperors, kings, and communes, the idea of *one* Italy never dawned on his mind, except as she was comprised in the unity of Christendom. In his famous book 'De Monarchia,' he says:

"As the Empire signifies the dominion of the Roman people over the earth, so the majesty of the Roman people is personified in the Emperor, to whatever country it may belong. The garden of the earth is Italy, not Germany, whence the Roman Emperor must extend his sceptre over all monarchies and over all peoples, thus transforming the world into a Christian republic, of which all states are members, the kingdom of France even as the smallest Italian commune."

And he worked for this shadow of empire when Henry of Luxembourg, that ghost of a Roman Emperor, descended into Italy, advising him to assert his imperial rights, "which are bounded neither by Italy, nor by Europe—which ought hardly to be limited by the waves of the ocean."

Petrarch dreamed of Italian States at peace among themselves, and encouraged Cola di Rienzo in his attempt of restoring the Roman republic—the old Roman dream, not the new Italy. When the last spark of Italian free communal life was extinguished at Florence, Italy, for the following 300 years, seemed dormant or dead. But if she appeared thus politically, she was not so intellectually. The intellectual history of Italy for those 300 years has not yet been written. We have studies, monographs, lives, written in England, France, Germany, and, since the accomplishment of Italian liberation, in Italy (for before that time no such work would have been allowed to be published);

but a philosophical and scientific history of this intellectual ferment we have not. Giordano Bruno, whose monument has just been unveiled at Rome on the same Campo de' Fiori where he was burned at the stake, and his contemporary Galileo would alone shine as the pioneers of free thought and scientific research; and, following them, what a long list of intellectual luminaries.

Coming nearer to our own day, Mme. Mario notes:

"In 1791, about the time that the guillotine was invented in France, Galvani discovered galvanism, and Volta published his memoir on the electric pile, just as the troops of the French Directory invaded Savoy and Nice. Little doubt have we that Italy would have worked out her own salvation earlier and with less of suffering had she been left to her own devices. The Americans had sealed independence with their blood at Lexington in 1775, constituted their thirteen colonies into the United States in 1776, formulated their Constitution in 1787, proclaimed the rights of man to freedom and equality; yet still the world persists in attributing the rise of modern liberty, progress, and of democratic principles to France!"

During the Napoleonic rule the same Roman imperial ideals still predominated in Italy. Was not Napoleon an Italian, and of the oldest Italian race, of Etruscan extraction? And was he not crowned Emperor of the Romans? And all Italy fell down at his feet, even after the treachery of Campo Formio, when, with a stroke of his pen, he erased from the political map of the world the thousand-years-old republic of Venice, and handed her, bound hand and foot, to Austria. When Napoleon fell, had all the Italian States confederated their forces, they might have held their own; but this idea never occurred to them, and Europe settled their destinies according to the separate interests of the allied Powers, by parcelling out Italy into ten heterogeneous puny principalities.

It was only after so many centuries of disillusion that Mazzini first evoked the idea of Italy for the Italians united in one, which for two generations had thousands of victims and martyrs; and, when the last lingering phantom of the old imperial power was dispelled by Napoleon III. arresting the victorious French and Italian armies at Villafranca, this Mazzinian idea became universal among the Italian people, was fully and boldly taken up by the "King of the Alps," and brought Italy victorious to her freedom and independence.

Space will not allow us to comment on Mme. Mario's Supplement itself, except to say that it completes Garibaldi's Autobiography; and, as it is based on original documents in her special care, or draws from official records or personal testimony, is therefore the most thorough and authoritative addition to Garibaldi's memoirs that has yet been published, and a vast mine of wealth for the future historian of Italy.

The first volume is adorned with a portrait of Garibaldi in photo-aquatint, which is the best and most natural likeness we have ever seen of him.

The Story of William and Lucy Smith. Edited by George S. Merriam. Boston: Houghton, Mifflin & Co. 1889.

An American clergyman and man of letters, Mr. Merriam has written the life of an English man of letters and his wife, and he has done it excellently well. The reader will be sure to wonder why it was not done before; why some one of the many near to them as relatives or friends did not assume the task. But the delay was fortunate which found its term in Mr. Merriam's gravitation to the business for which he has proved himself eminently fit. Drawn to it by love and admiration, through acquaintance with the writings of William Smith and some correspondence with Lucy after her husband's death, he had placed in his hands a mass of varied material from which he has worked out a consistent whole. It will very likely be objected to his book that it is too long (666 pp.); that it introduces us into too close an intimacy with the joys and sorrows of the two Smiths; that he has given us too much of his own comment on the course of spiritual events which he displays. But there will very certainly be many who will agree with us that, even if these objections are valid, they still leave the book abundantly delightful and impressive.

But are they valid? Only in part. There is too much of personal detail. Mr. Merriam would have us know with what plain living the high thinking of these people went along—that a great sorrow did not prevent the wife from simple happiness in household cares; he would have us see the wholeness of her life; and these things he has accomplished, but they might have been accomplished with a less expense of the details of domesticity and intercourse with relatives and friends. As for the intimacies disclosed, Mr. Merriam has not exceeded much, if any, the limits of Lucy Smith's memoir of her husband, printed at first for an inner circle, but afterwards published with a group of his essays and with his novel 'Gravenhurst.' It may be that she offended, but we have had so many revelations of domestic infelicity that it would seem as if we were entitled now and then to a revelation of domestic happiness, of love stronger than death. As for Mr. Merriam's commentary on the course of spiritual events, it is justified by the motive with which it is made and by its intrinsic character. To a remarkable degree the tendencies of religious thought and feeling of their time were reflected in the lives of William and Lucy Smith. It has been Mr. Merriam's object to draw out the lesson of their lives, and make it helpful for those who are under stress of spiritual weather; to connect it with tendencies of thought which have become dominant since William Smith laid down his busy pen.

There have been so many Smiths that it would not be strange if the name William Smith conveyed no distinct idea to the majority of our readers. He was born in 1808 and died in 1872. His best known works are 'Thorndale' and 'Gravenhurst,' in which he threw into conversational form a discussion of philosophical and religious matters. They are hardly to be ranked as novels. The characters are personifications of different tendencies of the writer's own thought. Dropping the form of fiction altogether, he wrote a 'Discourse on the Ethics of the School of Paley,' and 'Essays on Knowing and Feeling.' Of all these writings Mr. Merriam gives a careful analysis, which will send many to the original matter. What was most remarkable in William Smith was an extremely spiritual interpretation of doctrines which are commonly supposed to lean to the unspiritual side. He anticipated many evolutionist ideas, but we find ourselves continually regretting that he never brought the full force of his thought to bear on the general scheme of evolution. A fine meditative quality was his most excellent gift. It would seem as if no one could read him, or about him, without finding in him a kind of English Amiel. Like Amiel, he published poems—two or three dramas among them, one of which Macready produced in 1842—but they had the dulness of Wordsworth without his sudden gleams of satisfying thought and glorious expression. Where Amiel published but two or three essays, William Smith published nearly or quite one hundred, for he held from 1839 until his death a connection with *Blackwood's Magazine*, and the most important books of a whole generation furnished the subjects upon which he wrote.

In his early manhood he was intimate with the younger Mill, John Sterling, Lewes and Maurice, and was not the least of them in the promise of an active public life. But "the spell of the desk" grew on him steadily, and at length he drew apart from all society for a life of meditative thought. The first product of his seclusion was 'Thorndale'; the next was a happy marriage with Lucy Caroline Cumming, who had come with her mother to spend the summer in Borrowdale, where he had taken refuge from the world. The best part of Mr. Merriam's book is from this point onward. For material he had Mrs. Smith's Memoir of her husband, her manuscript account of the love-making and engagement, his journals and her letters to many friends, with their testimonies to her worth. He was about fifty, she nearly forty when they met. If she was not intellectually his equal, she was a woman of no mean abilities or acquirements. She was a successful author, and a diligent translator of French and German books. Her translations of Freytag's 'Debit and Credit' and Grillparzer's 'Sappho' are well known. The marriage was delayed two years by reason of pecuniary straits. The quality of the man is indicated by his refusal to do a piece of translation which would have made the marriage possible, because there seemed to be a certain dishonesty in translating, and so making more accessible, writings which were discordant with his own ideas.

For eleven years William and Lucy Smith lived together in a union of singularly perfect happiness, their love enduring in the higher love of all great realities and fair ideals. Before he knew her he had written:

> "Our best beliefs from best affections spring,
> And solitude is ignorance."

And this prophecy he now made good. In 'Gravenhurst,' which he wrote after meeting her, the tone is distinctly more genial and hopeful than in 'Thorndale.' But the spell of the desk was not broken. Her society was all he asked, and what larger intercourse there was came from her gentle violence with him, responding to the claims of many friends.

It is with his death in 1872 that we enter on the most impressive phase of her experience. She survived him ten years, living in constant spiritual communion with him. There was no narrowing of her life, but rather much broadening. She drew to her many noble friends. She was a diligent reader of the best books, especially of those which bore upon the subjects which had engrossed her husband's interest, and upon the problems of theism and a future life. She entered more deeply into her husband's mind when he was gone than she had done when he was living. She attained to firmer confidence than his in immortality. She had never reacted from evangelicism so violently as her husband, and was helped until the last by the faith of those whose reasons for their faith she was obliged to put away. At the same time she was singularly brave in her encounter with such thought as was most hostile to the hopes and longings of her heart. She was incapable of wilful self-deceit. On the one hand, we find her in correspondence with President Porter of Yale College, and on the other with George Eliot. We have had no side glimpses of the latter more delightful and

assuring than those which are afforded here. Her sympathy with a faith and hope to which she could not personally hold was very beautiful.

We cannot imagine any better book than this for those who have suffered grievous loss, especially if for them the dogmatic tenure is no longer possible. Even the most dogmatic may be led to wonder if their dead certainty is any better than a living hope. Those who cannot permit themselves so much as this will find themselves encouraged by the spectacle of a real spiritual communion of soul with soul. A photograph of a bust of William Smith answers completely to the mental image of modesty and delicacy and refinement which the book in general conveys. It is a pity that we have not the wife's picture also. Her late marriage was from no lack of beauty. We are told that she was very beautiful from youth to age, and that she had many noble lovers. The homeliest face informed with such a soul as hers must have been beautiful at last.

"*War with Crime*": Being a selection of reprinted papers on crime, reformatories, etc., by the late T. Barwick Ll. Baker, Esq. Edited by Herbert Philips and Edmund Verney. Longmans, Green & Co. 1889.

THE editors of these papers are justified in their selection of a title by the fact that Mr. Baker himself employed it as a heading for one of his essays, but we could wish that they had chosen differently. There is a suggestion of sentimentalism in it that is unfortunate; for, while Mr. Baker was the soul of kindliness, his feelings did not escape from the control of his reason, and his methods were rigidly scientific. He had a prolonged and thorough acquaintance with criminals, and he had learned by experience to judge of the motives by which they are influenced. Hence he was always ready to defend his theories by referring to facts that had come within his own observation, and, indeed, his theories were for the most part derived from his own experience. We would not be understood as claiming for these papers any perfection of form, but they are capital examples of that common sense which is after all the sublimation of reasoning, and which has given their wonderful success to the political institutions of the English people. We cannot do better than quote, as showing Mr. Baker's grasp of the subjects with which he dealt, and as illustrating the manner in which such subjects ought to be dealt with, some passages from one of his papers on Adult Reformatories:

"I imagine that it will be generally allowed that the time for simple retributive justice—that is, for considering that a man is to expiate his offence by suffering a proportionate amount of punishment—is past, with the days of mammoths. I think it will be allowed that our object now is not to spite a man for what he has done, but to prevent him and others from doing the like again. This includes the two principles—deterrence or prevention, and reformation.

"I place first the deterrence or prevention, because I consider it as applying to by far the largest number, and therefore to be of more importance. Reformation appeals to thousands who have been detected in crime; prevention to the millions who have not. I am no opponent of the deterrent system. I believe that if it be shown that a punishment inflicted on a criminal will, by its severity, prevent others from crime, we are justified to any degree in which the present evil of the severity is balanced by the benefit of prevention.

"But we must remember that punishing a man by no means implies doing him or wishing him harm; and a punishment may be highly deterrent, and yet in the end beneficial. Our object should be then the greatest possible deterrence with the least ultimate harm to the offender; or, if we can manage it, even the greatest good we can give to the offender without the loss of the deterrence."

These sentences contain the philosophical basis of modern penology. They seem axiomatic, but those who are acquainted with the history of legislation affecting criminals know with what difficulty public sentiment has been educated to their reception, and to what constant attacks they are even yet exposed at the hands of benevolent as well as malevolent persons. Did our space permit, we should be glad to quote Mr. Baker's own statement of the measures by which these principles are most effectively reduced to practice. The system which he advocated for many years, with line upon line and precept upon precept, and which has been to a considerable extent adopted in Great Britain, is in its main features as follows: In general, a first offence should be punished by a very short sentence, perhaps not more than ten days' imprisonment, but the prisoner's fare should be only bread and water. Experience shows that under this treatment more than four-fifths of the offenders are not again convicted. For a second offence the punishment should be materially increased, six or twelve months, or the reformatory, with police supervision after release. For a third offence there should be penal servitude for six or seven years, and for a fourth, in most cases, penal servitude for life. In this way the class of old and hardened offenders, the dread of the honest and the corrupters of the weak, is broken up. Gangs of skilful thieves cannot maintain themselves as they do when sentences are not regulated by the previous history of the convict.

Upon the subject of police supervision of discharged criminals Mr. Baker's observations are conclusive. It has been urged, and the theory has been adopted in practice, that when a man has been discharged on a "ticket of leave," the police ought not to look after him. From a sentiment of pity it has been urged that these men ought not to be hindered in their attempts to earn honest livings by having their antecedents disclosed. That is to say, if the police see that a skilled burglar has, on his discharge from prison, obtained, very likely by a false character, a situation as butler, they ought to allow the employer to remain in ignorance of the history of the custodian of his plate, rather than disclose what might cause a poor man to lose his situation. The fraudulent character of this philanthropy is clearly exposed by Mr. Baker, and he clinches his argument by facts which show that there is no practical difficulty in obtaining work for men known to be discharged convicts. Of the many other advantages of a system of supervision we can make no mention.

During the most of his life Mr. Baker was the manager of a reformatory which he established on his own estate. We learn little of this from his own papers, but it is known to have been steadily successful. In 1856 these reformatories came generally into use in England, and the practice was adopted of sending to them nearly every boy who was convicted for any but a first offence. In that year about 14,000 girls and boys were committed to prison, but in four years the number was reduced to 8,000, and in 1882 it seems to have been only 5,700. In fact, these papers show clearly how effective rational principles of treatment have been in England in reducing all grades of crime. Incidentally they show how much good work has been accomplished in a quiet way by a class of men much abused in these democratic days, the justices of the quarter sessions. Many of these gentlemen have devoted themselves to the management of reformatories with as much zeal and at as much expense as wealthy Americans display over their stock-farms. The former have improved the breed of men, the latter the breed of horses. Some of Mr. Baker's illustrations show, also, how ignorant is much of the newspaper criticism of the sentences imposed by these gentlemen.

There is a great deal of repetition in these papers, but it is not tedious repetition. We incline to think that those who are unfamiliar with these subjects will find the reiteration of the principles involved an advantage, and we heartily commend the book to all who feel that they have some individual responsibility in the matter of the general duty which it is admitted society owes to its feebler members. While this collection of papers is not properly a memoir of Mr. Baker, it yet gives some idea of the noble life which he led, and is a much more impressive monument than most biographies. It well deserves an index; the table of contents, although classified, is inadequate.

Historic and Picturesque Savannah. By Adelaide Wilson, illustrated by Georgia Weymouth. Boston Photogravure Co. 1889. 4to, pp. 258.

THE open squares of Savannah, interspersed at regular and frequent intervals, originally designed as places of refuge for the outlying population in frontier war, have become beautiful parks and breathing-places, which, with the abundant foliage of the streets themselves, quite justify the title of Forest City sometimes given to the subject of the work before us. But it is less the topography of the wooded, sandy bluff, with the yellow river in front, the swamps in rear, and the not distant sounds and bays of ocean, that make it interesting, than its inheritance of character and its relics of those who gave it character. As Georgia was the youngest colony, so Savannah has a pre-Revolutionary history of barely forty years; but Oglethorpe and Whitefield lived for it, and Pulaski and Jasper died for it, all leaving their impress. Oglethorpe, soldier and philanthropist, established the colony (and for a long time the colony centred on the town), partly as a haven for those under civil oppression and partly as a bulwark against the Spaniards. Both ends were successfully attained, and the Savannah of to-day in its inhabitants and its institutions displays its early strain. The people are martial, given to hospitality, and abounding with benevolent institutions.

The makers of this book have collected curious and interesting material, much of which will probably surprise all but well-informed local antiquarians, although in the nature of the case there is a great deal of no value other than that which age imparts to any incident. General readers will take the most interest in Bethesda, the orphan home established by Whitefield in 1740, and nourished by the well-known Countess of Huntingdon; in the effort to make Georgia literally to flow with oil and wine, and especially to force it into a silk-growing community; in Oglethorpe's generous diplomacy with the aborigines and skilful strategy against the Spaniards; in the influence of three wars; and in the singular incidents by which the graves of Gen. Greene, who died near the town, and of Count Pulaski and Sergeant Jasper, who fell before it, remain undetermined, although in Pulaski's case, it is true, the probabilities point to his body having been secured.

No book prepared especially for the popular taste can be expected to be minutely accurate, either as to things said or left unsaid, but there

are in this certain odd omissions. For instance, we can find no mention of the ornate Confederate monument south of Forsyth Park. The peculiar organization and management of the police force, modelled upon that of regular troops, does not appear; the very excellent colored military companies are ignored, although much space is given to their white comrades. In that archaic period "before the war," smoking was forbidden in the streets of Savannah. A similar ordinance in Boston formerly led to much derision from the presumed Puritanical instincts it was supposed to indicate, but Savannah was never thus held up to scorn. Whether in consequence of that compulsory education or not, it was long a mark of the resident, as distinguished from the transient citizens, for men of whatever degree to remove their cigars, any lady approaching. So gracious a custom deserved commemoration. There were no public schools in Savannah until 1866. "During slavery" a free colored woman, by energy, frugality, and toil, had amassed a little fortune. It was unlawful to educate those of her own color, and she left her earnings to establish a free school for poor white children—the first within the city. Such pathetic bounty reflects glory on all her kind. Now, excellent public schools for both races flourish. Within a very few weeks a disastrous fire has swept the town, and the Independent Presbyterian Church, on Bull Street, figured and described in these pages, for seventy years an architectural ornament of distinction and a treasury of tender association, went down before it. So suddenly does what is become what has been.

The only error of fact that we have noted is a curious one of derivation, affecting the base-word itself. Savannah traces a distinct etymological ancestry through the Spanish *sabana* and the Latin *sabanum* to the Greek σάβανον, and therefore we can hardly join in the enthusiasm with which the author (p. 4) "rejoices that Savannah River and Savannah town are left to tell their tale of Indian origin down the long line of centuries to come." This is like the grave explanation offered last summer on an Atlantic steamer by a clergyman imported from the mother country, that Pulaski (Tenn.), which came up in conversation, was named for an old Indian chief who used to live there! The index appears copious, but is exasperatingly disappointing. A book of this kind, whose whole value depends upon its accumulation of details, should have a carefully prepared and carefully arranged index, and the one is not always the other. This is neither. The table of contents is better.

Essays, Chiefly Literary and Ethical. By Aubrey de Vere, LL.D. Macmillan & Co. 1889.

THIS supplementary volume of Aubrey de Vere's Essays is less striking than those "chiefly in poetry" which we recently noticed, partly because the topics are less important in the literary criticisms, and partly because the tone is controversial in the political and religious division. Archbishop Trench's poems are carefully considered, and a justly favorable decision is reached, though without due acknowledgment of the secondary and imitative quality of his secular verse; Coventry Patmore and Sir Samuel Ferguson's Irish epics are the only other reviews, and the literary pieces include besides these only a lecture upon the Social Aspect of Literature, principally directed to those who might regard literature as an encroachment upon religion or a rival to it, and some remarks upon Wordsworth which we have elsewhere referred to in connection with the Wordsworth Society. The larger part of the volume is occupied with discussions of Irish policy and church disestablishment, and with argumentative rather than suggestive papers upon science and religion, and the inadequacy of the Bible, as interpreted by private judgment, to afford a rule of faith that can equal in authority and validity that derived from the church. Mr. de Vere writes upon these topics with earnestness and fervor, with an interest in them perhaps deeper than his interest in literature; but he appeals to a narrower audience, and the points in dispute are such that agreement upon them is not to be expected. The author's temper, it is needless to say, is admirable.

The Petrine Claims: A Critical Inquiry. By Richard Frederick Littledale, L.L.D., D.C.L., etc., etc. London: Society for Promoting Christian Knowledge; New York: E. & J. B. Young & Co. 1889.

DR. LITTLEDALE is a man of very considerable learning, of much wit, and of a versatility that is little short of wonderful. He has written abundantly during the last thirty years in a range that extends from the editing of Greek Office Books to the reviewing of new novels in the *Academy*. He is in every way comparable, except perhaps as poet, with his friend the late Dr. John Mason Neale, and yet somehow—one does not know exactly why—he has never had Dr. Neale's *auctoritas* as a writer, nor his *gravitas*. Perhaps the reason is that he has been so often a controversialist and an advocate. His present volume shows both his strength and his weakness. It is an extremely clever argument to show that, under the rules of the Canon Law to which Roman Catholic controversialists appeal, the Papacy has no case at all; that there never has been a devolution of the Petrine Privilege in the See of Rome; and that, if there had been, it would have been long ago entirely annulled and voided by demonstrable and incurable flaws, so that no valid Pope has sat for more than four centuries, and none can now be created.

This is certainly sweeping enough, and is in a way amusing, just as Prof. Huxley's little scuffle with Mr. Lilly, or Mr. Mivart, about the teaching of Suarez was. But it will convert nobody—not even the youngest cardinal. For, whatever men may say, nobody really cares twopence now about the Canon Law. The appeal lies rather to what Cardinal Newman has called "the logic of visible facts." Dr. Littledale's book is, nevertheless, dedicated by permission to Bishop Stubbs of Oxford.

BOOKS OF THE WEEK.

Arnold, Sir E. In My Lady's Praise: Poems Old and New, written to the honor of Fanny Lady Arnold. London: Trübner & Co.; Boston: Roberts Bros.
Daudet, A. Les Femmes d'Artistes. Paris: A. Lemerre; New York: Westermann. $1.25.

The Nation

VOL. XLIX.—NO. 1255. THURSDAY, JULY 18, 1889. PRICE 10 CENTS.

D. Appleton & Co.

HAVE JUST PUBLISHED:

I.

Days out of Doors.

By CHARLES C. ABBOTT, author of 'A Naturalist's Rambles about Home.' 12mo, cloth. Price, $1.50.

'Days Out of Doors,' like the author's preceding work, 'A Naturalist's Rambles About Home,' consists of a naturalist's observations in the fields and the woods, and possesses a similar interest to all lovers of nature.

II.

The Garden's Story.

OR, PLEASURES AND TRIALS OF AN AMATEUR GARDENER. By GEORGE H. ELLWANGER. With Head and Tail-Pieces by Rhead. 12mo, cloth extra. Price, $1.25.

A literary ramble amid the flowers of the garden, with practical hints upon the cultivation of plants, and gossipy comments upon the characteristics of favorite flowers.

III.

The History of a Slave.

By H. H. JOHNSTON, author of 'The Kilimanjaro Expedition,' etc. With 47 full-page Illustrations, engraved fac-simile from the author's Drawings. Large 12mo, paper cover. Price 50 cents.

"'The History of a Slave' is a work of fiction based upon every-day occurrences in the Dark Continent, and well calculated to bring home to the reader the social condition of heathen and Mohammedan Africa, and the horrors of a domestic slave-trade."—*The Athenæum.*

IV.

Won by Waiting.

A NOVEL. By EDNA LYALL, author of 'Donovan,' 'We Two,' etc. New cheap edition. Appletons' Town and Country Library. 12mo, paper cover. Price, 50 cents.

V.

Appletons' Hand-Book of Summer Resorts.

New edition for the present season. With Maps and Illustrations. Large 12mo, paper cover. Price, 50 cents.

For sale by all booksellers, or by mail on receipt of price.

1, 3, & 5 Bond Street, New York.

HORSE RANCH

For sale. Ideal location. All natural facilities for raising thoroughbreds or trotters. Four and a-half hours' buggy ride from Denver; ten miles from station. For particulars,

P. O. Box 2180, Denver, Col.

Schools.

Alphabetized, first, by States; second, by Towns.

CALIFORNIA, Santa Barbara.

MADAME ALFRED COLIN WILL receive into her home a few girls for whom a mild climate and educational advantages with responsible care are sought. Languages a specialty. Pupils can join her in N. Y. in Sept. for westward journey. Address as above, or MLLE. CLERC, New London, Conn.

COLORADO, Golden.

STATE SCHOOL OF MINES. ESTAB- lished 1874. Tuition free. Fall term opens September 23. Catalogue on application.

CONNECTICUT, Middletown.

WILSON GRAMMAR SCHOOL.—A Preparatory School for Boys. $500 per year. For Circular address E. W. WILSON, A.M.

CONNECTICUT, Pomfret Centre.

THE MISSES VINTON'S HOME School for Girls. Will reopen October 7. Number limited. Circular sent on application.

CONNECTICUT, Stamford.

MISS LOW.—BOARDING AND DAY School for Girls. Number limited. Pupils prepared for college.

DELAWARE, Wilmington, Franklin St.

THE MISSES HEBB'S ENGLISH, French, and German Boarding and Day School for Young Ladies and Girls reopens September 20, 1889.

MARYLAND, Baltimore.

EDGEWORTH BOARDING AND DAY School for Young Ladies will reopen on Thursday, September 19. Mrs. H. P. LEFEBVRE, Principal.

MARYLAND, Baltimore, 1214 Eutaw Place.

MISS RANDOLPH'S BOARDING School for Young Ladies. Prepares for college and for European travel. The broad scope and aims of a liberal education are not sacrificed by wasting time in cramming to secure school honors or a high mark on a college entrance examination. Apply for circulars.

MARYLAND, Catonsville.

ST. TIMOTHY'S ENGLISH, FRENCH, and German School for young ladies will reopen September 19, 1889. Principals, Miss M. C. Carter and Miss S. R. Carter.

MASSACHUSETTS, Andover.

ABBOT ACADEMY FOR YOUNG Ladies. The sixty-first year opens Thurs., Sept. 12. For catalogues apply to W. F. Draper; for admission, to Miss PHILENA MCKEEN, Principal.

MASSACHUSETTS, Belmont.

THE BELMONT SCHOOL, OCCUPY- ing the well-known Cushing-Payson place, in Belmont, Mass., three miles from Cambridge, will open Sept. 25. Private boarding-school for boys fitting for college. For prospectus, address B. F. HARDING, A.M. (Harv.), Head Master.

MUSIC—ART—ELOCUTION and **General Culture. Desirable Positions** open to progressive students. All interested will receive valuable information **Free**, by addressing **E. TOURJEE**, Boston, Mass.

The Nation

Is a weekly review of politics, literature, science, and art, conducted with the aid of the most competent writers obtainable. The list of contributors who have been employed more or less frequently during the twenty-three years of the journal's publication, has included most of the leading names in literature, science, art, philosophy, and law in this country, and many of corresponding eminence abroad. A bound volume of the *Nation* presents one of the most complete and accurate condensed records procurable of the world's current history, with impartial comment on questions which should occupy the attention of thoughtful men. Its Departments are:

The Week. Brief comments on the most important current events, domestic and foreign.
Editorial and Miscellaneous Articles. Careful and moderate discussion of prominent political and social topics.
Special Correspondence. From all quarters of the globe, by intelligent and trustworthy observers.
Occasional Correspondence. Letters to the editor on every subject germane to the scope of the paper.
Notes. Short paragraphs, chiefly on literary, scientific, musical, and dramatic topics.
Reviews of Books. By able writers and scholars (mainly specialists) of both hemispheres.
Fine Arts. Competent criticism of art exhibitions and works of art, the drama, etc.

Terms, $3 per annum, postpaid. Address

THE NATION, 208 Broadway, New York.

MACMILLAN & CO.'S NEW BOOKS.

A New Book by the Right. Rev. The Bishop of Durham.

ESSAYS ON THE WORK ENTITLED

SUPERNATURAL RELIGION.

By the Right Rev. J. B. Lightfoot, D. D., D.C.L., Bishop of Durham. (Reprinted from the *Contemporary Review.*) 8vo, $2.50,

Sir Monier Williams's Work on Buddhism.

BUDDHISM:

IN ITS CONNECTION WITH BRAHMINISM AND HINDUISM, AND IN ITS CONTRAST WITH CHRISTIANITY. Being the Duff Lectures for 1888. By Sir Monier Williams, M.C.I.E., D.C.L., etc. With 15 Illustrations. 8vo, $5.25.

"Sir Monier Williams, who has given many years of patient study to the subject, who brings also a wealth of knowledge gathered from accurate scholarship and extensive travel, has given us what up to date is the best work in the English language on the subject of Buddhism. If any one has been attracted to that *ignis fatuus*, the 'Light of Asia,' through Sir Edwin Arnold's beautiful poem, . . . we beg him, before yielding himself to the seductions of a Buddhist Society, to read this work. If any are in doubt about the superexcellence of the religion of Jesus Christ when compared with Buddhism, let them listen to the calmly judicial comparison of Sir Monier Williams."—*Christian Union.*

LETTERS AND LITERARY REMAINS OF EDWARD FITZGERALD.

Edited by William Aldis Wright. In three volumes. With Portrait, etc. 12mo, $10.00.

"Edward Fitzgerald, the celebrated translator of 'Omar Khayyám."—*N. Y. Times.*

English Men of Action. New Volume.

DAMPIER.

By W. Clark Russell. 12mo, 60 cents.

"One of the most readable volumes is this story of Dampier's life and adventures. . . . Mr. Russell has made an exciting book, with a genuine old-time flavor."—*N. Y. Herald.*

Completion of Grove's 'Dictionary of Music.

DICTIONARY OF MUSIC AND MUSICIANS.

A. D. 1450-1889. By eminent writers. Edited by Sir George Grove, D.C.L. With illustrations and woodcuts. 4 vols., 8vo, $6.00 each.

An Appendix, edited by J. A. Fuller Maitland, bringing the Work down to 1889. 8vo, $2.25.

*** *This Appendix, which forms part of volume iv., completes the Dictionary. But a full Index to the entire work is in preparation, and will be presently published as a separate volume.*

"Will far surpass in completeness, in accuracy, in well-digested, candid, thoughtful information, whether for amateurs or for professional musicians, any lexicon or dictionary of music that has ever yet appeared. . . . For the earnest seeker after musical information, for one who wishes to go to the bottom of the matter and really understand things, such a dictionary as Mr. Grove's is greatly needed. The musician needs it as well as the amateur; and students of music, such as throng our 'conservatories' and 'schools,' ought every one of them to possess a book so thoroughly well prepared for them."—*Dwight's Journal of Music.*

"Dr. Grove's Dictionary will be a boon to every intelligent lover of music."—*Saturday Review.*

STEPHEN'S DICTIONARY OF BIOGRAPHY.

VOLUME XIX.

THE DICTIONARY OF NATIONAL BIOGRAPHY. Edited by Leslie Stephen. Volume XIX. 8vo, $3.75.

"In fulness, general accuracy, conciseness, and simplicity of treatment, with not infrequently an infusion of literary quality, the biographies are certainly superior to those of any literary work of the kind in English."—*G. W. S., in New York Tribune.*

ROBERT BROWNING'S COMPLETE WORKS.

VOLUME XV.

THE POETICAL WORKS OF ROBERT BROWNING. New and uniform edition. Volume XV. Dramatic Idyls, First Series: Dramatic Idyls, Second Series; and Jocoseria. 12mo, $1.50.

*** This edition will be completed in sixteen volumes.

"A charming edition."—*Boston Evening Traveller.*

"The volumes are of that convenient size so grateful to the reader, and the type is clear and large, the covers a soft brown, and the volumes are thus very alluring."—*Boston Transcript.*

WALLACE'S DARWINISM.

DARWINISM. AN EXPOSITION OF THE THEORY OF NATURAL SELECTION. With some of its Applications. By Alfred Russel Wallace, LL.D., F.R.S., author of 'The Malay Archipelago,' etc., etc. With Maps, Illustrations, and a Portrait. 12mo, $1.75.

"No one can read this fascinating volume without feeling that the foundations of Darwinism have been vastly strengthened thereby. . . . We thus find that the Darwinian theory, even when carried out to its extreme logical conclusion, not only does not oppose, but lends a decided support to, a belief in the spiritual nature of man. It shows us how a man's body may have been developed from that of a lower animal form under the law of Natural Selection; but it also teaches us that we possess intellectual and moral qualities which could not have been so developed, but must have had another origin."—*N. Y. Commercial Advertiser.*

"He has, indeed, written an admirable volume, in an equally admirable style, and it is in no way discredited by the fact that it differs from most presentations of evolutionary doctrine in according the first place to spirit, which is given a thoroughly scientific status, and the second place to matter, the limitations to which are clearly magnified and definitely indicated."—*N. Y. Tribune.*

112 Fourth Avenue, New York.

The Nation.

NEW YORK, THURSDAY, JULY 18, 1889.

The Week.

ONE year ago (July 1, 1888), according to figures presented in the last *Financial Chronicle*, the Government's deposits in national banks were $59,979,046. On the 1st of July, 1889, they were $47,432,377, a reduction of about $12,000,000. But the reduction of the total cash in the Treasury in the same time has been $52,808,742. That is to say, the Secretary of the Treasury could, if he had been disposed to do so, have drawn out every dollar of the money deposited with the banks, in the course of ordinary disbursements. But he has drawn out rather less from this particular part of his resources than from his Sub-Treasury funds. The public have not forgotten Mr. Blaine's terrible arraignment of Secretary Fairchild for "lending the money of the Government to the banks," in his speeches at Detroit, New Albany, and other places last year, ably seconded by President Harrison in his letter of acceptance. Mr. Blaine said at Detroit that Secretary Fairchild was liable to impeachment, or that if any Republican Secretary of the Treasury had thus loaned the public money to the banks, and the Democrats had been in power, they would have impeached him. Mr. Fairchild made a reply a few days later in which, after showing that it was necessary to keep the money in business channels in order to prevent a financial crisis, and that the law expressly authorized him to make such deposits in the banks, he said that if he had known that he was liable to impeachment in case Mr. Blaine were imperfectly acquainted with the law, he would never have accepted the office of Secretary of the Treasury. The campaign of misrepresentation went on to the end of the chapter. Mr. Harrison's share in it was attributable to ignorance only. "The surplus now in the Treasury," he said, "should be used in the purchase of bonds. The law authorizes this use of it, and, if it is not now needed for current or deficiency appropriations, the people, and not the banks in which it has been deposited, should have the advantage of its use by stopping interest on the public debt." Mr. Harrison and Mr. Blaine have been in office since the 4th of March. The surplus then in the Treasury is still there, except $12,000,000. They have had ample time and ample facilities to remove it. The money market has been easy. Why have they not done what they said ought to have been done? And do they think that Secretary Windom ought to be impeached as soon as Congress assembles?

The *Financial Chronicle* has an article on "Foreign Exchange and Recent Gold Shipments," in which the causes leading to the recent movement of gold to Europe are carefully examined, and shown to be such as could hardly be counteracted by any step on the part of the Government; and that any arbitrary action of the Treasury, such as charging a premium for gold, would correspondingly depress the prices of exportable merchandise, including silver, because, if we are in debt to foreigners, we must pay them with something. If we refuse to pay the balance in gold, we must send them something else, and that must be something they are willing to take, and at the prices they are willing to pay. The fact that gold is called for is proof positive that they are not willing to pay our present prices for goods. It follows that if we do not repudiate our debts, we must, at certain times, export gold or lower the price of our goods. Therefore, any artificial means of preventing the outflow of gold would be robbing Peter without paying Paul. One interest would suffer, namely, all holders and producers of goods which depend in whole or in part upon foreign markets. Would any other interest be the gainer? Certainly not. It is not anybody's interest that we should retain gold if some other country offers a higher price for it than we ourselves estimate it to be worth, and it is only on such conditions that it can be exported.

If an attempt to check the exportation of gold by governmental action should be made, we may probably count on the silver-men to oppose it vigorously, since it would be a manifest discrimination against the white metal, and an aristocratic proceeding altogether. It would be an acknowledgment that gold was better than silver, for, if it were not better, why should we adopt special means to retain it? Why should we take measures to keep one metal and not the other? Can we imagine a more deliberate insult to silver? In the whole category of wrongs and oppressions put upon silver by modern governments, nothing more wantonly abusive and degrading can be conceived than a public proclamation that gold is more precious than silver, and that its exportation ought to be prevented by law. Such a proclamation would be doubly humiliating when made by the United States, and would go far to encourage the enemies of silver in other countries to continue their dastardly assaults on that metal. We look to Senator Stewart especially to resent any such indignity to silver, and we have no doubt that he will be warmly seconded by Mr. Beck and Mr. Bland. Meanwhile the cause of the exportation of gold is made clear by the *Chronicle*, viz., an adverse balance of trade of $33,000,000 for the past six months, plus the spendings of 100,000 Americans now sojourning in Europe, plus the freight money on our foreign trade. It is estimated, by a banker consulted by the *Chronicle*, that the average expenses of these travelling Americans are at least $1,000 each. This is certainly low enough.

The sudden and disastrous fall in Lead-Trust certificates on the Stock Exchange on Friday was due to the discovery that the amount of certificates outstanding was very much larger than "the Street" had any idea of. This is one of the dangers attending speculation in these hybrid securities that were pointed out by the newspapers in the beginning, and, of course, every banker and broker understood it. But the so-called "investing public," meaning thereby a lot of people all over the country who think they can dash into Wall Street, pocket some money, and then dash out again, never understood this fact, or paid no attention to it. The risk is just as great now as it was before the discovery about the Lead Trust was made, and it attaches to all the Trusts alike; for although they are required by the rules of the Stock Exchange to register with some bank or some properly incorporated trust company the number of shares "listed"—that is, the number that shall be "good delivery" on the Exchange—they may issue as many more as they see fit for private delivery, and they may issue them on such terms as they choose. Regularly incorporated companies cannot do this. They can only issue such number of shares as the law allows; and when they do issue such shares, they must report the fact to some public officer, while overissues are punishable by imprisonment. Even with these safeguards, the speculating public "get caught" sometimes by not acquainting themselves with the laws and the records that are open to them. But in the case of the Trusts they are quite helpless, since neither laws nor records afford any protection. If people choose to gamble where all the chances are in favor of the dealer, and take the risk of his being a rogue, there is not at present any law against such folly.

The strike, or lock-out, at the Homestead works of Carnegie, Phipps & Co. has been settled by what is called a compromise. If the terms are correctly reported, viz., a reduction of 20 per cent. in the wages of skilled labor, it is a complete victory of the firm and an unqualified defeat of the Amalgamated Association, since a 20 per cent. reduction in this class of labor is exactly what the firm insisted on in the beginning. The point in controversy, as we gather from the iron-trade journals, was not that Carnegie, Phipps & Co. could not pay the Association's scale of wages and still make a living profit, but that the workmen were making too much money, considering the rates of wages paid in other places and trades. If this is the real key to the controversy, it proves conclusively that the tariff is not maintained for the workingman particularly, as we have been so often told, since in a crucial test the workingman has to give way. The Amalgamated Association has worked up to the theory that what the tariff gives is intended for them, and has pursued it so steadily that wages in some departments of the structural iron trade have been forced up to eight or ten dollars per day. Now Messrs. Carnegie, Phipps & Co. say, not that they

cannot afford to pay so much, but that it is not a fair deal. They establish a 20 per cent. reduction, lock out their hands, and beat them inside of forty-eight hours. There is nothing in the nature of things to prevent them from knocking off 20 per cent. more after the present "compromise" comes to an end.

Ex-Mayor Hewitt made some incisive and happy remarks on iron and the iron trade at a meeting of the British Iron Trade Association on the 7th of May, which are printed in the pamphlet proceedings of that body. What he said about the cost of making iron in some parts of the South will be read with surprise by many, and his contemptuous allusion to the doctrine of protection will no doubt be "viewed with alarm," as coming from one of the most experienced iron-manufacturers in the United States. He said:

"In Carolina there were vast bodies of magnetites, and if not very near to the coal at present, railways were in course of construction which would bring them within sixty miles of the best coal in the world. *He had made a calculation, and believed that coal and iron could be brought together to make pig-iron for Bessemer steel at not exceeding 40s. a ton.* He knew that this might astonish his hearers, particularly in view of the fact that the American mining industry was dependent upon a duty; but they were slow to learn in the United States, and they honestly believed that they needed this protection, *and it would go on until they had fried long enough in their own fat to learn to find some other outlet in the markets of the world.* There was a vast deposit of ore, commencing in Tennessee and thickening until, in Alabama, where a great physical eruption must have taken place at one time, a mountain was covered with a 50 per cent. ore, which was as a rule in admirable condition to be put into the furnace. It was not low enough in phosphorus for the acid Bessemer, but could be used for the basic process. The coal and the ore were only five miles apart, and about five shillings would deliver at the furnace the materials for a ton of iron. Of course this was a combination which, as far as he knew, did not exist anywhere else in the world, and he supposed he might assume that the only drawback at all would be in the higher rate of wages; *but there was the vast body of negro labor quite available, and he doubted whether the per-diem wage was so much as in England.*"

Forty shillings are equal to $9.74. At the present time the price of pig in Glasgow is 43s., and in the Middlesborough District 39s., per ton.

The Home-Market Club of Boston having got rid of its Secretary, Mr. Radclyffe, who was so diligent last year in circulating the forged quotations from English newspapers, that person has unbosomed himself as to the origin and mode of circulation of said forgeries. Mr. Radclyffe was accused at one time of having originated them. In order to repel this charge he makes his present statement. He says that he happened to be in New York in July, 1888, attending a meeting of the National Republican Committee, and there he saw for the first time a "flag document." On his way homeward from the Committee rooms he saw a boy selling *Tribune* extras containing the flag document having the forged extract from the London *Times*: "The only time England can use an Irishman is when he emigrates to America and votes for free trade." It struck him that this would be a very telling document, and he prepared it for circulation by the Home-Market Club and sent it out, and kept sending it out until he saw a telegram in the Boston *Post* saying that the *St. James's Gazette* of London had published an article denying the authenticity of the quotation from the London *Times*. He seems to have doubted whether there was any such paper as the *St. James's Gazette*—which does not speak well for his intelligence, seeing that he is himself an English importation. He waited till the *St. James's Gazette* arrived in Boston with the article as reported. Then, finding that there was such a paper and such an article, he stopped the circulation of the forgery.

Our own recollection is of facts of a somewhat different character, namely, that the Massachusetts Tariff-Reform League and others in Boston made strenuous protests against the circulation of this particular forgery by the Home-Market Club, without avail, and finally made a personal appeal to Mr. Joseph H. Walker of Worcester, in his religious character, that he should either stop the circulation of this forgery or withdraw from his position as one of the directors of the Home-Market Club, and that Mr. Walker replied that such request was reasonable and would be complied with so far as he was concerned, and that thereupon the circulation of this particular forged quotation by the Home-Market Club was discontinued. But it was never discontinued at New York. The only person who made any pretence of discontinuing was Mr. H. K. Thurber, who dropped the words "London *Times*" and substituted "an English paper" in place thereof.

The *Civil-Service Record* publishes a correspondence with Robert P. Porter, Superintendent of the Census, on the subject of the application of the civil-service rules to the appointments in the Census Bureau. It had been previously announced that Mr. Porter, or somebody, had persuaded President Harrison that "pass examinations" would answer the purpose of getting suitable appointments for the census work. In a letter of June 24, published by the *Record*, Mr. Porter advances the idea that the law organizing the Census Bureau interposes an obstacle to competitive examinations by providing that "all examinations for appointment and promotion shall be in the discretion and under the direction of the Secretary of the Interior." This provision of law seems to relieve the President of the responsibility and to put it on the Secretary of the Interior. Of course, it is as easy for the Secretary to say that the examinations shall be competitive as that they shall be pass examinations merely, and it is as easy for him to say that they shall be conducted under the rules of the Civil-Service Commission as under rules to be established by the Superintendent of the Census. Here is a pretty good test of the fibre of Secretary Noble. The *Times's* Washington despatches say that the decision has been reached to select the appointees on the old spoils system of pass examinations, in total disregard of the Chicago platform and of President Harrison's letter of acceptance.

We notice that the Republican press is gradually awakening to the dangers of nepotism. When the President began to appoint his family relations to office, there was a disposition on the part of Republican editors to make light of it as being of little consequence; and even when we called attention to the fact that members of his Administration were beginning to follow his example, they were inclined to the opinion that it was the usual Mugwump effort to make a good deal out of a very small matter. The more recent developments of the practice have produced a decided change of tone, and it is now a common thing to find protests against further indulgence, at least on the part of subordinates. The action of the new Commissioner of Indian Affairs in making his wife his secretary at $1,000 a year, and of the Superintendent of Indian Schools in securing for his wife as his secretary compensation at six dollars a day, appear to have been more than the Republican editors could endure in silence. But why were these cases worse than the President's appointment of a half-dozen or more of his family relations to office? Why were they worse than Secretary Blaine's selection of his son for an important subordinate position in his Department, and of his private secretary for a lucrative office abroad? Why were they worse than Commissioner Tanner's selection of his daughter for private secretary, or than Mr. Halford's conduct in rewarding a railway porter, who had been of service to his wife, with a position in the Treasury Department? All these acts have the same character. In every instance the public service is used as if it were private property.

The President is now reaping the fruits of his folly in appointing a blatherskite Grand Army politician to the responsible position of Commissioner of Pensions. Tanner's performances in the matter of rerating pensions have been so reckless that the Administration has been forced to call a halt for fear that the Government may be bankrupted. The fellow has actually had the impudence to mark up the rate of a pension as much as he chooses—say, for example, from $10 to $30 a month—and then pay the pensioner the extra $20 a month for the whole period that he has been on the rolls—25 years, perhaps, which would make $6,000 of arrears. To cap the climax, he began this sort of business in the case of Gen. Manderson, a rich man who draws a $5,000 salary as Senator from Nebraska. Of course the Government is bound in equity to treat as generously the tens of thousands of poor devils on the pension-rolls, and, long before Tanner should get around, the surplus would be exhausted and new taxes would be required. The Administration is now trying to get itself out of this box. The President deserves no sympathy, for he was warned, by people who knew all about Tanner, how preposterously unfit he was for the place, and he made him Commissioner with full knowledge of his character and record.

The Washington correspondent of the Columbus (Ohio) *Journal* states that Congressman Taylor's assault upon the Civil-Service Law "has led to a general opening up of the question which bids fair to lead to a modification of the law, at least," and that "it is not at all improbable that the next Congress may make some radical changes in the law." The correspondent says: "The real statesmen of both parties evince a disposition to rise above its petty provisions and put something practical in its place." At the same time, he admits the melancholy fact that "there is an element in both parties that is disposed to *pander* to the much over-estimated idea of public sentiment in favor of the present law, and through fear they will refuse to vote to change it." What a happy land this would be for "real statesmen" if nobody ever felt compelled to "pander" a little to the moral sense of the community!

The testimony and speeches collected by Senator Cullom's Committee at Boston have shown that the New England States are very firmly opposed to any legislation or Treasury regulations which shall have the effect to restrict the traffic of the Canadian lines entering their territory. Last year the case was somewhat different. The fishery imbroglio and the Presidential election were pending, and, accordingly, Senator Frye of Maine was in a state of high wrath on the subject of retaliation upon Canada for her various misdoings, including her refusal to allow our fish to be transshipped in bond through her territory. It appears now that the State of Maine and the city of Portland in particular are the most resolute of all in insisting that no such retaliation shall be thought of. But in this frame of mind they are not very different from Boston. Indeed, New England has apparently forgotten that there is any fishery question, or any such place as Gloucester. If her views could govern, there would be no change in the Commerce Act, and no refusal of the bonding privilege to the Canadian Pacific Railway's extension across our northeast territory. This would be a very happy ending of the dispute if we had to deal merely with the fishery question, the Irish question, and the feelings stirred up by the Presidential campaign. But there is one thing more to be considered, and that is whether we can allow the Canadian roads, not equality merely with our own roads, but an advantage over them in this, that the former are not subject to the long-and-short-haul clause of the Commerce Act, while the latter are. The Canadian roads can take through-traffic at as low rates as they choose, and recoup themselves by higher rates on their local traffic. The Portland *Press* thinks that, although this policy is open to them, they will not adopt it, because such a course would create a public sentiment in the Dominion that "would demand and compel some regulations to put an end to the practice." This is a trifle hazy, regarded as a condition for regulating the railway traffic of several millions of people. The most probable course of the Canadian railways would be to take whatever steps would bring them the most money, and then wait and see what the effect upon public sentiment would be. It is not within our experience that railways run very far ahead of public sentiment to the detriment of their own interests.

The Inter-State Association at Chicago a few days ago by unanimous vote passed the following resolution:

"Resolved, That the lines interested in the St. Paul and Minneapolis traffic be requested at once to open negotiations through the northwestern division of the Western Freight Association with their Eastern connections, with a view to make such joint tariffs and rates between all points reached by the Canadian routes and lake routes as shall meet any and all rates made by said Canadian and lake routes. That, in the opinion of this Committee, by reason of lake and Canadian competition, a dissimilarity of circumstances and conditions exists which justifies the meeting of said lake and Canadian competition, regardless of intermediate rates."

The *Railway Review* explains this resolution by saying that, under the construction of the law given by the Commission, the American railway lines have the right to meet the lake and Canadian rates without reducing their intermediate rates, and they propose to do so, believing, nevertheless, that the rates so made to St. Paul and Minneapolis are not properly adjusted, and hoping that the result of this action will be to place them eventually upon a proper relation with Chicago rates. This is certainly a reasonable construction, and if it is not the law now, it ought to be made such. Aside from this, we do not see what the Senate Committee have to do, unless they are preparing to apply the principle of "protection to American industry" to railway transportation. On grounds of an equitable division of plunder this would be fair, but to those who wish to stop plundering altogether every extension of the system is offensive and repugnant. The statement so often made, that the Canadian Pacific Road is competing unfairly with us by reason of a Government subsidy, ignores our subsidies to the Pacific railroads, which, counting bonds and lands together, are probably greater than those of the Canadian line, although ours were divided among several companies, instead of being concentrated on one.

The flurry over the temporary enforcement of the Prohibitory Law in Bangor has provoked an interesting controversy as to whether the city of Boutelle's residence or the home of Neal Dow is "the drunkenest city on the continent." The Portland *Advertiser* the other day applied the title to Bangor. The Bangor *Commercial* insists that Portland is over-modest, and is itself entitled to that preëminence, quoting in evidence the following article which appeared in the *Advertiser* on the day after the Fourth of July two years ago:

"There was more drunkenness in Portland yesterday than on any holiday for years. Notwithstanding the fact that the sheriffs and police made large seizures on Saturday night and Sunday, enough liquor was on sale yesterday to make several hundred men drunk. In some parts of the city the scenes were disgraceful. Drunken men were laid up on the sidewalks and door-steps in all directions. In Deering's Oaks many of the benches were occupied by sleeping sots. Around the Custom-house it is estimated that fifty men were seen drunk during the night and day. It was even worse about Gorham's corner and the adjacent parts of the city. The police made arrests until the station was full and could accommodate no more. Forty drunkards were locked up at one time. This morning forty-one cases were before the Court and many were discharged without being brought up."

With such revelations as to the workings of prohibition in Maine, the rest of the country will be more than ever rejoiced at the rejection of that policy by other States.

It is evidently the purpose of Dr. McDow to do all he can to make the people of Charleston regret the betrayal of justice by which he escaped the gallows for murdering Capt. Dawson. The widow of the murdered man has been obliged to request police protection for her governess against attempts on the Doctor's part to renew relations with her, and there are other reports of fresh scandals about him, all showing him to be as shameless as he is infamous. He evidently regards his acquittal, and the congratulations which he has received because of it, as a vindication of his character, and is starting out in search of fresh honors in the same field. His conduct has prompted the *News and Courier*, the paper of which Capt. Dawson was the editor, to break silence in regard to his trial, and to say, with no attempt to conceal the force of its words, that the trial was a farce, that the jury was "fixed," and that its verdict was given without regard to the character of the evidence. It says:

"We doubt that, under the circumstances, the result would have been different if in his confession Dr. McDow had admitted he shot his victim in the back as he was leaving the office. In view of the result of the trial, the defendant's attorneys might have saved the State the unutterable shame of this judicial travesty, had they moved to quash the indictment for murder upon the ground that there was no statute of South Carolina providing that the killing of F. W. Dawson was a punishable offence."

The *World's* defence of its course in regard to the recent prize-fight is one of the frankest confessions that we have seen in a long time. It says it is "doubtless true" that, by giving so much publicity to the fighters in advance of the combat, the newspapers "helped to create public interest" in it; that a "genuine newspaper does not arrogate to itself the right to dictate to the public how it shall read its news or what particular news it shall luxuriate in"; and that criticisms of such "genuine newspapers" comes from that portion of the press which "makes the inculcation of morals paramount to news." This, to parody Artemus Ward's famous definition of his principles, means: "Morals? Nary a moral! We are in the genuine newspaper business!" This being the case, why preach morality at all? Why pretend that you are opposed to prize-fights or anything else that is degrading? News being paramount to morals, and the highest aim of the genuine journalist being to sell his paper, the worse the quality of the news and the greater its quantity, the better for your business.

THE GENTLEMAN CRIMINAL IN SOUTH CAROLINA.

THE Governors' reports on pardons, which we have heretofore quoted from in relation to the treatment of negroes accused of crime in South Carolina, incidentally throw light on the attitude of society in that State towards white men who have had the regrettable misfortune to lose their tempers before the commission of crime. This element, which in its most aggravated form has occasionally, in other parts of the country, been called emotional insanity in the courts, seems in South Carolina to be tacitly recognized, even in its mildest forms, as a sufficient excuse for any crime involving personal violence. The whole matter has been most neatly put by a United States Collector of Internal Revenue in interceding with the Governor for the pardon of a white woman, by the name of Clardy, who was convicted of an assault and battery with intent to kill, in January, 1887. He writes: "The difficulty which terminated in the conviction of this unfortunate woman is the result of one of those unfortunate family and neighborhood feuds in which prejudices exceed the bounds of reason, fairness, and judgment." This reasoning had its weight with the Governor, and a pardon was granted. We are quite ready to believe that even the friends of the late Capt. Dawson will admit that the unfortunate difficulty which ended with his being shot in the back, was one in which the prejudices of Dr. McDow exceeded the bounds of reason, fairness, and judg ment

It was in March of the same year that Mr. Hayden, of Oconee County, was charged with "drawing a gun and threatening to shoot" a fellow-citizen while on a drunken spree. The gun seems to have been got away from him before any serious damage was done, and the jury, willing to express their disapproval of such a proceeding, found a verdict of guilty. To their horror, the judge imposed a sentence of one year in the penitentiary, and the foreman of the jury promptly writes to the Governor that "there was much hesitation in the jury in finding any verdict of guilty at all in this case. They regarded the matter as a mere technical breach of the peace, and would have rendered a verdict of not guilty if they had had any idea that the punishment would be more than a slight fine." The prosecutor, the county officers, a Senator, and some of the best citizens urge the pardon, which the Governor grants.

William Aiken Owens, supposing that his father was in imminent danger of bodily injury when unequal to the combat, committed an "assault and battery of a high and aggravated nature." The Governor was impressed with the reason urged by a judge, a State Senator, and many of the best citizens, that "the prisoner is of such a character that the fact of conviction and punishment is more in such a case than the extent of the punishment"—five months in jail—and granted the pardon. Such finely organized and sensitive natures are common in the South, and apparently the fear of a shock to such a nature deters many a jury from doing its plain duty on the evidence.

In still another case, of a white man convicted of manslaughter, the prosecuting attorney writes the Governor that the defendant had great though not legal provocation, and, in view of the fact that he so earnestly protested his innocence, feels constrained to recommend his pardon. The brevity of the report of the case fails to satisfy our curiosity as to what it was he protested his innocence of; but, as the twelve jurymen unite in the recommendation, he was probably innocent of something—of any legal provocation for the act, most likely.

In this state of public sentiment, we can admire the manliness of Mr. J. D. Whittle, who promptly pleaded guilty to a charge of assault and battery which was committed in a sort of cock-and-hen state of mind, after being insulted in the presence of his wife. Some of the best citizens of Barnwell County certify that, in resenting the insult, the defendant did only what any man of self-respect would have done under the circumstances, and the Governor remitted the small fine.

These reports are not without their encouraging features, and we are glad to read such a case as that of B. C. Pawley, who was fined $400 for aggravated assault and battery and carrying concealed weapons. The judge who tried the case reports that "in this case a highly respectable and Christian citizen appealed to the law to redress an aggravated assault upon him. I felt bound not only to punish the offence sufficiently, but also to discourage all others from taking private satisfaction," and he therefore imposed an additional punishment as a satisfaction to the feelings of the party assaulted. The defendant was without means, and his wife, a young lady of most estimable character and in delicate health, sold her clothing and all she possessed, but was unable to raise more than half the amount of the fine. The prosecuting attorney does not regard the punishment as excessive, although he sympathizes with the wife, and in so far as her situation affects the matter, to that extent only he joins in the petition. The assaulted party notified the judge that he was fully satisfied, and on their recommendation the fine was reduced to $200. It is to be noticed that the judge lays some slight emphasis on the fact that the party appealing to the law in this case is a Christian citizen, and there is in this reference a possible doubt suggested as to the Christianity of a people who appeal so little to the law in the settlement of private differences.

Woe, however, to the white man who commits an offence that does not come within the class of gentlemanly crimes. Samuel Dixon was sentenced in 1877 to thirty years' imprisonment for arson. He was charged with being one of a gang of white and colored men, three of whom were sentenced to prison for life, and the rest for terms of years. Nine years after, when the prison surgeon reports that the prisoner has not much longer to live, the prosecuting attorney who tried the case, and the owner of the house burned, represent that the evidence at the trial showed that Dixon was not present at the burning at all, as, although he had agreed to go, his heart failed him and he stayed at home. The solicitor thinks he has suffered long enough for his guilty knowledge, and the Governor grants the pardon.

A SOUTHERN MORAL FROM BANGOR.

THE State of Maine, for a period equal to the life-time of a generation, has had upon its statute-book a law which forbids the manufacture and sale of intoxicating liquor. Five years ago, by a vote of 70,783 to 23,811, an amendment to the Constitution was adopted which embedded this prohibition in the fundamental law of the State. For more than thirty years, therefore, the existence of liquor-saloons in any town or city of Maine has been forbidden by the authority of the statutes, and for five years past by the added weight of the State Constitution itself.

Bangor is the third city in Maine, with a population of 16,856, according to the last census. It is the home of Charles A. Boutelle, a Republican member of Congress, an ardent advocate of prohibition, and the editor of the Bangor *Whig and Courier*. In view of the speeches of Boutelle in other States in praise of a prohibitory law and in censure of the nullification of law, the public would have had every reason to suppose that in Bangor, if anywhere, the law and the Constitution of the State of Maine must have been strictly observed.

During the past week, however, Boutelle has made the astounding confession, in the editorial columns of the *Whig and Courier*, that during all these years the law and the Constitution of his State have been openly violated in the city of his residence; that there has been a large number of liquor-saloons in open operation; that the city has been "under the rule of the saloons"; in short, that the law has been a complete nullity. The exposure of this astounding fact was provoked by a strike of lumbermen which broke out a fortnight ago. As is the rule under similar circumstances in States which license saloons, the authorities of Bangor notified the rum-sellers to close their saloons during the continuance of the strike. The saloons accordingly were closed for a few days, when, the exigency which provoked the order having passed, to use Boutelle's words in the *Whig and Courier*, "the rum-shops of this city resumed their devastating work in our midst," and "the drunkard-mills of the city are again running on full time, and grinding out their sickening grist of inebriates." The effort to arouse public sentiment against a reopening of the saloons thus involved the confession that they had been allowed free swing during all the years up to the time of the temporary closing. The truth of this confession does not depend upon the mere word of the editor. He has published letters from prominent clergymen confirming it. The Rev. F. C. Rogers says that "the sale of intoxicants here has been unrestrained," and the Rev. George D. Lindsay writes that "Bangor has acquired an unenviable notoriety because of

the liberty allowed to those who traffic in the degradation and ruin of their fellow-beings."

It may therefore be accepted as established beyond cavil that in one of the chief cities of Maine the Maine law has always been defied. What has been the reason? Boutelle gives it clearly in the *Whig and Courier*. It has been simply because the public sentiment of the city would not sustain the enforcement of the law of the State. It is still uncertain whether that public sentiment will sustain the enforcement of the law in the future. Boutelle appears to be hopeful that it may be aroused to a pitch which will put an end to the nullification that has already been resumed. On Thursday last he said in an editorial article that "nothing is needed but South. Federal laws and the Federal Constitution are violated in some parts of that section. How is this violation to be stopped? Boutelle has pointed out the way. Not by the howls of partisans in Maine or at Washington; they would have no more effect in Mississippi than the howls of partisans in Mississippi would have to stop the violation of the law in Bangor. Not by the passage of fresh laws; fresh amendments to the Maine law have been passed by every Legislature for a score of years without closing a single saloon in Bangor. There is but one cure for the evil—in Bangor or in the South—and Boutelle has discovered it. It is to arouse "the power of public opinion," in the locality where the law is broken—in Bangor a public opinion against liquor-saloons, in the South a public opinion against abuse of the negroes and frauds in elections. This must be the work of the people of the locality. Mr. Butterworth, Republican Congressman from Cincinnati, was right when he said the other day that "the South will have to work out its own salvation"—just as the people of Bangor will have to work out theirs. Happily, there are signs of progress. A grand jury in Nashville, largely composed of Democrats, has just indicted a number of men for election frauds which enured to the benefit of the Democratic party. Possibly the Federal laws and Constitution may be enforced in the South before the Maine laws and Constitution are enforced in Bangor.

"CONSPICUOUS INSTANCES" OF REFORM.

A FEW weeks ago the Boston *Journal* was asked by its namesake in Providence to name "one conspicuous instance" in which President Harrison had observed the spirit and purpose of civil-service reform. "Well, we have two close at hand," it replied, "in the retention of Postmaster Corse and Collector Saltonstall." The retention by a President of representatives of the opposite party in important offices was thus pronounced by a prominent Republican organ the best possible proof of his fidelity to the spirit and purpose of civil-service reform.

About the same time with this discussion between the *Journals* of Boston and Providence, the *Journal* of Lewiston, Me., edited by Congressman Dingley, published an editorial article on the subject of civil-service reform, which said, among other things: "And, by the way, one great advance which is being made under Harrison is this—under the present Administration, in the case of term-officers (as the President advises the country) present Democratic incumbents will be allowed to serve out their terms, unless the public interests obviously require removal. Under this principle Postmaster Pearson was allowed to serve out his term. On the contrary, and with very few exceptions, Republican Presidential postmasters were removed by Cleveland *before the expiration of their terms*, in order to make way for Democrats." The truth is, however, as the official records will show, that on the 25th of July, 1887, nearly two years and a half after Cleveland was inaugurated, the President had removed or suspended only 24 per cent.—one in four—of the Republican Presidential postmasters whom he found in office on the 4th of March, 1885.

We are indebted to the Washington correspondent of the St. Paul *Pioneer-Press*, the leading Republican newspaper of Minnesota, for a detailed statement of the "conspicuous instances" of the spirit and purpose of civil-service reform which Mr. Cleveland afforded in that State, and we commend it to the especial attention of the *Journals* of Boston and Lewiston. There are in Minnesota not quite sixty Presidential post-offices. In five of these, changes have already been made by the Harrison Administration, and they are excluded from consideration. The correspondent furnishes a list of the remaining fifty-three, which shows in each case when the present Democratic incumbent's term began, and so, of course, when his Republican predecessor's ended. A summary of the facts thus brought out is presented in the following table, showing by months of each year the times at which Mr. Cleveland made appointments to these fifty-three offices:

	1885.	1886.	1887.	1888.
January	.....	2	4	3
February	.....	.....	3	1
March	.....	6	6	.....
April	.....	.....	.....	2
May	1	.....	1	1
June	1	.....	.....	1
July	3	2	.....	2
August	.....	.....	1	1
September	1	1	.....	1
October	1	3	1	.....
November	.....	1	.....	.....
December	.....	.....	3	.....
Total	7	15	19	12

It must be remembered that the "clean sweep" of the spoils system would have made these fifty-three offices vacant immediately after the 4th of March, 1885, and put them in the hands of Democratic "workers." Instead of this, no change was made until May, and but seven in all during the whole of 1885. The first of January, 1887, nearly two years after Mr. Cleveland's inauguration, found thirty-one of these fifty-three offices still filled by Republicans, and a full dozen of the number continued until their terms expired at intervals during the year 1888. It should also be noted that in one case, at Montevideo, Mr. Cleveland reappointed in September, 1886, the woman whom Mr. Arthur had made postmistress in September, 1882.

This is a very remarkable showing, and the Lewiston *Journal* will admit that, so far as the State of Minnesota is concerned, it conclusively disproves the statement that Mr. Cleveland removed Presidential postmasters "with very few exceptions" before the expiration of their terms; and the Boston *Journal* will confess that so long a

list of "conspicuous instances" establishes the fact that, so far as the State of Minnesota is concerned, Mr. Cleveland was, according to its standard, a thorough-going civil-service reformer. We regret to say that there were other States, notably Indiana and Maryland, in which the same policy was not pursued, although, despite the general removals in such States, the proportion of removals in the whole country did not reach quite 25 per cent. in the third summer of his term. "Taking it by and large," it must be admitted, we think, by such candid men as the editors of the Boston and Lewiston *Journals*, that Mr. Cleveland displayed a great deal of the spirit and purpose of civil-service reform in the matter of Presidential post-offices.

The New York *Tribune* not long ago printed a story which represented President Harrison as saying that "we [the Republicans] must do as well as Cleveland did," in the matter of allowing officials to serve out their terms. The correspondent of the *Pioneer-Press* represents that Gen. Harrison will live up to this idea in the matter of the Minnesota post-offices, the present intention being to allow these Democratic postmasters to retain their places until their terms expire, more than half of them, it will be observed, not until 1891 and 1892. Here is a striking proof of the impetus which Mr. Cleveland gave the cause of reform. In Minnesota at least he broke up the "clean-sweep" system, and neither Gen. Harrison nor any subsequent President will restore it.

ART NO LUXURY.

THE most formidable argument of those who favor the retention of the present tariff upon works of art is, that art is a luxury of the rich, and, therefore, one of the most fit subjects of taxation. The firmest protectionists find it hard to justify on the ground of protection a tax protested against by its supposed beneficiaries, but even a free-trader may be misled by the plausible question, "Shall we let in free of duty the rich man's pictures while we tax the coat and the shoes and the very tools of labor of the poor?" Such a question has a good ringing sound to it, and is admirably calculated to entrap the unthinking. It has been heard more than once in Congress and elsewhere, and is likely to be heard more than once again before the artists get rid of the tax they detest. No doubt it comes often from the mouths of demagogues who pose as the champions of the poor, but no doubt it is also often asked in all seriousness by those who have not studied the question deeply, and it is therefore worthy of serious discussion.

Is art a luxury, like wine or silks or laces? Does it minister only to the pleasure or ostentation of the rich, without benefiting the community at large? Decidedly we say no.

The first great distinction between a work of art and those luxuries with which it is falsely classed is, that it is not consumed by the man who buys it. If I buy a bottle of wine and drink it, it has pleased my palate, given me an hour of pleasant exhilaration, and it is gone. The money or the labor it cost is destroyed absolutely in procuring me that hour of pleasure. If I buy a silk dress for my wife, the pleasure lasts a little longer, and, if she is a handsome woman, spreads a little further, but the dress wears out, and there is an end of it. But if I bring into the country a beautiful picture or a noble statue, I have brought something that will last for hundreds of years after I am dead, and will contribute to the higher pleasures of generations yet unborn. So far from destroying the labor of others for my personal and temporary gratification, I have paid for the enjoyment of thousands, and in so far am a public benefactor. We all recognize the public spirit of him who erects a fountain or gives a garden to the people, and doubtless we are not called upon to admire in the same way the generosity of him who puts a picture in his parlor. Doubtless he puts it there for his own pleasure. Yet, as far as the public is concerned, the benefit is but deferred. Be he as selfish as he may, he cannot keep it shut up for ever; he will die, and the picture will live. Even in his lifetime many will see it, and a work of art truly belongs to him who enjoys it, not to him who owns it. Sooner or later it will change hands, it will be seen in public exhibitions, it will be sold; and the history of all great works of art is, that at last they become the property of the public, and are placed in museums for the pleasure of all. Luxuries are for the moment, but "a thing of beauty is a joy *for ever*."

The first quality in which a work of art differs from a luxury is its permanence; the second is its productiveness. It not only gives pleasure to thousands and for ages, but it gives much more than pleasure—it gives education. The history of art is the history of civilization. Art, in one form or another, is the great beautifier and ennobler of life, and a nation without art—without poetry or painting, architecture or sculpture or music—is a nation of barbarians, though it possess the steam-engine and electricity. But let us leave to one side the question of general culture, of the advance of civilization, of the education of our artists, and let us ask the supporters of the tariff if they know how many millions of dollars the artistic knowledge and taste of its artisans may be worth annually to France. Has it ever occurred to them that in hundreds of industries the market of the world is open not to him who makes cheapest, but to him who makes most beautifully? Has it ever occurred to them that every opportunity of artistic cultivation given him increases by so many dollars' worth the productiveness of the workman's labor? Bring everything down to the mere brutal test of money's worth, and art is productive. The question should not be, "Shall we not tax the rich man's pictures while we tax the poor man's tools?" but rather, "Whether or not we tax the poor man's tools, shall we tax his education?"

No, art is not a luxury—it is civilization and the tariff on works of art, like the tariff on books, is worthy only of a race of savages. We think ourselves the foremost nation of the world, and yet we are content to rank with Turkey in taxing what every other country in the world that has any claim to a high civilization makes as free as it is welcome. And for what is this tax imposed? Not for revenue, for we have more revenue than we know how to spend. Not for the protection of our artists, for they never asked for it and have always protested against it. It promotes no worthy interest, puts money in no honest man's pocket. A more useless, vicious, and indefensible tax never was levied. Why can we not put an end to it? Why should not all men of culture, all men of intelligence, all lovers of art and of beauty, Democrats and Republicans, protectionists and free-traders, be

his own story. He tried to show the effect on her character and moral nature of a crime with which she was in some way necessarily connected—perhaps as one of the causes—without being in any way an accomplice. But he made her endeavor to ward off the recollections and consequences of that crime by instigating the commission of another.

The great fault is in the portrait of Donatello. Hawthorne had evidently met one of those charming, frank, boyish young Italian gentlemen—amiable, always ready to serve or please, unconscious of himself, as perfectly natural as an animal, with good and right instincts, but otherwise, one might say, without a moral nature, and with little intellectual culture. Such young men are not uncommon in Italy, and perhaps were more frequent in the Rome of those days, when there was no intellectual or political life. It was a character which Hawthorne, with his New England introspective nature, could not possibly understand; nor, being himself uncommunicative even in English, could he get at all well acquainted with the man. Seeing in him, therefore, something of the antique idea of the faun was very natural, and would have been a very pretty conceit had Hawthorne not dwelt on it too much, and almost endeavored to prove it. The mistake was in endowing a Donatello of this kind with a New England conscience. The real Donatello might have murdered the man—as he was bidden to do by Miriam's eyes—but he would probably have thought no more about it; and it certainly would not have overwhelmed him with remorse, so long, at least, as his love for Miriam lasted, nor have created for him a moral nature. Not that all Italians are like Donatello, for there are many types, perhaps more plainly marked by sharp lines than among most peoples. But Italians of the conscientious, reflective character, with a rigid sense of right and duty, men of the type of Mazzini and Aurelio Saffi, are not like Donatello to begin with.

Nearly all the remaining material of the novel comes from the 'Notebooks.' All the setting of the story, all that is called local color, is to be found in the 'Notebooks' almost in the same words as are used in the novel. Some passages, as that about the dead friar in the Capuchin Church with the blood flowing from his mouth, and that about the buffalo calf which gambolled about Kenyon, being given literally in the novel, were not even reprinted in the 'Notebooks.' The greater portion of the moonlight ramble at Rome is for the same reason omitted. All the visits to studios, the evenings with artists, the art-talk and criticism—even to the statement that Gibson's Venus was tinted with tobacco-juice—were skilfully put together by Hawthorne from his notes. There, too, may be found, at least in their germ, his reflections on the advantages and influences of Catholicism. The humors of the Carnival, again, and even such an incident as the discovery of the antique Venus, may be found there. Here, also, are Hilda's tower and the Villa Montauto, which is moved further back into the Apennines and christened Monte Beni, thus giving a title to the novel. The description of the landscape is taken very literally from the actual site as noted down, but, having removed it in place, the author felt at liberty to put in it what he thought it lacked—"the gleam of water and the bright eyes of half-a-dozen little lakes looking heavenward." In the novel this reads—"A river gleamed across it, and lakes opened their blue eyes in its face, reflecting Heaven." This is more justifiable than applying the front of the Cathedral of Siena to the church at Perugia. They carried on the vintage at Monte Beni in the same way as at Montauto; and there, too, it was not so picturesque as cider-making in New England—"The great heap of golden or rosy apples under the trees, and the cider-mill worked by a circumgiratory horse, and all agush with sweet juice." And in both places the unripe wine did not taste as good as new cider. Mr. Kirkup of Florence, his spiritualism and his little girl, also were talked of at Monte Beni; and in the oratory of both houses were the same prints, the same alabaster skull, and in a glass case the same "little naked waxen boy like a cupid, holding up a heart resembling a bit of red sealing-wax."

There is no need to multiply instances. We can now understand the object of the notebooks which so puzzled Mr. Henry James, who thought that they were only for practice in keeping up a good English style. Hawthorne, even when he could see outside objects clearly, apparently could not remember accurately for long what he had seen. He remembered only the impressions which had been made on him, and frequently his entries seem like impressions of his impressions. His notebooks were part of his working material; it was to them only he could say, in Browning's words:

> "Rescue me, thou the only real!
> And scare away this mad ideal
> That came, nor motions to depart!"

Without the notebooks 'The Marble Faun' would have been—to use Hawthorne's own expression—"all cloudland." But the recital of the details of the sources does not enlighten us as to how they could be transmuted into what is, after all, a great novel. That is a puzzle which can be solved only by assuming the possession by the author of what we agree to call genius. E. S.

LAND IRRIGATION AND RECLAMATION IN EGYPT.

MALTA, April 17, 1889.

FROM the earliest times it has been known and written that the country of Egypt is the gift of the Nile. Excepting the province of Fayum, lying to the west of the river, not far above Cairo, which totally differs in character from the rest of Egypt, all the fertile soil above Cairo is contiguous to and lines the river banks, and below that point is included in the Delta. This black, productive soil overspreads the sand beneath in varying depths of from three to six metres, and has all come down suspended in Nile water from the mountain regions of Abyssinia and the great lakes of Equatorial Africa. The slope of the land from Assuan—the first cataract—to the sea is very gradual, that point being 300 feet above the sea and 450 miles distant. At Khartum the two main streams forming the Nile unite, the richer Blue Nile from Abyssinia and the clearer White Nile from the great swampy lakes nearer the centre of the continent; the former becoming a vast muddy torrent, the latter only slightly colored, but also greatly swollen, in the rainy season. Near Berber the Atbara adds its muddy waters from the Nubian mountains. From these combined sources comes that reddish, fertilizing stream, depositing ooze and slime, which, annually overflowing in depths of several inches the burnt-up plains of summer, causes those marvellous double and treble crops without more fertilizing or (as a rule) even ploughing—the seed falling into the numberless cracks of the drying mud. The Nile water holds in suspension in flood time, when it is let on the land, from one-tenth to one-sixth of one per cent. of solids; the coarser, heavier particles falling first, upon the slowing of the currents, and mainly before reaching the Delta canals.

The drainage area of the Nile is the same as that of the Mississippi; its annual discharge is six times less, its rainfall is thirty per cent. greater, and one-third of it is supposed to reach the Delta. It is, next to the Father of Waters, the longest river in the world—3,300 miles. Its tributaries are nearly dry from October to May, and mighty streams from June to September. When other streams of Europe, Asia, and America are low, the Nile is high; it rises every year with marvellous regularity as to time and fixity of volume, and flows for its last 1,600 miles without receiving a single tributary. Finally, owing to its great deposits before reaching the sea, and the littoral currents of the Mediterranean, the Delta now gains but little on the sea, and the coast has been but slightly changed during the last 3,000 years.

The cataracts begin at Assuan, and in all number six, the second being at Wady Halfa—tourists rarely getting up further, and not being allowed this season beyond the first, for fear of wandering bands of hostile dervishes. Before the loss of Khartum, the state of the river—its risings, fallings, and slightest changes—was telegraphed from that point to the authorities at Cairo, a gain of twenty-five days' time; they now have but half that time, and get information from points near Wady Halfa. It has been supposed by some to be in the power of the Mahdists to divert the Nile to some extent from its course, but Sir Samuel Baker has demonstrated this to be impossible with their present resources, quite a chain of granite hills interposing. The maximum difference of water level between summer and winter exceeds twenty feet; in floods, the level is from three to eight feet above the level of the country, dykes and banks protecting villages and fields. It is only in flood times, from July to November, that much water goes to sea; during the rest of the year temporary dams are thrown across the Rosetta and Damietta mouths.

From the river, canals lead off to all cultivable regions in a systematic manner, the larger principal ones being exceptionally deep and used for boat transport. The water may run in by sluice gates, or, as the level recedes, be pumped to them. At the head of the Delta, a short distance below Cairo, is the remarkable work, the *Barrage*, a great dam, the creation of Mehemet Ali's French engineers from its conception in 1835 to its completion in 1863 It was meant to keep up the Nile level at the head of the great canals, with consequent abundant water. It showed structural weakness at once, due to haste in making foundations, and up to 1884 had not supported more than three or four feet of water. It cost enormously, crossing both the Damietta and Rosetta branches near where the main stream divides, with a series of gates, arches, and battlemented and fortified towers, and being 3,310 feet long. The platform is 30 feet above sea level. No ordinary borings indicate the consistency of the subsoil of Egypt, and the foundations consist of great wide thicknesses of rock, cement, and concrete, overlying sand and mud, up stream and down.

In 1884 the English virtually took possession of the country, and from that moment there has been in the irrigation and public works department a body of skilled engineers and practical men, whose extraordinary achievements and beneficence even obstructing pashas an foreign opponents must now admit. Many natives are retained, and the Englishmen, some with experience gained in India, are but a

handful. The chief, Col. Moncrieff, is the Under Secretary of State for Public Works. Col. Moncrieff soon decided that the *Barrage* must do its work, and, with the aid of proper precautionary works, it has been, after long years of disuse, gradually applied to its original purpose, being not yet strengthened and repaired to its finish, but year by year supporting a higher Nile level, and having thus far in the two years of low Nile averted a water famine in the Delta. This (for Egypt) great feat having been accomplished, a grant of £1,000,000 was obtained in 1887 to finish the work properly, and to carry on urgently needed irrigation projects and repairs, in addition to the usual annual grants. The *Barrage* will be completed in 1892, and will then support a maximum level of water, with full canals for the bulk of the country. Without this work the Damietta branch would silt up not many years hence, as have the five other mouths of the Nile during the last eighteen centuries. Public rejoicings and thanks to the Khedive and Col. Moncrieff followed this increased regular water supply, sweet water now going to remote villages before subsisting on foul and brackish wells.

Prior to 1884 the directing heads were of other nationalities, mainly French, combined with native powerful pashas, but when in 1887 an exceptional flood came, the present Chief wrote in his annual report:

"When face to face with disastrous inundation, we naturally looked for records of previous floods. It would have been invaluable to have known where were found the weakest points, what means were found effective and what ineffective. But even of those two great floods within the last thirteen years ('74 and '78) not an engineering record was forthcoming any more than if they had occurred in the reign of a Pharaoh."

However, the Nile flood of that year was safely guided and tended to the sea, notwithstanding the river rose higher by one foot than it had in former disastrous flood years.

To form an idea of possible losses from an uncontrolled flood Nile, the Deltaic provinces lying between the great branches of the river, yielding annual crops estimated at £10,000,000, reckon 11,708 water wheels, 1,285 stationary and portable steam engines of 12,290 horse power, and innumerable canals with their appurtenances—to say nothing of the people, with their cattle and effects. Low Nile means enormously diminished revenues and material want among the agricultural people. Land not irrigated cannot grow crops and is not taxed. The estimated revenue averages a little less than a pound sterling per acre. The approximate value of the whole crop of the country is from £25,000,000 to £30,000,000. The cultivable area consists at present of six Delta provinces, 2,850,000 acres, and Upper Egypt, 2,250,000. Reclamation of land in the latter region is not possible, the desert being close at hand, excepting Fayum, which is really an oasis, and is a cup-shaped depression with hills, valleys, and a great lake. In Lower Egypt, reclamation is going on at the rate of 50,000 acres per year, and in the Behera province double that amount.

This work of again bringing into use vast areas of land for the benefit of an impoverished, down-trodden race once more given the opportunity of living freely by their own industry, is being accomplished by methods of simple honesty and engineering skill, under the present régime. It was evident that improvement must result if anything were done at all, and since what was undertaken has been well done, much good results. Canals must be kept in repair, as well as sluices, drains, dams, locks, syphons, and pumps of all degrees—the large Dutch wheel, the Archimedes screw, and steam centrifugal pumps up to a capacity of 220 tons per minute. Watchmen patrol the banks in high Nile, and by steam-launches the engineers rapidly go about and note the signs of strain or weakness. Banks are strengthened, and cutting currents deflected by strong bags filled with sand, by boats sunk full of stones, by stakes, by jetties, and by other devices, and the inspectors are at hand to direct the hundreds of willing natives in times of danger. In dry season, repairs and new works are carried out, long-forgotten channels are cleared and extended to long-neglected and arid regions, and, as by magic, the land ever widens its green covering. It may be said that there were skilled engineers before the present time, and honest officials in the irrigation department, yet it is plain that the fellah gets more water for his fields freely now; bribing for an undue share of it is far more uncommon than formerly, and the work is done systematically and successfully for the first time in centuries.

Nearly one-third of the Delta is still valueless for agriculture, and includes the shallow lakes and marshes of Mareotis, Burullus, and Menzaleh along the coast. Abukir has been drained by a private company, is being washed of its salt efflorescence, and will shortly add its 32,000 fertile acres, while the margins of the larger lakes are being encroached upon and annually some useful land reclaimed. The bulk of those million acres, however, remains to be restored, being now useless but for the fisheries. Adjoining the inland borders of Mareotis, near the great desert, the vine once flourished; it is again to be attempted, and the old sites have recently had a new canal led to them. One finds over the barren and long-deserted tracts mounds of broken pottery and ruins of ancient habitations, and the Abukir region, now again dry and becoming green, shows traces of streets and stone-covered ways, as well as of the old cultivation in its rectilinear lines of minute shells tracing out the banks and fields. This region was densely populated in Alexander's time and after. Canopus, the famous old Greek city, is a mass of levelled unexplored ruins, covered by heaps of pottery in a desolate, barren plain. The sea has cut off some of the edge, and exposes house foundations, walls, baths, pottery, and, by a little digging about, occasional coins. Seven large fluted columns of Syene granite are lying about near one spot, partly covered, and unfinished, as if the Greeks had taken them from some preceding Egyptian structure and were fluting them. They are said by Petrie to be the only fluted columns in Egypt. There is also a breakwater a few yards off shore composed of masses of broken sphinxes and one Egyptian god of the same material. Many wall surfaces preserve their enduring colors to this day, in red, green, and yellow. Under all this débris, fifteen feet thick, is the tenacious Nile mud at the sea level.

The rainfall in the Delta is of some importance, but practically in Lower Egypt agriculture depends on regular irrigation as known to us. In Upper Egypt, where what is known as the basin treatment of irrigation, the old natural system of the Pharaohs, prevails, the country is divided into basins of from 8,000 to 50,000 acres each, the water coming in on these tracts in August and September (in high Nile), emptying again in October, the resulting deposit of several inches being at once fertilizer and irrigator. The crop of wheat and flax is sown in November without ploughing, and reaped in March. Countless wells are dug in summer, and supply water by the primitive shadoof, and the second crop is millet, cucumbers, and melons. This is the ideal old Egyptian agriculture, and the soil is as famously fertile as it was ages ago. As Shakspere has *Antony* say to *Octavius Cæsar:*

"Thus do they, sir: They take the flow o' the Nile
By certain scales i' the pyramid; they know,
By the height, the lowness, or the mean, if dearth
Or foison follow: the higher Nilus swells,
The more it promises: as it ebbs, the seedsman
Upon the slime and ooze scatters his grain,
And shortly comes to harvest."

In Lower Egypt all this is changed, chiefly since the introduction of cotton forty years ago. Here the year has three seasons, corresponding with the Nile phases and the climate. The first is "Sefi" or summer (April to July inclusive—low Nile), when the water discharged averages 20,000 cubic feet per second; the crop being cotton, rice, sugar-cane, melons, and cucumbers. This is followed by "Nili," high Nile or flood season (August to November inclusive), when maize is grown, the staple food for the whole agricultural population; the cotton, rice, and cane-sugar are maturing and being irrigated, and fallow land is submerged. The maximum water discharge is now 380,000 cubic feet per second. The third season is "Chitawi," or winter (December to March inclusive), and the crops are wheat, barley, beans, tobacco, and clover; and the Nile discharges not over 55,000 cubic feet per second. In the order of value the Delta crops are cotton, maize, wheat, clover, beans, barley, rice, sugar-cane, and tobacco. Under this treble-crop system it is necessary to irrigate all lands, but to flood none, whereas in Upper Egypt the best crops come from the recent alluvial deposit in the basins flooded once annually; maize or durra ripens in high Nile on higher land without being inundated.

Land in Lower Egypt is yielding less than formerly, and the quality of the products is deteriorating. If the same system is to continue, cropping must be improved and fertilizing must be extensively introduced. It is not now expedient or practicable to reintroduce basin irrigation there, as it would involve at once the loss of one or two cotton crops, each of an estimated value of £5,000,000, and it is not generally believed to be any longer applicable to the Delta, owing to changed conditions. In Upper Egypt the basins lie close upon the Nile, fill and run off easily enough, getting the pick of the mud deposit; obviously the fan-shaped, flatter Delta enormously increases the difficulties. Much of this invaluable mud and slime annually goes to sea, and Napoleon once remarked that, were he master of Egypt, not an ounce of it should be wasted there. The Pharaonic system of basin irrigation in Lower Egypt lasted many centuries into the Christian era; but gradually, through neglect of dykes and drains, the sea encroached on the low coast, and, mingling with the Nile, produced salt plains and black swamp fit only for coarse grasses. Thus was lost one-third of the area of the Delta. There are here remote villages using brackish and foul water brought a long distance on women's and children's heads in jars, but sweet-water canals are being led to them, to the great improvement of health and comfort. The great lakes are only from one to four feet deep, and Menzaleh has an area of 800 square miles. The sea shut out, with evaporation and years of Nile deposit they might be reclaimed. Other projects include extensive drains, better transport to markets, and, more remotely, an immense reservoir in the depression of the Fayum province—a holding capacity requiring several years of Nile floods alone to fill. The present all-engrossing tasks before the engineers include: the finishing of the great *Barrage*, to keep up the level of water, obviat-

ing the use of pumps, and by some means diminishing silting, and consequent *corvée* or forced labor, by reason of more regular currents in the canals; the protection of the Nile dykes during flood; regulation of the water supply; and, lastly, the gradual conversion of the salt plains near the inland lakes, and the marsh districts near the coast, into good land.

Forced labor on the canals is an old Egyptian institution, and, in comparison with slavery as it existed with us prior to the civil war, was infinitely worse. Annually, for four months or longer, the natives, to the number of from one to two hundred thousand, were forced to clear the deep canals of ooze and mud, without pay, and given only the coarsest bread to eat. There was no escape, and force in the Orient is unequivocal. They were torn from their wretched homes and villages, and labored, sickened, and starved, often in distant parts of the country; sometimes dying by thousands. If for no other reason, the gradual abolition of this *corvée* and the amelioration of so much as remains—the laborers are now paid wages or may ransom themselves cheaply—the present Government of Egypt and the English control should persist yet another generation longer, when, no matter who controls, this dreadfully miserable people may have been taught to realize their emancipation and know how to resist brutal oppression if need be. It was believed that the fellaheen would not work unless forced, but it is found that they work better when paid for their labor. They toil all day in the mud for ten cents. Human nature is still the same even here.

The cost of the administration was in 1887 but $212,000, though the expenditure was something over $4,000,000. So much good for the money has never before been obtained in Egypt.

C. A. Siegfried.

Correspondence.

SOUTHERN HOMICIDE.

To the Editor of The Nation:

Sir: In your editorial of July 4, headed "The South Carolina Idea," you say:

"Due process of law in South Carolina and in the South generally would require that some near relative of Capt. Dawson should kill McDow, in which case he should be acquitted because he had a strong feeling against McDow. Then, if a near relative of McDow should kill a near relative of Dawson, he, too, would be acquitted on the same ground. There are no assignable limits to a vendetta of this kind short of the extinction of the families."

Your paper generally has authority for what it asserts. May I ask the authority for the above, so far as South Carolina is concerned? Can a single instance of the kind be given?

Very respectfully,

A South Carolinian.

Charleston, S. C., July 7, 1889.

[If our correspondent challenges us to instance a South Carolina vendetta, we freely concede our inability to do so, though we do not believe there is or has been anything in public sentiment or judicial practice regarding personal violence which makes the vendetta impossible in that State, or less likely to occur there than in other parts of the South. We say this with the more confidence because the late H. V. Redfield, in his book on 'Homicide, North and South,' makes no distinction between South Carolina and the other slave States, and gives to the former certainly one of his most dismal chapters. Thus, on p. 93 he says: "The number of family affrays between relations [in S. C.] bears about the same proportion to total deadly difficulties as in the other Southern States." On p. 91, we read:

"In a street-fight in Edgefield one afternoon in August [1878] four men were killed—three shot dead, and the fourth mortally wounded—and five slightly or severely wounded. Two of the killed, we are informed, 'were old, gray-haired men'—Benjamin and James Booth. Benjamin Booth had previously killed Luther Toney, and Broker Toney (one of the four killed) had previously killed Deputy-Marshal Gus Harris, and 'also another man two or three years before.' This affray, therefore, leads us into accounts of seven different homicides. All who survived the battle were, I think, acquitted on trial."

Mr. Redfield closes his South Carolina chapter with these reflections on the deed of a Nashville (Tenn.) desperado (p. 109):

"It is also mentioned casually that the murderer was regarded as dangerous, as he had on two previous occasions stabbed two men so severely that they were believed at the time to be mortally wounded. And yet, under the fine Southern system which rears such men by the tens of thousands, they are permitted to stab and shoot and rearm and stab and shoot again. One would think that after a man had stabbed two men nearly to death on different occasions, his operations might be somewhat abridged by the enforcement of law. In a large percentage of these Southern affrays and assassinations, it is found on investigation, as in these cases [viz., in Nashville and contemporaneously in Edgefield County, S. C.], that some of those engaged had previously been parties to deadly difficulties, and were still permitted to go at large."

In his chapter on "Personal Difficulties," Mr. Redfield makes general application of two statements which are pertinent to the McDow incident: "The theory of self-defence, in many cases, has been carried to the extent of making it a cloak for murder. I could give multiplied instances of this, but it is unnecessary." (He gives one, p. 122.) "There are very many instances in the Southern courts where men are acquitted for manslaughter when their only justification was a blow from a cane or even the fist. Indeed, in some instances this is carried to the extent of acquitting for murder when the murderer killed his enemy in revenge for an insult by words, and when he was in no bodily peril whatever."—Ed. Nation.]

To the Editor of The Nation:

Sir: Your article on "The South Carolina Idea" will doubtless call out some response from Charleston, but you will pardon me for one or two comments.

In apology for the acquittal of Dr. McDow I have not a word to say, and in this place, which is not so far from South Carolina, I have heard not a word about it except in reprobation. While it was doubted by many whether the jury would convict of murder in the first degree, no one that I heard speak of it expected such a shocking travesty of justice as this verdict. How far it accords with the South Carolina idea, South Carolinians must say; but as a people they are not distinguished for that sort of cowardice that shoots an unarmed man in the back. The tendency to violence among us in the South, we deplore. I have preached freely on the subject, and the enclosed clipping shows how the Charleston ministers are aroused. But I want to direct your attention to two things. You make a good deal of the fact that Dr. McDow was congratulated at church by his friends, *including many ladies.* When this telegram was read in the ears of *Southern* ladies, they hooted at the idea that they could have been *ladies.* But whether the telegram was true or false, the fact is no indication of *South Carolina* opinion, since it was stated that it was a Lutheran Church, and Lutherans in the South are almost without exception foreigners. You made in your article some careful distinctions between foreigners and South Carolinians; it is strange you did not notice this.

But there is another part of your article which shows you do not apprehend the true situation in the South, viz., the lynching of negroes for rape on white women. You lay stress on the fact that there is no indignation if the crime is the other way. The truth is, that such a crime is practically unknown. A white man was lynched recently by negroes for rape on a negro girl—*it turned out that he was half-witted.* The fact is, it would be impossible, except in a few cases, to get a jury of negroes to believe that an alleged rape on a negro or mulatto girl was such in fact. The estimation of lapses from virtue among them is fairly indicated by this instance. A lady's coachman (a married negro) seduced the daughter of her cook. When the lady was about to dismiss him, the girl's mother remonstrated: "Lor', Miss ——, you ain't gwine send him 'way *jes' for dat.*" Immoral white men, alas, find it only too easy to gratify their lusts without resorting to rape. There are many self-respecting colored girls, but they are unfortunately a small minority.

But with regard to lynching for rape, it is, indeed, a desperate remedy; but what other can be used for so desperate a disease? Our wives and daughters are surrounded by a people among whom hundreds are brutal savages in their passions. When passion is aroused, and opportunity occurs, the law's delays, the chances of escape, the time for "getting religion," and the chance for glorification on the scaffold, all so modify the terrors of the death penalty that it fails to restrain them from this most brutal of crimes. If nothing but the certainty that an outraged community will rise and execute swift vengeance will check the crime, who shall say that a community must not so defend itself? It does, indeed, reveal a state of civilization but little removed from barbarism, but it is the barbarism of a race that has been forced into contact with civilization, and civilization must protect itself by methods that would not be needed if the barbarism were not there.

A Southern Pastor.

SHORT TERMS OF OFFICE DANGEROUS TO PRIVATE RIGHTS.

To the Editor of The Nation:

Sir: One sometimes hears it stated that long tenure of office by public servants, whether elected or appointed, tends to bureaucracy and threatens the rights of individual citizens. May I call your readers' attention to the fact that short terms may have this effect, familiarity with the system of frequent changes rendering both courts and legislatures careless as to these rights?

By the amended charter of Covington, Ky., all actions to recover from that city any taxes or assessments illegally or erroneously collected are barred after six months from the time the cause of action accrued. The constitutionality of the amendment containing this limitation was sustained in the City of Covington vs. Hoadley, 83 Ky., 444. Holt, J., who delivered the opinion of the court, went beyond the mere question of the legality of such a limitation, and referred to its practical utility and reasonableness in the following words:

"It is the rule in this country, rather than the exception, to provide municipalities with a limitation law different from that provided by the general law. The reason is obvious. The municipal officers and agents are changed often; and that which can easily be ascertained to-day by reason of their presence or assistance, may be difficult or impossible of ascertainment a year hence."

That the officers and agents of our municipal governments are frequently changed is unquestionably true, and it is probably as true that this has given rise to this extreme restriction of private rights against a municipality. One might naturally look, therefore, for a severe denunciation of a system so utterly perverted, so thoroughly unbusinesslike, as to make it impracticable for a municipality to recognize for a longer period than six months the legal claims of individuals against it. On the contrary, the statement is made as of a perfectly natural and unobjectionable state of facts, without a word of protest or even criticism. It might, perhaps, be suggested that the learned judge was indulging in a piece of refined satire; that he thought the picture of municipal misgovernment and tyranny, sketched in these few sentences, sufficiently impressive to call for no words of comment; but his opinion in a later case forbids this explanation. It seems that the amended charter of Louisville places the same limitation of six months upon all actions against the city for damages of every character, whether to person or to property; and in Preston vs. City of Louisville, 84 Ky., 118, which sustained the amendment, the same judge reiterates what he had already said in the Covington case, in explanation of this provision also, and with the same tacit approval as before.

It is sufficiently startling that a judge upon the bench should manifest approval of the system of short terms and frequent changes of public servants, that canker which destroys the efficiency and often the honesty of the administration of public affairs all over the country; but that he should refer to the system as a reasonable ground for such a curtailment of private rights must be simply astounding to all who believe that government exists for the protection rather than the oppression of the individual citizen. Judge Holt does, indeed, refer casually to the intrinsic reasonableness of these limitations, apart from the cause to which he ascribes them, but one cannot but think that his view in this respect is colored by his notions of the conduct of public business. The tendency of Western legislation is to shorter periods of limitation than are usual in the East, but if the time in which a claim based upon a simple contract or tort must be asserted be, as in Kentucky, five years as against an individual or a private corporation, what good reason can there be for a limitation of six months when the claim is against a city? If the Kentucky Legislature should require suits against all business men or corporations who were in the habit of frequently changing their clerks and agents to be brought within six months, would Judge Holt consider that a reasonable restriction of the rights of their creditors? Would he think it in accordance with a sound public policy? A valid claim against an individual or corporation cannot stand upon any really higher ground than one against a municipality; and yet Judge Holt would apply a wholly different rule in the two cases. Could the most extreme bureaucracy ask more of him than this? Verily, when once you discard the principle that the best public servant is, other things being equal, the one who has been longest in his place, there is no telling where you will stop.

CHARLES C. BINNEY.

PHILADELPHIA, July 12, 1889.

THE OBSTACLE TO CIVIL-SERVICE REFORM.

TO THE EDITOR OF THE NATION:

SIR: The obstacle to civil-service reform is not President Harrison, nor any one nor all Senators, Congressmen, or politicians. It is the indifference, in fact, the hostility, of the people. Among the refined and the men of literary tastes, nine-tenths are warm advocates of the merit system; among all other men, nine-tenths or more consider Marcy's historic words about the spoils of office as an axiom in American politics. The only hope that the friends of reform have is, to draw the mass of the people away from their error; the politicians will soon follow.

Now, the toleration, and affection even, which the mass of Americans entertain for the spoils system, rests on two cardinal mistakes of fact, or at least misconceptions. The first is this, that the spoils system means only the appointment of members of the winning party to office, and the average American argues that there are certainly twice as many people fit to fill all the offices as there are offices to fill; hence, no great harm can be done by taking all the office-holders either from one or the other of the two great parties, which are nearly equal to each other in numbers. And the first premise is undoubtedly true: there are but few offices in which the incumbent is indispensable, and not very many in which much harm could be done by merely displacing the Democrat who is in, in favor of the best-fitted among the Republican applicants, or vice versa at the next deal.

But the spoils system does not mean the appointment of the best-fitted men with the additional qualification that they must belong to the dominant party. It means a scramble, in which, among the members of the dominant party, those generally prevail who stand best with the State or district boss, or who spend most time in hunting endorsements and most money in Washington hotel bills. It means interminable intrigue and corruption, and fearful waste of brain and even muscular force to the President and all his Cabinet, at the cost of the real work on behalf of the people for which they are supposed to be elected or appointed. It means very often the elevation of disreputable or utterly incapable men to responsible offices; men who are most subservient to the boss, and most persistent in the "still hunt," because they are most fully persuaded of their inability to make a living in any open profession or in any honest business. The people should know that it is not a question between Democrats and Republicans, but between men willing and able to give good work for the moderate salary on the one side, and heelers and ward bummers on the other.

The next misconception which most men of both parties entertain about the effect of partisan appointment to office is that it helps the party, and that, self-preservation being the first law of nature, each party is justified in rewarding its friends and punishing, or at least disabling, its enemies. The experience of the last sixty years has proved this belief to be most erroneous. It is only necessary to study the election returns in a series of *Tribune Almanacs* to become convinced of the utter futility of all attempts to strengthen a party by the distribution of Federal offices, by the recognition of its leaders. The elective local offices do help the party—they call forth an ambition which can only be satisfied by local success; but Federal offices do no good whatever; on the contrary, the smaller the party is in any district, the better the offices will go round. There is an exception which proves the rule. In the Gulf States the Republican vote fell off between 1884 and 1888, when the Federal offices were in hostile hands; but in the Gulf States the Republican party was made up almost entirely of unlettered field hands, who needed the interested leadership of Federal office-holders. But even in the Gulf States there is an oasis. In New Orleans, with a small nucleus of white Republicans, foreign-born, Northerners, and Creoles, the party gained a Congressman during the rule of a Democratic President. In all the border States, in Tennessee, North Carolina, Arkansas, the Republicans have more than held their own; they have materially reduced the majority against them without the aid of State or Federal patronage. The reason for all this is very plain: for each partisan that is rewarded, from five to ten are disappointed and soured.

This also should be drummed into the ears of the people till the average voter comes instinctively to fear the gain of offices by his party as a danger, in like manner as he now looks forward to it as a piece of good luck. When the people are properly educated in these two points, the establishment of the merit system will be secured.—Respectfully, L. N. D.

THE PRESIDENT'S PLEDGE IN WEST VIRGINIA.

TO THE EDITOR OF THE NATION:

SIR: If there is any State in the Union in which the civil-service pledges of the present Administration are regarded, it is not West Virginia. In pursuance of the plan to subsidize the press, A. B. White of the *State Journal* was appointed Collector of Internal Revenue. Just before he took the oath of office his paper contained the following manifestation of the contempt with which he regards the pledges which the President has made:

"He [Mr. White] is as anxious as any Republican to get the changes made as speedily as consistent with good service, being a devoted believer in the doctrine that to the victors belong the spoils; and, at the earliest practicable date, every Democratic appointee in the office, from the humble and poorly-paid apple-jack gaugers to the well-paid store-keepers and clerks, will be succeeded by simon-pure all-wool and yard-wide Republicans."

Some one who still has faith in the good intentions of the Administration might say that the interests of the public no doubt demand this change; but Collector White himself has forestalled any such defence, for we read in the editorial columns of his paper that "Hon. John F. McGraw turns over the office of United States Collector of Internal Revenue with a clean and honorable record. He has made a worthy official" (weekly *State Journal*, July 4). In the same issue, Mr. Coulter, Sixth Auditor of the Treasury, is commended for expressing the belief that "it is about time the men who did the horn-blowing during the last campaign should have something to show for their labor."

Perhaps we shall find out after a while just what is expected of the editors who have been given retainers by Mr. Harrison. They certainly have no idea that it is any part of their duty to their distinguished client to help him in giving the country an honest administration of the civil service. TRAVELLER.

PARKERSBURG, W. VA., July 8.

EFFIGY MOUNDS.

TO THE EDITOR OF THE NATION:

SIR: In your number of May 23, department of "Notes," occurs the following passage: "It was known long ago that effigy mounds were

found only in Wisconsin and the nearest vicinity, and that they were on that account probably erected by Dakota Indians, who inhabited that tract."

This statement is somewhat misleading in one or two respects. There are effigy mounds in Ohio also, which have been known to the archæological world nearly as long a time as those in Wisconsin, and are unmistakably of the class referred to, though they number only four, viz.: the Granville alligator, the Newark bird, the Brush Creek serpent (lately dedicated to the public), and the three-legged animal of the Scioto River, a few miles north of Portsmouth. To these may be added the *bear*, recently discovered on the Kentucky side of the Ohio, opposite Portsmouth.

I am afraid, too, that the territorial coincidence of the habitat of the Dakotas with the country of the effigy mounds is not so apparent. When first known to history, the Dakotas —as the "Sioux of the Lakes" and the "Sioux of the Prairies"—appear to have lived in and hunted over a stretch of country extending from the ridge dividing the waters of Lake Superior from those of the Saint Croix and upper Mississippi W. S. W. to and beyond the upper waters of the Minnesota River, while the region where the effigy mounds are the most numerous lies fully 300 miles to the southeastward. On the one hand, it may be said that the effigy mounds known to exist in the ancient country of the Dakotas can be counted on one's fingers, so scarce are they, while, on the other, history does not show the presence in force of the Sioux of old times in southern Wisconsin other than as invaders and enemies.

ALFRED J. HILL.

ST. PAUL, MINN., July 3, 1889.

THE FALSE WASHINGTON PEDIGREE.

TO THE EDITOR OF THE NATION:

SIR: As a preliminary to the true pedigree of Washington which may be expected from Mr. Waters in the course of a few weeks, I desire to expose more fully an utterly false and absurd pedigree, published in 1879 by the late Albert Welles. The English portion was a most ridiculous performance in every point of view, and it is only fair to suppose that Mr. Welles was not in a sound state of mind when he adopted and published this statement. His unnamed English correspondent claimed to have derived his alleged facts from the Common Pleas Rolls, and adds: "The pedigree I now send I can establish by legal evidence."

The object of this pedigree was to show that several generations of Washingtons had been born at Warton, County Lancaster; that a Lawrence W. was born there in 1569, whose eldest son was Leonard W., born about 1595, the father of four sons and one daughter *baptized at Warton* in 1616, 1619, 1622, 1625, and 1627. The two younger sons were said to be Lawrence, baptized 1625, and John, baptized 1627, who were termed the emigrants to Virginia.

I will not waste time in refuting the innumerable blunders of the rest of the pedigree, but deal with the essential point here raised. Col. Chester printed a letter in the New York *World* of March 29, 1879, when he had seen the prospectus of Welles's book. He said:

"I at once recognized an old acquaintance, hawked about London some years ago, the original manuscript of which is in my own possession, and now lies on my table before me, where I keep it for the amusement of my friends. . . . I will simply select the crucial point of it, where it is stated that the two emigrant brothers, Lawrence and John Washington, were sons of Leonard Washington of Warton, and that they were respectively born and baptized in 1625 and 1627. The only possible source from which these two baptisms could be obtained is the parish register of Warton. I have examined the register personally and very carefully, and can declare that no such entries are to be found in it."

At this point I desire to introduce the evidence of the Rev. T. H. Pain, M.A., Vicar of Warton, given in a letter now before me, addressed to the editor of the *New England Historical and Genealogical Register*, dated January 25, 1889. He writes:

"I beg to say that I have not been able to find any entry of the baptism of Leonard Washington, said to have been born in Warton about 1595. As to the baptisms of his children, I send the following extracts:

"Baptismata Anno Dom. 1616.
"Robertus, filius Leonardi Washington, baptiz. octavo die Septembris.
"Baptismat. 1619.
"Jane, daughter of Leonard Washington, bapd. 4th day of September.
"Bapt. Anno Dom. 1622.
"Francis, ye sonne of Leonard Washington of Warton, baptized ye 4th day of February.

"*I have not been able to find an entry of the baptism of Lawrence, said to have been baptized at Warton in 1625, or of John, said to have been baptized here in 1627.*"

In the light of these two statements, no one can doubt that the pedigree is a rank and stupid forgery, made by the simple method of fastening upon Leonard Washington two sons of whom he had no knowledge, and without a word of proof.

I had hoped that this ridiculous and transparent fraud had died out, but I see to-day for sale in this city copies of a pamphlet entitled 'The Washingtons and Their Connection with Warton,' by Henry Whitman. The pamphlet itself is below criticism, a mere rambling collection of useless notes, but evidently prompted by an enthusiastic desire to point out the English source of our American Washingtons. But Mr. Whitman quotes and uses throughout this spurious Welles pedigree, and reprints the outline of it, beginning with Bardulf, brother to Bodin in the time of William the Conqueror. So it seems that the proverbial life of a lie is again exemplified.

It seems to me that Col. Chester's statement of the genesis of this forgery may be amusing and instructive. He wrote under date of June 16, 1879:

"If you could see the original, which strangely fell in my hands, you would see how the whole thing was concocted. It was got up some years ago by this 'James Phillippe' for John Camden Hotten, who died before publishing it, and his successors had too much good sense to carry out his intentions. It is evident that the compiler, after working out an elaborate pedigree, much of which I know to be false, looked about for a safe place where to put the two emigrant brothers. He finally decided to make them sons of Leonard Washington of Warton. Afterwards, probably thinking that he might be detected, he crossed out this affiliation. But, finding no better place for them, he finally wrote (as an instruction to the printer), 'This is correct.'

"Of course you would not find any proofs of his statements. This distinguished 'genealogist' never furnishes any. If asked for his authority in any instance, he draws himself up to his full height (6 ft. 4) and says, '*I* am the authority'; and that is all any one can ever get out of him. . . .

"The 'Common Pleas Rolls' are as well known to every historical student and genealogist as the Herald's Visitations. Like all similar records, they are more or less valuable, but they rank no higher, if so high, as the 'Chancery Proceedings.' Unfortunately, they are very difficult to search, from being entirely unindexed, and it is this fact of which 'Phillippe' takes advantage. He may almost with impunity say that his authority for a particular statement is a Common Pleas roll, for unless he also gave you, which he never does, the precise year, term of court, number of roll, and number of membrane, it would be almost impossible to test his statement. I spent weeks over these rolls of the period. To say that they are not used by other genealogists is as ridiculous as to say that other genealogists do not look at wills or parish registers or any other common source of information."

Col. Chester proceeds to point out numerous specific errors, and adds:

"I have all the Washington entries of all the Registers in all the places named in the pedigree, and can say without hesitation that they can never have been consulted by the compiler. The whole affair is a mere catchpenny concern, and I am amazed at the impudence of men who can put forth such a concoction and then claim that every statement can be substantiated by legal evidence."

I hope that this indignant exposure of the fraud, from the pen of the most competent authority, will prove sufficient. A very few weeks will bring before us the very satisfactory results obtained by Mr. Waters, who seems to have had the good fortune to strike a clue which Col. Chester lacked. In the meantime, the reperusal of this letter of my valued friend reminds me that the great collections which he made respecting all the branches or families of Washington in England are still in the hands of his executor for sale. These documents should be obtained for some library here, because we want all the information obtainable about the race from which George Washington sprang. I hope the renewal of public attention to this subject will lead some wealthy patron of literature to purchase these collections, and to place them where they can be used by genealogists.

W. H. WHITMORE.

BOSTON, July 11, 1889.

THE REPUTED IGNORANCE AND AMBITION OF AMERICANS.

TO THE EDITOR OF THE NATION:

SIR: In a book just published, 'Words About Wellington,' by Sir William Fraser, there occurs a noteworthy anecdote. Gen. Grant, when dining, at Apsley House, with that eminently respectable cipher, the late Duke of Wellington, is reported to have addressed his host in these words: "My Lord, I have heard it said that your father was a military man. Was that the case?" And this ridiculous tale will, no doubt, be unhesitatingly believed by thousands of Englishmen of the better sort. In fact, there is nothing to our discredit, individually or nationally, that our kinsmen over here, for the most part, are not ready to accept as indubitable fact. So it was, to my own knowledge, upwards of forty years ago; and, where it is in question to defame us, time has as yet wrought hardly any appreciable diminution of British credulity.

English youths, at the present day, are, indeed, even more convinced, if possible, than the generation before them, of our gross illiteracy. It is not long since a young man, with the air of a person certain that he was imparting novel information, was so good as to tell me, in tedious detail, who Chaucer was, when he lived, and what he wrote. Nor was he in the least abashed when, at the end of his lecture, I remarked that I had read every line of Chaucer years before he was born; whereupon he threw up his chin, shook his head, and looked a direct contradiction, just as I had anticipated that he would do.

My own experience has, probably, been that of nearly every American who has mixed much with the people of Great Britain. It is taken for granted, by them, of us all, and with a blind eye to any counter evidence, that we have but a single aim in life, or, at least, that everything is, with us, subservient to its realization. On one occasion, when tired by the persistent assumption, on the part of an Englishman, that I required to be instructed in the most elementary matters of history and literature,

I was moved to ask him whether an American was supposed to know anything. "Yes," he replied, "how to make money, the only thing he cares for." So prevalent here is this estimate of us that the very man at the corner, unless markedly exceptional, will be found prepared to endorse it.—Your obedient servant, X. Y. Z.

London, England, June 23, 1889.

Notes.

Ticknor & Co. announce a subscription reprint in one folio volume of the uncolored edition of Charles Wickes's 'Spires and Towers of Mediæval English Churches.' A certain number of these plates have adorned the *American Architect* during the past two years. The notes and criticisms of the original work will accompany the plates.

Houghton, Mifflin & Co. are now passing through the press 'The Life of Harriet Beecher Stowe,' by her son, the Rev. Charles E. Stowe. It will be an illustrated subscription book.

Mr. Spurgeon's new work, entitled 'The Salt Cellars,' being proverbs and quaint sayings, together with homely notes thereon, will soon be published by A. C. Armstrong & Son, by arrangement with both author and English publishers.

D. C. Heath & Co. publish directly Rice's 'Science Teaching in the Schools.'

The great Halifax Summer Carnival, which is to fill the week beginning August 5, is to be chronicled and graphically delineated in 'The Carnival *Echo*,' in which Halifax will be more fully illustrated than ever before.

Mr. Austin Dobson's translation, made in 1866, of Manuel's 'Captain Castagnette,' with illustrations by Doré, is to be reissued by subscription by Frank Murray, Derby and Nottingham, England. It will be a guinea book, of luxurious manufacture, lacking only the author's consent to the revival of a piece of hack work of his day of small things.

It appears from a letter addressed to the London *Times* by Thomas Hughes, that the omissions made in his school edition of 'Tom Brown' by Ginn & Co. were in deference to the temperance sentiment of this country, but not to Mr. Hughes's own view of the morality of his work or his readiness to have it "brought into accord with the morality of America," or to have his memoir prefixed, or to have any reprint at all. Having taken as much liberty as they did, we wish the publishers had gone further and abated the pugilism of the narrative, as we remarked last week.

There is much to commend in the 'Guide to the Study of Nineteenth Century Authors,' by Prof. Louise Manning Hodgkins (Boston: D. C. Heath & Co.)—so bound, by the way, that each author treated can be separated. The classification of writings, especially of poems, is serviceable. Some freakishness is shown, as in the borrowed note that "Dr. [O. W.] Holmes bears much the same relation to Boston that Dr. Johnson did to London," and in the original notes after this fashion: "Lowell is called The Songster of Elmwood, The Author of the American Hudibras, Our Ablest Critic, Our New Theocritus." Forgivable would have been citations of verse containing these allusions—if any such exist.

The same publishers add to their outline maps one of England, on a tolerably large scale, to be filled in by the historical student.

The prolific Dr. Sauveur has brought out a new book adapted for the use of schools, in which he endeavors to make Béranger's songs more easily understood and earlier appreciated ('Chansons de Béranger,' New York: W. R. Jenkins). To this end he has taken some of the very best of them, with a leaning to those of an historical nature, and accompanied each with a preface, either historical or critical, and a glossary of obscure words, idioms, and proper names. Many of these introductions are taken from Sainte-Beuve's critiques on Béranger's own writings. The author's own attempts to amplify in his notes Béranger's beautiful terseness of imagery, as in "Les Étoiles qui filent," occasionally seem to us superfluous. Not so, however, is the pains he has taken to exclude characteristic but unfit specimens of a free muse, though the shortened and expurgated "Roi d'Yvetot," with which his selections open, still harbors an innuendo as indelicate as it is humorous.

Other French texts on our table are two from the Hachette series (Boston: Carl Schoenhof), 'Récits d'histoire de France,' selected from Michelet by M. Seignebos; and 'Les Héroïnes de Harlem,' edited from Mme. de Witt by Paul E. E. Barbier. Both these clearly printed volumes are illustrated with cuts on which not much care has been bestowed, though they add something to the attractiveness of the text.

'Dramatic Idyls—Jocoseria' is the title of vol. xv. of Browning's edition of his own Poetical Works (Macmillan); and the end of the pretty series is not yet, we believe.

The first four parts of the 'Century Dictionary' make the first volume, ending with the formidable word *Conocephalitidæ*, which the binder reduces, in despair, to two syllables ("A to Cono"). The buff, richly stamped covers are as admirable in their way as the De Vinne typography, yet, being doomed to soil, seem to call for a protecting envelope, on which a white label might well bear in black letters the *full* words beginning and ending the volumes.

The "Camelot Series" (London: Walter Scott) has for its latest issue 'Letters Written by Lord Chesterfield to his Son,' selected by Charles Sayle, who furnishes a "prefatory note," biographical and critical. The same publisher adds to his "Canterbury Poets" Landor's Poems selected and edited by Ernest Radford: and finally, Cary's version of Dante's 'Purgatorio' reappears in "Bohn's Select Library" (Scribner & Welford).

A very unattractive book, called 'The Birth of the Republic,' and compiled by Daniel R. Goodloe (Belford, Clarke & Co.), brings together a great many documents exhibiting the growth of the Revolutionary sentiment and the formation of the Constitution. Mr. Goodloe has escaped the censure visited on the author who dispenses with an index, only to be blamed for omitting what is here even more important—a schematic table of contents. The portrait of himself does not atone for this neglect.

We have in hand the official city report on certain bronze tablets set up on June 17, 1889, in Winthrop Square, Charlestown, Mass., by the city of Boston (of which Charlestown is a part), commemorating by name the dead of Bunker Hill. This is the first attempt ever made to discover them all, and it is supposed to be so nearly exhaustive that a dozen additional names can scarcely be expected to turn up. The tablets would have been erected on the grounds of the monument if the Bunker Hill Association had been complacent. Their avowed objections were not of equal weight. Much stress was laid on the fact that the committee of the City Government having the matter in charge had recorded their own names along with those of the dead soldiers. We trust that the Irish origin of two of the committeemen had nothing to do with this ground of exclusion. It is not the first time in Boston that Irish-Americans have shown more zeal for the memory of Revolutionary heroism and the preservation of municipal antiquities than the descendants of the Puritans themselves. We observe that the Hon. John R. Murphy was the orator at the dedication of the tablets.

From the *Argosy* office, Demerara, has been issued a separate impression of a paper on "The Fight between the *Peacock* and the *Hornet* in 1813," by N. Darnell Davis, the well-known historical antiquarian and historical writer, and contributor to *Timehri*, the journal of the Royal Agricultural and Commercial Society. This account is written in a very pleasant vein, with equal respect for British and American valor. It ends with the story of the engagement in June between the *Shannon* and the *Chesapeake*, to the command of which Capt. Lawrence passed on leaving the *Hornet*. The second lieutenant of the *Shannon*, who took the vessel into Halifax, is still living, in his ninety-ninth year, being Sir Provo William Parry Wallis, G.C.B., Admiral of the Fleet in the Royal Navy.

Part iv. of the Atlantic Coast section of the 'United States Coast Pilot,' issued from the office of the U. S. Coast and Geodetic Survey, is certain to be in request, as it deals with Long Island Sound, its approaches and adjacent waters. The customary directions as to making port, channels, anchorage, pilots, beacons, lights, buoys, fog signals, etc., etc., are accompanied by profiles and charts. The volume is sold at one dollar.

The June Bulletin of the New York State Museum is a first report, by John C. Smock, on the iron-mines and iron-ore districts in this State. Notice is, for the sake of historical completeness, taken of mines no longer worked. As is shown on the map, by far the larger part of the mines lie parallel to the axis of the Hudson River and Champlain depression.

M. Couat, the rector of the Academy of Lille, has recently published 'Aristophane et l'ancienne Comédie attique' (Paris: Lecène & Oudin; New York: F. W. Christern), the first of two volumes devoted to the old comedy of Greece. The second is to consider the art and literary methods of Aristophanes, while the present volume is taken up with a discussion of the matter which the comic dramatist of Athens was at liberty to handle. M. Couat sketches with French clearness the origin of Attic comedy, and the conditions under which the comic dramatist could come before the people. Then he treats in succession the government, the social organization, the religion, the education, and the morals of contemporary Athens, stating distinctly what was the attitude of Aristophanes and his fellows towards each of these, and the reasons which led them to take it. M. Couat carries his learning easily and without pedantry.

It is enough to mention that a translation has been made of Frederick Delitzsch's 'Assyrian Grammar' by Prof. Archibald R. S. Kennedy of Aberdeen University (Berlin: H. Reuther; New York: B. Westermann & Co.). This standard work thus becomes accessible to many students who would otherwise have had to contend with the difficulties of German as well as of the cuneiform writing. The paradigms, the brief chrestomathy, the glossary and bibliography are incorporated directly from the German edition.

A plan is on foot to resuscitate the Oriental Translation Fund, an English Society which was actively employed from 1828 to 1879, or rather to start an O. T. Fund II., with an an-

nual subscription of £1, or a life membership of £10. The return would be one or two volumes of Oriental works yearly. Communications should be addressed to F. F. Arbuthnot, 18 Park Lane, Piccadilly, London.

There are good translations of many English classics into Russian, but up to the present day there has existed no very satisfactory rendering of Byron, especially of 'Don Juan.' One recently published by P. A. Kozloff overcomes many of the serious difficulties in the way of accuracy. Some passages lose in sententiousness and force by the change of tongue, but the general, and even the particular, result is admirable.

Zaporozhye, the land of the Cossacks of the Dnieper, who furnished "Táras Bulbá" to the characters of literature, and who long served as a bulwark to Russia against Poles and Turks, has been used by Mr. D. I. Evarnitzky as the subject of a book which affords popular reading as well as interesting facts for history. The author has studied the Zaporozhye from popular traditions and ancient remains, and has illustrated his observations with fifty-five drawings and two maps. He made a tour among the localities in question, collecting songs, customs, and traditions of life and habits which will have vanished in another generation, and a knowledge of which is much needed by the regular historian in order to give his more serious studies an air of life and reality. He turned topographer, archæologist, and ethnographer for the occasion, and his book is a very conscientious account of his eight years of travel, into which enters only so much of the archives, songs, and literary materials as directly concerns the subject. The remainder of his material will be used in a history of the Zaporozhye, so important in the Middle Ages.

—The latest publication of the English Dialect Society is a reissue of the 1877 'Glossary of Words used in the Wapentakes of Manley and Corringham,' by Edward Peacock, revised and considerably enlarged, in two volumes (London: Trübner & Co.). The district in question, including the so-called Isle of Axholme, on the west bank of the Trent, forms the northwestern corner of Lincolnshire, was traversed by one of the old northern Roman roads (Ermine Street), and appears among the wapentakes in Domesday Book as Manelinde. Mr. Peacock's Glossary is very readable, being full of racy illustrations selected with an eye to the humorous, and affording many glimpses of society and morals. Here we meet with the obsolete *dog-whipper*, whose function, down to the memory of men still living, was to drive intruding dogs out of church, not without occasional remonstrance from the owner. In 1579, Rouland Bell of Branspeth "will not suffer his doge to be whipped out of the Church in time of devine service, but kepithe him uppe in his armes, and gevithe frowarde words." Likewise, at the beginning of the present century it was a common barbarous practice to sweep chimneys "by letting a cord down, and, having attached to it the legs of a goose, drawing the bird slowly up and down." Mr. Peacock cites from an English author a lady's remark on such a procedure—"How cruel to the poor goose!"—and the reply, "Why, madam, if you think my method cruel to the goose, a couple of ducks will do." A populace thus behind the age may well still lament "the *lost* days" which went with the introduction of New Style in 1752. "Many persons have not yet forgiven those who made the change, as it has thrown, say they, all the fairs in the country wrong." Some of their locutions are amusing by virtue of distortion, as, *dymonite* (for dynamite), of hybridism, as, *baccatotal* (abstainer from tobacco), or of pithiness, as, *all there* (meaning that a person is quite sane), *ninepence to the shilling* (meaning that he is a little lacking), *cypher up* (to take the measure of a person, to "size him up," in our vulgar phrase). To *land up* is said of the silting of a river. The phrase *from A to andparcy* shows a variant of ampersand ("and per se—and").

—The paper on the "Geography of the Caucasus," by V. Dingelstedt, in the *Scottish Geographical Magazine* for July, is a mine of information in regard to what is being done for the scientific survey of that region. About 40,000 square miles have been mapped by the surveying department, and extensive geological researches have been made by the mining department. The Physical Observatory at Tiflis, in connection with various stations, conducts meteorological observations, and the museum at the same place contains a rich collection of botanical and zoölogical specimens and of national types and costumes. The Archæological Commission has published ten large folio volumes containing an enormous amount of material bearing on the history and ethnology of the country. This work is supplemented by the Education Department, which "is publishing the highly valuable researches of Baron Uslar on Caucasian idioms, and collecting information regarding the domestic handicrafts and the manners of Caucasian indigenes." The Department of Domains investigates the condition of the peasant life on the state lands, as well as "the distribution and methods of cultivation of every kind of agricultural product," while an Agricultural Society studies the flora, though having for its practical aim the extension of useful economic plants. In addition to these should be mentioned the publications of the Caucasian Geographical Society, founded in 1851, now amounting to twenty-two volumes of memoirs and bulletins. Mr. James Stevenson replies with much effect to Prof. Batalha Reis's statement of the claims of Portugal to Nyassaland published in this magazine. He shows that while Portuguese explorers had at times passed through the country, the Government had never "exercised authority or held posts" in that part where the British have settled. In respect to the financial sacrifices which Portugal has made to maintain her possessions in East Africa, he recalls the fact that the territory held by the Portuguese on the Zambesi was almost denuded of its population, who were sold as slaves for the gold mines in Brazil, the Government receiving an export duty of $18 per head.

—Dr. Ewald Flügel, youngest son of Dr. Felix Flügel (known to so many American scientists as the German agent for the Smithsonian) is treading bravely in the footsteps of his father and his grandfather. Two years ago he published (Leipzig, Grunow) a monograph of nearly 300 pp. on the Ethics of Carlyle ('Thomas Carlyle's religiöse und sittliche Entwickelung und Weltanschauung'), a very helpful guide to a just understanding of the method that underlay much of Carlyle's seeming madness. This year he presents us with a still more scholarly work: 'Sir Philip Sidney's Astrophel and Stella und Defence of Poesie, nach den ältesten Ausgaben, mit einer Einleitung über Sidney's Leben und Werke' (Halle: Niemeyer). This publication is a sign of the times. In connection with Alfred W. Pollard's recent edition of 'Astrophel and Stella' (referred to in the preface), and Grosart's edition, and Arber's reprint of the 'Defence,' it shows us that the great Elizabethan is coming fully into his rights. There can be little question that, outside the great group of poetic geniuses led by Spenser, Marlowe, and Shakspere, the most commanding figure is that of Sidney. His practice of poetry in the 'Sonnets,' his theory in the 'Defence,' call for the closest study. Although Marlowe and Shakspere won the battle against him in the drama, his every word still deserves to be read and pondered. Without him we shall fail to understand his age, or the so-called school, of Ben Jonson. Dr. Flügel's Introduction, treating of Sidney's life and personality, although based, of course, upon preceding biographies, has many features quite novel, taken from original letters and documents in the British Museum, at Hatfield Place, and in other English and Continental repositories. To the Hon. Mary Sidney of Penshurst he is indebted for the surprising discovery that the boy Sidney was actually collated, June 4, 1564, to the church of Whyteford, Wales. He was then in his tenth year! The relations of Sidney to Spenser and Harvey, Languet, Leicester, and the Queen are discussed at length, and the significance of each of his writings carefully estimated. The text of the 'Sonnets' and the 'Defence' embodies an exhaustive study and collation of editions and variants. As a matter of course the original spellings are scrupulously preserved. The presswork is a credit to the publisher. We have not the space for remarks upon details. We can only congratulate Dr. Flügel upon his achievement, and ourselves upon this valuable aid in a most fascinating study.

SCHOULER'S FOURTH VOLUME.

History of the United States of America, under the Constitution. By James Schouler. Vol. IV. (1831–1847). Washington: William H. Morrison. 1889.

In this fourth volume of his history, Mr. Schouler reviews American life, manners, and politics, for the period extending from the middle of Jackson's first Presidential term in 1831 to the middle of Polk's Administration in 1847. The narrative runs, therefore, through that most exciting epoch in our annals when the fungus growths lodged in the very joints and seams of our Federal structure began, in Biblical phrase, to "take root downward and bear fruit upward," in baleful forecast of the worse things that were to be done in the dry tree when such things were done in the green. As he enters the penumbra of the dim eclipse which came in 1861 to perplex our politicians with fear of change, the historian confesses to some misgivings, lest readers who have thought well of his former volumes may cease to confide in his judgment and discrimination, now that he endeavors, in matters still warm with the blood and passions of living men, to learn and to speak, without fear or faltering, "the whole truth as others have not learned it before." Candidly avowing that it is not in his nature to be impartial as between right and wrong, between honorable and dishonorable public conduct, Mr. Schouler leaves his reader in no doubt at all as to the moral and political weights he uses, or as to the scales in which he places them, while evidently seeking, as far as he can, to hold the balances with a firm and steady hand.

The interval here sketched in its salient features is typical and representative of all that was most distinctive in the political and constitutional history of the United States before the outbreak of the civil war. It was the period (to group together a few of its most characteristic marks) when great administrative

measures of public policy concerning the tariff, internal improvements, the National Bank, the distribution of proceeds from the sales of the public lands, etc., became, in the eyes of the American masses, the articles of standing or falling parties in the State; when divergent political interests and dynastic ambitions, masquerading behind divergent theories of economics and constitutional law, lifted aloft the banner of nullification, and advanced it to the perilous edge of battle; when great party leaders like Jackson, Clay, Webster, and Calhoun could still speak with a voice which commanded the listening ears of all the people; when a vivid interest in public affairs (presenting the conjuncture which Cicero desiderated in the cause of eloquence) begot "the golden age of American oratory," and when, as Mr. Schouler phrases it, "the great wind-sails went round to the delight of all free-born Americans," as Webster, or Clay, or Wm. C. Preston, or S. S. Prentiss, or Wendell Phillips fanned the gales of political debate; when the intensification of this public interest produced a fierce political gladiatorship on the floor of Congress, as John Quincy Adams stood forth for the defence of the "right of petition," and as men like Robert Barnwell Rhett, George McDuffie, and Henry A. Wise showed themselves the swift Hotspurs of debate in defence of slavery and its political rights; when the moral deepening of this public interest found an organ in the flaming zeal of Garrison proclaiming a moral crusade against the abomination of desolation standing, where it ought not, in the very shrine of our national temple; when the elements of party-formation in the country were dissolved by the fervent heats of the time, and kept in a state of seething chaos; when the stately Federalism of our archaic period finally disappeared for ever from sight as the new Jackson Democracy rose to supersede the obsolescent forms of the Jeffersonian Republicanism, and as "the great Whig party" slowly welded itself together into a composite organization, amid such flying fragments as the so-called States'-Rights party, the Anti-Masonic party, the Conservative party, the Equal Rights party, the Locofoco party, the Liberty party, etc., etc.; when a baser sort of sordid and corrupt politics came to take without a blush the place of that patrician management which had swayed the dignified councils of the Essex Junto in the times of John Adams, or had ruled even in the schemings of the Virginian conclave in the days of Jefferson and Madison; when the Congressional caucus, with its abuses, gave place to the worse abuses of the irresponsible national convention, and when the latter, in one of its first essays, offered to the nation the spectacle of a "steam doctor" throwing the vote of the whole State of Tennessee in favor of Van Buren and his mate on the Democratic ticket; when Marcy formulated for the first time the practice of his party and the practice of his age into the neat and quotable dictum of predatory warfare, that "to the victors belong the spoils"; when the shrewd tactics of the Albany Regency, under the deft touch of its "Little Magician," paved the way, by a natural gradation, for the scullion service of "the Kitchen Cabinet" under Jackson, and for the barrack espionage of the "Corporal's Guard" under Tyler.

The whole country has been recently reminded, in a way not soon to be forgotten, that a marked decadence in the forms and in the inspirations of American politics may be said to date from the advent of "Jacksonian vulgarity" in the conduct of our public affairs. The successive stages of this facile descent are traced step by step in the pages of the volume before us, and that, too, with all due concessions made by the writer to the unfaltering courage, the quick sagacity, the administrative statecraft, and the sterling patriotism of the Democratic party chieftain who, more than any other ruler in our history, openly brought the discipline of the camp and the maxims of military strategy to the manœuvres of politics and the despatch of public affairs. "He [Jackson] left nothing in affairs for others to finish," says Mr. Schouler, "betrayed no sign of fear or timidity, shrank from no burden, however momentous, but marched to the muzzle of his purpose, and, like an old soldier, gained half the advantage in a fight by his bold despatch and vigor." But, on the other hand, we are reminded that "personalism came to tincture all politics, all politicians, under his arbitrary and exacting administration, while the painted Jezebel of party patronage seized upon all public trusts for her favorites." Even the fight with the Bank of the United States originated most likely, says Mr. Schouler, "in a personal offence," and was certainly made by Jackson a personal affair after the issue had once been openly joined with Nicholas Biddle.

The spirit of giddiness and revolt so widely shed upon the nation in the forms and phases of its politics during this momentous epoch was not confined to the sphere of politics alone. It was as part and parcel of a general stirring in the popular mind that the whole community was excited alike in the lowest beds of society and in the highest peaks of intellectual culture. Bloody riots shook the peace of our cities. Election riots, anti-negro riots, native-American riots, Irish riots, anti-Irish riots, anti-Catholic riots, and anti-abolition riots kept the public mind in a constant state of tension during the closing years of Jackson's reign. And in higher spheres of culture the old order was changing to make place for expanding schemes of thought and action. It was a time of dissolution and thaw. Woman came to the front for the first time as a social agitator and moral reformer. Tares were mixed with the good seed sown in the fresh-turned plough-fields. Robert Owen preached a new gospel of labor. Fanny Wright preached a new gospel of social order. Fourier had his little knot of free-thinkers and free-livers among us. Thomsonianism, the Graham diet cure, steam doctoration, and the therapeutics of homœopathy and hydropathy in general and in particular were pitted against orthodox medicine. Phrenology vaunted itself as a cheap and easy psychophysics, while peripatetic professors of this new mental science went around fumbling the bumps of the curious and the credulous at so much a head. Animal magnetism, mesmerism, and clairvoyance had their charlatans and empirics, professing to burst the bounds of space and time and to unveil the mysteries of the future state. In religion and in philosophy, men and women of the amateurish sort in both, began, as Mr. Schouler expresses it, "to paddle about the infinite in their cock-boats, and to cast out their plummets in order to sound the bottom of things." Of this "Renaissance" period in New England the Transcendental Philosophy was the bright consummate flower in the domain of pure speculation, as the Brook Farm experiment was its choicest Utopia in the domain of practical life. If this most modern of Utopias "died the death of all genteel communities guided by quill-driving ploughmen," we can all none the less concur with Mr. Schouler in the gratulation that Hawthorne should have raised "such rich literary produce from his dung-fork studies"; and if Emerson, the seer of Concord, showed in his mannerisms some of the contortions of the transcendental sibyl, it is also very certain that he was imbued with a goodly portion of the sibyl's genuine inspiration as he went up and down the highways of New England, advising men everywhere to keep "things" out of the saddle and to hitch their wagons to a star.

It will be seen that the period here discussed by Mr. Schouler is a time of elemental stir. The chief interest of the average reader will naturally attach to the most portentous of these elemental agitations in the sphere of politics—the nullification controversy of 1832, the long and internecine struggle of Jackson with the United States Bank, the recrudescence of the slavery question as raised by Garrison to the higher level of a great moral issue, and finally the annexation of Texas, with its bloody sequel, the war against Mexico.

Confining our attention to two of these topics, the issue joined by Jackson with the Bank and the revival of the slavery agitation under its new front, we may say that the views of Mr. Schouler under both of these heads seem to us in the main to be well-weighed and just. Though his sympathies are evidently with the Whigs in the era of the Democratic crusade against "the monster" of Nicholas Biddle, his judgment often compels him to admit that the drift of wiser opinion and of sounder economy was not discerned by the Whig statesmen. Indeed, while concurring with him in this view, we think he sometimes does a little less than justice to the *apologia* that might be made for the Bank and for its directors when, in the latter stages of its career, he animadverts on its huckstering traffic with the Whig politicians as being like the conduct of "a maiden lost to shame." Mr. Schouler certainly knows that, in the earlier stages of the Bank's unsullied career, it was not the Whig politicians who made trial of its virtue, and that it was not until the Bank had set its face like a flint against the seductions of the Jacksonian Democracy, in the case of Jeremiah Mason and the Portsmouth branch, that Nicholas Biddle and his associates were driven to seek succor and shelter for the "maiden" in the camp of the Whigs. From this time forth the Bank was doomed to fight, not alone for its honor, but for its very existence; and no history of that life-and-death struggle can be called complete which ignores the compromising correspondence had by the Democratic fuglemen with Nicholas Biddle over the head of Jeremiah Mason, when he was appointed as President of the Portsmouth branch in 1829, and all this because he was known to be a friend of Webster's. After Mr. Schouler's intimation that Jackson's quarrel with the Bank most probably originated in a "personal offence," it would seem better to have said less if no more than this was to be said on the origin of the whole controversy. The importance of this controversy Mr. Schouler does not at all exaggerate when he says that for nine long years it irritated the passions of the people "more constantly and more deeply than has any other single national issue save one."

That the Bank meddled with politics, whether with or without compulsion, must be frankly admitted, but what shall be said of "the pet banks" which Jackson installed in its place? On their own motion, and with the full license of the Administration, they crowded around the Treasury troughs at Washington with loud clamors for a share of "the fiscal patronage," in the shape of Federal deposits, openly solicited on the ground that the suitors were "friends of the Administration and of the revered chief at the head of the Government." It was not

long after the deposits had been removed from the Bank because it "meddled with politics" (on the wrong side), that we find the cashier of a "pet bank" writing to Reuben M. Whitney, the lobby agent of "the selected banks" near the Government, that a share in the public revenues was solicited for the express purpose of providing business "accommodations" which would enure to the political advantage of the Administration and to the propagation of "Democratic sentiments."

Mr. Schouler, of course, has not a word to say in defence of this "litter of lesser monsters" which Jackson put to suck at the breast of the Federal Treasury; and while not blaming Jackson for the veto of the Bank bill, he does blame the "meddlesome removal" of the deposits in advance of any better provision being made for the safeguarding of the public funds. Indeed, it not too much to say that, in those days of financial empiricism and wreck, the leaders of both parties were blind leaders of the blind, and hence it was but natural that the Government itself should at last have fallen into the ditch of bankruptcy under Van Buren. It is but just on the part of Mr. Schouler that, amid much derogation from Van Buren's public character in other respects, he gives to him the meed of highest statesmanship for the courage and sagacity with which he advocated and carried the Independent Treasury against the pressure of the best culture in the land, and against the dissuasives of expert opinion in finance, as "best culture" and "expert opinion in finance" were ordinated in that day. Speaking generally, the author concurs with the opinion of another, that the Democrats of that era had the better principles, but that the Whigs were the better men. The Democrats, he says, sided with persons and personal rights. The Whigs, on the other hand, "leaned to property, to great public and private undertakings involving money, and fostered by privilege and favoritism." Their party, therefore, soon became "the favorite of Northern polite circles, of scholars, professional men, the rich and prosperous tradesmen, bankers, of such as led good society or hung to its skirts, of capitalists, and of those who bask in the sunshine of capital, but most of all of manufacturers and merchants." It is easy to see that these principles of party formation are constant factors in our politics, and that they still survive, with certain modifications, in the political divisions of our own time.

In the matter of the new movement at the North in 1831 against slavery, Mr. Schouler makes no secret as to the drift of his sympathies. "Better this agitation," he says, "though it sent a two-edged sword, than the poisonous lethargy before it; better a quarter-century of sharp collision, followed by the desperate struggle for the mastery, than another century of corrupt growth and of bonded mis-alliance." Yet even here he puts his pen in poise that he may the more justly carry out his purpose to "interpret all men and all parties by the atmosphere of their times." In this sense he inclines in the same breath to applaud the bold denunciations of Garrison, and to find palliations for that long stupor of the public conscience under which the nation, sheltering itself behind the defences of the Constitution, had well-nigh lost its faith in the moral order of the world. He thinks it a matter of temperament to decide "whether one shall admire most the bold denunciator whose speech irritates thought into action; or the enlightened statesman who accomplishes for reform all that his age will admit, and respects the limitations of social ordinance; or the grim warrior who wins the fight." History, he says, should do justice to all. Yet he admits that "the one idea of Garrison" was abstractly right, and that it was because this idea ruled in his breast with the spirit of prophecy that the Northern conscience was awakened at length from its long sleep, and public opinion was eventually forced up to a higher plane of thought and aspiration.

The character sketches scattered by Mr. Schouler through the volume before us are drawn with a free and dashing hand. His portraiture of Jackson, Clay, Webster, Calhoun, Tyler, and others does full justice to the strong points of each in respect alike of intellectual and of moral endowment. Conceding to Calhoun the highest praise for the austerity of his private virtues and the purity of his personal character, the writer indulges perhaps in a needless acerbity of phrase in order to point his antipathy to the political aims and objects of the "arch-nullifier," the "vampire dogmatizer," "the Catilinarian," "the high priest of slavery extension," etc. Thucydides, though a victim of the factions of Athens, could paint the portrait of even a Cleon without a single epithet. The portrait of Benton is drawn by Mr. Schouler with much tenderness, perhaps out of respect for the palinode of his later career, and therefore at the furthest possible remove from the charcoal sketch of him by John Minor Botts and Edward Bates.

The style of the volume is in the main animated and sententious. Indeed, Mr. Schouler's sentences are often crisp and sparkling, but sometimes the grammar is careless, as, for instance, when he writes that "the best practical wisdom of the day in trade and finance *were* at the service of the Whigs." Sometimes the rhythm minces a little in its gait, as when he writes "nothing, eventually, moulded, after all, the policy of Tyler so much as the wish to be reëlected." Sometimes we stumble on a solecism, as when he speaks about the difficulty of "coalescing" the old elements of the Opposition into the new Whig party. The historical perspective is sometimes at fault, as when he writes of Amos Kendall as "a good Baptist and a Bible-class teacher" in 1835. It was not until long afterwards that Kendall made a public profession of his Christian faith. The bloody tussle between Jackson and Benton in 1819 is called a "duel." That certainly is not the name by which Benton characterized it in the card he published at the time, reciting how Jackson had assaulted him with murderous weapons in his own private lodgings. The spelling of the proper names is often careless: Mem*m*ucan Hunt instead of Memucan; Gen. Jessup, instead of Jesup; the "Priggs case," instead of the Prigg case, Julian C. Verplanck, instead of Gulian, etc., etc. (This last-named error is carried even into the index, and is quite inexcusable in the case of a versatile scholar like Verplanck, who combined in his person the characters of historian, politician, theological professor, economist, and man of letters.) Reuben M. Whitney, that shady politician whom the Whigs never ceased to lampoon as the "pimp of the pet banks" and the "scullion of the kitchen cabinet," is always despoiled by Mr. Schouler of the middle letter in his name. The references, too, sometimes mislead because of misprints in the figures, as, for instance, on page 542, where reference is erroneously made to page 675 of Benton's 'Thirty Years' View,' instead of page 679. Even the index sometimes trips the reader, as when reference is made in it to page 152 of this volume, as containing some allusion to Benton, though his name does not occur on that page. We presume it should read page 157.

JUSTI'S VELASQUEZ.

Diego Velasquez and His Times. By Carl Justi, Professor at the University of Bonn. Translated by Prof. A. H. Keane, B.A., F.R.G.S., and revised by the author. London: H. Grevel & Co.; Philadelphia: J. B. Lippincott Co. 1889.

WEIGHT is the most pronounced characteristic of Prof. Justi's 'Velasquez.' It is not only weighty, it is heavy—very heavy. The mere physical weight of this bulky quarto volume of more than five hundred pages is formidable, but the intellectual heaviness of its contents is almost appalling. We are assured in the preface that "some historical and descriptive details not bearing directly on the argument have here and there been . . . omitted" in the translation, and one can only shudder at the thought of what the original must be like, for the volume before us seems to contain everything that human ingenuity can conceive of as even remotely connected with the subject. Of course it includes a great deal of valuable matter. Everything that is known of the life of Velasquez, and not a little that is guessed, is here, together with a critical and descriptive catalogue of all the known and unknown and most of the imputed works of the master; and all this, though unduly expanded, it is well to have; but all this, expanded as it is, would not half fill a volume of the size that Prof. Justi seems to have thought necessary to the dignity of his subject, and no art known to the makers of books is spared to fill up the remainder. We have biographies of every one whom Velasquez painted or may have painted, and of many whom, according to Prof. Justi, he did not paint, and of every man whom he met, or must have met, or may have met. We have long historical accounts of every city he visited and of every house he lived in. We have quotation and description and disquisition without end.

To give an idea of the way in which it is done, let us dissect the contents of the first book, which occupies fifty-five pages. First come, by way of introduction, six pages of general criticism on the master and his position in art. This is well enough executed, but every word of it is repeated—some of it more than once—later in the volume. Then come nine pages devoted to "The Galleries" and to a presentation of the sources for "Biographical Data." So far, one has little to complain of; but there follow five pages devoted to a history and description of Seville, where Velasquez was born, and four to the "Poets and Literary Circles" of that city, with which he had nothing to do. The remaining thirty-one pages of the first book are occupied with a history of Spanish art from the mediæval period to Velasquez's own time, with notices of individual artists from three to eight pages long. All that is essential to know of such of these artists as had even the slightest influence upon Velasquez, is afterwards given in its place in the story of his life, which begins with the second book.

Another and even more striking instance of the author's talent for expansion occurs in the fourth book. In this there is a section devoted to "Murillo in Madrid," which occupies about seven pages. It begins with an account of Murillo's youth and early struggles, and of his determination to go to Madrid; describes his personal appearance on his arrival; gives an account of his interviews with Velasquez, and details the advice that master must have given him; continues with a notice of the effect of this intercourse upon his later work, and concludes with a rhapsody upon his painting in

general. The foundation for all this is, that it is now known that Murillo *did* go to Madrid, and that he *may* have met Velasquez there. The opportunity for digression was too good to be missed, and the result is, "One halfpenny-worth of bread to this intolerable deal of sack!"

But the heaviest thing in this heavy book is the utterly indescribable style, at once stilted and colloquial, never clear, and sometimes unintelligible, stuffed with misapplied technical terms and Germanisms, which makes reading a torture. We are told that the proof-sheets have been revised by the author, but the strange confusion in the use of art-words would lead one to believe that, while the translator knows nothing of art, the author knows nothing of English, and has accepted as a proper translation of technical phrases anything that occurred to the fancy of the former. Certain pet words, "anyhow," "jejune," "blends" (as a substantive), "saturated," are repeated with a "most damnable iteration," and one hears of "the Art" (with a capital A) until one is sick of it. Such a style must be seen to be appreciated, and we give a few specimens gathered here and there. The italics are ours:

"In any case this *feature* provided itself at the right moment with an *eye* as an organ exceptionally endowed for photographing visible phenomena." (P. 4.)

"Here the impression of an ordinary visit to a young mother is completed by the accurately depicted babe in swathing clothes, anyhow this time comfortably tucked in with his pretty but still quite stupid little head and lovely gold curls." (P. 83.)

"Owing to the diagonal *lie* of the axis." (P. 205.)

"*Feelings* of jealousy were too alien from his nature *not to be rejoiced* at the discovery." (P. 231.)

"The outlines receiving an appearance of quivering motion by *broad* brown strokes of the brush *as if stippled.*" (P. 421.)

We will give one longer quotation, a passage of eloquence, and have done:

"But who has ever before more searchingly studied the action of the sun, which here before our eyes weaves pictures with its divers radiations? Here it seems at work with its magic spells, quivering on silken tissues, fondling a dazzling white neck, merging in coal-black Castilian locks, giving plastic distinctness to one object, throwing a hazy weft over another, dissolving the substantial in the imponderable, giving to flatness the roundness of life, transforming the real to an image, the image to a vision. Here we feel with the physicist that light is motion, and on every tongue hovers the exclamation, 'Symphony of colours!'" (P. 432.)

The critical judgments of the author are, in the main, sound. It is impossible to rate Velasquez too high as an artist, and Prof. Justi not only heartily admires him, but generally admires in the right place and for the right qualities. Through all his astonishing verbosity, and in spite of the blunders of his translator, it is still possible to get a right impression of the manner and the merits of the first of "painters." And yet the Professor is not entirely proof against the malady of admiration incident to biographers, and, not content to show us his hero as "le peintre le plus peintre qui fût jamais," he must make him out what he was not, an artist capable of the lofty treatment of classical and religious themes. He writes pages about the "conception" of Velasquez's two or three religious pictures; the fact being that Velasquez had no "conception" of these subjects whatever, and contented himself with wonderfully executed portraits of a few models in more or less decorous and befitting poses. His "Coronation of the Virgin" is, from the absence not only of any "religious sentiment," but of any feeling for the ideal, one of the most disagreeable pictures ever painted by a great artist. Harmony of composition, grandeur or beauty of line, nobility of type, are all wanting, and we only see a decrepit beggar, a ruffianly bandit, and a rather handsome woman seated on the clouds, and encumbered with drapery, and posturing in a dignified but altogether meaningless way. The same indifference to and incapacity for the classical in art is shown in his mythological pieces. In not one of them is there any glimpse of the great Italian feeling for composition. The age of grand art was past, and Velasquez was as helpless to restore it as any of his contemporaries.

Assuredly Velasquez had an idealizing power of his own, but it lay in his intense perception of truth and beauty of light. Here he was the innovator and the unapproachable master. He was the first to see and to paint light and air, the first painter of aspects, the great and true *impressionist*. In his greatest works, "The Maids of Honor" and "The Spinners," the figures seem merely incidents, while the true subject is the light that plays upon them, and the air in front of them and around them; and by the delicate *ordonnance* and balancing of these elements he produces a composition as truly ideal as the grand arrangements of line or splendid harmonies of color of the Florentines or Venetians. With the Dutchmen and with Velasquez modern painting begins, but Velasquez is more essentially modern than the Dutchmen. The powerful chiaroscuro of Rembrandt would have seemed exaggerated to him, and Terburg's detailed insistence upon tangible fact would have seemed petty. He was the great discoverer of *values;* and to him the just amount of light upon an object and the exact quantity of air between it and the spectator—its *appearance* at a given distance and under a given effect—this was the one thing about it worth painting, and this he painted as perhaps no man has done since.

Great innovator as he was, however, he still left something for his successors to discover, and when Prof. Justi would have us believe that Velasquez, three hundred years ago, was a modern *plein-airist*, he goes too far. He severely reprimands a "recent bungler" by whom "our master's landscapes are likened to hanging draperies"; and yet the "recent bungler" is quite right and Prof. Justi is quite wrong, and the fact that these landscapes "are recalled at every step by all travellers in the Castalian highlands" has no bearing on the question. Be the landscape as truthful as it may, in itself, if the relation between it and the figure be *not* truthful, it will look like an admirable landscape-painting *hung up* behind the figure, and it is just so that it looks in the portraits of Velasquez. The just relation of a figure in the open air to the surrounding landscape was, so far as we know, never painted until our own day.

The tendency to praise, occasionally, in the wrong place is shown again when the rocking-horse action of Velasquez's horses is spoken of as "just"; and the passion of all literary critics of painting for finding more in a picture than the artist ever put there crops out amusingly in such a passage (and there are too many such) as the following, from a description of the portrait of Juan de Pareja: "A certain sly air seems to betray the secret, *of which his master is still unaware*, that 'I also am a painter.'"

After all our fault-finding, let us say again that the critical part of the work, while always wordy and sometimes overstrained, is generally sound, and that the historical part seems thorough and accurate. An intrepid reader who is not afraid of wading will find fish for his net therein. The mechanical execution of the book is excellent, the illustrations are better than was to be expected, and the exceptionally full index will render it useful as a book of reference.

LEIDY'S ANATOMY.

An Elementary Treatise on Human Anatomy. Second edition, rewritten, with four hundred and ninety-five illustrations. By Joseph Leidy, M.D., LL.D., Professor of Human and Comparative Anatomy and Zoölogy in the University of Pennsylvania, etc. Philadelphia: J. B. Lippincott Co. 1889. Pp. 950.

THE first edition of this work appeared twenty-eight years ago, and then formed the only original American compendium of human anatomy. In the interval, besides several editions of English works, there have been published in this country an extensive treatise by Harrison Allen, and smaller ones by Weisse, and Darling and Ranney, to which may properly be added the anthropotomical articles by Frank Baker and others in the 'Reference Handbook of the Medical Sciences.' The progress of anatomy during the last quarter of a century has been partly through the discovery of new parts or features visible to the naked eye, but more markedly in the determination and interpretation of microscopical structures, the tracing of developmental changes, the recognition of the resemblances between man and animals in the light of evolution, and the simplification of the terminology. This last forms the distinctive feature of the present volume. Most of the modifications are announced in the following extract from the preface:

"As a rule, one name for an organ or part is used, and that one selected which is simplest and most expressive of its character. The name also, so far as may be permitted, is rendered into English. Many phrases in common use as names have been curtailed of what have appeared unnecessary portions, and sometimes the adjective portion of the phrase has been retained, in preference to the substantive portion, where, for various reasons, it has seemed more appropriate. Where names of persons are applied to parts, they are generally avoided. . . . Some further attempts have been made to improve the nomenclature, and it is hoped that the experiment may prove successful in helping the student in acquiring a knowledge of the subject. While the author regards with favor the proposed improvement in anatomical nomenclature of able authorities, he has not followed them completely, in apprehension that, with the prevalent nomenclature, a radical change would confuse rather than facilitate the study of anatomy."

Stated in technical linguistic terms, in this treatise pœcilonymy is avoided; *e. g.*, instead of *tænia hippocampi* in one place, *corpus fimbriatum* in another, and *fimbria* in a third, the last is consistently employed and the others given as synonyms. In the choice between names, etymological accuracy is subordinated to availability; *e. g.*, *vagus* is preferred to *pneumogastric*, and *fiocculus* to *lobus nervi pneumogastrici*. The Latin words are commonly paronymized rather than translated into inelegant or misleading heteronyms; *e. g.*, *pedunculus* is Anglicised as *peduncle*, not *footlet; vermis* is adopted unchanged as an English word, instead of being rendered into *worm*. Certain ponderous phrases are discarded—*e. g.*, *iter e tertio ad quartum ventriculum*—and others are reduced to mononyms; *e. g.*, *crus cerebri* to *crus*, *brachialis anticus* to *brachialis*. When the adjective element of a polyonym is more distinctive than the noun, the latter is dropped and the former used substantively and inflected; *e. g.*, *corpus callosum* becomes *callosum*, adj. *callosal; dura*, *pia*, *striatum*, and *oblongata* are other examples. Epo-

nyms are regarded as undesirable ; the following are discarded : *foramen of Winslow* for *omental foramen ; sinus of Valsalva* for *valvular sinus ; fissure of Rolando* for *central fissure ;* the following are reduced from dionyms by the omission of the personal genitives here parenthesized : *pons* (*Varolii*), *aquæductus* (*Sylvii*), *torcular* (*Herophili*), *antrum* (*Highmorianum*). Since, indeed, the brain contains but one pons and one aqueduct, there is no more need of specifying their real or supposed discoverers or describers than there is of saying the "stomach of Jones" or the "liver of Robinson," supposing those parts to have been discovered or described by individuals so called. Other commendable terms are *hippocampus* for *hippocampus major* and *cornu Ammonis ; calcar* for *hippocampus minor ; crusta* for *pes* (or *basis*) *pedunculi*. Notwithstanding some less happily chosen terms (*e. g.*, "hippocampal hook" for *uncus*, "central lobe" for *insula*, "suprarenal capsule" for *adrenal*), and the non-adoption of Owen's *ectocarotid* and *entocarotid*, *precava* and *postcava*, and some others that could scarcely be misunderstood—and, indeed, have exact precedents in the author's "ectoretina," "mesoretina," "entoretina," and "preretina"—it will be seen that an anatomist, distinguished alike as an investigator and a teacher, at a period of life when any change in the "tools of thought" is unacceptable, has taken a decided stand in favor of nomenclatural reforms which, in various degrees, have been advocated during the present century by Barclay, Owen, and Pye-Smith in Great Britain, and in this country by Coues, Gage, Spitzka, and Wilder.

Respecting the concluding part of the extract from the preface, it may be well to add that no really "radical changes" are advocated by living anatomists. The proposition, independently made by investigators and teachers in New Zealand and the United States, that *ventricle* should be replaced by *cœle* as a designation of the brain cavities, is strictly a rehabilitation of the Greek κοιλία (meaning any cavity, especially of the brain or heart) for the sake of obtaining a series of single-word, inflected terms (*mesocœle*, etc.) correlated with the commonly accepted names of the encephalic segments (*mesencephalon*, etc.); and, while the change accords with the principles advocated by Dr. Leidy, and with his practice in some respects, its acceptance in no way involves the general scheme of terminological reform.

It will be observed that the preface refers only to the names of organs (organonyms) and not to terms of description (toponyms); nor is there any evidence that the author has undertaken to leave the beaten track of descriptive anthropotomy in this respect; indeed, the designation of Figs. 371 and 372, representing sections of the oblongata at a right angle with its axis, as "horizontal sections," furnishes a good example of the general rule that from the chance of being misled by the current descriptive terms of human anatomy, only those are quite secure who do not need to be informed. The designation, however, of the vertebræ between the neck and the loins as *thoracic* rather than *dorsal* (p. 59) is a distinct admission of the force of the latter term, and warrants the expectation that in another edition the descriptive terms may apply not to the upright human body alone, but to any vertebrate in any possible attitude.

As to the general arrangement of the text, two features are to be noted, and the former at least commended; viz., the consideration of the joints in connection with the bones of each region, and the placing of the nervous system and organs of sense at the close of the volume. The author's eminence as a comparative anatomist adds significance to his resistance of the natural temptation to introduce into a work especially designed for medical students details or generalizations respecting animal structures; but the recent discoveries and hypotheses respecting the conarium (pineal body) might well have been mentioned. In the account of the peculiar muscular tissue of the heart there is no mention of the nuclei, and Fig. 132 shows neither the nuclei nor the cellular demarcations so clearly represented by Gage in the fifth volume of the 'Reference Handbook of the Medical Sciences,' published now two years ago. The description of the embryonic brain, though undesirably brief, clearly states the definitive composition of the organ by five segments—prosencephalon, thalamencephalon (or diencephalon), mesencephalon, epencephalon (including cerebellum, pons (with the corresponding part of the oblongata), and metencephalon. Had this been placed before instead of after the descriptive anatomy of the organ, the latter would perhaps have been presented segmentally; as it is, under the caption "cerebrum" are considered not only the "hemispheres," but also the thalami, gemina, and crura, constituting two other segments. A figure of the embryonic or ideal brain would have facilitated recognition of the segmental constitution of the organ.

The generalization (p. 714) respecting that ever-interesting topic, brain and mind, requires some such qualifications as are here interpolated within brackets:

> "All other conditions being equal, the brain is observed [commonly] also to hold a relation in size to the degree of mental development; hence the more civilized races and the more cultivated and intelligent people are [usually, and upon the average] distinguished by a larger and heavier brain, while the opposite condition exists in the barbarous races and the least cultivated persons."

The footnote on p. 714 implies that in no mammal is the brain relatively larger than in man, whereas, as stated by Owen, in the little marmoset monkey the ratio is as one to twenty, nearly twice that of man.

Dr. Leidy refrains from any discrimination between the cerebral depressions as *fissures* and *sulci*, employing the former name for all. It is to be wished that, following the examples of two recent successive Presidents of the American Neurological Association, the intervening elevations had been called *gyres* rather than *convolutions*. The latter word, indeed, seems to be as much out of place in this work—characterized for the most part by short terms—as would be *conflagration* in the author's description of a fire. Moreover, the designation of the association-fibres by the new term, "gyral fascicles," would lead one to expect the employment of the corresponding substantive.

Figures 379 and 380 represent, respectively, the lateral aspect of a white and negro cerebrum, and are intended to illustrate the fissures. The fissural lines are doubtless accurate as to location, extent, and connection, but there is an unusual and perplexing degree of "confluence," and the main fissures are not enough heavier than the others to be readily recognized. The two brains might well be figured and described in detail as quite peculiar, but, so far as the student is concerned, simpler brains or mere diagrams would have been more useful, especially if accompanied by a few figures of fœtal specimens. The insula ("central lobe") is inadequately shown; the paracentral lobule is not even mentioned. Among the clearest and most instructive figures are 388, 389, and 391, all exhibiting the "internal capsule"; but on neither of them is this very important fibrous tract designated.

The lack of distinct indication of the circumscription of the encephalic cavities by a line representing the lining membrane is so nearly universal a defect in anatomical treatises that we note it in this case merely for the sake of adding that, in our opinion, no adequate morphological conception of the brain is possible in the absence of clear demarcation between the ental (cœlian or ventricular) surfaces and those which are ectal or pial. Nor is the text clear upon this matter; the velum ("choroid tela") is said to "extend into the third ventricle"; the central canal of the cord is described as "opening at its lower end into the posterior median fissure," and the thalamus is said to "project from the hemisphere into the lateral ventricle." Nor is the effect of these ambiguities likely to be altogether counteracted by the explicit statement (p. 769) as to the continuity of the endyma over the telæ and plexuses, and the closure of the third and lateral ventricles at their sides.

Of the five hundred illustrations, two hundred are original; of the others, many are from Wilson, others from Sappey, Kölliker, and recent authors; most of them are large enough and well executed. The several parts are designated by numbers, and the descriptions are confined mainly to the names; in some cases the student's recognition of features would be facilitated by additional comment.

The metric system is ignored, and there are no references to other manuals or to monographs. The index contains all the preferred names and most of the synonyms; the two groups of terms might have been distinguished advantageously by some typographical difference, as in Henle's work. Instead of burdening the text and confusing the reader by interpolating synonyms these are placed at the bottom of the page, as in the treatises of Henle and Schwalbe.

In conclusion, while the large and well-established text-books of Gray and Quain may not be generally discarded in favor of this, there can be no question as to the usefulness of the present volume to the numerous students at the University of Pennsylvania. The good effects of the author's courageous and comprehensive departure from the prevailing nomenclature will never cease to be felt.

French Traits: An Essay in Comparative Criticism. By W. C. Brownell. Charles Scribner's Sons.

FRENCH morals and manners, the frivolity and inconstancy of the Parisians, the corrupt condition of society—as pictured in French novels—are favorite themes upon which English and American writers, who perchance have spent a fortnight or a week in the French capital, love to descant with virtuous indignation and a complacent sense of superiority. True, we have now and then a clever little pen-and-ink sketch of French life—Miss Thackeray's pleasant short stories, for instance—which leaves a different and refreshing impression on the reader; but it cannot be denied that even the political events occurring from day to day in our sister Republic are seen with prejudiced eyes by the majority of our writers, from the unknown author of a newspaper paragraph to that of a more pretentious magazine article or book of travels.

Very different is it with the book before us. It is the work not only of an acute observer and critic, but of one philosophically bent, who, not satisfied with looking at the surface of things French, probes their very depth, ever seeking the cause hidden behind the effect.

"The Social Instinct"—the first of the nine headings under which Mr. Brownell particularizes the French traits—is made, by ingenious and sometimes paradoxical reasoning, to explain the virtues, attenuate the faults, and justify the idiosyncrasies of the French people. "There is one instinct of human nature," says Mr. Brownell, "one aspiration of the mind, which France has incarnated with unbroken continuity from the first: since there was a France at all, France has embodied the social instinct." He proceeds to show the development of this instinct under influences that have made it the basis of the national character, so much so that

"French history is the history of this instinct. . . . What one notes in the individual is, more than anywhere else, apt to be a national trait. There is, of course, differentiation enough, but it begins further along than with us, and is structural rather than fortuitous. They vary by types rather than by units. The class only is specialized. Their homogeneousness is not uniformity, but it is divided rather in the details than in the grand construction. . . . They are infinitely civilized. Individuals are of less import than the relations between them; hence manners and art. Character counts less than capacity; hence the worship of intelligence."

Treating that delicate question "Morality," Mr. Brownell's preliminary argument is as follows:

"Morality is indeed a fundamental matter, and French morality differs fundamentally from our own. But this is only all the more reason for replacing censoriousness by candor in any consideration of it. And the first admission which candor compels us to make is the unfairness of estimating the French moral fibre by what ours would be if subjected to the same standards and influenced by the same circumstances. Yet this is an error that we make continually. Consciously or unconsciously, we conceive our manners and character as a constant quantity, and reflect on the fate which indisputably would overtake our morals if we should adopt French ethics. . . . French morality is a direct derivative of the social instinct. Owing to the development of this instinct among them, morality is rather a social than an individual force, and the key to its nature is to be found in the substitution of honor for duty as a mainspring of action and a regulator of conduct. The distinction is a very plain, a very real one."

To give a correct idea of Mr. Brownell's book would necessitate copious quotations, more than the limits of a notice will permit. Suffice it to say that "Intelligence," "Sense and Sentiment," "Manners," "Women," "The Art Instinct," "The Provincial Spirit," and "Democracy" are treated in a like masterly way. True sympathy with and admiration for the French are discernible throughout the volume, yet they never degenerate into fulsome adulation, nor are the sincerity and fairness of the writer less evident. A Frenchman might not admit the defects nor claim all the qualities with which Mr. Brownell endows him. He might insist that he possesses the "poetry of art" denied him, and would grow very indignant at the expressed opinion that Victor Hugo was a greater prose-writer than poet. But how well his conception of *la gloire* is defined, and how proud he would be at the deserved compliment paid to his patriotism, to his readiness to die for *la patrie*, or for an idea that he believes just.

The chapter on "Democracy" is one which he who wishes to form a correct idea of the French Republic, of the state of parties there and their possible influence on the destinies of their country, should read carefully. We are apt to form our opinion upon facts obtained from English sources, and, as Mr. Brownell puts it, "much of the same views and gossip about the French Republic are to be found in the *Figaro* or the *Gaulois*, and in the English and American papers; but the latter only impose upon their readers." After reading Mr. Brownell's 'French Traits,' one will be very apt to lose some of the prejudices and preconceived opinions he has hitherto entertained. He will, moreover, find this book very pleasant reading; while suggestive of much thought, it is bright, discursive, full of fresh ideas, and gives evidence not only of the author's thorough knowledge of his subject, but of his familiarity with the literature and art of the three countries compared—England, France, and the United States.

The closing chapter, "New York after Paris," contains some wholesome criticism, which should be taken in good part. Mr. Brownell says in conclusion: "Life in America has for every one, in proportion to his seriousness, the zest that accompanies the 'advance on Chaos and the Dark.' Meantime, one's last word about the America emphasized by contrast with the organic and *solidaire* society of France is that, for insuring order and efficiency to the lines of this advance, it would be difficult to conceive too gravely the utility of observing attentively the work in the modern world of the only other great nation that follows the democratic standard, and is perennially prepared to make sacrifices for ideas."

The Geography of Marriage; or, Legal Perplexities of Wedlock in the United States. By William L. Snyder. G. P. Putnam's Sons. 1889.

THIS book is to be welcomed as a substantial aid to the comprehension of a difficult and important subject. It contains a condensed statement of the law affecting marriage in the several States, giving the requirements as to form of celebration, the regulations concerning infants, forbidden marriages, bigamy, divorce, etc. This statement occupies nearly 150 pages, and is of very obvious value. It is quite sufficient to justify a favorable verdict upon the book, which we should not be disposed to find if we had only the remaining pages before us. Doubtless Mr. Snyder was animated with a laudable desire to popularize his subject when he composed this portion of his work, but we question the wisdom of his methods. His chapters are headed with poetical quotations, and that upon "Clandestine Marriages and Runaway Matches" opens as follows:

"It sometimes happens that a chivalrous suitor entices his sweetheart to climb from the balcony window, in the pale light of the moon, beneath the tender influences of the stars, and accompanies her stealthily, through foliage and shrubbery, or over fields and fragrant gardens, or along silent streets or highways, to the chosen rendezvous where the secret ceremony is to be performed."

Perhaps the most charitable criticism of this sort of writing is that it seems to be liked by the class of persons who stand in need of the warnings contained in this book. But there is much better stuff in it than this. The objections to a national law of marriage and divorce established by constitutional amendment, and the advantages of the alternative plan, are especially well presented.

BOOKS OF THE WEEK.

Abbott, Rev. L. Signs of Promise: Sermons in Plymouth Pulpit, 1887-9. Fords, Howard & Hulbert.
Alexander, Mrs. A Crooked Path. Henry Holt & Co. $1.
Allen, W. B. Cloud and Cliff; or, Summer Days at the White Mountains. Boston: D. Lothrop Co. $1.
American Coin: A Novel. D. Appleton & Co. 75 cents.
Badlam, Anna B. The Primer. Boston: D. C. Heath & Co.
Bickford, L. H. A Hopeless Case: An Unpretentious Narrative. Chicago: C. H. Kerr & Co. 30 cents.
Boone, Prof. R. G. Education in the United States, its History from the Earliest Settlements. D. Appleton & Co. $1.50.
Braddon, Miss. The Day Will Come: A Novel. Harper & Bros. 45 cents.
Browning, R. Poetical Works. Vol. XV. Dramatic Idyls. Jocoseria. Macmillan & Co. $1.50.
Carey, Rosa N. The Search for Basil Lyndhurst. Frank F. Lovell & Co. 30 cents.
Cary, Rev. H. F. Dante's Purgatorio. Scribner & Welford. 60 cents.
Clip Her Wing, or Let Her Soar. G. W. Dillingham.
Conn, R. R. The Human Moral Problem. A. C. Armstrong & Son. 75 cents.
Cooper, S. W. Three Days: A Midsummer Love-Story. Philadelphia: J. B. Lippincott Co. $1.
Croll, J. Stellar Evolution, and its Relation to Geological Time. D. Appleton & Co.
Delitzsch, F. Assyrian Grammar. Translated by Prof. A. R. S. Kennedy. Berlin: H. Reuther; New York: B. Westermann & Co.
Dixey, W. The Trade of Authorship. 89 Hicks St., Brooklyn, N. Y.: The Author.
Dod, S. B. Stubble or Wheat? A. D. F. Randolph & Co. 25 cents.
Dods, Rev. M. The First Epistle to the Corinthians. A. C. Armstrong & Son. $1.50.
Dolaro, Selina. The Vengeance of Maurice Denalguez. Belford, Clarke & Co.
Doriot, Sophie. The Beginners' Book in German. Boston: Ginn & Co. 90 cents.
Farjeon, B. L. Three Times Tried, and Other Stories. T. Y. Crowell & Co.
Faulhaber, Prof. O. One-Year Course in German. 2d ed. Boston: D. C. Heath & Co.
Fraser, Sir W. Words on Wellington: The Duke—Waterloo—The Ball. London: J. C. Nimmo.
Gibbon, C., etc. Paying the Penalty, and Other Stories. T. Y. Crowell & Co.
Goodloe, D. R. The Birth of the Republic. Belford, Clarke & Co.
Haggard, H. R. Cleopatra. Harper & Bros. 25 cents.
Hale, Lucretia P., and Whitman, Mrs. Bernard. Sunday-School Stories for Little Children. Boston: Roberts Bros. $1.
Hall, V. G. Lawn Tennis in America. D. W. Granbery & Co. 25 cents.
Hannan, C. A Swallow's Wing: A Tale of Pekin. Cassell & Co.
Haygood, Rev. A. G. The Man of Galilee. Hunt & Eaton. 80 cents.
Herndon, W. H., and Welk, J. Life of Abraham Lincoln. Belford, Clarke & Co. 3 vols. $4.50.
Hodgkins, Prof. Louise M. Guide to the Study of Nineteenth Century Authors. Boston: D. C. Heath & Co.
Hughes, T. Tom Brown at Rugby. Edited by Clara Weaver Robinson. Boston: Ginn & Co.
Japp, A. H. Days with Industrials. London: Trübner & Co.
Jones, R. M. Eli and Sibyl Jones: Their Life and Work. Philadelphia: Porter & Coates. $1.50.
Landon, W. S. Poems, selected and edited by Ernest Radford. London: Walter Scott.
Letters Written by Lord Chesterfield to his Son. Selected by Charles Sayle. London: Walter Scott.
Lightfoot, Rev. J. B. Essays on the Work entitled Supernatural Religion. Macmillan & Co. $2.50.
Lodge, H. C. George Washington. 2 vols. Boston: Houghton, Mifflin & Co. $2.50.
McKeen, Phebe F. Theodora: A Home Story. A. D. F. Randolph & Co. 50 cents.
Miss Marlowe: A Story of Society. Philadelphia.

VOL. XLIX.—NO. 1256. THURSDAY, JULY 25, 1889. PRICE 10 CENTS.

Schools.

Alphabetized, first, by States; second, by Towns.

COLORADO, Golden.

*STATE SCHOOL OF MINES. ESTAB*lished 1874. Tuition free. Fall term opens September 23. Catalogue on application.

CONNECTICUT, Lyme.

*BLACK HALL SCHOOL.—A PRE*paratory school for boys. Highest references from parents and from members of the Yale and Williams Faculties. CHAS. G. BARTLETT, A.M.

CONNECTICUT, Middletown.

WILSON GRAMMAR SCHOOL.—A Preparatory School for Boys. $500 per year. For Circular address E. W. WILSON, A.M.

CONNECTICUT, Pomfret Centre.

THE MISSES VINTON'S HOME School for Girls. Will reopen October 7. Number limited. Circular sent on application.

CONNECTICUT, Stamford.

MISS LOW.—BOARDING AND DAY School for Girls. Number limited. Pupils prepared for college.

DELAWARE, Wilmington, Franklin St.

THE MISSES HEBB'S ENGLISH, French, and German Boarding and Day School for Young Ladies and Girls reopens September 20, 1889.

DISTRICT OF COLUMBIA, Washington.

THE COLUMBIAN UNIVERSITY— College, Medical School, Dental School, Law School, Scientific School. For catalogues, address DR. JAMES C. WELLING, President.

MAINE, Edgecomb.

SUMMER SCHOOL AND CAMP.— Four Harvard graduates, specialists in their departments and experienced tutors, will take charge of a party of boys for the coming summer. Special attention paid to coaching for fall examinations and admission to college. Private tutoring. Class in Natural History. Country and seashore advantages combined. Tennis, boating, etc. As the sports will be under the constant supervision of an experienced man, a few boys will be received who do not desire to study. Send for circular to LOUIS L. HOOPER, North Edgecomb, Maine.

MARYLAND, Baltimore.

EDGEWORTH BOARDING AND DAY School for Young Ladies will reopen on Thursday, September 19. Mrs. H. P. LEFEBVRE, Principal.

MARYLAND, Baltimore.

SOUTHERN HOME SCHOOL FOR Girls, 915 and 917 N. Charles Street. Established 1842. French the language of the school. MRS. W. M. CARY, MISS CARY.

MARYLAND, Baltimore, 1214 Eutaw Place.

MISS RANDOLPH'S BOARDING School for Young Ladies. Prepares for college and for European travel. The broad scope and aims of a liberal education are not sacrificed by wasting time in cramming to secure school honors or a high mark on a college entrance examination. Apply for circulars.

MARYLAND, Catonsville.

ST. TIMOTHY'S ENGLISH, FRENCH, and German School for young ladies will reopen September 19, 1889. Principals, Miss M. C. Carter and Miss S. R. Carter.

MASSACHUSETTS, Andover.

ABBOT ACADEMY FOR YOUNG Ladies. The sixty-first year opens Thurs., Sept. 12. For catalogues apply to W. F. Draper; for admission, to Miss PHILENA MCKEEN, Principal.

MASSACHUSETTS, Belmont.

*THE BELMONT SCHOOL, OCCUPY*ing the well-known Cushing-Payson place, in Belmont, Mass., three miles from Cambridge, will open Sept. 25. Private boarding-school for boys fitting for college. For prospectus, address B. F. HARDING, A.M. (Harv.), Head Master.

MASSACHUSETTS, Boston.

BOSTON UNIVERSITY Law School. Address the Dean. EDMUND H. BENNETT, LL.D.

MASSACHUSETTS, Boston, 259 Boylston Street.

CHAUNCY-HALL SCHOOL (62d Year). For boys and girls.—Preparation for the Mass. Institute of Technology is a specialty. Reference is made to the Institute Faculty. The location of the school building, on Copley Square, is especially attractive and is very near the Institute.
Preparation also for college (with or without Greek) and for business. Special students received.

MASSACHUSETTS, Boston, 112 Newbury Street.

THE MISSES HUBBARD'S SCHOOL for Girls will reopen October 1, 1889. A limited number of boarding scholars will be received.

MASSACHUSETTS, Cambridge, Larch Street.

*HOME FOR BOYS.—DR. ABBOT AD*mits not more than four boys into his family, to fit for college or educate privately. Separate tuition, with best of care in all respects. Charming location, with fine tennis-court. F. E. ABBOT, Ph.D. Summer address, Nonquit Beach, Mass.

MASSACHUSETTS, Duxbury, Powder Point.

*POWDER POINT SCHOOL.—PRE*pares for scientific school, college, or business. Laboratories. The boys are members of the family. FREDERICK B. KNAPP, S.B. (M.I.T.)

MASSACHUSETTS, Greenfield.

*PROSPECT HILL School for Young La*dies.—21st year. Regular and Special Courses. Beautiful and healthful location. Our certificate admits to Smith. Science, Art, Music. J. C. PARSONS, Prin.

MASSACHUSETTS, Milton.

"Very convenient and complete."—*Hon. Don M. Dickinson, ex-Postmaster General.*

"Likely to be of great and constant service to all who make much use of the mails. The ninety-four pages contain a great amount of information, very well arranged, knowledge of which should prevent most of the delays and losses in the mails."—*Literary World.*

"If all who use the mails (and who does not?) will turn to the pages of this useful little guide, the labor of the postal authorities will be greatly simplified, fewer mistakes will be possible, and the public will be better served. Its simplicity and low cost will commend it to all, and give it what it deserves, a universal sale."—*Hon. Thomas L. James, ex-Postmaster-General.*

"The work has been thoroughly well done, and the result is a book which would be a help and convenience on the desks of business men especially, not to speak of others."—*Boston Daily Advertiser.*

"A more than ordinarily useful hand-book. Contains a wealth of information upon postal rates, laws and regulations, valuable pointers upon wrapping and addressing mail matter, recovering lost letters, money-order department, etc."—*Tobacco.*

"The neat little 'Postal Dictionary' published by the *Evening Post* is worth its weight in gold to the busy 'man of affairs.' It will enable him to settle almost at a glance the points of inquiry in postal matters that are constantly arising."—*Home Journal.*

"Will be found of great value to those who use the mails to any great extent, and is well worth the price for which it is sold."—*Christian Union.*

"A most useful manual upon a subject of the greatest interest to men of letters."—*America.*

For sale by all booksellers, or mailed on receipt of price, 15 cents, by

THE EVENING POST, NEW YORK.

BACK NUMBERS, VOLS. AND SETS of the *Nation* bought, sold, and exchanged.
A. S. CLARK, 34 Park Row, New York City.

THE NEW YORK EVENING POST

Obtains for its readers every day the important news of the world and presents it to them in an attractive and convenient shape. Some subjects which occupy a prominent place in many daily newspapers THE EVENING POST does not find room for, but it challenges comparison, as a newspaper, with any journal in this country. It has all the telegraph despatches of the Associated Press to select from, but it depends on them only for the routine news of the day. Its cable correspondent in London gives intelligent interpretation of the leading topics of Great Britain and the Continent, and secures for it information not at the disposal of the news bureaus. Its correspondents at Washington and Albany keep its readers informed about all national and State affairs, and its correspondents in all the other leading cities allow no interesting topic to escape their attention. With the rapid means of communication now provided by the ocean cables, the telegraph wire and the telephone, all that is necessary to present a history of the world for the day to evening newspaper readers is liberality in purchasing news, good judgment as to what is news of real value, and quickness to take advantage of all modern appliances for transferring information rapidly to a printed page. These qualifications, it may be said without undue boasting, THE EVENING POST possesses. It is printed from stereotyped plates on the most improved presses, and in type that makes it easy and comfortable reading.

The city and local news of the day is also more fully and more accurately reported than in any other evening paper in New York. All reports are prepared with care, and its columns are kept as free as may be from scandal and impropriety. The arrangement of its news is intelligible, systematic, and convenient.

Out-of-town residents wishing a reliable New York daily will find it to their interest to examine THE EVENING POST. It reaches its readers in neighboring towns on the evening of publication, and at many other places twenty-four hours in advance of the New York morning papers of the following day, which contain substantially the same news.

Subscription price, $9 per year, or 75 cents per month. The paper will be sent to new readers, for examination, one week free. Address

D. APPLETON & CO., Publishers,
NEW YORK.

School Trustees, Principals, Teachers,

And others interested, are invited to consider the advantages offered by the *Nation* as an advertising medium. School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especially ordered displayed on other pages.

The *Nation*, in its special field of political and literary criticism, is unlike any other periodical, American or foreign. About 9,000 copies are circulated weekly, but these figures do not accurately represent the number of its readers. It is taken by reading-clubs and literary associations in a large number of places, and may be found on file in every library of importance in the country. There are probably few weekly periodicals whose columns offer so favorable an opportunity for reaching an audience interested in educational matters.

Rate per year for 3 lines, $23.40; 4 lines, $31.20; 5 lines, $39.00, etc. Any term less than one year at same rates —15 cents per line per week.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

THE NATION, 208 Broadway, N. Y.

THE FORUM.

August (ending Vol. VII).

THE REPUBLICAN PROGRAM. John G. Carlisle. The extravagance of the party, and its obligations to every "mendicant enterprise" in the country not to relieve an overtaxed people.

GOVERNMENT BY ALIENS. Bishop A. Cleveland Coxe. The most serious warning yet given against the dangers to our social and political life that come from aliens.

THE PROBLEM OF POVERTY. Edward Atkinson.

METHODS OF BALLOT-REFORM. Ex-Gov. George Hoadly.

THE TRANSFORMATION OF NEW ENGLAND. Prof. A. L. Bartlett of Mass. The growth of alienism and of Catholicism, to the threatened extirpation of New England people and institutions.

CANADA'S FORM OF GOVERNMENT. Judge James M. Love of Iowa.

THE ABUSE OF FICTION. Walter Lewin.

PROHIBITION AND LICENSE. Senator J. J. Ingalls. The success of prohibition in Kansas.

THE EXTINCTION OF LEISURE. Alfred H. Peters.

DEFECTS OF THE CORONER SYSTEM. Dr. S. W. Abbott. The absurdity of coroners' juries; the substitute therefor in Massachusetts.

$5 a year; 50 cents a number.

The Forum Publishing Co.,
253 Fifth Avenue, New York.

The Nation.

NEW YORK, THURSDAY, JULY 25, 1889.

The Week.

THE expulsion of McDow from the South Carolina Medical Society is the first formal indication that his crime is really condemned by the higher circles of the State. It is a welcome sign, and we give it all the weight and prominence it deserves as proof that the gentleman murderer is no longer free from *all* kinds of punishment in the South. The outspoken sermons, too, of prominent Charleston clergymen against the lax sentiment regarding the sacredness of human life, which was illustrated by McDow's acquittal, are most significant and encouraging. It is much less the practice in the South than in the North for the pulpit to discuss questions of the day, and this fact lends added force to such deliverances as those of the last two Sundays. It really begins to look as though the people of South Carolina were coming to see themselves as others see them in this matter. That is all that is necessary to work a reformation.

The Civil-Service Commission has given a fresh proof of its usefulness and impartiality by a straightforward report as to charges of violation of the Civil-Service Law in the Post-office at Grand Rapids, Mich., under the present Democratic Postmaster. Half-a-dozen clerks in the office have made affidavit that F. A. Hudson, the chief clerk during the campaign of 1888, demanded contributions to the Democratic campaign fund, threatening dismissal in case of refusal—a penalty which was enforced in one case. On the other hand, Hudson has submitted an affidavit specifically denying all the charges, and also copies of letters from two of the clerks mentioned denying the very facts they set forth in their affidavits. Upon which state of things the Commissioners thus comment: "If Mr. Hudson is guilty, he should be prosecuted; if he is not guilty, then the men swearing falsely against him should themselves be prosecuted for entering into a peculiarly infamous conspiracy to blacken his character." As the Commission's powers are limited, especially in the matter of administering oaths and subpœnaing witnesses, it is impossible for it properly to investigate such a case, and, accordingly, all the affidavits and other written matter in its possession have been turned over to the Postmaster-General for such action as he may deem necessary.

The Civil-Service Commissioners have made a valuable report on the Milwaukee Post-office, where their investigation disclosed a disgraceful state of things. It appears that Postmaster Paul, the Democrat appointed by Mr. Cleveland, compelled the secretary of the local board, who was one of his subordinates, to give him free access to the list of eligibles, and forced him to alter the books so as to produce a certification bearing the name of the appointee chosen by the Postmaster; that "the lists of eligibles were twisted and garbled in almost every conceivable manner, in order to produce swindling certificates whereby certain men could be rejected, although entitled to appointment, and other men appointed, although having no rightful claim to the chance"; in short, that "Mr. Paul has grossly and habitually violated the law, and has done it in a peculiarly revolting and underhand manner." The Commissioners conclude that the Postmaster's further continuance in office would be a great misfortune, and recommend his immediate removal. It is said that a Republican Congressman from Milwaukee is Mr. Paul's strongest backer.

Mr. Roosevelt has taken another of the Republican spoilsmen in hand, viz., Sixth-Auditor Coulter, the Ohio man whose idea of the Government is to provide places for the "horn-blowers," and who demanded the resignation of a faithful and efficient clerk, whose fidelity and efficiency he himself confessed, simply because, in his own words, "we want your place." As soon as Mr. Roosevelt heard the story, he went to the Secretary of the Treasury and laid the case before him, the result being a block in Coulter's proceedings. Too much praise cannot be given Mr. Roosevelt for his untiring efforts to secure the carrying out of his party's pledges in the matter of civil-service reform; but, after all, how ridiculous it is for him to try to restrain spoilsmen like Coulter and Clarkson when the President appoints and retains such men. The way to make people believe that the Administration "means business" in this matter is not for Mr. Roosevelt to try to keep up with the tricks of such a fellow as Coulter, but for Gen. Harrison to remove Coulter.

A significant petition has been in circulation for some weeks among the iron-manufacturers of New England. Its text, which is given by the Boston *Herald*, after stating that the signers are members of all political parties, requests New England Senators and Representatives to "insist upon the incorporation of the following provisions in any revised tariff law that shall be enacted:

> "(1.) That iron ore, coal, and coke shall be put upon the free list, as they were before the war; (2) that the duty upon pig-iron and scrap iron and scrap steel which prevailed immediately before the war be restored, to wit: a duty of 24 per cent. ad valorem."

This has been signed so generally, according to the *Herald*, as to encourage the hope that by the time Congress assembles substantially all the iron-working establishments in the Eastern States will have given it their approval. This is the more noteworthy from the fact that practically all these establishments are owned and controlled by Republicans. They are forced to take this step by the conviction that unless relief of the kind proposed is furnished soon, the iron industry of New England will cease to exist.

We have been favored by a protected manufacturer in the interior of this State, Alfred Dolge by name, with a pamphlet copy of his speeches in the late campaign. We are informed in the preface that Mr. Dolge "has searched and studied every authority on these involved and intricate topics. Beginning with Adam Smith and ending with Denslow, Mr. Dolge has studied all the masters in the economic field, including Ricardo, Cary, Karl Marx, Fourier, Proudhon, John Stuart Mill, Sumner, Sismondi, Malthus, Cobden, Spencer, and others." Opening the pamphlet at random, the following paragraph happened to be the first one that we read:

> "Now, for the sake of argument, let us admit that, with free raw material and low wages, the American manufacturer can compete with the European manufacturer. Where is that promised market for his surplus goods? *Can we sell any manufactured goods in Europe*, where they have such an immense surplus of them already that they hail with joy and gladness the possibility of a victory for the free-trade party in America, so that they may flood this country with their wares? 'Oh, no!' says the free-trader. 'There is South America and Australia, countries which do not manufacture at all, but have to buy everything!'"

The works of Marx, Fourier, and Proudhon are a very good preparation for a protectionist stump-speaker, because protection is a form of Socialism; but if Mr. Dolge had bestowed less time on those publications and a little more on those of the United States Government, he would not have fallen into the absurdity noted in the above quotation.

"Can we sell any manufactured goods in Europe?" if we have free raw materials, he asks in a tone of triumph. Well, we should say yes, with some confidence, seeing that we sold to England alone (not including Scotland and Ireland) more than $25,000,000 of manufactured goods in the year 1887, not counting flour, lumber, dairy products, or any of the articles peculiarly indigenous to the soil. Among the free raw materials that we import largely are hides, from which we manufactured for England alone, in the year mentioned, about $7,000,000 worth. We also get a raw material called sugar, from which our refineries turned out for the English market about $6,500,000 worth. From the raw material cotton we produced for the English market nearly $1,000,000 worth, and for foreign markets altogether about $15,000,000 worth. Of machinery, iron, and steel (exclusive of sewing-machines and agricultural implements), we sold in England during that year $860,000 worth; likewise $500,000 of books, maps, and engravings; also more than $500,000 worth of clocks and watches; also $350,000 worth of organs, pianos, and other musical instruments. All of which shows that Mr. Dolge either does not know what he is talking

about, or purposely deceives those who listen to him.

The *Manufacturer* of Philadelphia thinks that the probability is that Chicago will outrank the Quaker City in population in the census of 1900, if not in that of 1890, and that this preëminence will not be due to natural advantages, or to the absorption of surrounding villages, but to greater public spirit, freedom from railway monopoly, and an independent press. On the latter point it remarks that the Chicago newspapers are "not muzzled with passes or silenced by advertisements and social influences." What, we ask, is the meaning of this dark insinuation? Who has been muzzling the press of Philadelphia with advertisements? The most extensive advertiser in that city is Mr. John Wanamaker, or the Wanamaker firm. Mr. Wanamaker does not issue passes (except perhaps on the Western Union Telegraph Co.), but he has been suspected, not exactly of silencing the press with advertisements, but of making it voluble with praises of himself and his Sunday-school doings and his financiering in the field of politics. When the *Manufacturer* throws out such insinuations, it ought to explain what it means, and not leave people at a distance to form surmises which may be unjust both to itself and to Mr. Wanamaker.

Mr. Wanamaker's attempt to issue a general pass to the Government over the lines of the Western Union Telegraph Company is one of the most curious features of the policy of the new Administration. The law authorizes the Postmaster-General to fix the rate at which the Government's telegraphing shall be done by private companies just as it authorizes the fixing of the rate for railway postal service. But it was never contemplated that the rate should be less than cost. One-tenth of a cent per word, the rate fixed by Mr. Wanamaker for telegraphing, is less than the average cost of delivery of the message after it has been transmitted. It may cover the cost of the stationery furnished by the telegraph companies, but it cannot cover the cost of bookkeeping, collection, and postage. In fact, the postage paid by the companies on the vouchers required by the Government auditors will often exceed the amount of money to be collected for the telegraph service rendered. For example, an officer on a frontier post telegraphs to Washington a ten-word message of an Indian disturbance. The compensation for this message is one cent. The message itself must be forwarded as a voucher because the Government does not accept secondary evidence. If it happens to be the only one sent from that station during the month, the postage on it will be double the amount of the money to be collected for telegraphing it. Therefore it would be a saving to the telegraph company not to collect it at all. Probably it would be a saving to make the Government a deadhead out and out, because in that case all expense for bookkeeping and registering would be avoided, and this is probably as much as one mill per word. Mr. Wanamaker's order has the taint of demagogism, or downright oppression, or both.

Judging from the character of the instructions sent to the collectors of customs at El Paso and Eagle Pass, enjoining them to take pains to see that the silver ore which comes into this country from Mexico does really contain more silver in value than lead, the inference is warranted that Secretary Windom does not intend to reverse the decisions and practice of his five predecessors in office (including himself) that those ores are entitled to admission free of duty. The instructions are in part as follows:

"(1.) The sworn entry shall embrace, in addition to what is now required, a statement of the estimated quantities and values of silver and lead contained in the importation, according to the best knowledge and belief of the importer or consignee.

"(2.) The entry shall further contain a declaration that the importation embraces no mixtures of ores or concentrates from different mines.

"It is suggested that in the execution of these instructions care should be taken equally not to unnecessarily detain ores wherein silver so clearly predominates as to fix their character commercially as silver ores; nor to admit without assessment of duty those ores wherein the value of their components of lead appears to exceed that of the silver contained in such ores."

That is all very proper, but is probably what the collectors have been doing all along. If it were intended to reverse the previous decision, it is not likely that any of these instructions would have been sent to the border.

Mr. Abraham Remsen, examiner in charge of the sugar-room, and Messrs. Twamley and Cole, sugar-samplers, all of whom were removed from office by Secretary Fairchild for alleged "sugar frauds," were reinstated at the instance of Appraiser Cooper last Thursday, after an investigation made by a special agent of the Treasury Department. Mr. John S. McElwee, the person appointed by Mr. Fairchild examiner in charge of the sugar-room after he had been discharged by Appraiser McMullen for drunkenness and insubordination, at once tendered his resignation; but as an investigation was pending into his competency and character, the resignation was not accepted. These reinstatements will be as grievous to the Boston *Commercial Bulletin* as that of Examiner Bowne, whose return to his post was chronicled some weeks ago. The *Bulletin* informs us *in italics* that the Boston sugar-importers have not commenced proceedings to recover the money wrongfully exacted of them by the bad polariscoping from which they suffered prior to the report of the National Academy of Sciences. Their complaints, it says, "were dismissed on June 18, 1888. The Boston Custom-house has no notification of any suit brought for the recovery of duties wrongfully collected on account of polariscope tests, nor has any protest and appeal been filed. Without this protest the plaintiff has no standing in court." It is true that a protest against the wrongful assessment of duties must be filed within ten days, and that if not so filed, there can be no recovery at law. It is true, we believe, that the Boston importers did not discover that they had been wrongfully deprived of their property until after the expiration of ten days. But it appears that they did make complaint, and we know that they did take steps to recover their money, and we think it altogether likely that they will go to Congress with the same kind of proof of the goodness of their claim that they would have produced in court if they had not been cut off in the manner here stated.

The Ballot-Reform Bill which has been presented to the New Hampshire Legislature by Mr. Branch of Weare is an excellent measure, modelled closely upon the Massachusetts law, and containing, therefore, all the important principles of the Australian system. It provides for exclusively official ballots, for secret voting, and for nominations by means of petitions or nomination papers, as well as by the regular party organizations. The prospects for the bill to become a law are somewhat uncertain. There are much the same conditions in New Hampshire that there were in Connecticut. Public sentiment earnestly demands the passage of a reform bill, but the politicians are opposed to any change in present methods, and while they will not take the risk of defeating the bill openly, they will spare no effort to defeat it by indirection. It could not be expected that a Legislature which had just reëlected "Bill" Chandler to the United States Senate would show much toleration for any reform, especially a reform so purely "theoretical" as this is assumed by its opponents to be. We notice that some of the Republican organs of the State are troubled, as were Gov. Hill and Gov. Bulkeley, about the "complications" of the Australian system. They are very much afraid that it will prove cumbersome in practice, and are repeating the familiar misstatement that it has never yet been tried in this country. It has been tried in Louisville, Ky., and has worked so successfully that there is a general demand for its application to the entire State. It has been tried, in a modified but still "complicated" form, in Milwaukee, and worked so well in two elections that the Wisconsin Legislature at its recent session passed a law making a full adaptation of the Australian system applicable to the whole State.

What becomes of the descendants of kings not in the line of succession? is a question often asked. Hundreds of Plantagenets, the London *Economist* tells us, are simple commoners, earning their living like other Englishmen. And why should not the descendants of George III. do the same? The question is started by the proposed Parliamentary grant to the Princess Louise, who is about to marry Lord Fife. The *Economist* thinks that the grant must be made, but it sees coming a time when such grants will not be made, and when the immediate descendants of royalty will have to depend on the savings of the Crown, or "go into

business" like other people. In order to anticipate the time when democratic ideas shall have so far got the upper hand that Parliamentary grants cannot be had, it suggests the creation of a fund to be formed by the capitalization of various Crown properties, such as the Duchies of Cornwall and Lancaster, the unused royal palaces, etc., plus a grant from Parliament for this single purpose, the whole fund to be administered by trustees, like the fund of an insurance or investment company. The proceeds of this fund should, however, be strictly delimited, because "the country cannot provide for an unlimited clan." There must be a line drawn "beyond which the descendants of George III. shall not be entitled by any law or any rule of etiquette to any provision or any rank not attained by individual service." As to the matter of rank merely, the *Economist* shows that there may be, in the year 1950, two hundred male persons entitled to sit in the House of Lords solely by reason of their descent from George III., constituting a peerage in themselves, and this would be almost a scandal to the British Constitution.

Our British cousins are not always wise in commercial matters, and they are slow to change even when they know that they are wrong. One of their laws provides that when anybody receives a light-weight gold coin in payment, he shall "cut, break, or deface it," and that "the person tendering the same shall bear the loss." To make the latter provision effectual, the person receiving the coin must hand the fragments back to the payer, and then demand a good one in exchange for it. The theory of the law embraces the following points: (1) That every person knows a light-weight coin when he sees it or feels it; (2) that he always has a pair of scales handy with which to prove that the coin actually is light; (3) that he keeps also a vice or other machine suitable for breaking gold coins in half; (4) that he will habitually be eager to offend his customers by breaking up their money and handing the parts back to them so that they can go to the bullion-broker and sell the pieces. This law has been in force for many years, and has been a dead letter everywhere except at bank counters, where coin is habitually weighed in bulk, not piece by piece. If a hundred sovereigns offered for deposit do not weigh a hundred sovereigns, the light coin is searched for, broken on the wheel, and handed back to the depositor according to law. An ingenious mechanism exists at the Bank of England by which any number of coins can be put into a hopper and run through an aperture at the bottom, each one falling on the arm of a lever, the light ones dropping on one side and the good ones on the other. But as a matter of fact very few light ones ever find their way to the Bank. They circulate from hand to hand long after their lightness is apparent to any skilled observer. Probably no private person ever broke a coin tendered to him in payment, unless in the way of revenge, as he might pull the nose of the payer if he had legal authority to do so.

This law is a clumsy device to carry into effect the injustice of putting upon the last holder of a light coin the whole loss incurred by the abrasion of a hundred or more years. The coin may have suffered the entire loss of metallic weight before the holder was born, yet if he is ignorant and easily imposed upon, he is liable to have his twenty shillings turned into nineteen and sixpence by a legal hocus-pocus at any time. He is only spared this misfortune by a consensus of opinion that, since all are liable to be mulcted in this way, all will unite in disregarding such an absurd law. Thus the abrasion of the gold coinage has gone on from generation to generation, till at last something must be done. Mr. Goschen, the Chancellor of the Exchequer, has brought in a bill by the terms of which the mint is to receive all the light coins of earlier date than the reign of Queen Victoria, provided they shall not show signs of intentional abrasion, sweating, or defacement, and give new ones in exchange for them. It is estimated that not more than £5,000,000 of pre-Victorian coins are now in existence. To deal with the Victorian coins will be a much more serious matter. Probably when it becomes necessary to take these in hand, the expense will be met by an issue of one-pound notes.

The adjournment of the Spanish Cortes till autumn, as reported by the telegraph, leaving both the budget and the suffrage measure unacted upon, appears to imply a check to the plans and hopes of Sagasta. The new session opened most auspiciously for him. Violent attacks upon his Administration were made by the Conservative orators, backed up by bitter speeches from dissident Liberals, like Robledo and Dominguez. The object was to renew the noisy altercations of the previous session and to delay the Government's business. The Ministry met this scheme in the best possible way—by maintaining almost absolute silence. They gave their opponents every opportunity to assault, but, beyond two brief and cold speeches from the Government, no attention was paid to the passionate attacks of their enemies. The latter soon got sick of a fight on such terms and gave way to the public business. This was moving along smoothly and rapidly at the last mail accounts. The tax on alcohol was voted, the new law of legal liability was passed, and an important amendment incorporated into the Military Law. Good progress was also made in the discussion of the budget for Spain and Cuba. Sagasta was understood to have declared that the budget must be voted and at least the first section of the Suffrage Bill passed before he would adjourn the Cortes, threatening to hold the Deputies in Madrid through all the heated term, if necessary. Evidently he has not done it. A new combination of his opponents may have forced his hand, or, more likely, the enthusiasm of his followers may not have been equal to the July heat, and they may have called for a recess.

A few weeks ago we noted the assertion by Don Carlos of his right to the throne of France, and that he had made the Prince de Valori his accredited representative. Since then he has written a letter to M. Dubourg, who has been one of the most trusted agents of the Comte de Chambord, which has just got into print, and which contains some interesting paragraphs. Don Carlos says that he looks to his uncle's illustrious example to aid him in directing the affairs of his two kingdoms. "The party of the Revolution is in this year 1889 celebrating the revolt of a hundred years ago against God's rights. We, who have the happiness of being faithful to our traditions of a thousand years, make answer to the centenary in the consoling words that Christ used to the humble men of Paray-le-Monial." He does not quote these consoling words, which are not to be found in any Gospel known to New Testament critics, though probably familiar to devout French Royalists, but goes on: "I wish to unite with the French Catholics in rendering public homage to the Sacred Heart, even as I commemorated in Spain the thirteenth centenary of King Recaredo's conversion. It is constantly made evident that God protects these two glorious nations." The letter shows much faith, and even more hope—in fact, an almost heroic degree of those great virtues. It is also very devout; for if Don Carlos believes, as he doubtless does, that the interests of the house of Bourbon are especially a care of the Divine Being, he must often have forced upon him the lesson that Divine Providence is inscrutable and moves in mysterious ways.

The elections for members of the provincial Diets of Bohemia and Galicia, held June 30, issued in results that have much significance. In Bohemia there has long been considerable antagonism between the Czech and German elements of the population. The former have stood for a greater measure of local control of local affairs, while the latter have been thorough imperialists. An attempt was made to stave off the struggle between the two nationalities and the two policies by uniting all the great landed proprietors in a common party, irrespective of the differences mentioned; but this failed completely, and the election was contested as a fight between Czech and German, between home rule and imperial domination. The battle resulted in a great triumph for the "Young Czech" party, under Count Taafe, which carried twenty-nine out of forty-nine seats—a gain of twenty-three seats. The Germans are naturally cast down over their defeat, and the imperial Government is reported to be much concerned over the prospect of a demand for a Bohemian Constitution drawn on the lines of that granted to Hungary. Count Taafe, indeed, has all along held out this consummation as the thing to be striven for, though he may not find it so easy to reach as he maintained it was before the election. In Galicia, too, the nobility lost five seats to their opponents; and in the next Diet of the province the unprecedented spectacle will be presented of seven members taking their seats as peasants, elected by a peasants' party.

THE TYPICAL TANNER.

THE performances of Corporal Tanner as Commissioner of Pensions are exciting more attention daily, and there is a belief in some quarters that sooner or later the Administration will have to get rid of him. We are unable to see why the President or the Republican party should be dissatisfied with Tanner's course. He is carrying out in the Pension Bureau the idea which possessed the whole Republican party when it returned to power last March. That idea was and is that this country, especially its National Treasury, is the property of the Republican party to use according to its pleasure. On the 4th of March last the leading organ of the party said, without a suspicion that there was anything unpatriotic or unworthy in the sentiment, "The Republican party comes into its own to-day." President Harrison has been carrying out the same idea with unflagging zeal every hour since he entered upon his duties. The selection of Tanner as Commissioner of Pensions was, in fact, an ideal appointment to be made by a President who had come into power with such a notion in his own head and in that of his party behind him. The United States Treasury having become the private property of the Republican party, and the veterans of the war having voted to make it such property, why, of course, they should have some of its benefits. Public office a public trust? Not a bit of it. Public office is a Republican bonanza.

Tanner says that the President told him when he appointed him that he wished him to be "liberal to the boys," and that is just what he is. He said in a speech at Chicago a day or two ago: "I tell you frankly that I am for the 'old flag and an appropriation' for every old comrade who needs it. I don't claim that I represent the views of the Administration, but I do know that I have the support of the President and Cabinet on this line—a pension for every old soldier who needs one." As was only natural in a bureau in which a policy of this kind was known to be in force, the employees were among the first of the "old comrades" to feel the need, not merely of a pension, but of more pension. Tanner had declared himself the foe of low pensions and in favor of rerating all such to figures more worthy the veterans who received them. His entire force have been devoting their energies to rerating not only other pensions, but their own. Pensions of $4 a month were rerated to $30 a month, and the difference of $26 a month made up for all the years, twenty-five perhaps, during which the smaller sum had been paid. In one division of the Pension Bureau—the medical—five examiners had their pensions rerated, several of them from $4 to $30, giving them arrears amounting from $1,500 to $3,000. Naturally, medical examiners who had been blessed in this manner were in an amiable frame of mind towards pensioners who wished to be examined in order to learn if they had not in them hitherto unnoticed grounds upon which a rerating of their pensions might be made. One pensioner at least has been rerated twice, his arrears under the first amounting to $1,000, and under the second to $1,500 more.

Why should complaint be made that Tanner in carrying out this policy is demoralizing the Pension Bureau by exciting among its employees a positive craze to be rerated and get some of the Treasury money? Why should complaint be made that he is also demoralizing the great body of veterans throughout the country by exciting the same craze among them? Why should the Secretary of the Interior step in and remove, in Tanner's absence, several of the medical examiners who had been carrying out Tanner's policy in rerating pensions? Surely they are not to be punished for doing what their superior officer wished them to do, and what he himself was doing in accordance with the President's instructions to be "liberal to the boys." The entire policy of a national administration and a national party cannot be reversed by cutting off the heads of a few subordinates in a bureau who were simply obeying orders.

The only way by which Tanner can be checked and his policy reversed, is to remove him because he is too liberal. Will the Republican party and its President venture to take the position that any policy towards the soldier vote *can* be too liberal — so long as there is a dollar left in the Treasury? They have chosen Tanner, and must they not stand by him till the end of the chapter? For, after all, what is he doing that the President and other members of his Cabinet are not doing also? He is using public office as if it were private property, and so are they. All this is Republican policy. The protected manufacturers have made no concealment of their conviction that, since their money secured the return of the party "to its own" last fall, they were entitled to such Treasury decisions and to such legislation as would bring as much as possible of that money back into their own pockets again. The whole tone has been: "We have bought and paid for this business, and we now propose to divide the profits of it among ourselves." Can such a party "go back on Tanner"?

THE VANDERBILT PORTRAIT AGAIN.

A CORRESPONDENT writes to tell us that the severe rule recently applied to the reimportation of the Vanderbilt portrait is not new. He describes how Secretary Bristow, on the advice of Solicitor Bluford Wilson, decided that there was no law under which permission could be granted to export a picture for repairs and then reimport it, except on condition of paying the full duty a second time on the entire value of the painting, although the Collector of Customs at Cincinnati was of the opinion that in such a case the painting would not be dutiable.

We have not, however, inquired what the Treasury decision should have been in the Vanderbilt case, or in our correspondent's case. Our purpose, a few days ago, was to emphasize Mr. Chauncey Depew's objection to the customs tax on the Vanderbilt portrait, notwithstanding the great enhancement given to the general prosperity by taxes on imported property, and to call attention to the official incompetency implied in the two contradictory Treasury decisions given within six months on facts precisely similar. The decisions in the Schuyler and Vanderbilt cases cannot stand together, and in the Schuyler case the opinion of the Cincinnati Collector was affirmed. The Treasury Department, in November, 1888, gave precisely the permission to export and reimport which was refused to our correspondent. This is the text of the decision in 1888 in Westcott's case:

> With regard to the painting of Mr. E. G. Westcott of Hartford, Conn., which he states he proposes to take to Europe with him, and to bring back to the United States, you are informed that, in accordance with the recent instructions addressed to you in the Schuyler case, the painting may on its return be admitted to free entry, on its identity being established as a painting heretofore imported and subjected to payment of duty, the Department holding that, as it is *a household effect*, which has been in use for many years by Mr. Westcott, it may be considered as not an importation of merchandise within the meaning of the statute. Respectfully yours,
>
> H. S. THOMPSON,
> Acting Secretary.

Whether or not this decision was correct we do not now inquire. It seems, at first glance, to be reasonable and just.

The warehouse laws, enacted and perfected during Robert J. Walker's term, permit exportation of goods imported and placed in bond. But in such circumstances the goods have never paid taxes and never been out of Government possession. In the Westcott case, the Treasury insisted on adequate precautions to identify the painting as one that had once paid duty.

In his letter to the Collector of Customs at New York on the Vanderbilt portrait, Assistant-Secretary Tichenor said that article 547 of the general regulations prescribes that "*dutiable merchandise* imported and afterwards exported, although it may have paid duty on the first importation, is liable to duty on every subsequent importation in the United States." This article, Mr. Tichenor says, is founded on the fact that the provisions of the law imposing duty make no distinction between the original and subsequent importations of merchandise.

It had first to be decided whether or not the Vanderbilt portrait was "dutiable merchandise," or, in a tariff sense, "merchandise" of any sort. In November, 1888, the Department said that a portrait, similarly situated, was *not* either of the two, but was a "household effect." If Mr. Vanderbilt had resided in Paris for one year, with the portrait hanging in his rooms all the time, it would have ceased to be "dutiable merchandise." Why not if in his house in New York; the exemption being by Treasury regulation, and not by statute?

The law exempts from tax the baggage of an arriving passenger. A life-size portrait cannot be classified as a traveller's ordinary baggage, although small miniatures or photographs may be. Yet furniture that has been in use one year is admitted free as "personal effects," even when the passenger does not accompany it. Again, an ex-diplomatic agent of ours may bring in without payment of duty articles which would be taxable if imported by an ordinary citizen, although

there is no law authorizing such distinction. What statute, we might ask, exempts a railway car or a horse and carriage from duty each time it enters our territory from Canada or Mexico? The truth is, that common sense is supposed to govern in a multitude of cases where the law is manifestly absurd. Common sense was applied to the case of the Schuyler portrait and was withheld in that of the Vanderbilt portrait.

Inability, or incompetency, to be *just*, as between tariff-beneficiaries and taxpayers, may account in part for the bonnet-trimming and worsted decisions, as well as for the portrait partisanship. But if the inability or incompetency exists, there is surely a need of reform somewhere, by somebody, to remedy the evil of vacillation and contradiction in executive interpretation of the tax laws. The power now assumed by the Treasury to decide what shall be taxed and what shall not be taxed, or, if taxed, then the rate of tax, is a power too tremendous in the consequences of its exercise to be lodged in executive hands. Do we adequately appreciate the character and reach of the power to tax, to loose and unloose, which an Assistant Secretary of the Treasury now usurps, including the power to say not merely when the decision of a magistrate (like Judge Blodgett of Chicago) shall be rejected, but when a decision of the Supreme Court shall be nullified under the disguise of preparing another case for a reargument of questions already once decided by the same tribunal?

MR. WIMAN ON THE EVILS OF COMPETITION.

Somebody has been so kind as to send us a marked copy of *Electric Power*, a monthly magazine conducted with much ability, the marked article being entitled "The Waste of Competition," by Erastus Wiman. Mr. Wiman is a gentleman of distinction and versatility, and what he says is always worth reading. The article in question is a defence of Trusts, and the sum and substance of it is embodied in the saying that "it would certainly pay two-thirds of the traders in the land to board and lodge the remaining one-third, if they would simply get out of business and cease to annoy and impoverish by expensive competition." If Mr. Wiman had said that it would pay two-thirds of the people of the United States to board and lodge the remaining third if they would simply get out of business, he would have suggested an arrangement which might probably be made if the board and lodging were of the kind that he elsewhere prescribes for them—namely, the best hotels in the country, with tickets to the theatre every night. This would mean that 40,000,000 of people should provide first-class accommodations for the remaining 20,000,000, on the simple condition that the latter should knock off work. The only difficulty, we imagine, would be in stopping the rush of deadheads to the hotels and theatres. Too many people would want to knock off work.

But Mr. Wiman does not mean this; he means that two-thirds of a very limited class in the community could well afford to board and lodge the remaining third *of that class*, if thereby they could make 60,000,000 people pay whatever prices they might ask for the necessaries of life. If he does not thus in terms express himself, it is because he failed to complete his sentences. Moreover, among his mental reservations there was probably one implying that the two-thirds who were supporting the one-third in idleness, should deal in a perfectly just, humane, and kindly way with the 60,000,000, but still that the power of deciding what is kindly, humane, and just should remain with themselves.

Mr. Wiman tells us further that "in the end the public pay for all the extraordinary expenses incident to competition." If that is so, why should the traders object to it? If these expenses are refunded to them, why should they be so eager to go into Trusts? We suspect that this statement is as misleading as the other one. To take an example: Suppose that three persons are supplying a community with shoes, and a fourth, a boy, born in the community, grows up with an aptitude for shoemaking, or is under the necessity of making shoes for a living. (Of course he must exercise some productive industry, or become a pauper, or perhaps a burglar.) In order to get trade he reduces the price of shoes. This, according to Mr. Wiman, causes "terrible expense" to the other three, but what he means is not an increase of expense, but a lessening of profits. The two things mean the same to the shoemakers, but not to the public. The public do not "pay for all the extraordinary expenses" of the shoemakers, because there are none to pay. But, it may be said, they are now supporting four shoemakers where they only supported three. They would have to support four *persons* any way, unless they allowed one of them to starve. But the public are paying no more for shoes than before—by the hypothesis, rather less.

Mr. Wiman gives us some particulars. "Does any one suppose," he asks, "that petroleum would be as cheap as it is to-day if the Standard Oil Company had not existed?" We are able to suppose this without overexertion. Why not? Because, according to Mr. Wiman, the $30,000,000 capital necessary to construct the pipe lines never could have been got if competition had existed. This, then, would have been the first instance where capital could not be found to do remunerative work. As there was no difficulty in getting $30,000,000 to build the West Shore Railway, the remunerative character of which was always doubtful, we should say that Mr. Wiman's apprehensions in this case were quite unfounded and imaginary, the more especially since his whole argument goes on the theory that there is too much capital crowding in every direction. That is what the "waste of competition" means.

Mr. Wiman introduces Mr. F. B. Thurber as a valuable witness. Mr. Thurber, he says, "was the spirited and successful leader of the anti monopoly movement in the Empire State, and was then just as sincere as he is now in his thoughtful and intelligent appreciation of the necessities of combination for the good of the people, as for those more directly concerned." While we were musing on this "oscillation of the pendulum of thought," as Mr. Wiman happily puts it, we received the Prospectus of the North American Salt Company, which says that it is not a Trust, but which seems to be an improved form of Trust intended to evade the laws and court decisions that have been made since Trusts came in fashion, and about the most impudent one of the lot. The Treasurer of this proposed monopoly is H. K. Thurber of Messrs. Thurber, Whyland & Co., wholesale grocers and salt-merchants, a firm of which Mr. F. B. Thurber is a member. It appears, also, that Mr. Wiman himself is engaged to turn over all the salt-producing properties of Canada to this concern. Sufficient reasons are now apparent for the oscillation of Mr. Thurber's pendulum of thought, and also for Mr. Wiman's argument, without going into more abstruse questions. The State of Pennsylvania makes conspiracies of this kind on the part of coal-operators punishable by imprisonment.

THE LANGUAGE PROBLEM IN NORWAY.

With the awakening of the national spirit in Norway made manifest by the constitutional struggle in the Storthing and the unceasing popular propaganda of national independence, has come also a movement for educational reform, a revival of literature, and an increased activity in all branches of intellectual effort. As a necessary corollary to this latter phase of the subject, and corroboratory of it, has arisen, in its turn, a critical scrutiny of the language recognized as the national norm, and out of it, again, has grown a contest but little less bitter than the more generally known political duels which, of late years, from time to time have been fought between the legislative power and the executive.

With linguistic conditions as they exist and have existed in Norway, this result when, finally, an appeal should be made to nationalistic separatism, was almost inevitably sure to follow. Norway, down to the Calmar Union of 1397, had developed her language independently of the other Scandinavian kingdoms, whose speech, although at the beginning nothing more nor less than dialectic variations from a common original, had, nevertheless, before this time, as a result of unlike national growth, struck out into diverging paths of their own. Of them all, the language of Norway, as well as can be judged at the present time, had a condition of the greatest stability and homogeneity, and appears, even at this epoch, to have had a recognized standard of literary expression. Under normal conditions of national development there is good reason to suppose that a language which once, through a process of natural selection, had acquired such a literary precedence, would afterwards be tacitly accepted as authoritative. It would have changed in process of time, as every language changes, even when left to pursue its own course undisturbed by outside political intervention; such changes, moreover, would have been little or great according to circumstances of environment, but always, none the less, would still be in the direction of historical continuity. With the introduction of the Danish sovereignty, however, entered the disturbing cause that prevented the realization of this supposed result, and a state of things came about that has lasted for nearly five centuries and practically prevails to-day.

Norway, under Danish rule, underwent complete national extinction. There is, at first, from time to time, a flickering spirit of resistance, but there is no trace of concerted action. At last, the process of denationalization was consummated, and Norway was declared, without protest on the part of the Norwegians, to be but a province of Denmark. Even the Reformation failed to arouse her from her lethargy, and not until 1814, in the universal indignation evoked at the cession of Norway to Sweden by the Peace of Kiel, was there evidence of an awakening.

A necessary concomitant of the Danish system of governing was the use of the Danish language as its only means of expression, and, in a time comparatively short, Danish had become not only the official, but also the political, and the only written language of all Norway. With the advent of the Reformation by way of Denmark, Danish again became the language of the Church; and when public instruction was extended in the schools, and literature was once more produced, Danish was naturally, as a result not only of political but of intellectual dependency, doubly, and one would think indelibly, impressed upon the people. Nor is there reason to suppose, as some patriotic Norsemen do, that this result was anything other than an effect of the political connection with Denmark. There are, it is true, at the time of the Calmar Union, already traces of dialectic division and consequent instability in the language of Norway, but that is paralleled in the history of other Teutonic languages which have, nevertheless, maintained themselves in unbroken continuity down to the present day. What rendered the process in this instance comparatively easy was the fact that Danish was in reality but a Scandinavian dialect, differing, after all, only in minor points from the language destined to supplant it. The general apathy with which the change was viewed gives the true clue to the ethics of the case.

The spectacle presented in Norway during all these years has been, from a linguistic point of view, a curious, though not perhaps an unparalleled, one. It is very much what we may suppose to have existed in somewhat similar kind in England after the Conquest, when Norman French was the language of political administration and of polite society, though English never ceased to be spoken by the great majority of the people, and still maintained a vigorous, if homely, existence down about the roots in which were the sources of the subsequent national life. As in England, so in Norway, nothing has materially interfered with the continuity of the national dialects; they have never died out. They have doubtless been influenced by the language of culture, and their natural course of development has been retarded or deflected; new words representing the new ideas of modern civilized life have been in the great majority of cases taken in from Danish, and the comparatively flexionless character of Danish grammar has doubtless exerted in its turn a levelling tendency upon the fuller forms of the dialects. Nevertheless, they have still every right to be considered the living and lively representatives in legitimate descent of the old national language of Norway, which they are entitled to represent should opportunity again make the demand upon them.

The steady persistence of the popular dialects, in the face of the acceptance and use of a language over them, naturally gave rise to still further complications. The fact that the written language, the language of culture and of instruction, was different from the spoken language of every-day life, necessitated, in the case of all but a small minority of the population of Norway, the learning of two languages instead of the one which under ordinary circumstances is sufficient for the usual purposes of communication. Danish, in such cases, was naturally the acquired language; in countless instances, moreover, it was imperfectly acquired, and the cause of popular education has, in past years, beyond a doubt, irremediably suffered by the attempt to impart instruction by means of Danish. To the people themselves, however, is chargeable in great degree the fostering and growth of conditions under which they have as surely been made to suffer. Among themselves they have seemed to consider the language of the dialects good enough. In the presence of others even of their own nationality, a resort, however, has been and is still unerringly made to Norwegian-Danish, and this not necessarily at all from a desire to render themselves more intelligible, but solely from the fear lest they be adjudged less cultivated than they would like to appear.

The formal loosening, in 1814, of the long connection with Denmark, did not materially change existing conditions, as they have been described, either in the spoken or the written language of the land. With the new outburst of patriotism, it not unnaturally became the fashion to characterize as "Norwegian," without much discrimination, almost everything that existed in Norway. The language forms no exception, and we hear to-day of the "Norwegian language," when in point of fact we have but the unbroken perpetuation of the language which the Danes, at the beginning of their sovereignty five hundred years ago, introduced into the country. It is true that the language, as a result of its contact with the popular dialects, has been, in its turn, affected both in pronunciation and vocabulary, and markedly differentiates itself in both respects from the present Danish of Denmark. From its more virile pronunciation and the strong and picturesque expressions that have consciously and unconsciously found their way in from the peasant dialects, it is, in many respects, a better language than Danish; the vocabulary and idiom of Björnson and Ibsen contrasted, wholly aside from the question of intellectual force, with anything produced by their contemporaries in Denmark, abundantly proves, in these latter points, the truth of this assertion. The language they write, however, is "Norwegian" in no other sense than that, for instance, the language of America is "American" and not English.

Norway, then, at the present day has no national language, unless it be found among the spoken dialects of the peasants, and these deviate from each other in a very marked degree. The dialect of the east, for instance, is materially different from the dialect of the west, each, on its own side of the central mountain region, having gone its own way but little influenced by the other; within such broad divisions, again, there are minor subdivisions, and the inhabitant of a certain valley may even reveal to the initiated his place of abode by his speech alone. The result to the nation of such a linguistic condition is perfectly well recognized by the Norwegians themselves, and attempts have been and are strenuously being made to fix upon some one form of language which shall be given official sanction as the national language of Norway, and shall serve, consequently, as the language of all literature, of the State and Church and of public instruction, and ultimately become the one language of the whole people. The way to a realization of a widely wished result has proved, however, to be beset with unanticipated difficulties. While the project of a national language has been actively upheld by the people, and the promoters of the movement have clearly a majority in the Storthing, which has attempted to further it by large money appropriations, the whole question is apparently as far from a settlement as ever. Instead of the necessary unanimity of action, sectional jealousy has arisen between the different parts of the country lest the accepted language should represent the already existing speech of its neighbor more fully than its own. Still worse than this, because among its apostles, if at all, a concerted movement might have been expected, personal animus, not to call it animosity, has arisen between the advocates of the different forms of language submitted as a standard, and, instead of the one needed, a round half-dozen "national languages" have been evolved and become the subject of many a heated polemic in newspapers and brochures.

The movement for a *Landsmaal*, or national language, first found expression in literature as long ago as 1848, when Ivar Aasen wrote a 'Grammar of the Norwegian Folk-Language.' Aasen's grammar is based upon the spoken language of the southwest part of the land, particularly that of Bergens Stift, since that locality seems to him to approach nearest in its pronunciation the written forms of the old language; where the dialects differ, the oldest "westland" form is chosen. Aasen, accordingly, seeks his starting point and his justification in Old Norse, a fact which his critics do not hesitate to use against him. Professor Moltke Moe, for instance, calls attention to what is undeniably a fact, that where weight is laid in this manner upon a connection with the past, the language will represent a preceding period and not the present; that it will be "a sort of Middle Norse and not New Norse." Aasen's language, called, further, by Professor Joh. Storm of Christiania, in a recent widely noticed book on the subject, "an astonishing work of art," is, nevertheless, the rational and conservative production of a man who had a fine linguistic feeling and a thorough knowledge of his ground. It is classical in form, pure in vocabulary, and picturesque in its mode of expression. Above all, the author has in it struck the true tone of the folk-life of the North, and Storm himself is constrained to add: "One may contend about forms, but the spirit was there." Aasen's first grammar was followed by literary specimens of the new language, reading books, and various translations into it of widely different originals. It has been used, in greater or less purity, by many Norwegian writers—notably by Kristoffer Janson, Henrik Krohn, and Professor Blix.

Aasen's *Landsmaal* was not long left in undisturbed possession of the field. The first important deviation from it was the language used by A. O. Vinje, an author of unmistakable originality and force, who, particularly through the periodical *Dölen*, made an active propaganda for his form of a national language. In the main he follows Aasen; in other points he differs from him materially in that he often uses the dialect of Telemark, especially where its forms more nearly approach Old Norse. Vinje's idea, developed gradually in the course of his work, seems to have been to use exclusively neither "westland" nor "eastland" forms, but a compromise (literally on central ground) that should smooth the way for both, and render less abrupt the transition from one to the other. After Vinje's death, in 1870, the feeling that neither of the proposed forms of a *Landsmaal* was near enough to the

spoken language of a great part of the land to meet with universal acceptance, seems to have forced itself upon those who were interested in the cause. Fjörtoft of Söndmöre will do away with all old and effete forms, and give currency and authority only to the actual, living forms of the present language. Schjött of Skien takes very much the same stand, and writes a dialect in many respects similar. While both are "westland," Schjött's language has in many points more sharply developed "eastland" characteristics. Garborg and Mortenson, both editors of the journal *Fedraheimen*, in their reading-book make use of a dialect which Storm calls a compromise between Aasen and Vinje. It is "westland" with "eastland" peculiarities, yet not to the extent to which they are found in Fjörtoft and Schjött.

The strife, as thus far represented, has concerned itself only with the dialects of the west and the east. Aasen's language was wholly "westland"; the other proposed forms have one and all had "eastland" characteristics as well, and other writers on the subject, notably K. Knudsen, demand still further representation, if it is desired to make the *Landsmaal* the real language of the land. To complicate the matter, northern Norway now puts forward its claims to consideration, and two forms, different only in minor points, of the dialect of the district about Trondhjem have been presented as a *Landsmaal* by Ivar and O. J. Höyem respectively. Although this Trond dialect seems to have met with but scant general favor, it has, however, acquired an extraordinary importance in the history of the struggle for a national language from the fact that the Storthing made an appropriation of several thousand crowns to provide for the free distribution of O. J. Höyem's 'Sacred and Church History' throughout Norway.

At the present day, the question as to what shall constitute the *Landsmaal* seems as far from settlement as ever. What has really been accomplished is a survey of the field and a more or less complete realization of the magnitude and difficulty of the proposed task. If it has not yet been determined what the national speech shall be, it has, on the other hand, been pretty well decided what it shall not be. In the meantime, suggested forms of a common language are becoming more numerous even than has been pointed out, and what is most remarkable is the fact emphasized by Professor Storm, that scarcely a single grammatical form has been proposed concerning which there is complete unanimity. A real *Landsmaal*, then, thus far does not exist. The dialects exist, but the only national language, the only form of speech common to all Norway, is, and apparently will long remain, the Norwegian-Danish, which this movement so anxiously desires to supplant. The attitude of the Government in the matter is, from a distance, inconsistent and not wholly intelligible. As long ago as 1885 the School Commission proposed that "the *Landsmaal* and the literary language [*i. e.*, Norwegian-Danish] shall be placed upon an equal footing in instruction in the common schools of the land." It, however, neglects to specify which one of the many proposed forms of the *Landsmaal* is intended to be used, and leaves the matter in as great confusion as before.

Although unanimity of action would seem to be a first vital step towards the realization of the desired end, it would neither be under the circumstances the only one necessary, nor would it be unconditionally indicative of success even if it should ultimately result. Wherever in the past a dialect has been elevated from among its fellows to the rank of a national speech, it has been almost universally the result of political and intellectual conquest. In Germany there was, perhaps, nothing of either; but Luther's wise choice of an existing dialect at a time when there was still no common language, but when a whole nation hung eagerly upon the solution of a single question, gave it an irresistible precedence in that it identified itself with the cause as its visible expression, and its success was assured in the success of the Reformation. A language cannot be evolved in cold-blooded deliberation or be promulgated even by popular fiat. In order that a real Norwegian language shall come to take its place among the national languages of the world, some new revolution, social, political, or religious, must bring a form of speech that occasion has evolved prominently into the foreground as the exponent of its message. Or, this wanting, some new prophet of the people must arise whose language, because of the ideas it conveys, shall be looked up to as the standard of a common expression.

BRITISH POLITICS.

London, July 10.

Any one who tries to get at the real condition of British politics by inquiries made in London, now that the Parliamentary session is drawing to a close and the Parnell Commission has heard all the evidence, finds himself surrounded with difficulties. I have talked a good deal with politicians on both sides during the past few weeks, without meeting one who was not satisfied that, on the home-rule question at least, his own side was rapidly gaining ground. But ever since the huge blunder of 1880, when every Conservative in London was satisfied, beyond any manner of doubt, that the country was overwhelmingly in favor of Lord Beaconsfield's policy, one cannot help distrusting the gentlemen who rely on what they hear in London clubs and drawing-rooms, or on newspapers whose editors get their inspiration from the same source. The Gladstonians labor under no such discredit, and although they are not always able to give in facts and figures a reason for the faith that is in them, they are able to make a good show in the matter of probabilities. Many of them do not feel as jubilant over "the bye-elections" as Mr. Gladstone does, but they say with much plausibility that Balfour's policy in Ireland is disgusting the workingmen, to whom the Irish tenants are not tenants, but poor men, the landlords not landlords, but rich men, and the Irish land question is a conflict between labor relying on combination and capital backed up by the army and the police. I have been assured by two at least of the most candid and impartial men in the Gladstonian ranks, whose means of observation are unusually good, that these things are telling on the voters, especially in the north; that enthusiasm for home rule, as the cause of the poor and lowly, is rapidly growing in the country districts. They are never tired of repeating that if you want to know how public opinion is running, you must read not the London, but the country papers, foremost among which they put the Manchester *Guardian*.

I cannot find any one ready to assert positively that the *Times* has suffered in circulation through its Pigott blunder. It has several holds on the public in and around London which hardly any editorial blunder could shake. One is its advertisements. There is hardly any want in English life which is not best made known through its columns. Its Parliamentary reports, too, are by far the best, and the value of this can hardly be appreciated without remembering that Parliament is the one legislature of the empire, and that it contains in one branch or other a considerable proportion of the most eminent men in the country, whose sayings and doings are watched with eager interest from one end of the kingdom to the other. Though last not least, when any person of note wants to communicate with the public about anything, he "writes to the *Times*," no matter what may be his opinion of its morals and manners; and people of note here still write directly letters to the newspapers over their own names without, as with us, sending for a reporter and having themselves interviewed. I notice, also, that the custom of "having their attention called" to some things in the newspapers is not so common here as in America among great men. They admit unblushingly that they had seen it themselves without having it pointed out to them. These advantages all protect the circulation of the *Times* now, and will probably protect it fairly for an indefinite period.

Whether it has lost influence and authority through the Parnell business is another matter; nothing can be proved on such a question. Among the Gladstonians and Radicals generally, of course, its influence and authority are utterly ruined. But, unless human nature is greatly changed, they must be either destroyed or generally diminished among other classes also. The *Times* during the first sixty years of its existence owed a great deal to the mystery which surrounded the management. Very few knew who owned or edited it. Mr. Delane may be said to have been the first editor who threw the veil aside, and presented himself in society as the great being who furnished the tradesmen and the clubs with their daily opinions. But he was a very shrewd and capable man. He kept his thoughts very much to himself. In society, I am told, he was famed for his skill in encouraging people to talk without saying much himself, and making his scanty utterances weighty. His successor, Mr. Chenery, known to some of his ribald contemporaries as "The Arabian," on account of his attainments as an Arabic scholar, was unfit both in training and temperament for the management of a political journal, and one of the ways in which he showed this was his volubility in company. He got very little from the people he met, I am told, because he gave them but little chance of talking—a very unfortunate weakness for an editor. The present editor, every one says, is really Mr. Walter himself, the principal proprietor, Mr. Buckle being put in the place mainly on account of his youth and inexperience. But the light thrown on the management of the paper by the Parnell Commission shows clearly that the arrangement is not a good one. Nothing could have brought out its weakness more clearly than the Irish question, for the Walter family are said to have hated the Irish most cordially for three generations, and hatred of any class or tribe is a very treacherous thing for an editor. At all events, it has finally brought the Walter family to terrible grief by exposing their *arcana imperii*. I doubt if so great astonishment and mortification has overtaken Londoners in modern times as came from the discovery that the great "we" under whose rule they had lived in great mental peace for a century was composed of Mr. Soames, a country solicitor, whom Mr. Walter brought to town to contend with that prince of practitioners, Mr. George Lewis—Mr. Macdonald, the exceedingly droll manager, who thought it took

three men to write all Parnellite letters—and Mr. Walter himself, whom nobody ever suspected of astuteness; that 'Parnellism and Crime' was written by a briefless barrister named Flanagan, so carelessly that it has been torn to pieces in every direction by the evidence before the Commission; and that the author of the famous anti-Irish articles in the paper was an obscure Cork Orangeman named Wilson, for whose opinions on the question, delivered *in propria persona*, nobody would give what the Duke of Wellington used to call "a tuppenny damn." There has been nothing like this revelation to the average London business man since the little girl discovered that her doll was stuffed with sawdust.

All these things must be taken into account in trying to form an estimate of the future of the Gladstonians. The discredit which has overtaken the *Times* is undoubtedly a great help to them. It has given them hopes of great gains in London at the next election, for London went heavily against them at the last; and these hopes are undoubtedly stimulated by the success and influence among the workingmen of T. P. O'Connor's paper, the *Star*. It is a kind of newspaper that middle-class Englishmen detest—slangy, personal, and sensational; but the writing in it is able and effective, and it has an enormous circulation and great weight among the now formidable but formerly much despised class of wage-earners in eastern London. That it can handle serious questions effectively was shown in the support it gave Sir Thomas Farrer in his attack on the Sugar Convention. Baron de Worms's silly scheme received no more destructive blows from any quarter than Sir Thomas administered through its columns.

One hears here, and I heard before I came here, a great deal about the bitterness of feeling existing between the Home-Rulers and the Conservatives; but it is difficult for a passing observer to come on any tangible signs of it. The old men say there has been nothing like it since the passage of the first Reform Bill, but one would have to live in English society and be part of it to get proofs of its existence. Social warfare is very obscure and subtle when carried on between well-bred people. When one sees Gladstonians and Liberal Unionists and Tories together, as I have done on several occasions, there is apparently no want of cordiality in their relations. All the forms of mutual liking and respect are fairly well observed. If you ask how the mutual dislike is shown, you are probably told that it appears in the diminished number of dinners or balls of "smart people" to which Gladstonians are invited, for it must be admitted that although there are a good many "smart" Gladstonians, probably four-fifths of the smartness is to be found among their opponents. The latter have consequently ways of punishing Home-Rulers by leaving them out of their social entertainments, and their "Saturday to Monday" parties in the country houses, which the Home-Ruler finds it difficult either to resent or avenge. He perceives that he and his wife are not asked to houses in which they used to be welcome, and he guesses the reason why, but he cannot openly take notice of it. All he can do is to retaliate, and if there were more smart Gladstonians, retaliation might be effective; but, as matters stand, he is obliged to take refuge in most cases in religion or philosophy.

This kind of political warfare, too, is wonderfully aided in London by the social struggle, or, in other words, by the desire of everybody who stands high in the social hierarchy to keep those below him from rising, and by the desire of these latter to conciliate him and get him to let them join him up at the top. That Darwin never used London society as an illustration of the struggle for existence is a curious omission. The fierce competition which goes on in it gives the party which gets the smart people on its side an immense advantage. It is told of Lady Palmerston, who used to be one of the leaders of society here, and took great pains to keep it very select by throwing her doors open to rank, character, and intellect only, that, after the extension of the franchise in 1867, she was compelled to let down the bars. The new men who then came to the House of Commons wanted invitations for themselves and their wives, and the whips reported that unless they got them the Ministry could not have their votes. This sort of connection between society and politics is now stronger than ever. Opinions, especially on the Irish question, are just as much subject to fashion as clothes or furniture. Everybody who wants to be considered smart or to be on good footing with smart people has to oppose Gladstone's plan for "breaking up the empire," and to denounce "the old man" himself with more or less bitterness. The frankness with which this bitterness is expressed is often very amusing. I met with a country squire recently who declared it would give him pleasure to "hang the old fellow with his own hands"; and a lady told a friend of mine of the eagerness with which she looked in the paper every morning for news of his death. Talking to a man of high standing in the intellectual world the other day, I spoke of Mr. Gladstone's flexibility of mind as something marvellous at his years, not supposing that he cared much about Gladstone's mind, when, to my astonishment, he burst forth with, "Yes, and the old villain's conscience is just as flexible." It must be said that the Gladstonians as a rule receive these ebullitions with mild amusement, which nobody can help sharing who knows the object of them. His gentleness and indifference to attacks on him, and apparent ignorance of them, give them a slight air of bouffe to the casual observer. He may have points of provocation about him which are felt by those engaged in daily encounters with him, but to the mere passer-by it seems as if the furious hostility to him must be feigned.

THE RECONSTITUTION OF FRANCE.

PARIS, July 12, 1889.

COUNT CHAUDORDY began his diplomatic career long ago, under the Empire; he was for some time attached as Chief of the Cabinet to M. Drouyn de Lhuys, who was Napoleon III.'s ablest Minister of Foreign Affairs, and who had preserved all the traditions of our Foreign Office. In the war of 1870, M. de Chaudordy followed the Government of the National Defence, as it called itself, to Tours, and afterwards to Bordeaux. He had not much to do during the war, and had not many illusions as to the result of the journey of M. Thiers, when he went about Europe looking for an alliance. He was chosen deputy to the Constituant Assembly, and, though circumstances had brought him in contact with Gambetta, he took his place among the conservatives of the Assembly. He was, at Versailles, one of the deputies who struggled against the Commune, and he did not disguise at the time his desire to see the reëstablishment of the monarchy. In a book which he has just published, and which has attracted much notice, he says:

"M. Thiers could have created the monarchy at Versailles. His personal influence, the authority which recent events had given to him, rendered this work easy. If the Comte de Chambord had refused to take the crown under the conditions fixed by the National Assembly, M. Thiers would have remained Regent of the kingdom. Negotiated under these circumstances, the peace of 1871 would have been less hard for France. M. Thiers preferred to create the Republic. Many monarchists, having too much confidence in him, aided him in this enterprise. They had forgotten his past, and remembered only his opposition to Napoleon III. Thus was lost the best opportunity which has offered itself of reëstablishing the legitimate monarchy, for, at that time, the Bonapartists were reduced to complete impotence."

M. de Chaudordy was not among those who had too much confidence in M. Thiers; he never believed in the declarations of Bordeaux, where M. Thiers swore before God and man to remain impartial between the republican and the monarchical parties, and to favor personally no particular solution of the political problem. He was among the most moderate but the most determined adversaries of M. Thiers, and he gave all his support to the Government of Marshal MacMahon, his successor. At the present time he believes that France must accept the Republic. He sums up his ideas in these words, which I extract from his book, 'La France en 1889':

"In short, monarchy would be the form of government best suited to France, but it could not maintain itself, by reason of the existence of the Bonapartist party and the democratic condition of the country. The Empire, having its support in the principle of authority, would be better fitted to struggle against the exigencies of democracy; but, by its very nature, it leads the country sooner or later to a catastrophe. The Republic is, therefore, the government to which we must submit. But the weakness of the present system leads us to radicalism."

M. de Chaudordy would like to bring us back to the situation which existed under Marshal MacMahon. He thinks that in France, owing to the obligatory military service and to other circumstances, the moderate men of all parties will sooner or later unite and place at the head of the State a general having authority over the army and over the nation. "If not," he says, "the spirit of indiscipline will proceed from the people to the army; disorder will be the consequence, and we shall have a vulgar dictator, who will be a danger at home as well as abroad."

The National Assembly at Versailles did four things which must be placed to its credit: (1.) It imposed taxes to pay the expenses of the war and the German indemnity; and, notwithstanding these great burdens, it assured the equilibrium of the budget, and established a sinking fund. (2.) It conquered the Commune, and transported to distant parts its principal leaders. (3.) Notwithstanding the resistance of M. Thiers, it suppressed the National Guard, a militia without discipline, and an instrument of revolution. (4.) It placed the seat of the Government out of Paris, and delivered the Assembly from the tyranny of the mob.

If we look at the present moment, we find that the seat of government is in Paris; the most guilty members of the Commune have been pardoned, and many of them are in high places, some even occupy diplomatic posts; the equilibrium of the budget is destroyed, and the state of our finances alarms all thinking men; a new military law has just been passed, which reëstablishes the National Guard in a new guise. We shall soon have, instead of true soldiers, an armed people, with dangerous and undisciplined elements, and it is no secret that this new militia has in reality been created merely in order to force young priests into the ranks of the army. It is a part of our *Culturkampf*, of the great struggle which began when Gambetta said: "Clericalism is our true enemy." Religious persecution has divided

France into two halves, which are now irreconcilable; it has entered every school, every tribunal, every household. Who has profited by this great war? Only the radicals and Gen. Boulanger.

The changes which M. de Chaudordy proposes to make in the Constitution are the following:

(1.) He would allow the right of suffrage only to citizens above the age of twenty-five instead of twenty-one.

(2.) The Departments should vote for their Senators according to the present system; but he would add to the present Senatorial electors all the members of the Municipal Council.

(3.) The number of the Deputies should be limited to 500, and the duration of the sessions restricted.

(4.) The election of the President should take place in the Congress, as it does now, but the electors should be, besides the Senators and Deputies, about 100 delegates of the Councils General.

(5) The Presidential term should be, as it is now, for seven years, but reëlection should be prohibited except after an interval.

(6.) The President should have the free choice of his Ministers.

(7.) The Ministers should not participate in the deliberations of the Chambers; they should not retire in consequence of a vote of the Chambers, but must execute their will.

(8.) Commissioners, appointed by the President of the Republic on the nomination of the Ministers, should be at times charged to give explanations to the Chambers.

(9.) The Council of State should have the care of the preparation of the laws.

(10.) A special Council, composed of members of the Council of State and of the Court of Cassation, should verify, validate, or invalidate contested elections.

You see in this programme an approach to the American Constitution, which M. de Chaudordy professes to admire; it is becoming more and more a sort of axiom that while ministerial responsibility and the collective responsibility of a Cabinet are a necessity under the system of constitutional monarchy, a democratic republic requires, on the contrary, the independence of the Ministers and their selection by the President. At the present moment our Cabinets are too short-lived. As they represent only the prevailing coterie of the Chamber, they generally owe their existence to a coalition which cannot last and does not last. Such a system brings into ministerial life individuals totally unknown to the nation, without experience, without talent, and often without morality.

The defects of the system have never been better shown than during the last few days. If a foreigner, after ascending the Eiffel Tower and going through all the amusements of the Exhibition, should have the curiosity to enter the Chamber of Deputies, he would hear nothing but what we call interpellations. Every day some particular Minister is brought to account, some new scandal is revealed, some new act of corruption, fraud, venality is denounced. I do not like to cite names, but those who read the debates of our Chambers must know that three of our present Cabinet Ministers are under the gravest imputations, and that they have as yet very imperfectly cleared their reputations.

"To-day," says M. de Chaudordy, "the nation, seeing that the Chambers are split into groups of politicians, that individualism rules instead of patriotism, that radicalism, with all its dangers and horrors, is ready to profit by the faults of the most moderate parties, is alarmed. The Exhibition covers up these alarms for a while, but the Exhibition is, after all, an accidental event. It gives France a sense of her intrinsic value, of her productive capacity; it is not an institution; it does not change the nature of the political difficulties."

M. de Chaudordy speaks well of Carnot, who is personally honest, and who fulfils the Presidential duties, in a social sense, much better than M. Grévy. "But," he says, "he has not the necessary authority and energy. We need a personality more powerful, more decided, less accessible to the considerations of detail and to the influences of political groups; not having been mixed hitherto with parties, which are a dissolvent. In order to make a national work, that is to say, to reconstitute the country, we ought to place at the head of the State, with more effective powers, a chief of the army with an unimpeachable record."

Thus ends the first part of the book of M. de Chaudordy; the second part, which is perhaps the most interesting, is devoted to French policy abroad, and to the situation of France in the midst of Europe. M. de Chaudordy is familiar with the diplomatic society of all countries, and he writes on this subject with more authority than on the questions which affect the domestic policy.

FROM NIFFER TO TELLO.—I.

DRESDEN, July 2, 1889.

THE country between Niffer, the site at which our American expedition has been conducting excavations this past winter, and Tello, which the French Consul-General at Baghdad, M. de Sarzec, has rendered famous by his discoveries of sculptures and inscriptions from the earliest period of Babylonian civilization, has been visited more than once by explorers, but never fully described. On Kiepert's large map of the Ottoman empire a few ruins and canal lines are indicated, following stray notices of different travellers, and particularly the valuable little map attached to Loftus's work on Chaldea and Susiana, bearing the date of 1856; but the greater part of the region is a blank. Not only are no proper maps to be had: it was with difficulty we found a guide who knew the country, and who could tell whether the route was practicable, or even how many days we should require for the trip. Then we could find no muleteer who was willing to accompany us. At length the undertaker, if I may so call him, who carries the bodies of devout Affek to be buried in the sacred city of Meshed Ali or Nejef, beyond the Euphrates, agreed to provide us with two animals for a compensation at least double that which we should have paid under other circumstances. At the last we started on an hour's notice, forgetting, in our hurry, our very knives and spoons, so that we were compelled to accept without compromise both the hospitality and the customs of the Arabs. Our party consisted besides myself of Bedry Bey, the Turkish commissioner of excavations, a guide, two *zaptiyeh* (gens d'armes), and a muleteer, and we carried no baggage save that which could be placed on ridden horses.

It was Saturday afternoon, March 30, when we started. At Niffer the weather was intensely hot, the thermometer registering over 100° in the tents; the mounds were treeless, glaring and barren, and there was a constant storm of dust. In contrast with this the twilight boat-ride through the Affek marshes was like a trip to paradise. The canals were beds of fragrant white ranunculus, through which we were poled in long, narrow boats. The air was cool and still; frogs croaked on all sides, birds flew out of the tall reeds, and buffaloes grunted, lazily declining to return home in answer to the summons of their masters on the bank. Now and then we passed the reed village and mud-walled fortress of an Affek subchief, or even a garden of palm-trees and figs. All was beautified by new life in pleasant contrast with the ancient death of Niffer.

These marshes are part of the country of the Affek (pronounced Affej) nation. There is a confederacy of six tribes, of which the Affek are the chief, and it may well be compared in every respect (except that the natural ability of the Arabs is greater) with the Indian confederacy of the Six Nations once existing in New York. The Affek are almost sessile, irrigating and cultivating the land in a rude manner, but extremely warlike and turbulent, and very restive under Turkish rule—in fact, more than half independent of that rule. They are a fine-looking people, the finest-looking Arabs I have seen, with intelligent, attractive faces, of what I should suppose to be a pure Semitic type.

We spent the night at the Affek capital, Shatt-el-Husein, close to the village of Sukh-el-Affek, which is to be found on Kiepert's maps. These villages, with their palm-trees and reed huts, are exactly like the illustrations of African villages which one often sees. Our host was the brother of the great chief of the Affek confederation, Haji Tarfa. The latter is a rich man, worth, it is said, several hundred thousand dollars; and for greater security, it may be, or for some other reason best known to himself, he now resides on a domain of the Sultan beyond the Euphrates, rarely visiting his tribe. In the night the weather changed suddenly, and continued so cool during the whole period of our absence that, having come unprepared for such an eventuality, we actually suffered from cold. When I awoke in the morning, I counted nine coffee-pots on or about the fire, through which, so to speak, the coffee was gradually being reduced to its quintessence. My breakfast consisted of two swallows of this powerful quintessence of coffee, which had undergone, I do not know how many boilings. No Arab coffee-maker that I have seen can be induced to put more than a small spoonful of coffee, perhaps slightly flavored with myrrh, in the cup at once; but a guest of distinction is entitled to two or three such cups, one immediately after the other.

From Shatt-el-Husein we continued our journey on horseback. Our general course was southeast. In half-an-hour we had passed the cultivated land and entered a wilderness sparsely covered with tamarisk and camel-thorn. This serves as pasturage for sheep and camels, which, I was told, are driven as far as possible into the interior at this season, to avoid enumeration and taxation by the Turkish authorities. After a ride of some eight miles, we reached the mound of Delehem. This had been described by the Arabs as a ruin of much importance, and apparently former explorers had heard the same report, for it is to be found on Kiepert's map, and Dr. Ward, in the report of the Wolfe expedition, expresses much regret that he was unable to visit it. It is in reality a mound of small size, but, owing to its shape, conspicuous from a distance. There are two hills connected by a narrow ridge, the higher of the two forty or fifty feet in height, rising abruptly from the plain, and to the east and north of these is a low flat mound, perhaps a dozen feet in height, the whole covering a very small surface. We found there three wells of brick laid in bitumen, resembling those found at Tello, and a few potsherds, apparently fragments of clay coffins and other funeral ware. There are in the immediate neighborhood several other mounds of equal or greater extent,

not noted on the maps. From all that I could learn by inquiry among the neighboring Arabs and inspection of their treasures, these all seem to contain graves, the contents of which, in the shape of beads and other ornaments, resemble the contents of some of those found at Niffer.

About one o'clock, after a journey of less than fifteen miles, we were obliged to stop for the night at a camp of El-Budeir Arabs, because we had reached the limits of the water supply from the Euphrates, and the next water was a day's journey beyond. The El-Budeir are at present a poor, half-wandering tribe, depending chiefly on their flocks of sheep and goats for their support. They have one permanent village with a small plantation of palm-trees, visible from Delehem, but the greater part of the tribe live in tents. Their country is dotted, however, with the remains of mud forts and even of mud villages. These, together with numerous dry beds of irrigation canals and other signs of quite recent cultivation, seemed to confirm their own statement that they and their land have been ruined by the recent change of course of the Euphrates. They still continue to cultivate wherever, by canal irrigation or chance inundations, they can obtain the water which alone is necessary to render this alluvial desert fertile; but under such conditions they are rapidly reverting to the Beduin state. Their relations to the Affek are friendly and almost dependent; but a couple of weeks after my visit, war broke out between the two because the Affek, lying between the El-Budeir and the Euphrates, held the water of the canals to flood their marshes, refusing to cut the dams, to the great detriment of the El-Budeir, who could plant no crops, and barely find water, or rather mud, enough for themselves and their flocks to drink. Wars arising from such quarrels regarding the irrigation canals are of frequent occurrence among all the tribes along the rivers, and I should think that in ancient times similar wars must have been even more frequent.

Two hours beyond this camp were the large mounds of Bismya. These are extensive, but not high, consisting of several long, low hills, almost parallel to one another, with half-filled valleys between. I found no glass nor glazed pottery there, and my general impression, from a cursory examination, was that this is probably an ancient site not used nor built upon in the later post-Babylonian period. It is sufficiently extensive to have been a city of importance. But it must be said that judgments based merely on a cursory examination are of very little value until confirmed by the test of excavation. At present it would be difficult to conduct excavations at Bismya on account of the lack of water and the unsettled condition of the country, which is almost out of reach of the Turkish authorities.

The most important point which I have to notice in connection with Bismya is that it lies on the Shatt-en-Nil. This old canal has been a source of infinite trouble, and no two geographers seem to locate it in quite the same place. It was one of the most important canals in all Irak, and its course must have determined the location of more than one important city of Babylonian antiquity. Such a rôle does it play that Prof. Fried. Delitzsch, in his 'Wo lag das Paradies?' (it will be remembered that he locates Eden in Babylonia), identifies it with the river Gihon (Gen. ii. 13). It left the Euphrates at Babylon, and, according to the notices in ancient writers, seems to have joined the Tigris somewhere about the departure of the present Shatt-el-Haï. But, if this be so, the name adheres, nevertheless, to a large canal which is found at Niffer, and apparently, also, in the neighborhood of Warka (ancient Erech) and Sinkareh (ancient Larsam), and which must, therefore, have rejoined the Euphrates, or else joined the Shatt-el-Haï almost at its junction with the Euphrates. Loftus, Delitzsch, and others, in their maps of the country, have therefore assigned to it a southerly course after leaving Niffer. I found it, however, to the southeast of Niffer at Bismya, and later losing itself in the sandhills in the neighborhood of the three important ruins of Yokhah, El-Hammam, and Umm-el-Akarib. I regret to say that I could find no guide who was able to trace its course back step by step from Yokhah to Niffer, and I was not myself prepared to make the attempt to do so; but I hope that this may be done next season. Delitzsch, in the work above quoted (p. 221), speaks of Niffer as "am östlichen Ufer des Nil-Kanals." But what is known at Niffer as the Nil is a great depression running through the mounds from north to south and dividing them into two main parts, and a second depression, at right angles to this, dividing the eastern portion of the mound again into a northern and a southern half. To the north of Niffer I was able to trace the old canal-bed for some distance, but no one seemed able to point out any traces of its course immediately after leaving Niffer, whether to the east or south.

The desert between the El-Budeir camp and the country of the Montefik (pronounced Montefij) was said to be full of marauders, and therefore, for greater security, we took with us the brother of the chief in whose camp we had been staying. The waterless region between the present extreme limits of Euphrates and those of Tigris canal irrigation proved to be about twenty miles at its narrowest point. There was a time, not long since, when this region was at least partially irrigated and cultivated, and fresh-water shells, left by inundations of the rivers or canals, are visible everywhere; but now, owing to lack of water, it is an utter desert. We passed a number of old canal beds and ruin mounds, or *tels*, none, however, of the first importance. One long line of hills, called El-Harif, and presumably representing an old canal, was said to run from Niffer to the Shatt-el-Haï, and I think that it may have been a part of the old Nil Canal. We also observed in this region very extensive hills and fields of fine white sand. Loftus and Layard speak of these sand-hills in Irak as increasing rapidly, and likely, within a few generations, utterly to overwhelm the country. This prophecy has not yet been realized, and I think the increase of the sand-hills, if increase there has been, has at least been slower than they expected; nevertheless, there are here and elsewhere in Irak enormous quantities of this sand. Immediately to the north of Niffer were large fields of it, constantly shifting place and form; but from my observations there I should suppose that, much as it is blown about, it yet maintains a certain approximative permanence of position. It is generally supposed to have come in from the desert to the west, across the Euphrates and the great marshes of Nejef. I should think it possible that in some measure at least it is a natural product of the alluvial soil, and is, as it were, the chaff of that soil, separated by the wind when and where the ground is parched and destitute of vegetation. Whether this be the case or not, I think it probable, as is ordinarily assumed, that it is a recent appearance, since irrigation has ceased and the land become a desert, and that in the days when Babylonia was rich and populous these sand-hills did not exist.

We reached Tigris water first in the shape of a marsh formed by the Mejidieh, a canal not given on the maps, which leaves the Tigris, I was told, a little above the point of departure of the Shatt-el-Haï. About these marshes were camps of several sub-tribes of the Montefik, among others the Bene Temim, in whose tents we rested and refreshed ourselves at noon. They were feeling poor because another Montefik sub-tribe, the Ez-Zefih, had just robbed them of sixty she asses and two mares. From the Mejidieh marshes to the cultivated land along the borders of the Shatt-el-Haï proved to be another stretch of waterless, barren desert, about eighteen miles in breadth, a roaming ground of Montefik Beduin and marauders. This region must have been very rich in the ancient times, when the land was well watered, and to the south of our route especially lay several important mounds, of which hereafter. It was after six o'clock Monday, April 1, when, having been piloted through the numerous and intricate canals which irrigate the broad grain fields by the border of the Shatt-el-Haï, we reached an encampment of the Bene Rechab on the borders of that stream, or rather canal, some four hours above the Turkish town of Shatra, and about fifty miles almost due southeast from Niffer.

JOHN P. PETERS.

Correspondence.

WITCH-BURNING.

TO THE EDITOR OF THE NATION:

SIR: If "F. D. H." will turn to Bancroft's nineteenth chapter, he will find that New England did indeed hang, not burn, her witches. During that outburst of superstition at Salem which cost twenty lives, Noyes, the minister, pointed exultingly to where the bodies of eight of the victims swung, saying: "There hang eight firebrands of hell."

Hawthorne, in the 'House of the Seven Gables,' makes Maule, "at the moment of execution, with the halter about his neck," curse Col. Pyncheon: "God will give him blood to drink." He elsewhere pictures an elm as blasted and dead through the awful burden its branches were made to bear at that dark time. But nowadays persons generally speak of witch-burnings, perhaps because that mode of undoing seems to them more æsthetic than hanging. A few years ago, a short New England story, by Brander Matthews, appeared in *Harper's*, of which the motive was a never-dying fire kindled by a brand brought from a witch's burning, and kept alive by family hatred, until the long feud was quenched in love of youth and maiden, when the flame flickered and died.

Since our New England ancestors did burn human beings, albeit black, I think it makes small difference, on the score of greater or less iniquity, that they hung the witches instead of burning them, but it is as well that their descendants should be accurate about the matter. Besides the haziness as to the mode, I think the common belief exaggerates the number of executions. Apart from the twenty who were hanged at Salem, five more suffered at other times and places in Massachusetts, according to Hutchinson's 'History of New England,' and three were condemned in Connecticut; but the same authority holds that there is reason to believe that two escaped, making the total number twenty-six. The annals of the Plymouth Colony and of Rhode Island are free from such a stain, and Pennsylvania acquitted the one witch brought to trial in her dominion, while I believe there is but one authentic record of an execution in Virginia.

The accused were mainly women; and, in the matter of negro-burnings, those old Puritans showed a ghastly gallantry, sending the women to the flames, the men to the gallows.

J. C. N.

CINCINNATI.

TO THE EDITOR OF THE NATION:

SIR: Your correspondent "F. D. H." is undoubtedly right as to the absence of witch-*burning* in New England; but he is wrong, is he not? in his impression that, "at the period referred to, they were so put to death in the mother country." Was it not precisely because they were not burned in the mother country that they were not burned in New England?

In its form, indeed, the terse Massachusetts law of 1641—"If any Man or Woman be a Witch (that is, hath or consulteth with a familiar Spirit), they shall be put to Death"—is clearly a reminiscence of the Mosaical legislation; but it fails to prescribe the penalty, and the penalty took the form customary in England. Later than the middle ages there was no burning of witches in England. The first law on the subject in the English statute-book—in 1541, under Henry VIII.—prescribed only that the crime of witchcraft "shall be deemed, accepted, and adjudged felony," and that the offender "shall have and suffer such pains of death, loss, and forfeitures . . . as in the case of felony." The milder law of Elizabeth, in 1562, which provides only imprisonment and the pillory for the first offence, unless death has been caused, stipulates likewise that the hardened witch "shall suffer pains of death as a felon." And even when witch-hating Scotch Jamie, fresh from his torturings and burnings beyond the border, came to the English throne, in 1603, and at once turned his ponderous wits to the framing of a sharper statute, he left the penalty still defined only by the phrase "pains of death as a felon." Now this, in England as in New England, throughout the "witch-burning stage," was taken to mean simple hanging.

Yet "witch-burning stage" is surely the proper phrase; for everywhere else in Christendom—if not in the mother country, yet in all the fatherlands—not only on the Continent, in France, Spain, Italy, Germany, Scandinavia, but in Scotland and Ireland as well, witches were burned—not always alive: they were often, especially during the seventeenth century, first mercifully strangled or otherwise done to death before the fire reached them. But, alive or dead, burned the witch must be. It was not, as in the case of arson which you cite, a rude attempt to suit the penalty to the crime. Burning for witchcraft was a legacy from the Inquisition. Witchcraft was devotion to the devil, and so heresy, and heresy must be punished by fire. Magicians had been burned, indeed, as far back as under the Roman law—the Roman law in the hands of Christian emperors; but this had been long half-forgotten when the scrupulous conscience of the mediæval Church discovered that burning is not the shedding of blood, and that to commend heretics to the secular arm for such merciful anticipation of the flames beyond the grave was but in the true spirit of the Gospel to cast into the fire the withered branches that abode not in the vine. Before the end of the fifteenth century, for witchcraft as for heresy, the stake had found its way hence into nearly every code of Europe. Even England itself, where, in 1407, Henry IV. put the suppression of sorcery into the hands of the bishops, saw before the Reformation more than one witch-burning.

Nor, though our own "witch-burning stage" is happily gone by, is witch-burning wholly a thing of the distant past. The last witch was legally burned in Great Britain in 1722, and it is now more than a century since the courts of the Continent punished their latest victims; but the last quarter-century has seen witches perish, at the hands of popular superstition and frenzy, in Russia, in France, and in England. The latest (as yet) judicial witch-burnings known to history took place not quite a dozen years ago in Mexico. Nay, twice at least within the last year or two, if one may trust the newspapers, the law has had to intervene for the protection of witches in New Mexico and in Colorado. It is not a year since the London *Times* announced the opening of a witch prosecution in Austrian Poland. And not four months ago our own dailies brought tidings of a complaint of bewitchment preferred against a villager in eastern New York. Can any of your readers tell me of other modern instances?

EMERSON'S FREE-TRADE VIEWS.

TO THE EDITOR OF THE NATION:

SIR: In your recent review of 'Emerson in Concord,' I do not recall any reference to the following passage, which is quite complete in itself, and which treats the subject in hand with the ability that is begotten of simplicity:

"The scholar is bound to stand for all the virtues and all the liberties—liberty of trade, liberty of the press, liberty of religion—and he should open all the prizes of success and all the roads of nature to free competition.

"I have no knowledge of trade. There is not a sciolist who cannot shut my mouth and my understanding by strings of facts that seem to prove the wisdom of tariffs. But my faith in freedom of trade as the rule returns always. If the Creator has made oranges, coffee, and pineapples in Cuba and refused them to Massachusetts, I cannot see why we should put a fine on the Cubans for bringing these to us—a fine so heavy as to enable Massachusetts men to build costly palm houses and glass conservatories under which to coax these poor plants to ripen under our hard skies, and thus discourage the poor planter from sending them to gladden the very cottages here. We punish the planter there and punish the consumer here for adding these benefits to life. Tax opium, tax poisons, tax brandy, gin, wine, hasheesh, tobacco, and whatever articles of pure luxury, but not healthy and delicious food."

WILLIAM H. MAYHEW.

URBANA, O., July 17, 1889.

Notes.

G. P. PUTNAM'S SONS foreshadow their autumn publications by announcing 'Tales from the Korea,' collected and translated by Henry N. Allen, Secretary of the Corean Legation; 'A Race with the Sun,' a trip round the globe by Carter H. Harrison, ex-Mayor of Chicago; 'The Industrial Progress of the Nation: Consumption Limited, Production Unlimited,' by Edward Atkinson—a large octavo; 'A Woman's War Record, 1861-1865,' by Mrs. Gen. Charles H. T. Collis; 'Lectures on Russian Literature,' by Ivan Panin; 'Christian Theism; its Claims and Sanctions,' by Prof. D. P. Purinton, of West Virginia University; 'The Modern Chess Instructor,' by W. Steinitz; 'The Story of the Hansa Towns,' by Helen Zimmern; and 'The Practical Pocket Dictionary,' in English, French, German, and Italian.

Early in August, Macmillan & Co. expect to publish an edition of Chaucer's 'Canterbury Tales,' annotated by John Saunders, with a description of English life in the poet's time, and with illustrations from the Ellesmere MSS.—a volume of some 600 pages; also 'Sant Ilario,' by F. Marion Crawford—a sequel to his 'Saracinesca.'

Prof. Max Müller's Gifford lectures at Glasgow last year will be published directly by Longmans & Co. under the title, 'Natural Religion.'

'Selections from Wordsworth,' chronologically arranged, and edited by A. J. George, is in the press of D. C. Heath & Co.

The second part of Mr. George O. Seilhamer's "History of the American Theatre," 'During the Revolution and After' (the first having been 'Before the Revolution'), is nearly ready. (Philadelphia, 112 N. 12th St.). The third and last part, 'Last Years of the Eighteenth Century,' is in course of preparation.

The Dunlap Society has just issued, as its final publication for the current year, Mr. Lawrence Barrett's recent lecture on "Charlotte Cushman," adorned with a strong wood-cut portrait, and enriched by an appendix from the learned pen of Mr. J. N. Ireland, in which there will be found a most instructive and interesting list of parts played by the great actress during her long career on the stage. A note informs us that Mr. Henry Edwards is preparing a bibliography and a list of portraits of Miss Cushman, to be issued later.

Although intelligent interest in the theatre has greatly increased of late years in England and America, it has not yet attained to the French; and in that less intelligent interest which gives itself over to gossip about the incidentals of the stage, Paris still claims the foremost place. Many books have been published in Paris about the accompaniments of acting, but none of these has been quite as unnecessary or as frankly personal as 'Loges d'Artistes' (Paris: Dentu; New York: F. W. Christern), by "Rose-Thé." It contains some four hundred solid pages of about a square foot each, devoted to a description of the dressing-rooms of the leading actresses of Paris, amplified by an occasional account of the private residences of these ladies, all illustrated by many drawings by M. Félix Fournery, and introduced by a letter of M. Émile Bergerat. Five of the thirty ladies thus immortalized, Mmes. Desclauzas, Judic, Céline Montaland, Sarah Bernhardt, and Théo, have been seen in America. Nearly a third of them are now connected with the Comédie-Française. About a quarter are attached to the Opéra or Opéra-Comique.

The New Haven Colony Historical Society proposes to publish in August the inscriptions in the old Milford graveyard prior to 1800. The transcription will be literal, the type being varied to represent as nearly as possible the appearance of each stone. The work will be illustrated by photo-chemical facsimiles of seventeen of the most interesting stones. Copious genealogical notes by Mr. Nathan G. Pond, the transcriber, will be included. The following names are among the most important: Andrew, Baldwin, Beard or Baird, Bryan, Buckingham, Burwell, Clark, Camp, Fenn, Fowler, Gunn, Gillett and Jillit, Herpin, Liron, Miles, Merwin, Newton, Nettleton, Northrup, Perit, Prudden, Rogers, Sanford, Smith, Tibbals, Treat. Only 250 copies will be sold. Subscriptions are received by Dwight E. Bowers, Box 595, New Haven, Conn. Milford's 250th anniversary will be celebrated next month.

The time for subscribing to the now completed 'Directory of the American Book, News, and Stationery Trade' (Milwaukee: C. N. Caspar) at the lowest price has been extended for a few weeks. One of the features of this work is a polyglot vocabulary of terms and phrases

employed in literature, the graphic arts, and the book, stationery, and printing trades.

The Legislature of Minnesota has lost patience with "one Willard Glazier," whose distressing attentions to the Father of Waters as sole discoverer of the fountain-head are well known. It has passed an act fixing the name of Elk Lake situated in Beltrami County, and warning all publishers that "no edition of any school geography, published subsequently to January 1, 1890," which gives Glazier's name to that lake, or any name but Elk, "shall be used in the schools of this State."

Capt. Glazier's feat is ignored in the list of discoveries which Mr. Fred. A. McCord puts at the front of his excellent 'Handbook of Canadian Dates' (Montreal: Dawson Bros.), though he notices Joliet and Marquette's finding the Mississippi in 1673. The handbook must be of the greatest convenience to any one concerned with the political history of the Dominion. The founding of cities, of newspapers, the order of wars, and battles, and treaties, the provincial delimitations and organization, the Viceroys and Governors and Secretaries of State, the clergy and judiciary, the personnel of cabinets, the sessions of legislatures, the growth of railways—such are a portion of the data offered here as the fruit of laborious research.

Mr. Spofford's 'American Almanac' for 1889 has been issued in due time by the American News Co. Its usefulness is so generally appreciated that we need do no more than mention the fact of its issue (the twelfth).

We must dismiss briefly, too, the very attractive series of "English Men of Action" (Macmillan), of which five volumes have accumulated on our table, viz., 'Henry VII.,' by James Gairdner; 'William Dampier,' by W. Clark Russell; 'Wellington,' by George Hooper; 'Lord Lawrence,' by his Secretary, Sir R. Temple; and 'General Gordon,' by Sir W. Butler. Several of these handy books in scarlet contain portraits; that of Dampier, a woodcut, being a great improvement on the steel print one sometimes meets with from the same painting. Mr. Hooper, in summing up the pros and cons of Wellington's generalship, utters a just rebuke of Lord Wolseley's militarism as exhibited in disparagement of the Iron Duke. "That form of intellectual activity which is called military genius," he says, "is, when free from the restraints of all moral principle, a curse to mankind; and that will be an ill day for England when her generals come to prefer and adore such a form."

D. Appleton & Co. have published 'The History of a Slave,' by H. H. Johnston, the well-known African explorer. It is an intensely realistic description of life in the slave-raided region of the Western Sudan. No one can read it, or even glance at the illustrations from sketches (often of real scenes) by the author, without feeling with Dr. Livingstone that it is the duty of the Christian nations to use every proper means to heal "the open sore of the world."

Those who have still a keen interest in fixed forms of verse may be glad to see 'New Verse in Old Vesture,' by John Cameron Grant, a pamphlet of poems published in London by E. W. Allen. Mr. Grant's verses are introduced by a preface written by Mr. Gleeson White, the recent editor of 'Ballades and Rondeaus.' Mr. Grant's muse is exact, conscientious, and fertile, but her sacrifice to the virelai and the kyrielle and the gloze, and such artificial trifles, is idle. Mr. Dobson, Mr. Lang, Mr. Bunner, and Mr. Henley have shown that true grace may be put in a rondeau and real vigor in a ballade; but most of the other forms still seek a poet to justify their right to live.

Mr. Townsend MacCoun has published an historical atlas of the United States, prepared by himself, which will be found a most valuable aid to the study of American territorial history. The volume, a small quarto, contains forty-three maps, grouped in four divisions. The first, "Discovery," consists of six maps, mostly from fifteenth and sixteenth-century originals, and taken from the "Narrative and Critical History of America." The second division is "Colonial Period," the third "National Growth," giving the successive changes in territorial possessions from the time of the French and Indian war to the purchase of Alaska. The fourth division, "Development of the Commonwealth," gives the divisions of territory—colonies, cessions, States, and Territories—at successive epochs from the Revolution to the present day. The maps are followed by forty-four pages of "Explanatory Text," very compendious—perhaps too much so—but perspicuous and well arranged. The work is done with extreme care and accuracy. It is hardly possible that, in so varied and complicated a subject, and so comparatively new a field, there should not be errors; but we have not been able to detect any. Among the most curious of the maps—rather for special students than for general classes—are those which give the various boundaries proposed in the negotiations for the treaty of peace in 1783. A copy of this work we must consider almost indispensable for any thorough study of the subject; and for advanced classes it would be desirable that every member of the class should have a copy.

'Longman's New Atlas, Political and Physical, for the Use of Schools and Private Persons,' would be thought a luxurious possession by any schoolboy in this country, and indeed by the teachers of most of our public schools for their own use. It is a handsome quarto in substantial cloth binding, "consisting of 40 quarto and 16 octavo maps and diagrams, besides insets, and 16 quarto [lithographic] plates of views," etc., an index of places, and an introduction. The map scales are identical, or multiples of the prevailing scale; a uniform coloring in three tints indicates the comparative heights of countries; physical features are sufficiently indicated along with the political, save where special maps are given to both; only the more significant towns are named, but the index locates many of the places thus excluded. Such are the main cartographic principles observed, and they are very well carried out. Convenient is the table of contents inside the front cover. The map edges are reinforced by a backing, and numbered as in a ledger. Naturally, a British atlas is strongest in British maps, and the American portion would be too meagre for this market, which might well be consulted in a special edition. If the plates of typical scenery, etc., which make about one-fifth of the bulk of the volume, were dispensed with—as we think they might be, though the racial portraiture is fresh and admirable—the price would be by so much diminishable. It seems odd that lithography should here have been resorted to in place of woodcuts, which would have told so much more in the same compass, and told it better.

Some of our readers may have seen the Japanese Fairy Tale series—English version and native illustration and decoration—which we think the Messrs. Putnam introduced in this country. 'Princess Splendor, the Woodcutter's Daughter,' a legend of Fujiyama, translated by E. Rothesay Miller, comes to us from Tokio. It is a pleasant and humorous little tale of a banished fairy giving impossible tests to her human suitors. The pictorial embellishments are pertinent and effective.

After an inexplicably long interval, the excellent series of 'Les Grands Écrivains Français' has resumed publication with a biography of Thiers by M. Paul de Rémusat, an adequate and sympathetic sketch from the hand of a personal friend. We can do no more now than to note its appearance and say a word of praise for the admirable photogravure reproduction of M. Bonnat's vigorous portrait now in the Louvre. The 'Thiers' is the sixth volume issued, and in it we find a list of announcements greatly enlarging the original scope of the series. Among the new volumes now promised are 'Corneille,' by M. Sarcey; 'Pascal,' by M. Sully-Prudhomme; 'Marivaux,' by M. Ganderax; 'Madame de Staël,' by M. Albert Sorel; and 'Calvin,' by M. François de Pressensé.

The death of E. Véron, editor of *L'Art*, on May 22, is appropriately noticed in that magazine for June 1 by Paul Leroi, who speaks of his late chief in the highest terms, and enumerates some of his varied works, historical, economical, and artistic, as 'The Superiority of Modern Arts to the Ancient,' etc. For the rest, *L'Art* follows up on the one hand the Salon, on the other the Exposition, and continues its comparison of 1789 and 1889. M. Leroi says of the French school of art that its great evil is the suppression of thought in the sole interest of execution.

Wm. Mueller, 695 Broadway, sends us the American edition of *Academy Architecture and Annual Review* for 1889—a new venture, containing a selection of the most prominent architectural drawings hung at the Royal Academy exhibition, and "a review of interesting architectural subjects carried out or designed [in Europe] during the last few years." The editors, Alex. Koch and C. W. English, appear to be partners, for one of their designs appears on p. 81. The brochure consists wholly of plates, and the illustrations are indifferently process or heliotype copies of drawings, or, in a few instances, of nature. The variety of subject and of nationality gives much interest to this collection for the layman, and may have some for the designer and draughtsman, according to his critical capacity.

The Bureau of Education has just issued 'Education in Georgia,' a monograph in the series edited by Dr. Herbert B. Adams. The compiler is Mr. Charles Edgeworth Jones of Augusta, and his treatment follows the scheme adopted of tracing the history from the beginning. For the period before the war thirty pages suffice, since "there was no regularly organized system of common schools supported by public taxation" till Lincoln and Grant and Sherman had made it possible. The ninth chapter is devoted to institutions for colored people. Illustrations are given of college buildings, etc., as heretofore.

The professors of law, science, and letters and medicine at Grenoble have just founded a periodical *Annales de l'Enseignement Supérieur*, the first number showing all the faculties represented, and topics which range from "Orestes and Hamlet" to "un nouveau procédé de restauration du nez."

—The too slender ranks of genuine and serious students of American history have just been diminished by the death of Alexander Johnston, Professor of Political Economy in the College of New Jersey, at Princeton on July 20. This sad and sadly premature event had been foreshadowed by the state of Mr. Johnston's health for many years—perhaps even from the date of his professorship, to which he was called in November, 1883. He then wrote

to us, with a humorous deprecation of journalistic blundering, that we might "get his record straight," as follows:

"The record aforesaid is a brief one: graduated at Rutgers College in 1870; admitted to the bar in New Jersey in 1875, from the office of Gov. George C. Ludlow; and have written a 'History of American Politics,' the American political history in Lalor's 'Cyclopædia of Politics' and R. E. Thompson's American Supplement to the 'Britannica,' and No. xii of the Johns Hopkins historical series, 'The Genesis of a New England State [Connecticut].'"

"The catalogue of the books which I have not yet written, would fill," he added, "a large volume, but I think the above are all you can do anything with at present." In fact, this industrious writer subsequently produced the 'Connecticut' (in the American Commonwealths Series); 'Representative Orations, with an Outline of American Political History'; a 'History of the United States for Schools'; and the chapter on the history of political parties in the seventh volume of Winsor's 'Narrative and Critical History of America.' Add to this that, while his strength permitted, he was an active contributor to the *Century Magazine*, especially in its "Topics of the Time" department, and an occasional contributor to the *Nation*. Finally, he had but just attained his fortieth year, having been born in Brooklyn, N. Y., on April 29, 1849. One must be a genius to cover as much ground as he did at so early an age, and be free from error of fact or judgment; and he had the candor to acknowledge past mistakes and the eagerness for better information which were one of the charms of his character. In conversation he was as fluent as with his pen, and both socially and on his professorial side he was singularly genial and attractive.

—Few will rise from reading Mr. Henry F. Waters's "Gleanings," in the July number of the *New England Historical and Genealogical Register*, without the conviction that the Roger Williams of his documents is the subsequent founder of Rhode Island. The supposed parents are James Williams, citizen and merchant tailor of London, in good circumstances, and his wife Alice, who survived him thirteen years. The wills of both are given, each with mention of Roger, and the mother's (in 1634) speaking of him as "now beyond the seas," which *our* Roger had been for three years. Various other wills, in Mr. Waters's fashion, throw light on the family connection, and in particular that of Roger Pemberton of St. Albans, godfather of Roger Williams, and father-in-law to a sister of the Rev. Josse Glover who provided the means for establishing the first printing-press in what is now the United States, viz., in Cambridge, Mass. (Concerning this Glover-Pemberton alliance Mr. Waters promises us more information hereafter.) Mr. Waters, whose genealogical instinct is worth more than most men's researches, declares that tradition alone stands in the way of the proposed identification—the tradition, namely, that Williams was a Welshman, which has been supported by Mr. Reuben A. Guild, Librarian of Brown University. Mr. Waters considers Mr. Guild's argument, only to draw from it additional proofs of his own view. He points out lines of further research, regretting that he cannot prosecute them himself.

— For the full strength of the case we must refer to the *Register;* it covers the points of Roger's age, his brothers and sister, a kinsman whom he brought to New England as a protégé, etc. After Mr. Waters's communication was in type, he suggested a clue which the editor of the *Register*, Mr. John Ward Dean, promptly followed up, discovering two letters written by Roger Williams in 1629, preserved in the collection of Mr. Lowndes of Barrington Hall, Essex, England. Tracings of American autographs sent to him Mr. Lowndes pronounced identical with the signature appended to these two letters, which relate to a rejected proposal from Roger Williams to a niece of Lady Joan Barrington, and to the health of this lady's soul. He was then living at High Laver, in Essex. He speaks of "many former offers [of honor and preferment] and that late New England call," and of his pecuniary expectations ("amongst some other children") "after the death of an aged loving mother." This tallies exactly with all the circumstances of Alice Williams and her family at that date. Mr. Dean hardly seems to us to insist strongly enough—the handwriting considered—on the conclusiveness of this link in the chain of evidence.

—Some of the friends of the late Allen Thorndike Rice seem to think that he was the originator of the present habit of filling a review with articles bearing the signatures of contemporary celebrities or notorieties. Mr. Rice carried the practice to more pernicious extremes than other editors, but he did not originate it. In the *Edinburgh*, which was the earliest of all reviews, the articles were all anonymous, although the names of the writers were generally known to those most interested. When Buloz evolved the fortnightly *Revue des Deux Mondes* from the English quarterlies, French custom overruled the English precedent, and the articles bore the name of the authors. In time the English *Fortnightly Review* was founded, in imitation of the *Revue des Deux Mondes*, and, under the editorship of Mr. John Morley, its articles were also signed by the authors—then a distinct innovation on English usage. The *Fortnightly* was always decorous and devoid of "sensational" attraction. One of its rivals, the *Contemporary*, was edited for a while by Mr. James Knowles, and he it was who began the search for sensational signatures. When he withdrew from the *Contemporary* to found the *Nineteenth Century*, he made special efforts to get as many titled contributors as possible, and to extract timely articles from the man or the woman of the hour, even when these temporary lions were not professional writers. It was from the *Nineteenth Century* that the *North American* borrowed this unliterary seeking for special attractions, and this looking rather to the name of the writer than to the merit of the writing. Under the adroit guidance of Mr. Laurence Oliphant, Mr. Rice was able to vie with Mr. Knowles, and to procure papers as likely to be talked about as Mr. Gladstone's "Kin across the Sea." But after Mr. Oliphant was called away, and more particularly after Mr. Metcalfe withdrew to found the *Forum*, the *North American Review* sank lower and lower into the marsh of mere sensationalism. The founder of the *New Review* has spoken of his new venture as "a sixpenny *Nineteenth Century*," and so far Mr. Grove has skilfully followed on the lines of his two-and-six predecessor: not even Mr. Knowles could have done better than to get an article on the Eiffel Tower by M. Eiffel himself. There are no signs, fortunately, that either the *New Review* or the *Nineteenth Century* will ever descend to the depth of perverted "timeliness" in which the *North American* now is. The *Forum* has a dignity which the *North American* has wholly lost; and it seems to have a certain originality in that, as its title indicates, it offers itself as a platform for the man who has a pressing message. The demise of the *New Princeton Review* is much to be regretted, although the *Political Science Quarterly* is able to find room for essays, such as Mr. Whittredge's recent paper on "Rotation in Office," which we should have expected to find in the *North American Review* of twenty years ago.

—The completion of the second volume of the *Journal of Morphology* by a number containing five papers, two hundred and sixty pages, seventeen lithographic plates, and about forty figures in the text, calls for mention of it in connection with No. 2, which should have been noticed at the time of its publication. The paper by H. V. Wilson on the development of a coral (*Manicina*) was prepared as a thesis for the degree of Ph.D. at the Johns Hopkins University, and admirably represents the high character of the work done there. Should there be obtained a second example of the peculiar fish, *Grammicolepis*, described by Poey and Shufeldt, it is to be hoped that the brain and heart may be preserved and studied for the surest determination of its affinities. Prof. Cope discusses the hyoid and ear-bones of the Batrachia. He finds confirmation of his previously expressed view that *Siren* is descended from a land-salamander, and that its immediate ancestor became aquatic again at a comparatively late period of geological time"; he concludes that the condition of the ear-bones of the tailed Batrachia is "one of degeneration." From a comparative study of the Alaskan bird, *Aphrisa virgata*, Shufeldt concludes that it should constitute a distinct family, and thinks "that when such an isolated form is discovered, the fashion is too prevalent" of assigning it to some family already constituted.

—Of Number 3, the initial and longest paper is on the uterus and embryo of man and the rabbit, embracing numerous original and important observations. The author, Charles Sedgwick Minot, properly acknowledges the aid of a grant from the "Research Fund" of the American Association for the Advancement of Science, the first of the grants from that source. The plates and text are so clear that it is almost ungracious to suggest that in this, as in some other papers, the often nearly blank page opposite the plate might be profitably occupied by a categorical mention of the more important points which are illustrated thereby—an extension, so to speak, of the plan approximated in Plates xxviii and xxx. All American naturalists will welcome the paper of Mr. Allis on the "Lateral Line of Amia," not only for the new facts which it contains, but also because it is understood to be the first of a series of monographs, in which the structure and development of this interesting teleostean ganoid are to be presented in the country which alone it inhabits. The rostral disk will remind readers of the similar structure observed by A. Agassiz in the embryo garpike, while the transformations of the tail from protocercal through heterocercal to the adult "masked heterocercal" stage was predicted by Wilder in 1875 and 1876. Shorter but by no means insignificant contributions are "Segmental Sense-organs of Arthropods," by William Patten; "Atoms and Molecules," by A. E. Dolbear, a discussion of a topic interesting the biologist from the physical standpoint, and "Some New Facts about the Hirudinea," by C. O. Whitman, in which are presented very important considerations as to the nature and origin of vertebrate sense-organs.

—In connection with the above-named paper on *Amia* may properly be mentioned Mr. S. Garman's account of the lateral line system of sharks, skates, and Holocephali, forming No.

2 of volume xvii of the Bulletin of the Museum of Comparative Zoölogy. The figures are based upon dissections made for the late Professor Agassiz by Mr. Garman and (in 1866-8) by Wilder. The text includes a description of the arrangement of the canals in thirty-four genera, a "synoptic list," a bibliography, with historical comments, and concludes as follows: "Professor Agassiz was the first to attempt to use the canal system as a basis for homologies, as an aid in classification, or as a means of tracing affinities—purposes for which it is admirably adapted." To Mr. Garman's study of the rattlesnake we owe an article in the Proceedings of the Boston Society of Natural History (vol. xxiv), tracing the growth of the rattle in connection with the sloughing, discussing the uses of it, and connecting its evolution with the copperhead (*Ancistrodon*), by way of the ground-rattler (*Sistrurus*). The same writer has contributed to the Bulletin of the Essex Institute (vol. xx) a literary-scientific paper on "The Batrachia of Kalm's 'En Resa til Norra America'"—a very thorough examination of Kalm's 'Travels' to determine just what the Swedish naturalist recorded about the frogs of this continent. Mr. Garman carefully compares the original text with English, Dutch, and German versions. He concludes that the bull-frog and the leopard-frog are "the only species noticed by Kalm that can be identified with any degree of confidence."

—Prof. Willard Fiske has published in Florence a pamphlet of twenty-eight pages containing a second list of books in the author's own collection not cited by Lidderdale in the British Museum Catalogue. It contains 139 titles of books acquired since the publication of the previous list, together with some corrections of it. In the British Museum Catalogue, the author tells us in his preliminary note, are 170 titles of books printed in Iceland before the establishment of a press at Reykjavik, in 1844. His two supplementary lists contain 278 more, making a total of 448, an astonishing number considering the population of the land and the wretched economical conditions that prevailed. The great majority of the books are of a religious or ethical character. Among the others are several calendars, an A B C book, a tract on the resuscitation of persons apparently drowned, on epidemic catarrh, and on vaccination. The titles are followed, as in the first list, by accurate descriptions of the copy catalogued and by complete bibliographical material, often extended to an exhaustive essay on the various editions of the work; the whole is succeeded by an index of names and titles. The value of this material in its bearing upon the history of the language and literature of Iceland, because of the definitive shape in which it is given, cannot well be overestimated. The steady growth of Prof. Fiske's unparalleled collection of Icelandic books attests not only an extraordinary interest in an out-of-the-way subject, but bears witness as well to his skill and indefatigability as a collector.

SAMUEL ROGERS.

Rogers and his Contemporaries. By P. W. Clayden. London: Smith, Elder & Co.; Boston: Roberts Bros. 2 vols. 1889.

"I MET Rhymer near your door, and he looked so unusually complacent that I guessed he had been at his old work, endeavoring to make some one dissatisfied. . . . You must not be disconcerted by his remarks, for, if I may be allowed to parody the observation applied to Charles II., I should say that Rhymer is known never to have *said* a kind thing, or never to have *done* an unkind one. He has come to the assistance of many a man of genius in those vicissitudes to which individuals of that class are more than any other liable when they depend on literature for support. Towards artists his good word to would-be patrons, possessed of more gold than taste, has never been wanting; yet, such is his peculiarity that, while ready to *serve*, he is seldom willing to avoid offending, and evidently finds a pleasure in saying disagreeable things. Even his compliments, and they are few and far between, have something in them which leaves those present in doubt whether they do not admit of another and less kind interpretation, although the individual to whom they are addressed may not be aware of it. . . . His age and infirmities screen him from the correction which his malice so frequently merits; and, aware of his impunity, he thinks himself privileged to annoy all those with whom he comes in contact. But no, not all; for to the rich and great he is as obsequious as he is insolent to those who are not in a position to gratify his *parvenu* taste for grandeur."

Such was the portrait of the poet Rogers as painted fifty years ago by Lady Blessington in her almost forgotten novel 'Strathern'; and on the whole the characterization is eminently just. It is borne out by his 'Table-Talk,' published soon after his death by his friend Alexander Dyce, much as that was decried at the time by some of Rogers's other friends; and by the remembrance of those who were intimate with him. At first sight the book before us would seem to give Rogers quite another character, especially in his earlier years; but, in summing all up, it comes to much the same thing.

In fact, Rogers had a very good heart and a very sharp tongue. He even took delight in saying disagreeable things, and

"had cultivated the habit of making caustic remarks until it had become a second nature. Sir Henry Taylor tells us that his wit was in higher repute than any of his time except that of Sydney Smith; but while Sydney's was genial and good-humored, that of Rogers was sarcastic and bitter. Rogers knew this and sometimes apologized for it. 'They tell me I say ill-natured things,' he observed to Sir Henry Taylor, in his slow, quiet, deliberate way. 'I have a very weak voice; if I did not say ill-natured things, no one would hear what I said.'"

His tongue was, a friend testifies,

"an incisive organ, never allowed to grow blunt or rusty, but kept bright and well pointed for needful occasions—moreover, always polite and always distinct, which immensely increased its effect; but, what has been forgotten by his detractors, it was strictly used for defence, never for provocation, and for defence of others quite as much as of himself. Although, therefore, within these limits, no one could better say a bitterer thing, yet all will admit that he never said a vulgar or a rude one, or that that small and distinct voice ever failed to be lifted up in praise of merit or defence of the injured."

To say, however, that Rogers's tongue was used solely in defence is saying too much. One remark of Lady Blessington's quoted above is made almost in the same words by Fanny Kemble Butler: "Although you say most cruel things (as I remember), you do, I know, many most kind ones; and I feel, therefore, the more courage in addressing this prayer to you." One would think that this was the preamble of a request for an important service, whereas it was only a sort of formula in a letter of introduction given to Miss Catherine Sedgwick. Rogers duly invited Miss Sedgwick to breakfast, and she as duly reported it in print in an American journal, being sure that "his life flowed in a kindly current. K. told me he met him one winter in Paris, where he found him enjoying art like a young enthusiast, and knowing every boy's name in the street he lived in, and in friendship with them all."

That Rogers should receive Miss Sedgwick was but natural—the son of a man who put on mourning on hearing of the fight at Lexington, and who had himself given hospitality to Priestly after his house had been destroyed by the mob at Birmingham and on the eve of his departure for America, could not but be kind to Americans. He was indeed so kind that his hospitality was sometimes taxed, and he said, according to Mr. Sumner: "The Americans I have seen have generally been very agreeable and accomplished men, but there is too much of them; they take up too much of our time." But there they were; and if he objected to the number, he must have been pleased with the quality of his guests—Cooper, Irving, Ticknor, Longfellow, Willis, Daniel Webster, Everett, Bancroft, Prescott, Sumner, and a host of others.

To go back: As to Rogers's goodness of heart there can be no question. Mrs. Norton says rather tartly: "He gave what he valued least, money: not what he valued most, praise." But this was not only untrue but unfair. Rogers, although a banker, never had money to throw away; he had money which was at the service of his friends, and for the assistance of those who needed it most. When Moore was in difficulties, Rogers lent him £500. Some time after it was repaid, Rogers asked him what he should do with that check, and on being told to present for payment, said: "Well, if it is any convenience to you in your Bermuda business, to enable you to allege that you *have no means*, I will keep it for you." Subsequently he offered to lend him £1,000 to arrange his affair with Longmans. In the same way he lent money to the poet Campbell to buy a share in a magazine, who said that his only difficulty was in inducing Rogers to accept the repayment of the loan. Several times he helped Sheridan, and after his death there were found among his papers checks of Sheridan which he had never presented. Much later in life he sent £200 to a friend who had been condemned by the physicians and wanted to go to the Cape as his last hope. In telling his sister of it he wrote: "I think my money well spent if I never see it again."

Such instances might be greatly multiplied, but it was not only in money ways that Rogers was kind. He was willing to take great pains and trouble for his friends, his friends' friends, and even for people who had no claim upon him—whether it were simply in providing for their amusement, for obtaining them places in the British Museum, or under the Government (as with Cary, the translator of Dante, and others), or for negotiating with publishers for the publication of their works (as with Wordsworth). He got Sir Thomas Lawrence out of difficulties by inducing Lord Dudley to purchase some of his art-treasures. Like all men in his position, he had almost countless applications for favors; not all could be granted, and some had to remain unanswered. Hence, perhaps, the accusations against him of hardness of heart. Rogers was by no means a rich man, and his friends believed that his income in the later years of his life scarcely exceeded £2,000 a year. When his bank was robbed, in 1844, of about £47,000, it was thought at first that the loss might cripple the bank and possibly ruin him. Most of the money was ultimately recovered, but during the period of suspense Rogers reduced his expenditure and gave up his carriage. One of the fabulous stories of his wealth and ostentation was manifestly impossible—that he had a million-pound note of the Bank of England framed in solid gold, and hanging in his drawing-room. What really hung there was Milton's receipt for the five pounds paid to him for the copyright of 'Paradise Lost.'

Rogers was never a handsome man. He was

in his later years very bald, his countenance singularly pale—even cadaverous—and wrinkled. This unearthly pallor brought upon him many jokes from his friends, which he generally took in good part and rather enjoyed. "One day, when he had been visiting the catacombs with a party of friends, Rogers emerged last. 'Good-bye, Rogers,' said Lord Dudley, shaking his hand, and everybody understood the joke. Sydney Smith jocosely advised him, in having his portrait taken, to be drawn saying his prayers with his face in his hands." Carlyle, in a letter to Emerson, speaks of "Old Rogers with his pale head, white, bare, and cold as snow," and says he "will work on you with those large blue eyes, cruel, sorrowful; and that sardonic, shelf chin."

Rogers's life was so long that he could easily have repeated to persons now living details of events occurring in the early part of the last century, told him by the actors in them. He had heard Blair and Robertson preach; had spent a day with Adam Smith; had known Fox and Grattan; had been intimate with Byron, Campbell, Moore and Scott, Wordsworth, Lamb and Coleridge, and afterwards knew Macaulay, Tennyson, Ruskin and Gladstone. Such a long life naturally falls into periods: his early years, when he was himself managing the bank, living in the country, and making his poetical reputation; his middle life, after he had come to London in 1803, was making his way in London society, and his house in St. James's Place a centre of literature and conversation, and when he was still at intervals busy at his poetry; and, finally, the twenty years after he had published the illustrated edition of his poems, had given up writing, and was living only to enjoy life. The accounts of the middle period, which are the most entertaining, are, or rather were, to be found, until collected by Mr. Clayden, only in the memoirs and letters of his contemporaries. The 'Reminiscences' and 'Table-Talk,' published after his death, naturally relate to his last period, and even the generation that noted them down has now almost passed away. These distinctions have to be remembered in considering Rogers, because his memory failed him towards the end, and the same story, therefore, often assumes different forms. Circumstances of which he had originally thought little or nothing—as, for example, Byron's somewhat coarse practical joke on him at Pisa—gained importance in his eyes after being often talked about and criticised.

In Rogers's time, or at all events in part of it, conversation was made a fine art. Men prepared themselves for the breakfasts and dinners at which they were to take part, sketched out the conversation, and arranged how to bring in their special topics and stories. Many took notes afterwards of the talk at table, and some even entered in a ledger the names of the guests and the anecdotes they themselves had told, so that they might not repeat themselves too often. Rogers had commonplace books of this sort, and he used sometimes to bring them out and read his recollections of distinguished men. In those days a man talked to the whole table, and allowed no interruption and no rivalry. Rogers himself was very exacting in this respect. He said one day that "it was a great fault in young men not to listen to old ones who were talking together; that a few days before, at a dinner-party, he was talking with the Archbishop of Canterbury, an old man like himself, and two young men sitting next to them kept talking together at the time; if they had held their tongues and listened to the old ones, they might have heard a great deal that was interesting." He preferred entertaining his friends at his own table to dining out, and when he spoke, the guests were expected to listen. His greatest difficulties were with Sydney Smith and afterwards with Macaulay, whom it was hard to put down. They met at Bowood on one occasion during the Christmas holidays in 1841, when Lord Lansdowne had a distinguished company of guests. Greville, speaking of Macaulay's sonorous voice, physical energy, and declamatory style, says: "The drollest thing is to see the effect upon Rogers, who is nearly extinguished, and can neither make himself heard nor find an interval to get in a word. He is exceedingly provoked, though he cannot help admiring." Fanny Kemble Butler makes a general remark about Macaulay's "speech-power," and says that

"'Sydney Smith's humorous and good-humored rage at his prolific talk was very funny. Rogers's, of course,' she adds, 'was not good-humored; and on this very occasion, one day at breakfast, having two or three times uplifted his thread of voice and fine incisive speech against the torrent of Macaulay's holding forth, Lord Lansdowne, the most courteous of hosts, endeavored to make way for him with a "You were saying, Mr. Rogers"—when Rogers hissed out, "O! what I was saying will keep."' Greville writes: 'He will revive to-morrow, when Macaulay goes.'"

Much of what was called wit in those days seems to us little more than coarse banter. The sayings of Rogers are neat expressions of cynicism or severe criticism rather than wit. His nephew, Samuel Sharpe, says:

"My uncle's conversation could hardly be called brilliant. He seldom aimed at wit, though he enjoyed it in others. He often told anecdotes of his early recollections and of the distinguished persons with whom he had been acquainted. These he told with great neatness and fitness in the choice of words, as may be understood by an examination of the prose notes to his poems. But the valuable part of his conversation was his good sense, joined with knowledge of literature and art, and yet more particularly his constant aim at improvement, and the care that he took to lead his friends to what was worth talking about."

Mr. Hayward wrote of Rogers's parties:

"It was a current joke that he asked people to breakfast by way of probation for dinner; but his breakfast parties (till the unwillingness to be alone made him less discriminating) were made for those with whom he wished to live socially, and his dinners, comparatively speaking, were affairs of necessity or form. Even in his happiest moods he was not convivial; his spirits never rose above temperate; he disliked loud laughing and talking, and unless some distinguished person or privileged wit was there to break the ice and keep up the ball, the conversation at his dinners not unfrequently flagged. It seemed to be, and perhaps was, toned down by the subdued light, which left half the room in shadow, and speedily awoke the fairer portion of the company to the disagreeable consciousness that their complexions were looking muddy and their toilettes the opposite of fresh. After making every allowance for this drawback, however, his dinners were justly reckoned among the pleasantest in town."

Some who have thought Rogers's poetical reputation unmerited have considered it even factitious, and gained for him by his wealth, his social position, and by the cheap compliments of writers and critics who had been entertained by him and wished to be his guests once more. For such a statement there is no foundation. The contemporary critics of Rogers may seem to us mistaken in their judgments, but there is no reason or justice in accusing them of dishonesty. Certainly we cannot but suppose that both Byron and Lord Holland—to say nothing of others—were sincere in their admiration of Rogers's poetry. In point of fact, Rogers had made his poetical reputation and enjoyed popularity as a poet before he came to settle in London in 1803, and long before he possessed social power. 'The Pleasures of Memory,' on which his reputation was based, had been first published in 1792, and had been extremely popular. In those eleven years it had had a continual sale, and a new edition of 2,000, the fourteenth, had just been issued. It is true that at that time his only great rival was Cowper, and the other poets of the day were Mason, Joseph Wharton, Whitehead, Cambridge, Beattie, and Hayley. As Mr. Clayden says:

"Campbell had published the 'Pleasures of Hope,' written in emulation of the success of 'The Pleasures of Memory'; had just composed 'Lochiel's Warning' and 'Hohenlinden,' and was on his way to London to devote himself to literature as a profession. Southey had written 'Thalaba,' but it had been coolly received; Wordsworth, married in the year before, was writing the 'Prelude,' but had only actually published the enlarged edition of 'Lyrical Ballads'; Coleridge had composed some of his best poems, but was little known, and was earning his livelihood by writing for the *Morning Post*. Walter Scott had translated 'Goetz von Berlichingen,' and issued 'Minstrelsy of the Scottish Border,' but was not yet known to fame. Tom Moore, then called Anacreon Moore, because he had translated Anacreon, was travelling in America; and Byron was a boy at school."

The 'Epistle to a Friend' had appeared in 1798. From that time Rogers published nothing until 1812, when he issued his 'Columbus,' on which he had been slowly working for fourteen years. Two years later, curiously enough, as it seems to us now, his 'Jacqueline' was published in the same volume with Byron's 'Lara,' neither with the author's name, though there was no attempt to conceal the authorship. 'Human Life' came out in 1818, by far the best of Rogers's poetry up to that time. It is scarcely possible to characterize all these poems as other than a series of platitudes, conventional sentiments and commonplaces expressed in precise language and smooth and flowing verse. Some of them—the 'Columbus' especially—were submitted by the author to his friends for their criticism in privately printed copies; and there were often long discussions by letter as to the best form for certain passages and even for single lines.

The 'Italy' was the last work of Rogers, although on two or three subsequent special occasions he wrote a few verses. Unlike most of his other poems, it is in blank verse. It is pleasing, and appeals to cultivated minds far more than they. It is still read, but it is almost the only one that is read, and is perhaps the only one by which he will be judged in future. To those who have been in Italy every line recalls a picture, an impression, or a feeling; for that reason it is an agreeable book for the traveller to have in his portmanteau. It was the product of Rogers's two Italian tours. He went to Italy in the autumn of 1814, as soon as the Continent was again open to English travellers, and remained there the winter, passing through Brussels on his return only a few days before the battle of Waterloo. He kept a diary which is the foundation of the poem. It is a pity that Mr. Clayden has not printed it in full, for he saw much that would be entertaining in his detailed descriptions. Canova showed him how he kissed his bed three times when he went into it after dinner; and after he had dined at the Duke of Bedford's the Duchess waltzed and danced with castanettes before Canova. At Naples,

"at a ball at the house of the Minister of Finance, 'all the world danced and the King himself, in a quadrille, with the Princess of Wales. Wonderful play with his limbs, too much so with his head and body. It gave him the balancing air of a rope-dancer, or of a dancing-master teaching ease to his scholars.' Murat was extremely polite to Rogers, whose fame as a poet had reached him. The Queen talked to him about 'The Pleasures of Memory.' Murat

himself, as he rode on horseback about Naples, often met Rogers, and always saluted him with the question, 'Eh, bien, monsieur, êtes-vous inspiré aujourd'hui?' . . . On the 6th of March, after a visit with Lord Holland to Pompeii, Rogers was at Lord Holland's at night when the rumor came, 'Bonaparte gone from Elba.' Rogers adds: 'Fainting of his sister, the Queen; many conjectures'; 'un peu d'espoir,' says Mosbourg, 'et beaucoup de désespoir.'"

The idea of 'Italy' was formed gradually in his mind. Various bits had been written or sketched out on the spot, though it must be admitted that some of the prose descriptions, written hurriedly at the time—for instance, that of Paestum—are equal to the more finished and revised verses. In the autumn of 1821 Rogers went again to Italy for the winter, this time meeting Byron—first, at Bologna, and again at Pisa with Shelley. The meeting is commemorated by the passage headed "Bologna," though it was written after Byron's death. During the winter Rogers continued writing, and, under the editorship of his sister Sarah, the first part of 'Italy' appeared anonymously, while he was still absent from England. The second part was not published until 1828—this time with the author's name attached. But new schools of poetry had sprung up, and poets had appeared who were greater than Rogers—this relic of a past generation. The public taste had changed, and although 'Italy' had a *succès d'estime*, it was not popular.

"Rogers fancied," says his nephew, "that the cool manner in which the poem was at first received amounted to an unfavorable verdict. He was not disposed to question the taste of the public in the case of a work which was meant to please the public. So he made a bonfire, as he described it, of the unsold copies, and set himself to the task of making it better."

He therefore revised, enlarged, and improved the poem, and determined to issue it in an illustrated edition. Everything was done under his own constant direction and supervision. He chose the subjects, suggested the character of the pictures, superintended their execution, and made the illustrations almost as much his own as the letter-press they adorned. Of the fifty-five illustrations, twenty-five were from Turner's drawings, twenty from Stothard, and two from Prout. The total cost of the whole edition of 10,000 copies was over $36,000. The success of this magnificent book was such that Rogers then brought out a new edition of his poems, illustrated chiefly by Turner and Stothard, the preparation for which cost nearly the same sum. Both books paid for themselves, and the early copies now bring good prices on account of the engravings. They did much towards making Turner generally known.

Mr. Ruskin, in his 'Præterita,' tells of receiving as a present on his thirteenth birthday a copy of the illustrated 'Italy,' which, he says, "determined the main tenor of my life." In a letter to Rogers, written from Venice, he says:

"The worst of it was that I lost all *feeling* of Venice, and this was the reason both of my not writing to you and of my thinking of you so often. For whenever I found myself getting utterly hard and indifferent, I used to read over a little bit of the 'Venice' in the 'Italy,' and it put me always into the right tone of thought again, and for this I cannot be enough grateful to you. For though I believe that in the summer, when Venice is indeed lovely, when pomegranate blossoms hang over every garden wall, and green sunlight shoots through every wave, custom will not destroy or even weaken the impression conveyed at first, it is far otherwise in the length and bitterness of the Venetian winters. Fighting with frosty winds at every turn of the canals takes away all the old feelings of peace and stillness; the protracted cold makes the dash of the water on the walls a sound of simple discomfort. . . . When I used to get into this humor, I *always* had recourse to those lines of yours:

"'The sea is in the broad, the narrow streets
Ebbing and flowing, and the salt sea-weed
Clings to the marble of her palaces.
No track of men, no footsteps to and fro,
Lead to her gates. The path lies o'er the sea
Invisible; and from the land we went
As to a floating city—steering in
And gliding up her streets as in a dream.'"

Margery: A Tale of Old Nuremberg. By George Ebers. Translated from the German by Clara Bell. W. S. Gottsberger & Co.

Micah Clarke, his Statement. By A. Conan Doyle. Longmans, Green & Co. Also, Harper & Bros.

On the title-page of 'The Open Door' Miss Howard, in quotation from Molière, begs permission to weave the web of her romance at leisure and not to be pressed for the conclusion. For what is properly the romance the prayer must be denied. Hardly any one is morbid enough to wish to linger over the passionate love of a healthy young woman for a man whom she has never known in any other condition than that of an incurable and rather ill-tempered cripple. The author has evaded love-passages with some cleverness, and devoted her evidently ample leisure to less distasteful episodes. In the contrast between the dazzling lieutenant who rode out at morning to enjoy his kingdom, the world, and the maimed, senseless clod borne back at evening never again to move beyond the shady garden corner, a skilful psychologist would have had his opportunity. He could have made us sigh and weep for Count Hugo, and consoled, instead of offending, by the sacrifice of a beautiful, imaginative Gabrielle. Miss Howard cannot sound deep waters, and her attempts produce cumulative irritation. Count Hugo philosophizing is dull, and as a moralist inefficient. When he quarrels with his ridiculous mamma, he becomes amusing; and mamma, together with her pampered puppy, Mousey, provokes mirth in every attitude. Miss Howard has often come very near writing capital comedy, never nearer than in the delineation of the Countess von Kronfels; but she seems to lack either the sense for art or the knowledge which would keep her from bubbling over into burlesque. She has never learned how to make a good effect by moderating hilarity. Her tenacity of early habit shows itself in many ways. Long residence in Europe has not denationalized her style, which remains vigorously American. Her Europeans are all seen through American eyes, and New England's social simplicity permeates the wickedness of the worst. Count Hugo has no more hesitation about sending his sweetheart down to the village alone, at midnight, to protect the honor of a saucy chambermaid, than a chivalrous, republican Mr. Frye of Maine would have had. And would it ever have entered into the head of a woman who had not had the benefit of New England "culture" to select as a title for a story an indefinite phrase from Epictetus which has almost nothing to do with the case?

'A Girl Graduate' is a product of New England culture unimpaired. Life is always a serious affair, almost always solemn. The baby is born in a maze of problems and questions, and the old man dies still seeking solutions and answers. Everything is decorous and honest and uplifting, and there is either no grammar at all, or a great deal of it, very inflexible and stately. The girl graduate has the grammar, while her family and friends have it not; and one of the problems which, at eighteen, confront her is, how she may gain an entrance into those charming circles where it is believed to be pretty evenly distributed. Maggie Dean is the daughter of an illiterate machinist, and would be described by an Englishman as "a young person educated above her station." To Maggie's father, as to thousands of American fathers of the same class, the English phrase is meaningless. They are accustomed to knowing that their women are finer than they, and, in their heart of hearts, are proudest when "one of the girls" is like unto the owl for wisdom and the bird of paradise for plumage. To those fond and guileless men she cannot have been educated above her station, for does not her education make her equal with the best? It is left to the girl herself to find out that it does not, and then comes the bitter hour. In the story of the 'Breadwinners' the worst consequences to a girl's nature of recognition of this disappointing truth are described with a stern disregard of popular sentiment. It would be pleasant to be able to believe that the Maggie of that famous story is exceptional and Miss Wooley's Maggie typical; but we fear that the anonymous author generalized from the wider experience, and that his views about the effect of high-school education upon the mob were less rosy. Still, it is cheerful to have Maggie Dean purged of vulgar ambitions by the fire of social snubbing, and developing a refinement which does not always accompany the knowledge gained from books.

'Grandison Mather' is a modern and realistic "romance of a poor young man." The poor young man has been rich, has been fairly educated, and capitally trained to do nothing. In the heyday of fortune he provided himself with a wife, lovely and penniless, and, when fortune takes wings, she is the only luxury of which he is not deprived. The wife is not introduced to point the proverb that "a young man married is a man marred," but to impress upon a sceptical generation that most of all in poverty and trouble a man may rejoice with the wife of his youth. There is nothing intense or tragic in the situation while the husband is looking for work, the wife waiting at home, and the slim purse diminishing, but it is all tender and pathetic, and enlivened by humor inseparable from the circumstances. Grandison Mather and his wife are fictitious, but the story of their vicissitudes is true in the most trifling detail. The author could not resist the temptation to permit his hero in the end the achievement of notoriety if not of greatness. His book, 'Dreams Within a Dream,' is the novel of the year, and there, in enjoyment of his fame, the romantic novelist would have left him. One swallow does not make a summer, nor one novel that is talked about establish preëminence in fiction. The hardest lesson Mather has to learn is, that the creative faculty is independent and erratic, and not to be relied on for the provision of what Mrs. Lecks called "board-money." By this last bitter experience the story becomes a consistent chapter of real life. Its consistency is marred by only one romantic flight, the description of St. Marc, the terrible and all-powerful critic. The author's evident acquaintance with the conditions of journalistic and literary life in New York ought to have kept his pages free from the impossible lion with the tawny mane, and the remarkable den in which the place of honor

is given to a table laden with "a whole battery of liquors."

There is novelty in a story by Mr. James with a situation so important that we are more occupied by what the people do than by the way they do it. Such a situation is to be found in 'A London Life.' Not the great one—that is simple enough. From the beginning it is clear that Mrs. Lionel Berrington is on the high road that leads to the Court of Probate and Divorce, and that the case of "Berrington versus Berrington and others" will come on in due time. The scene which makes us pause and question its possibility is that managed by Laura Wing at the opera, when she practically asks her serious and ingenuous compatriot to marry her, and is practically declined with thanks. In the moment of certainty that the long impending disgrace was accomplished, that her sister, Selina, had bolted, Laura Wing might have cried out to Wendover to save her. That would have been an impressive expression of the desperation to which she had been gradually brought by her sister's artistic wickedness and her brother-in-law's brutality. But she stopped to consider that by to-morrow Selina's crime would have engulfed her, and to decide that she must play boldly now, or be lost for ever. It is her cold calculation which makes the scene important and improbable, for the only way to reconcile it with probability is by attributing to Laura a large share of Selina's unscrupulousness, an inference which is contradicted by her ultra-sensitive rectitude and exaggerated sense of personal responsibility. Having conceived the situation, it would have been more interesting if Mr. James had permitted Laura to win, and then shown us her feelings and thoughts when she looked herself in the face, and knew, as she would know, that, for honesty, there was no choice between her and Selina.

Selina is done in the author's best manner. A most airy, elegant, and apparently superficial creature, her corruption is so profound that she has lost every shred of moral perception. Sometimes her methods strike us as too subtle and finished for an American girl born of honest, decent stock. In the end, however, she does credit to her uncultivated ancestors, for, not content with making a scandal, she does it, as old Lady Davenant says, "in the most offensive way, publicly, clumsily, with the vulgarest bravado."

Mr. James long ago reached perfection in the art of insinuation. One of the great charms of his work is, that we can imagine so much more than he tells us, and feel quite sure that our imagination does not lead us astray. It is very pleasant and flattering to find ourselves able to do half the author's work, but it is maddening to have to do it all, to be given almost nothing to go upon. In Mrs. Temperly the author overestimates his power and abuses his privilege. She is an astute, managing mamma, of course, but what is the object of her astuteness? Where does she mean to arrive? The sphinx was frankness itself in comparison with Mrs. Temperly, and no one not in the author's intimate confidence will ever know what she was "after."

It is strange that when a story is discovered in ancient, mouldy, crabbed MS., it is pretty sure to be so dull a story that we wish the worm had eaten it, or that it had been quite undecipherable. For all the entertainment that can be extracted from it, the MS. of 'Margery, a Tale of Old Nuremberg,' might as well have rotted on the shelves of the merchant in Venice. Margery was old when she wrote her life, and that is some excuse for her prolixity, heaviness, and disorderly habit of narration. If she had undertaken less, she might have done better. Her own love affairs and the charms of her youth, beauty, and virtue are quite enough for one volume, while a consecutive account of the adventures of her wild brother, Herdegen, would suffice for a large second. The one merit of her clumsy, discursive manner is that it helps realization of a ponderous pomp and slow-going magnificence with which a burgher aristocracy, at the height of its power, probably surrounded itself. Some of her descriptions of fêtes and pageants are rich and gorgeous word-pictures, and the author's name is a guarantee for their historical accuracy.

The MSS. left by Micah Clarke, to be collated and edited by a descendant, are better worth preservation. The compiler unfortunately delayed his work a little too long, and his story of the Western Rebellion of 1685, and of the pitiful rout of James Duke of Monmouth, has been forestalled by Mr. Besant. But the tale can be twice told without loss, especially when there is no resemblance between the characters and minor incidents of the two versions. Micah had a stirring time for a month or two, and describes his adventures graphically. He is not the hero of his own tale, but an humble follower of Decimus Saxton, who had sold his sword to every prince in Europe, but was none the less able a soldier because he plied his trade neither for principle nor patriotism, but for money and purè love of a fight. Decimus is a spirited example of the soldier of fortune, and his figure makes a brilliant contrast to that of the unhappy Monmouth, the slave of mood, one hour depressed to the ground, the next exalted to the skies, fit for nothing less than a leader of armies, unless it may have been a king. Throughout the story there is a great deal of vivid, thrilling description, of which the charge of the King's men on the peasants massed behind their scythes at Sedgemoor is a fair example:

"The fog was rent, and the long lines of the royal cavalry broke out from it, wave after wave, rich in scarlet and blue and gold, as grand a sight as ever the eye rested on. There was something in the smooth, steady sweep of so great a body of horsemen which gave the feeling of irresistible power. Rank after rank and line after line, with waving standards, tossing manes, and gleaming steel, they poured onward, an army in themselves, with either flank still shrouded in the mist. As they thundered along, mane to mane and bridle to bridle, there came from them such a gust of deep-chested oaths, with the jangle of harness, the clash of steel, and the measured beat of multitudinous hoofs, that no man who hath not stood up against such a whirlwind, with nothing but a seven-foot pike in his hand, can know how hard it is to face it with a steady lip and a firm grip."

GOULD'S ORNITHOLOGICAL WORKS.

Birds of New Guinea, and the adjacent Papuan Islands, etc. Five volumes, imperial folio. London: Henry Sotheran & Co.; Philadelphia: J. B. Lippincott Co. 1875-88.

Supplement to the Trochilidæ, or Humming-birds. One volume, imperial folio. 1885-87. Same publishers.

THE ornithological works of the late John Gould comprise forty imperial-folio volumes, embracing about 3,000 colored plates, in most cases giving life-size figures of the species treated. This series of works, unrivalled for the accuracy and beauty of the illustrations, was begun in 1832 with 'A Century of Birds from the Himalayan Mountains,' and 'The Birds of Europe.' The latter, in five volumes, with about 450 plates, was completed in 1837. After two years of residence and travel in Australia, accompanied by his wife, Gould began the publication of his great work on the 'Birds of Australia,' in seven volumes, with 600 plates, finishing the work in 1848, to which, however, a 'Supplement' was added, 1851-69, consisting of eighty-one plates and accompanying text; the work as finally left comprising eight volumes and nearly 700 plates. In the meantime, he began a companion work on the 'Mammals of Australia,' which was not finished till 1863, forming three volumes, with nearly 300 plates. His next work was the 'Monograph of the Trochilidæ, or Humming-birds,' begun in 1849 and finished in 1861, five volumes, with 360 plates. In 1850 he brought out the first parts of his great work on the 'Birds of Asia'—seven volumes, with 530 plates—which, however, was not finished till 1883, two years after Mr. Gould's death. In 1875 he entered upon the publication of his seventh great work, the 'Birds of New Guinea,' one of the works here especially under notice.

Besides these large works, Gould published three important monographs of particular families of birds, mostly remarkable for the brilliancy of their plumage. These are, in the order of publication, 'A Monograph of the Odontophorinæ, or the Partridges of America,' 1844–50, 32 plates; 'A Monograph of the Family Rhamphastidæ, or Toucans,' 1852–54, 52 plates; 'A Monograph of the Trogonidæ, or Family of Trogons,' 1868–75, 47 plates.

In addition to his large folio works, Gould published a 'Hand-book' of the birds of Australia in 1865—two volumes, large 8vo, without illustrations, consisting of the letter-press of the larger work, with much interpolated matter, designed more especially for the residents of Australia and for those unable to purchase the larger work. He was also in the habit of publishing, as separate works, each in a single octavo volume, the introductory portions of his larger works, mainly for distribution among his scientific friends.

As already stated, the publication of the 'Birds of New Guinea' was begun in 1875, of which only twelve parts of the twenty-five comprising the work had appeared at the time of Mr. Gould's death in 1881. The remaining thirteen parts have been prepared and carried through the press under the direction of Mr. R. Bowdler Sharpe, the eminent curator of the Ornithological Department of the British Museum. The 'Introduction,' also written by Mr. Sharpe, gives an historical sketch of ornithological discovery and exploration in New Guinea and neighboring islands, mostly restricted in time to the last thirty years. Prior to this time our knowledge of this most interesting region was exceedingly slight and vague. "No other country," says Mr. Sharpe, "has produced in recent times more novelties in the way of birds than New Guinea, and every fresh expedition to the mountains of the interior appears to add to the number." Here several new and remarkable genera, as well as species, of birds of paradise have been discovered within the last few years, as well as many new parrots and other striking forms.

As shown by the full title of the work, 'The Birds of New Guinea and the Adjacent Papuan Islands, including any New Species that may be Discovered in Australia,' it was intended to be in a measure further supplementary to Mr. Gould's great work on the birds of Australia. As the work was limited to twenty-five parts, only about three hundred species are here figured, out of a total of more than a thousand now known as inhabitants of the Papuasian region. The birds of New Guinea are especially remarkable for the brilliancy of their plumage, including as they do the larger part of the great family of paradise

birds, with their rich metallic coloring and odd and striking appendages in the form of ruffs, crests, shields, and remarkably elongated plumes. The great parrot family is also represented in its extreme brilliancy of coloring and variety of forms, while some of the kingfishers and the fruit pigeons and the gaudy pittas, make up an assemblage that may well tax the most skilful artist to delineate. Many of the smaller birds are not lacking in striking features of coloration or form. As usual in Gould's works, a single sheet of text accompanies each plate, giving a description and a brief history of the species figured.

The supplement to the Trochilidæ, or humming-birds, projected shortly before Mr. Gould's death, was also carried to completion by Mr. R. Bowdler Sharpe, with the coöperation of Mr. Osbert Salvin, a well-known English ornithologist, who has made this group of birds a special subject of study. This work was issued in five parts, 1885-87, forming a single volume of fifty-eight plates and text, completing the work on the humming-birds, now comprising six volumes, with upwards of 400 plates. About 420 species are figured the size of life, with appropriate floral surroundings, almost rivalling in effectiveness of presentation nature's own handiwork. The original designs (of the original work, at least), as in the case of Gould's other works, were executed by himself, and drawn on stone by Mr. Richter. The introduction to the work fills more than one hundred pages, and treats of the classification and systematic arrangement of the genera and species.

The humming-birds have been styled the "gems of creation," their metallic tints rivalling in brilliancy, variety of tint, and play of colors the richest mineral gems. Mr. Gould's collection of these birds, numbering nearly 6,000 specimens (now in the Natural History Department of the British Museum), was for many years unequalled in its extent and completeness, and long since acquired a world-wide celebrity. The common generic names given these birds indicate well some of their striking features. Among them are, with distinctive prefixes to indicate the various species, such as the following: emerald, amethyst, sapphire, topaz, ruby, star-throat, flame-bearer, sunbeam, rainbow, sun-angel, wood-star, hill-star, velvet-breast, train-bearer, sylph, raquet-tail, plumleteer, coquette, etc.

Mr. Gould was a remarkable man, and his illustrated works form an enduring monument to his energy, unceasing activity, artistic ability, and taste. He was born in September, 1804, in Lyme, Dorsetshire, England, and died February 3, 1881, at the age of seventy-seven years. In 1827 he went to London and was appointed Curator to the Zoölogical Society's Museum. He here made the acquaintance of many leading naturalists, including Mr. N. A. Vigors, an eminent ornithologist, by whom he was encouraged to make his first venture in the field in which he eventually became so famous. "By this time, however, an event had taken place which had an influence on the whole of his later life; viz., his marriage with Miss Coxen, the daughter of Mr. Nicholas Coxen of Kent. Besides her other accomplishments, Mrs. Gould was an admirable draughtswoman, and, from her husband's sketches, she transferred to stone the figures" of his first illustrated works. In 1838 she accompanied him to Australia, where for two years they studied in life the birds they were to depict and describe. Soon after their return, however, Mrs. Gould died, and for a time Mr. Gould was nearly overwhelmed by his bereavement.

Letters of Thomas Carlyle. 1826-1836. Edited by Charles Eliot Norton. Macmillan & Co. 1888.

THESE new letters of Carlyle extend from the date of his marriage to that of the publication of the 'French Revolution,' and, in his life, from the thirty-first to the forty-first year. They are in nearly all cases written to members of his family, and portions of a few of them were included, with many errors, in Froude's 'Life.' They afford a complete view of Carlyle's interests, labors, and temperament at this important and trying period of his life, and amply justify the hopes that such an epistolary autobiography would give not only a much needed correction of the false impressions made by Froude's method of dealing with his materials, but an entertaining and useful story of Carlyle's growth and nature. The most striking general feature of the letters is their simple and almost humble tone. Froude, by selecting for publication the most highly colored passages, and especially those most affected by emotion, melancholy, or picturesqueness of style, made his narrative altogether too high-strung. The larger mass of ordinary letters is needed to give proper relief to such moments of feeling. With these new letters before us, we see that Carlyle's relations with his family—and these were the most vital and intimate of his life-relations—were natural and healthy; and they were in the highest degree honorable to him. One would look in vain for a better example of filial or brotherly affection constantly alive, conscientious, and helpful. He was interested in the doings and fortunes of all, not in a generally sympathetic, but a specific and practical way, and he knew no difference between the "Doctor" at Rome and Naples and poor "Alick" struggling on his farm, under the hopeless conditions and hard surroundings of Scottish agriculture. He was always anxious to give and receive merely personal news, shared in their ventures and trials, and was ready with advice and encouragement.

The more interesting part is naturally the expression of the attachment between himself and his aged and pious mother, as it also exhibits character in a very pure form. Carlyle's mother, indeed, with her worryings over the children and her trust in God, her learning to write from him and her painful exercise of the pen, her reading of his books and articles, her limited experience beyond the Ecclefechan horizon, and her looking forward to the annual meeting with her son, is the most prominent character in the correspondence; and whenever he writes to her, the page is brighter for the beauty and tenderness of the relationship. To have brought out fully the fact of this tie, which was so large an element in Carlyle's human life, is sufficient reward; but when to this is added the spirit of the whole united family, struggling to live independently and worthily, and to better themselves and each other according to their opportunities, a great deal has been added to our knowledge of the good in Carlyle's days.

Next to this undiminished and simple family affection and helpfulness in Carlyle, one notes particularly his kindness to those whom he could in any useful way assist. He was hospitable really to any sincere and honest young man, and did not limit his interest to literary youths. He was willing to do a good turn by the way to very humble and ordinary folk. The capital instance of his kindness, however, in these letters, is his attention to poor Glen, a disciple of his whose mind failed. He read Homer with him—much to his own pleasure, it is true, but that does not lessen the virtue of the act, and he was attentive, so far as was in his power, to his comfort and bettering. To Irving, too, his spirit is admirable in patience and love. The victim of what Carlyle most abhorred, he nevertheless was not suffered to become alienated from his heart, and Carlyle's pictures of the wretched condition of his friend are more full of sorrow than of the contempt he must have felt for the results of such a life as Irving came to lead. Towards Jeffrey, also, though one perceives the gradually widening rift between the two, Carlyle maintained as appreciative and grateful an attitude as was to be expected. Jeffrey himself nowhere in our accounts of him stands forth so amiably and acceptably as here. He was kind and helpful, according to his lights, when Carlyle needed friends, and will be so most pleasantly remembered. Mill's friendship and considerate services also are truly rendered, and, on the whole, one gets the impression that he was a truer and more interested friend than the correspondence properly shows. These are the principal human elements in the letters, outside of the family concerns, and they give an impression of general kindliness and good-will in the air—the very thing which Froude most left out.

Carlyle himself is egoistical as always; absorbed in himself, in his genius and its expression so much as to lend disproportion to the world of men outside him, which he always beheld with a queer distortion. The keenness of his physical eye seems to have partly blinded him to moral and intellectual character less immediately and continually shown, and his proneness to a depreciatory judgment disturbed his little faculty of toleration. His mood was that of the prophet, and he carried it to the dinner-table, where it does not belong. The difficulty he found in obtaining expression for his genius doubtless contributed to this oblique view of ordinary human life. The necessity he seems under of talking to himself, as a driver does to his horse, to keep his courage up, is as obvious in all these letters as in any others. He preached to his own soul as pertinaciously as to the world, and in the same words. This strain, this unceasing reminder to himself to fear God and respect not men's judgments or ways, keeps on independent of his progress. He gradually left behind the schemes of taking professorships and lecturing, he burned his failures in literature, and came to a sure conviction as to his place and work, and the fate he was subject to of staying put, but without finding it easier to do so without self-declamation.

It is hardly fanciful to say that these apostrophes to himself and "lashings" of moral feeling were to him what, in another age and with other modes of the same faith, prayer and "wrestlings" would have been. They were his spiritual resource and the language of them. But in a certain way the constant repetition of these phrases and the fluency of these "communings" serve an end. It was one result of the publication of his opinions upon men and of his family history to turn attention from his works to his life; and it is well to find that the principles he preached were those he lived by, that they were self-derived, genuine and native to his own struggles, and to observe in what way they operated on himself from day to day and year to year. The sight of struggle in its real forms, of tragedy unsoftened and unilluminated by the poetic spirit, is never pleasant; hard features are as disagreeable in a life as in a face, and in Carlyle's biography this element is trying always. But, although in these letters all this must enter, being a part of the truth, yet the value of

Prof. Norton's work, which is that of a just friend as well as of a laborious editor, is that it lowers the relief of these hard lines, and shows more fully the kindliness, the fidelity, and the true-heartedness of Carlyle, in which his manhood lay quite as much as in his self-rallying courage, his indignation at feebleness and folly, and his uncharitableness when his affections were not concerned. These volumes show his private life with those nearest and dearest to him, apart from his genius, and in this way—which is the way of truth—serve his memory as his friends would wish.

Speeches of the Right Honorable Lord Randolph Churchill, M.P., 1880–1888. Collected, with Notes and Introduction, by Louis J. Jennings, M.P. 2 vols. Longmans, Green & Co. 1889.

Later Speeches on Political Questions, with Select Controversial Papers. By George W. Julian. Indianapolis: Carlon & Hollenbeck. 1889.

An American reader of Mr. Jennings's volumes cannot help asking himself of how many of our public men it would pay to print the speeches after the voluminous fashion in which those of Lord Churchill, Mr. Bright, Mr. Chamberlain, Mr. Gladstone, and many others have been presented. A cynical politician might reply that they are not expected to pay, at least in a pecuniary sense, but only as an advertisement of the particular statesman. But the question recurs *à fortiori*, how many of our public men would think that any gain at all adequate to the expenditure could result from such a method. That which seems to be much more relied upon here is the management of primary meetings and nominating conventions and political machinery in general. But it is not only remarkable that these speeches should be printed, but that they should be made. With us, in the few weeks preceding a Presidential, and in a much less and almost vanishing degree before a State election, a certain number of speakers make the rounds, but the audiences are for the most part small, and much more interested in brass bands and torch-light processions. In England, at every interval of Parliamentary sessions the leading statesmen go about the country, and the interest is so great that, to hear even men of the second rank, like Lord Churchill, audiences of five, ten, and twenty thousand persons are not wanting.

A third feature of the English speeches is that they are so much more readable than any made here. The writer of this notice, at the time of the introduction of Mr. Gladstone's Home Rule Bill, waded through at least a hundred columns of speeches reported in the *Times*, and has not found the interest of these two volumes to flag. Yet, surely, the questions of civil-service and tariff reform, of the Inter-State Commerce Act, the general pension bills, the treatment of the Indians, admit of as dramatic presentation, and ought to be of more interest to us, than those of home rule in Ireland, of the Egyptian expedition, or the management of the British army and navy.

The secret we take to lie in the personal and public character of English politics, as compared with the anonymous and abstract quality of ours. In England all great questions are debated in the open arena of the House of Commons. They take the form of definite measures, for and against which are arrayed all the leading men, both of the Government and of the Opposition. When these men afterwards go outside of Parliament or into the provinces, they are already perfectly well known, both of themselves and in their relation to the great questions of the day. A keen interest is felt in seeing them and hearing their remarks, not only upon the main subjects, but upon their colleagues and opponents.

In this country all business is thrown, in its crudest and most abstract form, into the committee-rooms, from which it emerges in perfectly impersonal shape, and usually only in the last hours of a session, or in such a confusion of other business that debate of a kind to interest or inform the public is out of the question. When a member, therefore, undertakes to address the constituents of his own or any other district, he must deal in pure generalities. His hearers know nothing of the processes or arguments by which the result, if any, has been arrived at. They do not identify it with any particular man or men, and thus the element of personal interest is wholly lost. No speaker can point to anything good or bad which he himself or anybody else has done, or can promise that he or anybody else will do anything in the future, because all action depends upon majorities—first of committees and then of the houses—respecting which nobody can say anything definite of any kind. We are not now discussing other qualities of the two systems; but with regard to the interest of public speaking there can be no question as to where the advantage lies.

Lord Randolph Churchill is apparently neither a very great orator nor a very great man, yet these side-lights make his speeches entertaining. First of all comes the fury and hatred with which the true Tory regards Mr. Gladstone. The rueful admission of his great influence with the mass of the nation, coupled with the outbursts of denunciation, is very amusing. Not less so is the exaltation of the influence of property and land and position, struggling with the compulsory worship of the rising tide of democracy. On one side Lord Randolph seems distinctly to deserve credit, in that he has ventured to separate himself from his party by denouncing the extravagance and inefficiency of the spending department, and preferred rather to resign the Chancellorship of the Exchequer than to be a consenting party to expenditures against which he had pledged himself in his public speeches. It may be added that while not always expressed in the purest of English, these speeches show a good deal of vigor and force, and at times rise to a fair height of eloquence.

It is to be feared that reformers of Mr. Julian's type do more upon the whole to discredit reform than to advance it. Their besetting sin is exaggeration, and after they are once found out their influence ceases with the sober-minded. We are in full accord with Mr. Julian in most of his contentions, and we have no disposition to question his sincerity; but we are repelled by his methods. Those who differed with him may have been in the wrong, and those whom he denounced may have deserved denunciation; but *est modus in rebus*. Profuse and diversified vituperation may seem effective oratory at the hustings, but it makes poor reading, and of several of the speeches collected in this volume we must say that they are "full of sound and fury, signifying nothing." Reason revolts when we peruse a diatribe full of such statements as that in Massachusetts "a crouching tenantry, toiling under absentee landlords, bears witness at once to the decline of agriculture and the decay of freedom"; or when the author calls the denial of the suffrage to women as gross a wrong as negro slavery is. Yet, in spite of the offensive tone of these speeches and their almost total lack of literary merit, they are worth preserving. They contain some sort of history of the Independent movement of 1872, or rather of the abuses which caused that movement. They contain also very clear and strong statements of the case against Garfield, of that against Blaine, and of the scandalous proceedings in Louisiana after the election in 1876. These statements are made in partisan manner and for partisan purposes, but they seem to us substantially accurate, and are very effectively arranged. It would probably not be easy to find a more detailed and comprehensive arraignment of the Republican party than is contained in this volume.

Bibliotheca Washingtoniana: A Descriptive List of the Biographies and Biographical Sketches of George Washington. By W. S. Baker. Philadelphia. 1889.

Valuable as is this fourth compilation on Washingtoniana that Mr. Baker has prepared, it yet falls short of the needed detail and accuracy of a bibliography of the subject, while, on the other hand, it is more full and general than would be looked for in a reader's handbook. A bibliography would demand a complete collation of an edition, the full title, paging, and even errors of arrangement; but the manner in which Mr. Baker has secured many of his titles, from library sales and booksellers' catalogues, notes in magazines, or advertisements of proposed publications, has made this complete record impossible. Where a copy of a book has come under his eye, the needed information is given, and, so far as we have compared his titles, given accurately, while his notes are judicious and by no means uninteresting reading.

It is difficult to realize how much energy has been expended in describing the life of Washington—we had almost written *lives*, as a comparison would lead the readers to believe that different persons were being written of, and not the same man. And it is by no means a consoling reflection to think that it is the crude and more imperfect attempts that enjoy the greatest popularity. Of the earlier writers none can begin to compare with Marshall, whose biography in many ways is still the best extant. Now Marshall is noted 18 times, Weems 49, Corry 20, Ramsay 14, Aaron Bancroft 12, and Morse 10. Of the later writers Sparks is most favored, but Irving, Guizot, and Frost are not left far behind. It is, therefore, Weems, the itinerant book-peddler and fiddler, who has gained the greatest popularity; and a very curious story in the evolution of Washington myths could be written from the different editions of this little book, now worthy to be called a "classic," for its sale still pays a royalty to the possessor of the latest copyright. In the first edition (1800) Weems is merely "Rev.," and the moral tales of the cabbage-garden and cherry-tree do not appear until the reverend author has had sufficient courage and imagination to describe himself as "formerly rector of Mt. Vernon parish," equally a myth with his legends. This did not occur until the sixth edition, published in 1808. Yet the popular idea of Washington is more apt to be based upon these figments of Weems's imagination than upon a more solid estimate like Marshall's. We should like to notice other curiosities, such as the first biographical sketch noted (1777), the Latin works of Glass and Lance, the play by Custis, and the absurd genealogy issued by Welles, in which he starts with Odin; but space forbids.

The fact that a limited edition of Mr. Baker's book is issued precludes a second edition, yet it will be well to note several errors and omissions. His 447, without an author's name,

is a reprint of Mrs. Hyde's volume, already entered as No. 426. A note should have been added to Habberton's sketch (No. 474), to allow the reader to know that it is a "comic" biography. And, as the man has been his best biographer, why ought not some mention of the new collection of his writings now in process of publication to have been made? It was announced early in 1888, and Mr. Baker has titles of what has been issued in 1889. But these are light failings when compared with the general utility of the book. Its interest and value are enhanced by an etching of the "Powel" portrait of Washington, painted by Wright.

John Brown. By Dr. Hermann von Holst. Edited by Frank Preston Stearns. Boston: Cupples & Hurd.

THIS small volume is perhaps the first evoked in a polemic spirit by Messrs. Hay and Nicolay's Life of Lincoln during its piecemeal appearance in the *Century*. Others, we dare say, will follow, not so recklessly incurred—for a judgment of the hero of Harper's Ferry was by no means necessary to the biography. Mr. Stearns, whose father's relations to John Brown are well known, seems to us to have been unduly moved by an *obiter dictum*, and on the other hand to have overrated the effect of the essay which Von Holst contributed to vol. xli of the *Preussische Jahrbücher*. Its style is rather more tropical than that of the author's 'Constitutional History,' and the argument seems to us to offer nothing new to a discussion which cannot possibly be compressed into 120 pages of coarse print—one-half devoted to Harper's Ferry alone. While allowing full weight to Holst's historical opinion and moral sympathies, we think Mr. Stearns unwarrantably elated when he makes of this essay an impregnable bulwark against hostile attacks on Brown. "No rude hand will ever again," he is confident, "reach high enough to pull down this record of his fame." But, as a first consequence, let us see if Messrs. Hay and Nicolay will feel constrained to modify their censure in the finished book.

For example, what has Von Holst done to fix the verdict of posterity concerning the midnight Pottawatomie massacre—assassinations—"executions," to use Mr. F. B. Sanborn's euphemism? He gives at most 300 words to the subject, and declares it a false accusation that Brown was the originator of the deed. Mr. Sanborn, on the contrary, writes a whole chapter to prove that Brown was the author of "this act of wild justice," that it was his crown of glory, and that he was, "consciously or unconsciously," executing the will of Heaven. No doubt the difference between the essayist and the biographer is referred to by the former (who wrote before the appearance of Sanborn's Life) when he tells Mr. Stearns that, while his views of Brown's character and the historical significance of his career have undergone no change, "the new materials brought to light by Mr. Sanborn render some corrections as to details necessary." Mr. Stearns thinks "the details in this case are fortunately not essential." If Pottawatomie is one of them, he will not find many to agree with him, and certainly not Messrs. Hay and Nicolay, whose insistence upon it in their general disparagement of Brown is one of Mr. Stearns's chief grievances.

The editor's part in this volume consists of a preface, a rambling introduction professing to characterize Von Holst's great 'Constitutional History of the United States,' and a medley of appendixes, in the longest of which Mr. Stearns takes up the unfriendly criticism of John Brown. He even has to cover Brackett's bust of Brown from assault, without convincing us that it has a tithe of the impressiveness of the best photographs before the beard was grown—for Brown's mouth was the man.

Mr. Stearns's ill-health compelled him to employ for the translation of Von Holst a French American, and hence on page 171 we have "Freedom" (for Liberty) party; but "Pelleton" on pages 190, 192, should not have been overlooked. Other slips are "36° 31′" (for 30′) on page 68, and "Dr." Richard D. Webb, for plain Mr., on page 49. Views of John Brown's grave, a beardless portrait, the bust, the medal, adorn the volume.

A History of the University of Cambridge. By J. Bass Mullinger, M.A. [Epochs of Church History.] A. D. F. Randolph & Co. Pp. 232.

MR. BRODRICK'S history of the University of Oxford, which we reviewed nearly two years ago, has found a companion in the history of the University of Cambridge, by J. Bass Mullinger. It would be invidious, if it were easy, to draw a comparison between books of so high merit, especially when the plan of composition does not admit of any but a very general and popular treatment. The distinctive character of the two institutions does not fail, however, to show itself in the treatment. The strong intellectual life of Oxford, its general conservatism, and its steady adherence to the party of the King, are contrasted with the ardor with which its sister university espoused the cause of the Reformation, and its decided Puritan leanings. Mr. Mullinger has supplied what we pointed out as a defect in Mr. Brodrick's book, by giving a pretty full sketch of the origin of the university system of the Middle Ages, and something of its management. The interesting history of university education in the last two centuries is well related, and this will be found, in both books, a welcome aid by many students.

French Life in Letters. By Mrs. Molesworth. Macmillan & Co. 1889. Pp. 80.

A YOUNG English girl goes to Paris with some relatives for the purpose of improving her knowledge of the French language. She has promised to write to her mother and sister chatty letters recounting the incidents of her voyage, impressions of French life, shopping, housekeeping, sight-seeing, etc. Her teacher suggests that she add the useful to the agreeable by writing altogether in French. Such is the plan of this excellent little book—a happy idea, well carried out. Miss Laura has only had time to write ten letters when her mother and sister join her in Paris; but these eighty pages, so fresh and interesting, so different from the commonplace, guide-book rehash usually found in text-books, so replete with useful information, might have for epigraph, *Multum in parvo*. The style, always natural and correct, is far from childish, and, though the book be intended for schools, any young lady contemplating a trip to Paris will find it a valuable companion to take along with her. The typographical execution is what we expect from Mrs. Molesworth's publishers. Still, errors will creep into the best work, and in another edition it were well to print *sourit*, instead of *souria* (p. 64), and *demandai-je* instead of *demandais-je* (p. 53).

BOOKS OF THE WEEK.

Abbott, C. C. Days out of Doors. D. Appleton & Co. $1.
Alexander, Mrs. A Crooked Path. Geo. Munro. 20 cents.
Belford's Magazine. Vol. II. Belford, Clarke & Co.

The Nation

Is a weekly review of politics, literature, science, and art, conducted with the aid of the most competent writers obtainable. The list of contributors who have been employed more or less frequently during the twenty-three years of the journal's publication, has included most of the leading names in literature, science, art, philosophy, and law in this country, and many of corresponding eminence abroad. A bound volume of the *Nation* presents one of the most complete and accurate condensed records procurable of the world's current history, with impartial comment on questions which should occupy the attention of thoughtful men. Its Departments are:

The Week. Brief comments on the most important current events, domestic and foreign.
Editorial and Miscellaneous Articles. Careful and moderate discussion of prominent political and social topics.
Special Correspondence. From all quarters of the globe, by intelligent and trustworthy observers.
Occasional Correspondence. Letters to the editor on every subject germane to the scope of the paper.
Notes. Short paragraphs, chiefly on literary, scientific, musical, and dramatic topics.
Reviews of Books. By able writers and scholars (mainly specialists) of both hemispheres.
Fine Arts. Competent criticism of art exhibitions and works of art, the drama, etc.

Terms, $3 per annum, postpaid. Address

THE NATION, 208 Broadway, New York.

READY AUGUST 2d.

CHRISTIANITY AND AGNOSTICISM.

A CONTROVERSY.

Consisting of papers by

HENRY WACE, D.D., PROF. THOMAS H. HUXLEY,
THE BISHOP OF PETERBOROUGH,
W. H. MALLOCK, MRS. HUMPHRY WARD.

The interest taken in the recent controversy between the Rev. Dr. Henry Wace, Principal of King's College, London, and Prof. Huxley, over the question of the true significance of agnosticism, and incidentally of the limits of natural knowledge, and the difficulty of getting at the complete discussion when scattered through different publications, have induced the publishers to bring the articles together in a single volume. To these have been added W. H. Mallock's article, "Cowardly Agnosticism," and "The New Reformation," by Mrs. Humphry Ward.

12mo, cloth, $1.00; paper cover, 50 cents.

THE LIGHT OF HER COUNTENANCE.

A NOVEL.

By H. H. BOYESEN, Author of "A Daughter of the Philistines," etc.
APPLETON'S TOWN AND COUNTRY LIBRARY. 12mo, paper cover, 50 cents, (also in cloth 75 cents).

D. APPLETON & CO., Publishers, New York.

MIDSUMMER HOLIDAY

CENTURY.

(*AUGUST NUMBER.*)

80 PICTURES, 8 FULL-page Illustrations, including a new portrait of Tennyson; thirty-two exquisite pictures of life and scenery on the Thames, by Pennell; engravings from nature by Kingsley, French, Closson, and Davis; three full-page engravings from Fra Angelico, by Cole; Indian pictures, by Remington; two complete stories by Cable and Edward Bellamy; the beginning of a novelette by "Uncle Remus"; "Lincoln and the Churches"; "At the Kara Mines of Siberia"; "The Poison of Rattlesnakes," by Dr. Weir Mitchell, etc., etc., etc.

THE CENTURY CO., New York.

ONEITA

A FAVORITE TABLE WATER IN LEADING HOTELS, CLUBS, AND RESTAURANTS, AS WELL AS FOR FAMILY USE.

ONEITA SPRING COMPANY,

UTICA, N. Y.

J. M. BELL & CO., 31 Broadway, New York.

HOMŒOPATHIC DESCRIPTIVE Catalogue (books, medicines, etc.) mailed free. Address BOERICKE & TAFEL, 1011 Arch St., Philadelphia, Pa., or 145 Grand St., New York. *Oldest Homœopathic Pharmacy, established in 1835.*

FISHING IN TWEED AND YARROW,

BY ANDREW LANG,

Is likely to prove the most entertaining summer-vacation article of the year, for lovers of the sport, young and old. Six or eight historic spots where Mr. Lang has fished are beautifully pictured.

WIDE AWAKE

For August (20 cents).

Also tells "How Long Pond Ran Away" (a precedent of the Conemaugh flood); a pictorial account of "Queen Mary's Child-Garden"; Miss Risley-Seward's romantic but real story of a remarkable day

In the Meadows at Trianon,

a visit with Laboulaye and the inaugural reception of Thiers.

Vacation articles about "Rowing," by Louise Imogen Guiney, and the making of "Wild Flower Books," by Miss Harris; the strange, pathetic story of "Bin," by Grace Denio Litchfield; Margaret Sidney's charming "Peppers," Mrs. Fremont's "Camping Near the Giant Trees," etc., etc., make a rarely rich number.

At the news stands, or sent, postpaid, by

NEW EDUCATIONAL WORKS

PUBLISHED BY

Macmillan & Co.

MILL. Elementary Class-Book of General Geography. By Hugh Robert Mill, D.Sc., F.R.S.E. With Illustrations. 12mo, 90 cents.

GREAVES. Statics for Beginners. By John Greaves, M.A., Mathematical Lecturer of Christ's College, Cambridge. 16mo, 90 cents.

COCKSHOTT and WALTERS. A Treatise on Geometrical Conics. In accordance with the Syllabus of the Association for the Improvement of Geometrical Teaching. By Arthur Cockshott, M.A., and F. B. Walters, M.A. 16mo, $1.25.

JOHNSON. Treatise on Trigonometry. By W. E. Johnson. 12mo, $2 25.

HALL—STEVENS. A Text-Book of Euclid's Elements. Including Alternative Proofs. Together with additional Theorems and Exercises, classified and arranged. By H. S. Hall, M.A., and F. H. Stevens, M.A., Masters of the Military and Engineering Side, Clifton College.

Book 1, 30 cents. Books 3–6, 75 cents.
Books 1–2, 50 cents. Books 1–6, $1.10.
Books 1–4, 75 cents. Book 11, *shortly.*

MACMILLAN'S Primary Series of French and German Reading Books. Edited by G. Eugène Fasnacht. With Illustrations.

CORNAZ—Nos Enfants et Leurs Amis. Edited by Edith Harvey. With Notes, Vocabulary, and Exercises. 18mo, 40 cents.

MOLESWORTH— French Life in Letters. By Mrs. Molesworth. With Notes on Idioms, etc. 16mo, 40 cents.

"This excellent little book—a happy idea well carried out. . . . These eighty pages, so fresh and interesting, so different from the commonplace guide-book rehash usually found in text-books, so replete with useful information, might have for epigraph *Multum in parvo.* . . . Though the book be intended for schools, any young lady contemplating a trip to Paris will find it a valuable companion to take along with her."—*Nation.*

LOEWY. A Graduated Course of Natural Science, Experimental and Theoretical, for Schools and Colleges. Part 1, First Year's Course, for Elementary Schools and the Junior Classes of Technical Schools and Colleges. By Benjamin Loewy, F.R.A.S., Science Master at the London International College. 16mo, 60 cents.

HELPS. Essays written in the Intervals of Business. By Arthur Helps. With an Introduction and Notes by E. J. Rowe, M.A., and W. I. Webb, M.A. 16mo, 60 cents.

BACON'S ESSAYS. Edited with Introduction and Notes. By F. G. Selby, M.A. 16mo, 90 cents.

POSTGATE. Sermo Latinus. A Short Guide to Latin Prose Composition. Part 1. Introductory. Part 2. Selected Passages for Translation. By J. P. Postgate, M.A. 12mo, 60 cents.

LUCRETIUS. De Rerum Natura. Book 5. Edited with Introduction and Notes by J. D. Duff, M.A. *Pitt Press Series.* 16mo, 50 cents.

PAUL. Principles of the History of Language. By Hermann Paul, Professor of the German Language and Literature in the University of Freiburg. Translated from the Second Edition of the original by H. A. Strong, M.A., LL.D., Professor of Latin in University College, Liverpool, with a Preface to the American Edition by Benjamin Ide Wheeler, Cornell University, Ithaca. 8vo, $3.00.

MACMILLAN & CO.'S New General Catalogue, embodying the important Educational Works issued by the Universities of Oxford and Cambridge in the well-known CLARENDON PRESS SERIES and PITT PRESS SERIES, is now ready and will be sent free by mail on application.

The Nation.

NEW YORK, THURSDAY, AUGUST 1, 1889.

The Week.

THE particulars of the rerating of Senator Manderson of Nebraska as a military pensioner have a very bad look. Mr. Manderson was wounded in 1864 and granted a half-pension in 1865. From that time to the present his ability to earn a living has been demonstrated by his notable advance in public position, which has brought him in middle life to the very highest council of the nation. All this tells *for* him as a man and *against* him as a pensioner. That is, it has demonstrated in a remarkable way how little Mr. Manderson needs to be supported at the public expense in consequence of wounds received in the military service, or for any other reason. But, as a matter of fact, a fellow named Squires, whom Corporal Tanner took to Washington as a clerk in the Pension Office, and who has since been discharged for gross misbehavior, or rather transferred to a different office (that of timber agent), pulled out of the pigeon-holes of the department the medical certificate on which Manderson's half-pension was granted in 1865, and he (Squires), together with Tanner and one Carpenter, a "medical referee," decided in a private way that Manderson ought to have been awarded a full pension in the beginning—that is, for "total disability," which the law fixes at $30 per month for officers of his rank. This is called rerating. It gave Manderson "back pay" at the rate of $15 per month from the date of his discharge to the present time. It hoisted the sum of $4,000 out of the public treasury into Manderson's pocket, and it causes the additional sum of $15 per month to be paid to him during the remainder of his life if the rerating transaction is allowed to stand.

It is said that Senator Manderson had not applied for a rerating, and that he knew nothing about the proceedings until he received the check for back pay. But it appears that he put it in his pocket just the same. The public will not recognize any difference between the one act and the other. He was either entitled to the money or he was not. Being a lawyer and a Senator as well as a pensioner, he knows what the words "total disability" signify. He knows whether he was totally disabled by a wound received a quarter of a century ago. If he was not, then he knows that he was not entitled to the $4,000 hoisted out of the Treasury for his benefit by Squires, Tanner, and Carpenter, and that he had no moral right to touch it. Whether he had a legal right to it may yet be determined by the courts. A despatch to the Philadelphia *Inquirer* says that if the Secretary of the Interior is not satisfied with the proceeding, he will bring suit against Manderson to recover the money. Such a suit against a Senator will be a public scandal, and one which the people of Nebraska would probably have taken notice of by sending Manderson into retirement if it had occurred before his re-election last winter. The man Squires, who took the initiative in rerating Manderson, was formerly a clerk in the Naval Office of the New York Custom-house. Tanner was in the same office with him. Squires, under the free-and-easy system which aforetime prevailed in the Naval Office, knocked off work for a year or more, but continued to draw his pay. It was found that he was running a pension agency of his own somewhere in the city. He was finally called to order by the Naval Officer and directed to abandon one vocation or the other—either to resign his clerkship or his pension business. After a good deal of difficulty, and after orders had been issued forbidding to pension claimants entrance to Squires's room, he resigned. Naturally he turned up as an invaluable auxiliary to Tanner at Washington. After he was discharged by the Secretary of the Interior for scandalous conduct, he was appointed timber agent at some place in the West, where his opportunities for thrift will probably be as great as they were in either the Pension Office or the Naval Office, and will be worked for all they are worth.

It is believed in Washington that both the President and Secretary Noble are desirous of keeping the Commissioner of Pensions, Mr. Tanner, away from the approaching national gathering of the Grand Army of the Republic. The reason given for this desire is fear of what Tanner may say there on the subject of pensions. It is said the Administration is anxious not to be committed to the service-pension policy, and is afraid that if Tanner attends the meeting and talks, as, of course, he would, he would commit the Administration not only to that, but possibly to some policy even more "liberal to the boys." Fear of Tanner's mouth is not without justification, but it is difficult to see how he can commit the Administration any further than he has already done. He said only a short time ago, in a public speech to some veterans at Chicago: "I tell you frankly that I am for 'the old flag and an appropriation' for every old comrade who needs it. I don't claim that I represent the views of the Administration, but I do know that I have the support of the President and Cabinet in this line—a pension for every old soldier who needs one." If that does not mean a service pension, what does it mean? As for the standard of "need" required to get Tanner's approval, the Manderson case throws sufficient light upon that.

Congressman De Lano, of the Twenty sixth New York District, has been giving a great deal of his time and mental force to the problem of getting the post-offices of his district out of the hands of Democrats and into the hands of Republicans with the least possible delay. When asked how he had succeeded, he is reported to have replied, a day or two ago: "Pretty well. There are 190 fourth-class post-offices in my district, and 140 of them are now run by Republicans. The others pay so little that there is no demand for a change. I am pretty well satisfied with the Administration." Probably this case represents accurately the average speed with which the post-office guillotine has been worked by the First-Assistant Postmaster-General, Mr. Clarkson, since he took office under the pious Mr. Wanamaker, or, as he is called by his religious admirers, "our beloved John." Nothing approaching Mr. Clarkson's record has ever been made in the Department. During the same period of time in which his predecessor, Mr. Vilas, removed 4,000 fourth-class postmasters, Mr. Clarkson has removed 13,000. His best record was 1,015 in one week, or an average of 169 each day for six days; for, of course, no assistant of so good a man as Mr. Wanamaker would be allowed to work on Sunday. This would be about one removal every three minutes, which is extremely rapid work, and which would not be possible under a system that allowed removals for cause only. The present rate is about 600 a week, and this is likely to be the regular pace, kept up with slight variations, until every one of the 55,000 fourth-class post-offices in the land has a good Republican in it.

An interesting glimpse at Republican methods in a Southern State is afforded by the proceedings of a meeting of Republicans recently held in Eureka Springs, Ark., to protest against the appointment, at the instance of Powell Clayton, of J. W. True as Postmaster. The resolutions, while holding President Harrison blameless, on the ground that he was "misled and deceived in the premises," accuse Clayton of disregarding the wishes of nine-tenths of the Republicans in the place in this matter, and declare that he "has openly and notoriously violated repeatedly the will of the Republican party, not only in his own home, but in different parts of the State of Arkansas, *and has prostituted his high privilege in our party as the dispenser of Federal patronage.*" The resolutions further declare that "it is our honest conviction that Gen. Clayton's leadership of his party in this State is only for his own personal benefit in controlling Federal patronage, and not for the success of Republican principles and the party," and that he "has thereby ruined Republican success in this State; and it is our opinion that so long as these methods in procuring this and other appointments are resorted to and he remains at the head of our party, we despair of success." The participants in the meeting resolved that they would not further submit to "this damaging and ruinous element in our party," and called on "all true and tried Republicans throughout the State" to follow their example, and "assist in every lawful way and manner to restore our party to honorable and impartial leadership." Northern Republicans who

cannot understand why their party does not stand better with decent men at the South, may study these proceedings with profit.

The prospectus of the North American Salt Company is too much for the loyalty of the St. Louis *Globe-Democrat*, which is moved to say:

"The combination between American and British salt magnates is designed to go into operation on January 1, 1890. Congress will meet a month—perhaps two or three months—before that date, and will give its undivided attention for a few weeks to the subject of 'combines.' *Salt must be put on the free list.*"

What is to become of our precious platform adopted at Chicago last year, which says that "if there shall remain a larger revenue than is requisite for the wants of the Government, we favor the entire repeal of the internal-revenue taxes, rather than the surrender of *any part* of our protective system"? Is not salt a part of our protective system? Anybody who has kept the run of tariff debates for a quarter of a century will be apt to think so. Anybody who recalls the wonderful speeches of the Republican members of Congress last summer, when the salt paragraph in the Mills bill was under discussion, will think that this article is as large a part of the underpinning of the protective system as anything else that can be named. Who has authorized the St. Louis *Globe-Democrat* to trample on the precious platform and knock out the underpinning of the tariff in this reckless fashion? What authority has this wild Western newspaper to pledge Congress to so ruthless an act? What has the question of Trusts to do with the tariff anyway? Did not Mr. Blaine tell us that Trusts were largely private affairs? And how, we ask, are the beneficent effects of the duty on salt (79 per cent.) lessened by the salt combine? The theory of protection is that the money made by the protected interests is "kept in the country," and that it is diffused in the form of dew all over the land. Obviously in such a case it can make no difference whether the money is collected by a Trust or by individuals. The formation and distribution of dew will go on just the same in either case. We think that the *Globe-Democrat* is much too hasty.

The collapse of the Salt Trust is due entirely to the force of public opinion. There are plenty of capitalists who would have been glad to share in the venture. The prospectus of the Syndicate was very attractive. The plan announced was feasible, and would probably have been subscribed for two or three times over if confidence in Trusts had not been so much impaired by the hostility of the press, the State Legislatures, the courts, and all the recognized organs of public sentiment. One of the most ominous signs of all, and the most painful to the protected Trusts, has been the vacillating course of the *Tribune*, which seems one day to be coming over to the free-traders and the next to be going back to the high-tariffites. On Monday morning it essayed both rôles in the same paragraph, thus:

"Free-trade Democrats have the idea that Trusts and other similar combinations are fostered by the tariff. If they could realize how the sugar monopolists feel about the matter, and the promoters of the Salt Trust, they might change their minds. The power of the people to smash any combination, by reducing or abolishing a duty on imports, is one which monopolists are just now inclined to regard with great respect."

The difficulty of making out which way the *Tribune* is steering has probably unsettled the minds of many American investors, and may have affected unfavorably the subscription to the salt combine in England. The announcement from the other side that if the owners of the salt works show a good disposition, the scheme may be taken up in England next October, is very funny indeed, considering that the prospectus did not contemplate that the owners of salt works should do anything except sell out for cash. Yet it is true, we believe, that the only heavy subscriptions made were those of producers of salt whose property was to be embraced in the combine.

If there is any kind of property in this country that British syndicates do not want to buy, after taking the breweries at the owners' estimate of their value, we cannot imagine what it may be. Of all vocations by which men make a living, brewing in a large city is the one requiring the closest personal attention and the most unceasing vigilance. A document published by the Church Temperance Society a year or two ago disclosed the fact that most of the beer-saloons in this city are held under chattel mortgage by the brewers. It was shown that one brewer owned nearly two hundred saloons, the street and number of each one and the nominal proprietor being designated. Of course the strictest attention is needed to secure the proper returns from each saloon. Now, fancy all the breweries consolidated and the management of these and their outlying dependencies, the saloons, put under a single management, and that management responsible to a board of some kind sitting in London. What would probably be the end of such a speculation? We have heard of cheating in Western mines owned by foreigners, when there was only one thing and not more than half-a-dozen persons to be watched. Who will watch the breweries and saloon-keepers in a dozen American cities and render faithful accounts weekly or monthly to a confiding syndicate in Lombard Street?

The *Tribune* has an article entitled "Wool and Ballots," the aim of which is to show how much the price of wool has been advanced by Harrison's election, and how great an advantage that is for the country. In the concluding paragraph, however, it appears to recall the trifling circumstance that there are buyers as well as sellers of wool. It admits that the manufacturers "have not yet realized corresponding benefits," and that "it is felt by most of them that the state of the market for goods does not warrant so large an advance as has been realized in wool." What ought we to do in such a case? The *Tribune* has its own idea about it, and we have never seen anything more lucid in its discussions of public questions. The wool-growers ought to lower their prices for wool *a little*. Here is the remedy in its own words:

"If the growers have insisted upon too rapid or large an advance, some modification of prices may be found necessary in order to secure ready sale of goods representing the entire supply of wool. If, on the other hand, the goods market will support the manufacture fairly on the basis of wool at present prices, the most enterprising and skilful will soon discover and demonstrate the fact, and others will be encouraged to follow their example."

It is so much the custom of the producers of staple articles to accept less than the market rate in order to accommodate the purchasers that, we have no doubt, Mr. Columbus Delano, President of the Wool-Growers' Association, will speedily call his clan together and address them in words like these: "We have been too hasty and too greedy. We have '*insisted* upon too rapid and large an advance.' The manufacturers cannot stand it. We have demanded twenty-six cents a pound for our wool. The manufacturers will pay us this price rather than not have it. But as some modification may be found necessary in order to secure a *ready sale* of woollen goods, I move that we charge only twenty-three cents per pound. The voting will be by ballot."

We can imagine that the assembled wool-growers would receive the proposition at first with the respectful silence due to the known wisdom of the *Tribune* in commercial matters. But after some moments spent in pulling the wool away from their own eyes, probably somebody would ask how they could be sure that all would join in charging lower prices for wool, because, even if a pledge should be signed to that effect, some one might sneak off and sell his clip at the full market rate. Such an inquiry, once started, would spread to growers not members of the Association, to foreign growers, to wool-merchants having stocks on hand, and to foreign merchants in like case. How to get them to join in charging lower prices in order to make things easier for the manufacturers would be an ever-widening puzzle. Probably before all could be brought in and induced to sign the pledge, and to give satisfactory bonds for keeping it, the whole clip would have been worked off, and nothing done. There is, however, a latent idea in the *Tribune's* suggestion. It is that the wool-growers and manufacturers are partners in business, and that the former cannot be permanently prosperous if the latter are impoverished. The manufacturers will not work much longer on the starvation wages they have been getting. They are already on strike for lower duties on wool. They are demanding ad-valorem instead of specific rates, and of course they would not want that change unless it promised to give them wool on easier terms. Now we advise the wool-growers, instead of lowering the prices of their own wool by ballot, in the way hinted at by the *Tribune*, to lower the price of South American, Australian, Cape, and Donskoi wool by consenting to a change in the tariff. It is immaterial what you call it, so that the manufacturer gets his wool with less difficulty.

The organ of the American Protective Tariff League is moved to wrath by the charge that

it seeks to "*unduly* advance the prices of articles entering into the daily consumption of the people." It finds this charge in the columns of the New York *Tribune*, reference being had particularly to the article of refined sugar as at present monopolized by a Trust, and it brands the charge as "false," although it prefers to consider it due to a misunderstanding on the part of the *Tribune*. The *Tribune* has a good many misunderstandings, but this is not one of them. It was easy to say last year, while party feeling was in an excited state, that the tariff had nothing to do with Trusts, because people did not then stop to discriminate. They can see now that the tariff has to do with some Trusts, and not with others —that it is the bulwark and support of the Sugar Trust, the Lead Trust, the cotton-bagging, the binding-twine, castor-oil, linseed oil, and twenty or thirty others, while it has nothing to do with the Standard Oil, the Cotton Oil, or the Distillers' Trusts. Hence we are convinced that the *Tribune* is not laboring under the misunderstanding which the *American Economist* kindly intimates.

The tariff organ insists that it does not seek *unduly* to advance the prices of articles entering into daily consumption of the people. Evidently much depends upon the meaning of this phrase, and especially upon the kind of people who have the power to make the definition. Elsewhere in the same number of the tariff organ we find a triumphant comparison of the railway freight charges in this country and in Europe, the average here being $1.04 per ton, while it is $1.70 in Germany, $2.00 in England, and $2.14 in France. Now, what is it that has made the rate lower in this country than in the others named? Can we fancy that, if all the railways in the United States had been tied up in a Trust, the rate for freight would ever have gone as low as it is to-day? In such a case the railway managers would have said that they had no desire to maintain *unduly* high rates, but inasmuch as they were relieved from the pressure of competition, and were under no compulsory process to find the most economical methods of operation, they would be the exclusive judges of high rates, and would maintain them at about the figures prevailing twenty years ago. Competition has not allowed them to do so. That is the alpha and omega of railway rates in this country. Unduly high rates are any rates higher than free competition will fix and establish. When any man talks about his intention not to unduly advance the price of an article which everybody must buy and which he alone can sell, he means that he intends to fix those prices to suit himself, and that anybody who does not like them can let them alone.

Valuable testimony to the efficacy of the new ballot law in Massachusetts, which is to go into effect this fall, is furnished by J. E. Fitzgerald, one of the shrewdest and most adroit of the Democratic politicians of Boston. In speaking before a Democratic meeting on Thursday last, he urged the great necessity of harmony in the party because of the lessened chances of Democratic success caused by the new voting regulations. "There is," he said in describing the new law, "no ballot-distribution, nobody can hustle anybody up to the polls, and every man votes according to his conscience, behind a desk, with nobody to see him." The keen eye of the "practical politician" has detected one of the greatest reforms which the new law will secure: "Nobody can hustle anybody up to the polls." Nobody can "fix" a ticket for the bribed or intimidated voter, put it in his hand, and "hustle him up to the polls," and watch him while he casts it. There might be some prospect of "fixing" his ballot under the new system did not the law forbid any except official ballots to be used. That is the last and most deadly blow to the "hustler's" business, and that is why the politicians everywhere fight that provision the most earnestly of all.

The synopsis of decisions by the Treasury between July 6 and 20 is edifying for taxpayers. One of them is this:

"*Wooden cases* for use by manufacturers and venders of bottled soda-water, beer, and other liquors, and which are left by them with consumers to be called for again for the purpose of refilling, are not the *usual and necessary* coverings for imported bottles, and, when imported containing bottles, are dutiable at 100 per cent. ad valorem, under the proviso of section 7 of the Act of March 3, 1883." (Letter to Collector of Customs at New York, July 11, 1889.)

A hundred per cent. on a plain wooden box is rather a severe tax. How can the Collector know on entry that the box is to be thus left with the consumer or buyer of the contents, and called for and refilled, and is not to be used as kindling-wood? Are bottles treated in the same way? Is the box free of tax if not to be thus called for? What is the "usual and necessary covering" of imported bottles, if not a wooden box?

Mr. Wanamaker's idea of selling our present Post-office building and moving the office up town has been disposed of very summarily. Scarcely a voice has been heard in favor of the proposition, while practically the entire business community has condemned it as little less than foolishness. If Mr. Wanamaker had thought about it a little in advance, he would have seen that so long as the exchanges, banks, steamship and railway companies, heavy business and commercial houses, as well as newspaper offices—in fact, all the largest contributors to the mail service—are down town, they will insist upon having the Post-office as near to them as possible. The suggestion of removal up town must have come from the same source as the one to have the elevated railways extended to connect with the Post-office. The office is at present within a few steps of the stations of two elevated roads, and a switch track, if it were practicable, would not save an appreciable amount of time.

There is no doubt that, so far as Judge Settle of North Carolina is concerned, the "good old days of Grant" have indeed returned. The Judge, who served as captain in the Confederate army, was one of Grant's favorites, and between 1871 and 1877 he was able to get almost anything he desired from the national Administration. President Grant gave him the mission to Peru in 1871, and in 1877 appointed him United States District Judge for the Northern District of Florida. The Judge was naturally a devoted Grant man, and, if we are not mistaken, was an ardent advocate of a third term. Yet even in the heyday of his friendship with Gen. Grant he did not get so many "good things" for himself and family as the *Times* shows that he has been able to get from Gen. Harrison. The list reads as follows:

"Thomas Settle, son of Judge Settle, solicitor; Tyro Glenn, brother-in-law of Judge Settle, United States Marshal; Douglas Settle, son of Judge Settle, cadet at West Point; B. C. Sharpe, son-in-law of Judge Settle, General Storekeeper; Oliver H. Docker, brother-in-law of Judge Settle, Consul-General at Rio de Janeiro; Mrs. Hellen, sister-in-law of Judge Settle, stamp clerk at Winston. The total salaries to be drawn from the public purse for the benefit of this single family foot up to the very comfortable figure of $27,000 a year."

We doubt if the seven Harrison relatives for whom the President has found places draw more than that aggregate from the national Treasury. There is no equal to the Settle list that we have heard of save another for North Carolina which the *Times* mentions but does not give in detail, that of the family of J. J. Mott. Mott is himself Revenue Collector, and has succeeded in getting offices for five members of his family. It is small wonder that there is discontent in North Carolina at the greediness of the Harrison-Settle-Mott Trust.

Gen. Boulanger has made a sudden descent from the sublime to the ridiculous. He had announced himself as a candidate for the General Council in 451 cantons, and has been successful in two dozen. He had been debarred from standing for the Chamber of Deputies in more than one electoral district by the new law which restricts multiple candidatures. So he turned to the *conseils généraux*, which are administrative bodies something like our county boards of supervisors, but having much larger political powers. They assist in electing Senators, and they are charged in a comprehensive way to see that the republic receives no detriment. In the event of a dissolution of Parliament by a *coup d'état* the *conseils généraux* are empowered by law to form a new Parliament forthwith. Probably this feature of the political constitution of France prompted Boulanger to raid that body with horse, foot, and dragoons all at once. That he had every confidence of success was shown by cable despatches on Saturday, embracing an interview with Boulanger himself, in which he candidly set forth his electoral expectations, and announced the intention of maintaining peace with England and settling the affairs of Egypt in a satisfactory way. His adventure among the *conseils généraux* turns out to have been a complete fiasco. The plébiscite has been taken, and it is against him.

GEORGIA REJECTS THE BLAIR BILL.

THE action of the Georgia Legislature last week, in rejecting a proposition to endorse the Blair bill, must be received with great satisfaction by President Harrison, because it calls the attention of the whole country to the emphatic manner in which this representative Southern State has vindicated the position which he took, five years ago, when this question was before the Senate. In a speech delivered on the 25th of March, 1884, Gen. Harrison thus concisely and forcibly presented the argument against attempting to foster education in the Southern States by throwing millions of dollars out of the national Treasury into those States:

"The only permanent reliance for the education of the masses must be upon local taxation in the States; every one concedes that. One dollar voted by the people of any school district for the support of common schools is worth $10 given out of the Treasury of the United States. It evinces an interest in education, and guarantees a careful and intelligent supervision. Only a local supervision and interest will bring these constituencies that are now so backward in the race of education abreast with other States. In my judgment there could be no worse policy than to throw in a single year into those States $15,000,000 out of the national Treasury."

Five years ago it was open to anybody to say that such views as these of Gen. Harrison's were only a matter of theory; but the test of experience in Georgia has in the meantime vindicated them by facts. The vindication is so striking, and the moral is of such universal application throughout the South, that it is well worth while to set forth these facts at length.

Georgia has long been known as "the Empire State of the South," but for years it lagged behind its poorer neighbor Florida in the matter of public education. So long ago as November, 1882, Mr. Gustavus J. Orr, then State School Commissioner, in his report to the Legislature, condemned "the utter inadequacy of the sums which we are applying to the support of schools to the object to be accomplished"; pointed out "the urgent necessity of more liberal appropriations for schools"; showed that a tax of only one-fifth of one per cent. upon the property of the State would keep the schools in operation six months, nearly twice the period that they were then open; met the former plea of poverty by the declaration that "the time has come when we can do better"; and concluded: "I am sure that we have reached a point where we can continue our schools in operation for six months [nearly twice the period at that time] without unduly burdening the people."

The Legislature, however, failed to act upon Mr. Orr's recommendation. The reason for this failure was stated in an interesting letter to the *Evening Post* by Mr. Woodrow Wilson, author of the work on 'Congressional Government,' and himself a native of the South, who wrote as follows:

"In the winter of 1882-83 I spent some time in Atlanta, Ga., while the Legislature was in session. The project of Federal aid to education was already then being pushed. One day I dropped into the gallery of the State Senate Chamber for an hour, and chanced to find a discussion in progress upon a proposal to increase the appropriation for education, as Mr. Orr had urged that the State was so abundantly able to do. Only a small minority favored the measure for heavier taxation. The majority supported a counter-resolution that the Senators and Representatives of the State in Congress be requested to do all in their power to secure the passage of a law giving aid from the Federal Treasury to education in the States. I heard one speech made in opposition to this begging resolution. It was a sturdy appeal to the self respect and independence of Georgians, in view of what the speaker treated as the unquestioned ability of the State to support a school system worthy of so great and prosperous a commonwealth. No attempt was made by the majority to answer his argument, which, like Mr. Orr's plea, was indeed unanswerable. The majority kept silence, and contented themselves with passing the resolution appealing for outside help to do what by their very silence they confessed they were able to do themselves. It was evident that no increase in the State appropriation for public education would be voted so long as there was the least prospect of aid from Washington. The whole performance impressed me as a shameless declaration, upon the part of a well-to-do community, of its deliberate determination to enjoy the easy position of a beneficiary of the national Government to the fullest possible extent, rather than to be independent and support a good school system by its own unaided efforts."

Mr. Wilson's judgment that "no increase in the State appropriation for public education would be voted so long as there was the least prospect of aid from Washington" proved correct. Year after year passed without any increase of school taxation in Georgia, the people meanwhile waiting in the hope of getting the needed money from the Federal Treasury. But by last winter they had generally concluded that the public sentiment of the country would never permit the passage of the Blair bill, and they resolved to rely only upon "local supervision and interest." The Legislature therefore passed a bill making a large increase in the amount appropriated for public schools. This marked the turning-point in the long controversy as to whether the people of Georgia should build up a good school system themselves, or play the rôle of beggars, and the rejection last week by the Legislature of a resolution endorsing the "Bill to Promote Mendicancy" followed as a matter of course. Ever since the fight over heavier taxation for schools was won in the Legislature last winter, public interest in education throughout the State has grown steadily and rapidly, and there is no longer any doubt that the commonwealth will soon have a common-school system which will put it "abreast with other States."

This would be a matter of national interest if it concerned Georgia alone; but Georgia is in this respect only a type of all the Southern States. Gen. Harrison's words applied to them all when he said that "the only permanent reliance for the education of the masses must be upon local taxation in the States," and that "only a local supervision and interest will bring these constituencies abreast with other States." The worst feature of the long agitation of the Blair bill has been the check which it put upon the normal development of this local interest. Some scattering talk of throwing millions of dollars out of the national Treasury into those States is still heard, but the advocates of this demoralizing policy grow fewer and weaker all the while.

THE POSTMASTER-GENERAL AND THE TELEGRAPH.

IT appears that Postmaster-General Wanamaker heard from somebody that the Western Union Telegraph Company sent messages for certain large corporations at the rate of one mill per word, and, without making further investigation, he immediately fixed that rate for all Government business passing over the wires. It turns out that Mr. Wanamaker was entirely mistaken in his premises; that no messages are sent for any corporations at any such rate; that that rate is far below the cost of the business to the company, and even below the cost of *delivering* the messages after they are transmitted, transcribed, registered, enveloped, and superscribed. In short, Mr. Wanamaker has made a blunder, and the question now is whether he has the manliness to acknowledge and correct it, or whether he is one of those narrow-minded persons who esteem it a point of honor to stick to a decision once made, no matter how unjust it may be. A statesman like Mr. Gladstone can back out of a war, even under the stigma of a lost battle, when it becomes clear that the war ought not to have been begun. A weaker man would insist upon beating the enemy in order to teach him not to insist upon his rights in the future.

Now, Mr. Wanamaker must do one of two things. He must either convince fair-minded men that it is just and proper to cut down the price of Government telegraphing to one mill per word, or he must rescind the order he has made. If he does not do one of these things, not even his Sunday-school will save him from condemnation in the minds of business men, with whom he likes to stand well. Already we find among his supporters in the press a disposition to turn the matter off with a blast against great corporations, as though it were right and creditable for the Government to take from the Western Union Telegraph Company by force what it would not take from an individual. Such demagogue appeals might answer for some people, but not for Mr. Wanamaker. He belongs to the class of rich men himself. His faith in corporations has never been shaken, but their faith in him will be shaken mightily if he or his immediate supporters are found parroting the slang of Gen. Butler when he wants to excite the prejudices of labor against capital. Mr. Wanamaker has no standing except in the ranks of capital. His figure rallying the horny-handed sons of toil against corporate greed would be a laughing-stock for the continent. We therefore advise the Pottsville *Miner's Journal*, for example, not to emulate the New York *World* in this species of argument. The *World's* antipathy to capital is known to be unconquerable and deep-seated. When it declaims against rich men and corporations, we recognize the real shriek of the proletariat. No such purity and singleness of purpose would be allowed to the *Miner's Journal*, still less to Mr. Wanamaker himself.

We conclude, therefore, that Mr. Wanamaker must set about his defence in a reasonable way, and that he must not be too slow about it. He says that he has learned that the Western Union Company serves certain corporations at one mill per word. Dr. Green, the President of the company, replies that Mr. Wanamaker is entirely mistaken.

He says that this rate is much below actual cost, and that the company does not send messages for less money than it has to pay to its messenger boys. If Mr. Wanamaker has doubts on this point, the onus is nevertheless upon him to prove his thesis. Ample facilities will, no doubt, be given him for this purpose, whenever he shall show an inclination to begin. We will presume that up to this time he has been simply mistaken, having "gone off at half cock," as novices in public affairs are apt to do. This excuse, since Dr. Green's statement was made, is no longer available. Therefore it may be expected that he will speedily make good his own statement, or withdraw it.

We quite agree with those who say that the Government is entitled to as low rates as anybody for similar service. It is entitled to no less, but it is entitled to no more. It is able to pay, and it ought to pay, a fair rate. The presumption is that a fair rate is that which others pay voluntarily, but this presumption may be rebutted. The mere fact that a law of Congress authorizes the Postmaster-General to fix the rate does not help one to decide what is fair and just. It is a matter of business, of *quantum meruit*, and it is quite proper to take into consideration the special, not the general, services, if any, that the Government renders to the company—the general services being paid for by taxation, to which the owners of the property contribute. Dr. Green denies that the company has ever taken a stone or a stick of timber from the Government land. Certainly, the Government has not carried the poles, wires, linemen, and operators free of charge, nor has it put up the wires when they were blown down, or supplied new ones when the old ones were worn out. Has the Government furnished the right of way? Certainly it has not done so at any cost to itself. The right of way through the States belongs to the States and municipalities to give or withhold, and the latter are now requiring, very properly, that telegraph wires be put under ground. Right of way through the Territories is too trifling a matter to have been in Mr. Wanamaker's thoughts when he descanted on the services rendered by the Government to the company.

"Similar service" means service performed in similar time and manner, and at like cost to the party rendering it. If the Government gets its messages by "drop copy," like the Associated Press, no delivery by messenger being required, it is entitled to as good rates as the Associated Press, which, by the way, are far above one mill per word, and probably higher on the average than the Government has been accustomed to pay and was paying before Mr. Wanamaker made his recent order. If the Government builds lines for the company, or keeps them in repair when built, or pays the wages of operators in whole or in part, or carries materials free, then it is entitled to the same rates as the railroads which thus share in the first cost of the service. If it does none of these things, but on the contrary gets a preference in time on all business transmitted, and has a large reporting service free of charge, which no other patron has, then it is not entitled to any advantage in rates over private persons and corporations.

TELEGRAPH CHARGES IN AMERICA AND GERMANY.

In the July number of the *North American Review* Prof. Ely writes in advocacy of a Government telegraph. Most of the article consists of statements of opinion—the opinion, for instance, that a government is likely to be less corrupt if it does more business, or that the abuses which result from having a matter partly in politics will be lessened if we get it wholly in politics. As long as these remain mere statements of opinion it is impossible to refute them. But it is the misfortune of the advocates of State socialism not to be able to content themselves with expressions of opinion, but occasionally to descend to facts; and when they come to facts they almost always state them wrongly.

The article before us contains quite a marked instance of this kind. It ends with a comparison of telegraph charges in the United States and in other countries. It says that we may assume that the average charge in the United States is fifty cents a message of ten words, while that of Germany is only seventeen cents for ten words, and from this a deduction of one and a quarter cents per word is allowed if the message contains less than ten words. When a thing of that kind is stated by a man whose position should make him a responsible authority, people will believe him. It is worth while to examine the matter in detail and show how untrue the statement really is.

What Prof. Ely means by saying "we may assume" that the average charge in the United States is 50 cents a ten-word message we do not know. If he means that the advocates of State socialism are liable to make assumptions without regard to facts, perhaps he is right. If he means that this is a proper way of proceeding, he is decidedly wrong. What the average charge for a ten word message in the United States is, we have no means of telling; but the average charge for all messages, counting the longest as well as the shortest, during the last year covered by the Western Union report was 24 per cent. less than the figures assumed by Prof. Ely. The total number of messages sent was 51,464,000; the aggregate receipts were $19,711,000. The average receipt per message of every kind, including the longest as well as the shortest, was thus 38 cents instead of 50. If we omit miscellaneous receipts, the actual tolls per message are said to be only 31 cents.

If now we compare the German figures of the same kind, we find that in the year 1885 the number of telegrams sent* in the German Empire was 14,025,820, the receipts 19,883,240 marks, making an average charge of 33 cents per telegram, or very slightly lower than that in the United States. In this connection it must also be remembered that the proportion of very long despatches is far greater in the United States than in Germany, so that there is every reason to believe that the charge per space unit was much cheaper here than there. Let it be further remembered that the density of population in Europe is so much greater than in the United States that a 33-cent charge in Europe represents worse economy than the 38-cent—not to say a 31-cent—charge in the United States. This is not wholly or chiefly a question of distance as affecting the telegraph economy, although distance has considerably more influence than Prof. Ely will allow in his argument. It is also due to the fact that with a large population per square mile telegraph service can be and ought to be so much better organized as to do a vastly greater amount of work with little additional expense.

Let us now look at the matter in another aspect, and not compare average receipts, but tariffs of charges. We find from the German telegraph rate-sheet of 1888 (we have not been able to obtain a copy of the present year, but have no reason to suppose that any considerable change has been made) the following results:

For telegrams in Germany (address and signature included in every case)	1½	cents a word
For Austria	2½	do
For France	3½	do
For Italy	5	do
For Spain and Russia	6	do

It is further to be noted that a minimum price of about 14 cents is placed on all telegrams. If we now allow for the address and signature, we find that the ten-word telegram becomes the fifteen or twenty-word telegram, and that that should be the unit of comparison with the United States. Under these circumstances, we find that the fifteen-word message rate within Germany is 22 cents, to Austria or Denmark it is 37 cents, to France 52 cents, to Italy 75 cents, and to Spain or Russia 90 cents. Prof. Ely may decry distance as a factor for telegraph rates as much as he pleases, but European telegraph rates are graded according to distance, even if (though nominally) controlled by international boundaries and questions of transit. To be sure, a 22-cent rate prevails, where we have here 25 and 30-cent rates; but the 37-cent rate operates on an average at shorter distances than our 40-cent rate, the 75-cent rate at shorter distances than our 60-cent rate, and the 90-cent rate at shorter distances than our 75-cent rate.

Still another point deserves most serious notice. Not merely are the rates substantially equal to-day, but the German rate has been rising while the American has been decidedly falling. We give comparative figures for the latest dates of April compared with those of ten years earlier:

	1876.	1885.
Germany:		
Messages	8,768,535	14,025,820
Receipts, R.M.	12,175,319	19,883,240
Receipts per Message, R.M.	1.39	1.42
United States:		
Messages	18,729,567	42,096,583
Receipts, $	10,034,986	17,706,834
Receipts per message, cts.	54	41

*We have before us no figures for a later date which separate telegraphic from postal receipts. For obvious reasons it is better to count the number of despatches sent rather than the whole number handled, which is often given in statistics. The figures do not include Bavaria and Wirtemberg, which have separate telegraph services.

To be sure, United States rates have fluctuated somewhat from year to year, and would be objected to by the State Socialist as unsteady, but for ourselves we prefer an unsteady improvement to a steady deterioration.

This article is not intended as a defence of the Western Union Telegraph Company. While we do not agree with all the attacks that have been made upon that company, we think that it might have done better by the public, and has made great mistakes of policy which it ought to have avoided. We simply wish to show that when matters are truthfully presented, Government management at its best can barely show as good results as corporation management at its worst, and that if proper allowance is made for difference of density of population, the boasted economy of Germany proves to be no economy at all.

CLERICAL CONSCIENCES.

THREE or four rather striking proofs of the growing despite put upon theological tests by those who submit to them formally have recently fallen under our notice. Prof. Briggs of this city, who has long been noted for his alarming habit of speaking out in meeting, in an article on the question of Presbyterian creed-revision in the *Presbyterian Review* for July, coolly alludes to the lost sense of obligation in subscribing to the Westminster Confession in terms which would be sure to be highly resented if an outsider were to use them. He says: "If the Presbyterian Church is to revise the standards to suit all these claimants who are at present in the ranks of her ministry, it is clear that more than half of our venerable documents will be revised away." Speaking of the difficulty which many young men feel in subscribing, he says of those already in the ministry: "They manage in some way to soothe their troubled consciences, or to toughen them by lax interpretation of the standards or the terms of subscription."

The question of theological tests has recently had a new airing in England, in connection with the proposal of the Chancellor of the Exchequer to abolish such tests in the Scottish universities, or rather in the "secular" chairs of those institutions, leaving it to a special committee to devise a form of test for the theological professors. The London *Spectator*, which paper has long been set for the defence of the faith, approves the change, on the ground that it will tend to diminish conscienceless subscription, saying, "We all know how willingly in our English universities men accept tests in a non-natural sense, and how much mischief that taking of false pledges—for false it is so to take them—has done." With this may properly be mentioned Prof. Sanday's article in the July *Contemporary* on the prospects of theology in England. He ostensibly is replying to Mrs. Humphry Ward's late description of the decadent and little original character of theological teaching and investigation in England, but he has to admit that a large part of what she said was true. He says that the leaders of English theological thought have no idea where they are coming out; they follow the Germans most reluctantly, yet perforce they must follow; and, in fact, their attitude, as he describes it, is like that of the Bishop in the story, who said to his clergy, speaking of the three-witnesses verse in the Epistle of John, "This text is probably spurious, but it must not be given up without a struggle." Prof. Sanday thinks that the British laity are willing patiently to wait until their accredited teachers find out what to believe, and hence that any dream of a "New Reformation" is wholly futile.

Such testimonies as these are significant as being the utterances of those who speak from the inside, and are worth dwelling upon because they show that the sense of obligation which has been so eaten into in the commercial and political world has not failed to undergo great deterioration even in those who still are unquestionably the most conscientious class in society—the clergy. They could not escape, in fact, when the infection is so widespread. The Church and the ministry are more peculiarly susceptible than ever before to social influences, and if society has come to look leniently upon trustees who are not trustworthy, directors who do not direct, and methods of business which cannot stand up before a sensitive conscience, it was inevitable that the fine sense of honor which has characterized those who stand in the most sacred of places should have suffered somewhat. The ministry is compelled, or feels itself compelled, to wink at so many questionable transactions of church members that it naturally comes at last to wink at its own intellectual dishonesty. President Harrison, standing up at Woodstock to laud the use of wealth made by a man whose gains were in a large part discreditable, fell, all unconsciously no doubt, into the unfortunate attitude which the representatives of the Church too often adopt in like circumstances, and it is an attitude which carries its own demoralization with it.

We know how rarely a question of theological tests presents itself to a man as a pure question of honor or infamy. When it comes in that fashion, we do not believe that there is a minister in the land who would not settle it in the right way. But it is usually enmeshed in casuistry. The issue seldom appears clear and simple, especially after the theological obligation has been assumed. In the case of students for the ministry the case is easier, and we have Prof. Briggs's word for it that they, in increasing numbers, are shrinking from the bonds they are expected to put on. The result is, the Professor says, "the Presbyterian Church has not been able for some years to supply a sufficient number of ministers to fill our ranks." And he adds, what was of course to be expected, "There is a feeling in some quarters that the average quality and standing of the ministry have already been lowered, and that the average is likely to become lower still."

The only way to abolish the dangers inherent in theological tests is to abolish the tests themselves, so far as possible. This is practically the policy advocated by Prof. Briggs. Let us leave the creed alone, he says, "as at once the measure of our orthodoxy and the measure of our departure from it," and make the terms of subscription as broad in ecclesiastical law as they now are in fact—so broad that a minister of any Christian denomination could honorably take them. It would be a good thing if there were any chance of this being done; but there is not. Revision will drag along for some years, resulting, possibly, at the end in some minor changes of phraseology, and that will leave the whole question really at the same place where it is now, while it will have had the bad effect of lulling troubled consciences, in the meanwhile, and getting more men into a position which they will feel to be false for them, and yet from which they will not know how to escape.

THE PARNELL COMMISSION.

LONDON, July 12, 1889.

THE Parnell Commission has now passed its hundredth day of sitting. Nearly 100 witnesses have been examined, and over 90,000 questions have been asked. The taking of testimony is expected to close during the coming week. The counsel on both sides will reserve their summing up until after the long vacation, that is, until October, and the judges will make their report about the time Parliament meets, that is, in February or March, 1890. I have seen no one in London, of either political party, who does not look on the whole proceeding as a terrible mistake. The Gladstonians treat it with ridicule, and the Conservatives talk of it as a blunder into which they were led by the cocksureness of the *Times*. "We," that is, Messrs. Walter, Macdonald, and Soames, were so sure of their game that they persuaded all their friends that they were going to settle the Irish question by completely discrediting the Irish members, and of course no greater boon could be bestowed on the Conservative party than such a settlement effected in such a way.

The object of the inquiry was to see whether the Irish members were directly connected with outrages—that is, whether certain persons named had a hand or part in setting on foot certain determinate attacks on person or property. But the act was so worded that the judges have felt bound to admit evidence showing the indirect connection of Irish members with crime—that is, showing that outrages had occurred in certain places after these members had made certain speeches in them; or that outrages had followed the establishment of branches of the Land League, of which League they were prominent or active managers; or that they had circulated newspapers containing instigation to crime; or that they had associated in a friendly way with persons subsequently discovered to be the perpetrators of criminal offences. Consequently, the inquiry before the judges has taken on the nature and proportions of an examination of a certain period of Irish history, including the conduct and motives of the principal actors in it; and the work of the judges has become in some sort that of historians. The opinions of all sorts of people about certain events have been taken very much as an historian would take them, and these opinions have run on all sorts of phenomena—religious, social, political, and economical. In fact, it would have been just as proper to examine Froude, or Lecky, or Gladstone, or Morley, as a great many of the witnesses who have been examined, and the judges are getting up the kind of work for

which the French Academy of Moral and Political Sciences occasionally offers a prize, and crowns when approved. The question before them is whether the social and economical revolution which we are witnessing in Ireland was justified by antecedent events, whether it has been effected by means of which the moralist can approve, and whether the chief actors in it can be handed down to posterity as good examples for youth. This is no doubt a useful inquiry to have made, but it is generally conceded that it was absurd to charge three judges with it.

In fact, people are saying now that worse agents for the work than judges could hardly have been selected. What judges are trained in is the art of applying the law to definite issues of fact, carefully made up for them by the bar and stripped of all extraneous matter. For the collection and arrangement of a vast body of heterogeneous information for the use of the statesman, they have no special training at all. The opinion of the Parnell Commission, therefore, on the evidence they have collected will be simply that of three highly respectable elderly gentlemen, from which everybody will feel at perfect liberty to differ. It will not be ridiculous for any layman to say he does not agree with them, as it would have been had they been passing on questions of law. In truth, the summing up of the case of the *Times* by Sir Charles Russell will probably have as much weight with the public as that of the whole case by the judges. Every one agrees that this is a marvellous piece of intellectual work. John Morley, who, although a politician, is one of the severest critics in intellectual matters, places it in the very highest rank of performances of this kind—that is, the marshalling and elucidation of a vast body of heterogeneous facts, some historical, some political, and some economical. The speech has been published in a handsome volume by Macmillan, is having a large sale, and is probably the only product of the Parnell Commission which will really live in history.

Another reason, and a very potent one, which many Americans will find it difficult to appreciate, why the opinion of the judges will not carry great weight, is that lawyers have by no means the standing, as lawyers, in politics in England that they have in America. The English political mind is by no means disposed to assume, as the American political mind is, that a successful advocate must be a good legislator. Successful lawyers here almost invariably make their way into politics, but they there encounter the competition, from which American lawyers are free, of another large class of educated men, who have given more attention to politics than is possible for most busy men at the bar, and many of whom are so placed as to look down on lawyers socially. Consequently the opinion of the greatest lawyer on a political question does not carry half the weight it does in America; but, on the other hand, his opinion on a legal one carries, I am inclined to think, twice as much. Moreover, there is in the Parnell Commission virtually only one judge, Sir James Hannen, and a better judge there could not be. He is learned and able, looks his part to perfection, is a model of patience and good temper, and has a vein of caustic humor to draw on which is invaluable for the repression of turbulence or conceit. The others seldom open their lips. Indeed, Justice Day is said to have spoken only once since the Commission opened, and what he then said was, "Nor I." The report, when it appears, therefore, will be, or be taken as, Sir James Hannen's to all intents and purposes. It might be short, passing categorically on the Pigott letters, and the direct complicity of the persons named in the *Times* pamphlet with actual crime, but I am inclined to think that it will be long, and will, therefore, be somewhat in the nature of an essay on the Irish question, in which each party will find quotations for use on the stump and in Parliament. Probably nobody looks forward to it with much interest except the *Times*, which is naturally extremely anxious for some excuse or justification, however slight, from an authoritative source, for the great boldness of its course.

I was present in court during Sir Charles Russell's examination of Davitt, which was in some respects interesting, as revealing the character of one of the chief actors in the drama. He is a rather small, thin-faced, black-bearded, one-armed man, of a distinctly Jewish cast of countenance, and, as some say (relying on the indication afforded by his name), of Jewish origin. He is the son of an evicted peasant, lost his arm when working in a factory as a child, and has passed ten or twelve years of his life in prison. His black eyes burn deep in their sockets, as the eyes of fanatics are apt to do, and he flames up now and then in a way that makes you glad that he does not feel it his duty to do anything unpleasant to you. Nevertheless, such as he is, absolutely self-taught, he made no mean appearance on the witness-stand, where, according to the cruel and absurd English custom, he was kept standing five or six hours a day while the Attorney-General, Sir Richard Webster, worried him about his whole past life from the age of twenty. His life until the Liberals took up the Irish cause was that of a conspirator. He made no concealment of anything, and sometimes visibly disconcerted the Attorney-General by the frankness of his avowals. I have noticed frequently that Englishmen who are nothing if not loyal to the Crown, are completely upset by the readiness of the Irish to avow themselves "traitors" and "rebels." With that deficiency of imagination which is a national characteristic, they find it difficult at first blush to conceive the state of mind of a man who, born under the Queen, avows openly his contempt for her authority. Then Sir Richard is a bad cross-examiner. He puts on the old bullying *nisi-prius* manner, which in the trial of a political case draws him into frequent scuffles with the witness, in which he is apt to get the worst of it. This occurred with Davitt on several occasions. Davitt got off the stand, on the whole, without damage, except through the production of one very damning letter, which he wrote when he was twenty years old to a brother Fenian who proposed to murder a man for communicating with the police. Not one word of reprobation of the crime does the letter contain. He simply advises the other man not to do it without some one else's permission, knowing, he now says, that the permission would not be given, and, as a matter of fact, the murder was not committed. But the tone of the letter was atrocious, and shocked the public. Probably the most dramatic scene in his testimony was where he avowed his hearty sympathy with the widow Walsh, who urged her innocent son to die on the gallows sooner than give up the actual perpetrator of the murder for which he, the son, had been convicted, and he did so die accordingly. Davitt's passionate adhesion to her view made quite a sensation in the court-room, and really was a flash of lurid light on the course of Irish history. It brought out more clearly than a whole volume of exposition could do the Irish peasant's hostility to the law as foreign law, and his extraordinary obedience to the code of custom which has grown up around the law and in defiance of it.

AN OBJECT-LESSON IN CIVIL-SERVICE REFORM

CANEA, Crete, June 25, 1889.

I HAVE just been studying the effect of the law of rotation in office put into effect by universal suffrage and developed to its logical conclusions. I think the readers of the *Nation* may be interested in the result.

Ten years ago—in 1878, to be precise—the Cretans received a constitution, the fruit of numerous and destructive insurrections of which the history is probably pretty well known to your readers. This Constitution provided a single chamber (the governor being appointed by the Sublime Porte), by the vote of a three-fourths majority of which the Constitution itself may be modified, the modifications as well as the enactments of the Assembly requiring the approval of the Sultan to be effective. By this instrument eighty deputies are elected by the *scrutin de liste*. The judges are elective, each district having a court, and there being no court of appeals. The presidents of the courts, the procureurs and the clerks of the same, are appointed by the Governor-General, together with the *Kaimakams*, or Lieutenant-Governors of the districts. The custom-houses are reserved by the Porte, half the total amount of the duties collected being given to the island treasury by a subsequent concession, and the total direct taxes, which are tithes, belonging to the island. There is a large force of gendarmes enlisted among the population of the island in the proportion of the two religions, Mussulman and Christian, the officers being appointed by the Governor. For a time the arrangement worked very well, the Cretans not having discovered that there was any profit in politics, and being divided by no questions of general policy which required the formation of parties. It was reserved for an astute Governor-General, Christian in politics, to discover the true use of them. The Governor (or *Vali*, as he is entitled), being the survival of the Turkish dominion, and remaining the sole obstacle to complete self-government available to attack, was made the object of all the discontents of all factions and of continual complaints to the Porte—complaints followed by demonstrations in the way of facts—which the Porte appeased by dismissing him.

Photiades Pasha, one of the most capable of that class of Turkish employees whom it is perhaps fitter to call uncircumcised Ottomans than Christians, succeeding to the Valiship, saw in the naturally litigious character of the Cretans the means to distract their attention from him and retain his post by applying the maxim *Divide et impera*. He set secret agents to stimulate quarrels between families, and raise contested claims between adjoining villages or districts. His administrative council, a sort of advisory board to the Vali, contained some of the most capable and unscrupulous intriguers in the island, and aided him to carry out his policy so well that he was appointed for the second term—an isolated case in the annals of constitutional Crete. In this time factions and feuds and fights developed rapidly, and in due course the factions coalesced, as factions will, into parties, on no principle whatever except that of the gravitation of small movable bodies towards each other; and finally two parties were evolved, whose distinctive principles I have not been able to discover, but whose

antagonisms have led, I am informed by a late official, to about six hundred political murders down to the present time, besides innumerable killings and mutilations of cattle, horses, asses, stealing and killing of sheep, cutting down of olive trees and vines—the number of olive trees alone cut down being estimated at 40,000 in the entire island. The progress of empire under Photiades was such that he had finally to be thrown to the lions, and the term of office of his successors has not averaged much over a year. Each in his turn espoused the side of one or the other party, and was sacrificed to appease the Opposition.

This state of things made it necessary for the perpetrators of the crimes to have friends at headquarters and in the tribunals, and the judges were of course bound to protect their friends, and the deputies were obliged to look after the workers, while the members of the minority had no justice except in retaliation. The elections were struggles at first to secure protection, and then, as the taste for office grew, to get appointments. Last year the Constitution was amended to confer universal suffrage, and a new, enlarged, and hungrier constituency was let loose for the quest of the privileges of freemen. Fifteen months ago, or just prior to the opening of the last session under the restricted constituency, the present Vali was appointed. The two parties into which the population was divided were nearly equally balanced in the Assembly, one calling itself the "Barefoots," and styling its opponents the "Haversacks"; the former comprising the poorer people generally, and the latter most of the well-to-do islanders. The Barefoots were in a majority of two or three in the full Assembly, and the Governor threw in his lot with this majority.

When the suffrage was made universal, the elections gave scope to more demagogy than had been possible before, and the number of workers who had to be rewarded for their votes and for their works was enormously increased. If it had been difficult to get justice from partisan judges before, it was now much more difficult. The management of the elections was improved, and the falsification of returns was much facilitated and increased, so that the mayors (every commune has its mayor) made no hesitation in giving the certificates of election to the man who had the smallest vote; and where the mayor was on the side of the minority, steps were taken to convert the vote. The procureur made charges of some kind or other against the known partisans of the minority, or Haversack party, on the strength of which they were thrown into prison till the election was over, and others of the same party, having the fear of the law before their eyes, voted straight; and when this was not enough, the Assembly simply rejected the mayor's certificate and invalidated the election of the Haversack candidate, seating their own. At last, and this was in the first week of my visit, some two weeks into the session, they proposed simply to turn the Opposition members out as nuisances, though they were no obstacle to legislation in any sense the majority might desire, for they were only 13 out of 80. Meanwhile, the offices in the gift of the Governor, of which a slight majority had previously been held by the Barefoots, were being rapidly converted, and at present they are held in the proportion of nine to one by the victors. The conversion was proceeding apace when I arrived, the substitutions being made with the very least regard to the efficiency or honesty of the substitutes. A much respected Christian, who had long occupied the position of President of a provincial tribunal, and who could read and write both Turkish and Greek, was dismissed as illiterate, and his place given to a man who could write neither of those languages.

Prior to this campaign the practice of rotation in office on the American plan had not been formally adopted as the rule of government; and the minority, which, oddly enough, and by the confession of both parties, really represents the majority of the population, seeing themselves proscribed and hunted out of all part in the government of the island, determined to rebel. The deputies of the minority joined in a protest, demanded annexation to Greece, and partly withdrew from the Assembly. The outrages all this time were increasing and the authority of the Government diminishing, until no process will run for any crime or suit, the gendarmes cannot effect an arrest, no one will pay his taxes, there is no money in the treasury, and the police have struck or resigned. In fact, there is no recognition of the island Government outside of the walled fortresses. Mass-meetings were held and telegrams were sent to the Sultan, but the Governor stopped them. The Governor and the consuls (who are a very important part of the government of the island) agreed to ignore the complaints and the anarchy and to minimize the importance of the whole matter. The Cretans in reply called meetings and decided to form an *Epitrope*, or general committee of the population. This is an extremely important step in the politics of Crete, and is only taken in view of a general insurrection. This Committee is now in session in the mountains, and, as I write, in negotiations with the Imperial Commissioner who has been sent by the Sultan to investigate the condition of the island. At least three-fourths of the Cretans have taken part in these elections, and the legal Assembly no longer represents the country, but only the office-seekers and the office-holders.

The revolution is overwhelming. The Epitrope has begun to assume the direction of affairs, collecting the taxes and organizing the police, and has really begun to restore order. I have now been here three weeks, and in that time the change in the condition of the island is evident even in our relations with the interior. But the chaos is only less; order is far from restored, and I do not see how it is to be established. The entire interior of the island is under the control of the Epitrope, but the crowding of the office-seekers is undiminished. The last steamer from Candia brought 130 applicants for offices, all of whom had been efficient workers in the last elections, and wanted to be paid. The consuls, in part at least, waking up to the probable consequences of a pressman in their midst, advised the Vali to stop the guillotine, which he did at last; and the Assembly, which had demanded the heads of four Kaimakams among those called for and refused, abolished the kaimakamliks. It then passed an amendment to the Constitution taking the election of the judges from the people and vesting it in the Assembly; and, without waiting for the Porte's sanction to the amendment, went on to appoint the judges under the new law, though not a single appointee could go to his post and the law was worthless till approved by the Sultan.

There is no color of an insurrection against the Sultan, for the demand for the union with Greece is only the usual formula of discontent; but the insurrection, for such it practically is, is against the office-seekers and the office-holders—a revolt against the anarchy resulting from rotten self-government. The demands of the insurgents are, in chief, two: the dismissal of the Vali, who has made himself the chief of a party instead of being the guardian of legality and the holder of the balance between the two parties; and then the amendment of the Constitution in a more conservative sense. That other demands will follow is more than probable, but these are all that have been formulated so far. But I fail to see how this is to restore order and uproot the seeds of anarchy which have been sowing themselves for the last ten years. The rage of parties is such that unless (which is barely possible) there is a healthy reaction established, so strong as to abolish temporarily party distinctions, there is no authority in the island which can remedy the confusion. Should the Porte send troops to enforce order (which is a police function), the whole island will take up arms against the troops; the same would be the case with a force of any other country except Greece, so that it is quite within the possibilities of the case that the Greeks may be called on to keep the peace, and in that case it is also possible that they may keep the island. I do not know how far the present Epitrope, which is the organ of the Opposition, would be able to control the island if it became the official majority. The same rancor of party would probably impel it to persecute the present majority, and so provoke a revolt in turn. The parties are, in normal conditions, in the proportion of two to three in favor of the Haversacks. It was the knowledge of this fact which gave such energy to the revolt; but the minority is still a strong party, and the factions will not fail to rekindle unless the majority are wise, which democratic majorities rarely are.

W. J. Stillman.

SIMON'S 'WILLIAM THE SECOND.'

Berlin, July 11, 1889.

The appearance on the Berlin book-stands of M. Édouard Simon's book, 'L'Empereur Guillaume II. et la Première Année de son Règne,' follows by about three weeks the first anniversary of the accession of the young sovereign. It is intended, as the author says in his preface, to close the series of studies conducted by himself on the contemporaneous history of Prussia and Germany. These studies have hitherto included, as the readers of your paper are aware, a history of the reign of the Emperor William I., a history of Prince Bismarck, and an account of the reign of the Emperor Frederick. In all of these works M. Simon has displayed a fairness of view and impartiality of judgment remarkable in any historian, and perhaps without a parallel in one taking as his subject the policies and men of a country which, within his own time, has humbled and then to a certain extent supplanted his own.

His last work will confirm its author's reputation for impartiality. It is so dreadfully impartial that it is almost uninteresting. If it had been written by the court historian, the brilliant Professor von Treitschke, it could not have been more correct, from the imperial standpoint, and it would have been much less dull. But court historians, I am told, never write—at least not history—and in the absence of any other serious work on this the opening year of what promises to be a long and important reign, let us take M. Simon's book and go over very hastily with him those events of the new reign that have served to mark a tendency by observing which a key to the future may be obtained.

M. Simon indulges in no criticism of a governmental system that makes it possible for a young sovereign of unknown character to throw his country and all Europe into war in order to gratify a personal ambition. With

the system he is not concerned, only with the application of it under the present ruler. The first half of his book is given up to a sketch of the life of William II. before he came to the throne, and to a brief review of the leading events in the reigns of William I. and Frederick III. as a necessary introduction to those of the present reign. In the field of foreign politics he designates the elder William and Frederick, in a general way, respectively as Russophil and Anglophil; but he does not lay great emphasis on this. The point he seems most anxious to make is, that the administration of Frederick, had he lived, might not have been so liberal as it has come to be supposed. While recognizing the difference of views held by Frederick and his father, he recalls the first year of the old Emperor's reign, when he tried to rule with a Liberal Ministry and failed, and the opinion of Bismarck, that whatever views a Crown Prince may hold, when he comes to the throne he will see that it is only possible for a German Emperor to rule in accordance with the principles of the Conservative party. The one act of Frederick's upon which, in Simon's opinion, the Liberals had a right to build hopes for their future accession to power was the dismissal of Puttkamer; on the other side, in regard to the army Frederick was as much opposed as the old Emperor himself to anything in the nature of parliamentary interference, and his relations to Prince Bismarck were personally and officially cordial in the extreme. As to the return of the conquered provinces to France, there is no reason to suppose that the Emperor entertained such an idea.

There is, perhaps, an historical probability that had the Emperor Frederick lived to grow old in the cares of office, his opinions would have changed in time to the Conservative side. But as against this general probability there is surely little reason to doubt that had he lived in full enjoyment of his health and faculties, he would have sought to apply in practice the liberal ideas which he was known as Crown Prince to have held. M. Simon, in taking into account only his acts as Emperor, when he was too ill to accomplish whatever he may have wished, does him in this matter injustice. Frederick's first public decree (not mentioned by M. Simon in this book), leaving the period of mourning for his father to be settled by the people themselves, instead of setting for it an official limit, showed, at least as clearly as the approval or disapproval of a bill involving complicated interests could have done, the liberal nature of its author. The whole speculation is, of course, a profitless one, and I have dwelt upon it only because it seemed to me to hang well together with a fancied aim of M. Simon's, more creditable to his patriotism than to his historical insight, to which I shall by and by have occasion to refer.

The advent of William II. was accompanied, as M. Simon truly observes, by symptoms of alarm both in and out of Germany; and the new monarch's first words, addressed to his army and navy, instead of, as in the case of both his father and grandfather, to his people, appeared to justify the fears that were felt. The Emperor's words were not warlike, but they were addressed to the war power, and showed that his first thoughts were for that. Three days later appeared the short address to the Prussian people, and not until the meeting of the Reichstag did the sovereign address himself to Germany at large. In this first speech to the Reichstag, as in all subsequent speeches, he assured the world of his intention of following in the footsteps of his grandfather, accepting as a legacy the policies already inaugurated in the reign of William I., among which the two most important—the preservation of peace, and Prince Bismarck's State-Socialistic system of compulsory insurance for the laboring classes—he singled out for his especial approbation. Addressing the Prussian Landtag, he disclaimed any desire to extend the prerogatives of the crown, and promised to protect the liberty of all religious sects. This last assurance, which in any other country except Russia could be considered only as a piece of empty declamation, has unfortunately a practical value in Germany, where a political party stands for the suppression of the Jews. These first manifestations of the new Emperor produced, as M. Simon says, a generally good impression.

About a month after the death of his father, the young Emperor started off on a series of visits to the various foreign and German courts, which he has not yet completed. The object of these visits, as he himself has given out in the course of his speeches, is to cement the peaceful relations existing between himself and their sovereigns, as well as to encourage commercial intercourse between their peoples and his own. The Emperor has thus far visited St. Petersburg, Stockholm, Copenhagen, Dresden, Carlsruhe, Stuttgart, Munich, Vienna, and Rome, and he has yet to visit England and Greece. His reception at each of these places was good, or at least polite. In Vienna the Crown Prince Rudolph was absent from the festivities, but the Emperor Francis Joseph made up for his son's neglect with the most pointed expressions of friendship. In Rome there was a *contretemps* in the form of a shower of red paper scraps bearing the words "Vive la France!" some of which fell into the Emperor's carriage; but the greetings of the populace were unmistakably friendly. The Emperor here showed much tact in his intercourse with King and Pope, and succeeded in getting away without becoming the occasion of any acute unpleasantness. The outcome of the visit to St. Petersburg alone does not seem to have been the desired one. Although William II. is the first German sovereign to speak Russian, this circumstance does not seem to have been sufficient to recommend him to the Czar's affections. The relations between the two countries at the present moment, if one can trust to newspaper expression of opinion on both sides, are decidedly strained; and although a year has now gone by since the Kaiser's visit, nothing definite is given out about the Czar's return of it.

Before the Emperor's departure for St. Petersburg, he accepted with great reluctance Von Moltke's resignation from his active post as head of the army, and found for the aged soldier a lighter task in the Presidency of the Council of National Defence. This led naturally to the retirement of other old soldiers and the advancement of younger officers to the first places in the army. That these changes were made from necessity and out of consideration for the comfort of the older officers, and not at all to introduce more warlike blood into the first rank of the service, M. Simon seems to be justified in informing his countrymen. The cordiality of the Emperor's feelings towards the first soldier of his army does not admit of a doubt.

As regards the great questions of parliamentary government and religious toleration, M. Simon interprets the Emperor's words to mean that he will prefer in both a middle way to extreme measures. At the dinner given by the Chancellor to the members of the Reichstag, the Emperor overturned all the traditions of the Prussian court by attending in person and entering into discussion upon political matters with the representatives of his people. "A new era has begun," he said then. "King as I am, I like to keep up relations with the representatives of the people. My grandfather always remained a stranger to them; but I, for my part, am a child of the new age." This, however, must be taken to mean only that he is fond of discussion. No Liberal, however well-disposed to the Emperor, would maintain that he has any wish to put any more power into the hands of the Reichstag, and M. Simon himself calls him, like his grandfather, a constitutionist and not a parliamentarian. He will try to govern, M. Simon thinks, with the Moderates of both Right and Left, leaving the Progressists and the Reactionaries to go their differing ways. This is, of course, in one sense, the middle way, but it is quite as much, in another, the way of the absolute Conservative, who would keep things just as they are, and only kindly consents not to go backwards.

In questions of the religious order, the anti-Semitic party has been supposed to possess the sympathies of the Emperor, if not his actual support. M. Simon thinks that this cannot be the case, and he quotes a remark of the Emperor's, apropos of this subject, in which he says that he recognizes only patriots and opponents of the national development; that no one will believe him capable of wishing to turn back the wheel of time; that all German legislation is dictated by humanitarian principles; and that whoever refuses to recognize this fact and seeks to stir up the feeling of one class against another, may count upon his disapproval. Yet, if all other indications were wanting, the fact that the royal playhouse in Berlin does not employ Jewish actors, would seem to show that the principle of discrimination against a sect had obtained a footing among State officials presumably not so far removed from the imperial influence. In Church politics, the Emperor's appointment of a man of liberal ideas to a vacant university theological professorship shows that he does not move at the bidding of the extreme and intolerant orthodox party. He is a theologian, perhaps, of the Dr. Bismarck order, and is content to remain by the cardinal doctrine, "We Germans fear God and nothing else in the world."

Towards one party in the State, the Emperor has determined that no one shall mistake the nature of his feelings. Whatever progress may mean, it is not to be construed as meaning anything advocated by the Social-Democrats. They are simply enemies of the State, to be classed in the same category with the French. This convenient classification is sometimes applied by Prince Bismarck to less radical sections of the Liberal party, but it is true that the Emperor would reserve it in the main for the Social-Democrats. His most recent use of the expression (*Reichsfeinde*, foes of the Empire) was in the month of May to the delegation sent to express their grievances by the striking miners of Westphalia. If they maintained themselves in calmness and strict conformity with the law, he told them, he would interest himself in their behalf; but if the strike should prove to be the result of Socialist agitations, he should not be able to examine their demands with patience, and would order a vigorous suppression of their excesses. On the day following he received a delegation of the proprietors of the mines, and read them a lecture on the duty they owed the State to care for the welfare of their laborers, and to prevent the recurrence of such troubles by a wise foresight and an endeavor to admit the workmen to their just share of the benefits. As a result of the Emperor's intervention, a compromise was agreed upon by the miners and their

employers, and the strike, for the time, came to an end. When M. Simon finished this part of his book, he had not heard of its renewal; but, as we know, the soothing effect of his Majesty's words was but temporary.

While, however, the Emperor has shown himself intolerant of anything like Socialism when carried on among the people themselves, he has been the zealous promoter of the Socialistic system having its origin in the iron power of the State. The passage of the law assuring to invalid and aged workmen an income proportional to the salary they received in the practice of their trade, is an event of importance enough to mark the first year of any reign. Opposed to the end by the representatives of the class for whose benefit it is intended, it was finally adopted, as M. Simon says, "after long hesitations, and on the pressing desire of the Emperor."

To go backwards from the events last mentioned, we must not forget to chronicle the Emperor's conflict with the Liberal press of Berlin. The best known incident of this conflict was the publication of a portion of the Emperor Frederick's diary. All the circumstances concerning this episode are so familiar that it is unnecessary to repeat them here, and it need only be recalled that all the efforts of the Government to have some one punished for the publication came to naught, the courts steadily deciding in favor of the defendants. But the somewhat hostile criticism of the Liberal journals during the first part of his reign, and especially their free speculation upon his former relations to his father and his present ones to his mother, irritated the young sovereign in the extreme, and led to a protest on his part to the Berlin officials when they came to present him with a fountain on his return from his southern visits. He spoke out his indignation very clearly, but, the Liberal journals pretending to misunderstand him, he named them explicitly as the offending members of the press. When this did not silence them completely, a bill was prepared for presentation in the Reichstag the effect of which, if enacted, would be to restore the censorship in its worst form. This bill has not yet been urged upon the Legislature, and whether it has been abandoned, or is being held in reserve for another session, I do not know. M. Simon has made no mention of it whatever.

Two other policies—the building up of a navy and the fostering of a new colonial system—mark the first year of the new Emperor's reign. The first of these has long been a favorite project of his, and he has lost no opportunity of expressing his desire that Germany may become a first-class marine Power. The colonial policy is perhaps a natural outcome of the other; but M. Simon is undoubtedly correct in saying that it originates not so much with the Government as in the sentiment of the people, which is just now under the fascination of the colonial idea. In this matter the Emperor would prefer, as M. Simon puts it, to keep behind rather than to anticipate public opinion.

Apart from Russia and the two members of the Triple Alliance, the two countries whose relations with the German Empire offer the most interest are England and France. More than once since the advent of William II., the grounds for a possible disagreement between the Governments of London and Berlin have been made visible. The disputes in the two closely connected royal families, and the treatment of Sir Robert Morier by Bismarck, have furnished such grounds. Yet the relations of the two Powers have remained friendly, and a compact has been made binding them to joint action in the war against the slave trade on the African coast. M. Simon with justice attributes the avoidance of any break in the relations to the habit of the British Foreign Office of keeping itself free of personal entanglements. In regard to the attitude assumed by the new Emperor to France, M. Simon believes it not to differ from that of his two predecessors. To quote from his book:

"For a long time," he says, "people have been saying that he [the Emperor] is badly disposed towards the French nation. It would, perhaps, be more exact to say that he feels mistrust—a feeling which he shares with his predecessors, and which finds its explanation in the relations created between France and Germany by the war of 1870 and the treaty of Frankfort in 1871."

M. Simon goes on to say that the question of Alsace-Lorraine keeps open a big ditch between the two countries, but that, that question aside, "their diplomatic relations, since the advent of William II., have not lost the correct and courteous character which they had under the two preceding reigns." M. Simon is careful to remind his countrymen, as has been mentioned above, that the intentions attributed to the Emperor Frederick of returning the conquered provinces never had any existence in the mind of that ruler, and that therefore he is not to be preferred on that ground to his son and successor. Whether he is to be preferred on the ground of a greater liberality of mind and general policy, M. Simon has been careful throughout the present volume to express his doubts. M. Simon does not make the pretension, as he informs us, of writing history, in the strict acceptation of the word, of events so close at hand; moreover, he could not write historically of mere matters of speculation. If, then, he seems to strive, in a work not strictly historical, to lay stress upon the doubts he has conceived upon the degree of liberalism that would have marked the reign of a monarch who achieved something like popularity in the land of his enemies, for his supposed liberal tendencies, is there anything unfair in supposing that M. Simon has been actuated in this by a natural and patriotic desire to bring about a less hostile feeling on the part of his countrymen towards an emperor who is not, after all, so different from the one they admired?

In writing of contemporaneous events, there are advantages in living at a distance from the scene of your story, but there are also disadvantages. If M. Simon lived in Berlin, he would notice, unless I am much mistaken, from the mere tone of ordinary conversation, the public consciousness of the changed spirit in the national administration. From Frederick to William was a change from progressive ideas to mere reverence of tradition. So far as a stranger can observe, the Germans do not regret the change, but they recognize it. German society of all classes adapts itself with peculiar readiness to the opinions in vogue at court, and it is from this easy to determine when these opinions have undergone a change. A friend related to me the other day an instance which illustrates the point, and at the same time shows the direction of the last change, in a field apart from politics. A certain gentleman here made his preparations, during the lifetime of the Emperor Frederick, to start a review of literature and belles-lettres (a department in which German periodical journalism is singularly weak). On the Emperor's death, he gave up his intention, giving as his reason that, without the interest he had counted upon in the court, he did not believe that he could make the venture a success.

A little incident, now going the round of the newspapers, shows as well as anything how the Government of William is careful, even in small things, to distinguish itself from that of Frederick. The last-mentioned Emperor changed the name of the palace at Potsdam where he was born from "Neues Palais" to "Friedrichskron," directing that it should always be known by the latter name. As soon as he was in his grave, the old name began to be revived, and it is now given out that the building is to be known again as the "Neues Palais," the order, of course, coming from the Emperor, as without his permission the change of name would be illegal.

M. Simon's summing up is highly favorable to the young Emperor, whose first year of sovereignty he has been reviewing. One year, as he admits, is a short period to judge by, and no final judgment can be passed until he has been seen in the face of trial, which he has not yet had to encounter. But what one can say at present is, that in this first year of office he has avoided the mistakes which many expected to see him commit, and justified the hopes that others felt of his capacity for government.

"This year of début," so M. Simon begins his concluding remarks, "truth compels us to recognize, has not corresponded to the fears to which at first it gave rise; it has rather confirmed the prophecies of those placed within the environment of the future heir to an imperial crown, who augured well of his qualities as a ruler. . . . These fears [that he might disturb the peace of Europe] have happily shown themselves up to the present time to have been without foundation, and nothing gives cause for apprehension that they may be near a realization."

This is true, and the influence the young Emperor has exerted for peace indicates a conquest of himself which is thus far his best title to renown. His reign, which in so many other respects seems likely to be a repetition of that of his grandfather, bids fair to resemble it too in the conscientious regard for duty; he will set, we may hope, and, I think, believe, his duty to Germany above any ambition he may feel to win his laurels on a field of battle.

J. K. P.

FROM NIFFER TO TELLO.—II.

DRESDEN, July 2, 1889.

BOTH Layard and Loftus, in their travels and explorations in Assyria and Babylonia, were possessed with the laudable desire of finding whatever could confirm the historical accuracy of Bible statements, and the latter, I think, was curiously biassed by this desire in his observations about the Bene Rechab, or Sons of Rechab, to whom he devotes the better part of a chapter in his valuable and fascinating work on Chaldea and Susiana. It will be remembered that there was among the Jews at the time of the siege of Jerusalem by Nebuchadnezzar a nomadic tribe, the Rechabites, dwelling in tents and abstaining from the use of wine, by the command of Jonadab, the son of Rechab, their father, and that, in consequence of their adherence to this ancestral commandment, Jeremiah used them as the text of a sermon to the Jews, ending with the words (Jer. xxxv. 19): "Therefore thus saith Jehovah Sabaoth, the God of Israel: Jonadab ben-Rechab shall not want a man to stand before me for ever." Loftus at once reached the conclusion that the Bene Rechab whom he found along the Shatt-el-Haï were the Rechabites of the Bible. He speaks of them as a very numerous and independent tribe, allied with the great Montefik nation, but governed by an Amir holding a peculiar, almost sacred position. He also lays great stress on the markedly Jewish type of face which distinguishes them even among Semites, and which was the great argument for his identification. In answer to all

my questions I was assured that they were only one of the largest sub-tribes of the Montefik nation, and no one knew anything of the existence past or present of an Amir as their head.

It is so difficult to obtain information among the Arabs of conditions, events, or men of a past generation, that I should, nevertheless, be inclined to accept Loftus's statements regarding the status of the tribe in his day, and suppose a change of conditions since that time; but in regard to the matter of Jewish type I am afraid that he was the victim of mental bias. The Jews have always played an important part in Irak or Babylonia, and they even formed, shortly before the Mohammedan conquest, an independent kingdom in the marshes of that region. There would, therefore, be nothing surprising in the existence of a tribe or tribes with Jewish blood in their veins. But to me (and I found my opinion confirmed by at least one other unprejudiced observer) the Bene Rechab, together with all the Montefik whom I observed, are not only not Jewish in type, but, in marked contrast with the pure Semitic type of the Affek, they present a non-Semitic, or at the least mixed, type. Their faces were generally broader and rounder, the eyes neither so dark nor so liquid, and their noses of no particular shape, and as much or more inclined to turn up than down. In many cases one might suppose that Mongol blood ran in their veins. I may add that similar divergences of type seemed to me to prevail in the towns along the Euphrates. So the Arabs of 'Anah and Hillah present a pure Semitic type, those of the intervening towns, and especially of Hit (ancient Issos), a non-Semitic or mixed type. Similarly, the Armenians present at least two, and I think three, types, one of which is very pronounced in its Semitic character, so that it is frequently impossible to distinguish Armenians from Jews, although the former claim Aryan descent; while another broad, flat-nosed type might even be Tatar.

To return from this ethnological digression, leaving our horses at the camp of the Bene Rechab, and taking the chief with us as guard and guide, we descended the Shatt-el-Haï by boat the very night of our arrival, reaching M. de Sarzec's camp among the 'Atab Montefik at midnight. After our own rough settlement on the barren summit of the Niffer mounds, M. de Sarzec's little village on the shore of the Shatt seemed like a quiet summer retreat, the more especially as his wife, a ten-year-old son, and a French maid accompany him. Tello itself is three or four miles from the camp. Excavations were not in progress on the day of our visit, on account of M. de Sarzec's indisposition, and for the same reason he did not accompany us to the diggings. Outwardly considered, the mounds are very uninteresting, low, and so gradual in outline that it is difficult to determine their real extent. The excavations are neither large nor deep, and from all that I could learn I do not think that any part of the mounds has been thoroughly explored, so that much may still be expected from this site. The antiquities excavated here, as is well known, are the most valuable yet found in Babylonia, and M. de Sarzec has justly acquired his renown as a successful excavator. The determination of this site for excavations was the result not of its identification with a well-known ancient city, for even yet we scarcely know what city stood there, but of the finding by Arabs at this point of fragments of an inscribed statue, and up to the present moment excavations in Babylonia have resembled a game of chance, the ruins of the most famous cities yielding comparatively little to the spade, while this unknown site has yielded treasures of the first importance for the history of civilization.

Our visit to M. de Sarzec was almost enlivened by an Arab war, resulting from the cutting of an irrigation canal, and the village nearest to M. de Sarzec's camp was actually marching to the fray when the gendarmes interfered and sent the combatants home. The peaceful and subdued condition of the tribes along the Shatt-el-Haï, due to a severe chastisement inflicted upon them by the soldiers a few years since, was well illustrated by this incident. Having witnessed a war in the morning, we had a specimen of Arab love-making in the afternoon, on our return voyage up the Shatt-el-Haï. Two Arabs towed our boat by means of a rope attached to the top of the mast. It proved to be an exciting if not perilous mode of locomotion. Sometimes they would stop to clap their hands and dance and sing, and then, when the boat had come to rest and the rope was slack, whether from a sense of neglected duty or of mischief, they would start off again at full speed, almost oversetting us. One of them was in love with a maiden named Chorla, a native of one of the villages which we passed. The sight of this village inspired him to dance and sing, clap his hands and stamp his feet with double diligence, chanting Chorla's praises and proclaiming his own devotion. Arab music is tolerant of almost any words, however unrhythmical, and the laws of composition appear to admit of indefinite repetition, so that while he sang a long time, the words were little more than variations of the one theme: "Chorla, how I love thee! I cannot live without thee!" and an emphatic statement of her worth. Shortly we met Chorla herself walking on the bank, but the coy maiden disappeared within her garments, demurely ignoring both us and her lover. The final act of such a courtship would be the agreement with the parents on the price to be paid for the bride's purchase, although a maiden occasionally elopes without waiting to be bought. Indeed, during our absence from Niffer the daughter of our guide, a maiden of fifteen, who had been offered me for a wife, created much scandal by a runaway match. A self-respecting maiden should prefer to be purchased, and for a high price, as the amount paid is some criterion of her value.

On our way the Bene Rechab chief told of a mound named Jokhah or Yokhah, which he declared to abound in antiquities. According to his account, walls are visible there, and fragments of stone statues and other objects of worked stone abound. As no stone exists in the country, remains of this sort are a favorable indication of the importance of a site. I expressed my desire to visit the site in question, to investigate the truth of this story, but the Bene Rechab refused me an escort, declaring that it was unsafe, being in the territory of the Ez-Zefih, the same tribe which had robbed the Bene Temim a few days before. The offer of double and even treble payment had no effect. I then proposed to go without escort, and offered to give a large backsheesh to any one who would accompany me alone on a swift horse to guide me; but this also was in vain, and I went to bed with an uncomfortable sense of failure. The next day, however, we found our opportunity. On our return journey, near the Mejidieh marshes, we came to a very large camp of Sa'adun Montefik, whose chief, Hamud-el-Bender, pressed us to spend the night with him. I accepted the invitation, on condition that he would give me a guide and an escort to visit Yokhah that afternoon. He did so, and we visited it without accident, although on the return there was an alarm of Ez-Zefih, and most of our escort left us, brandishing their spears and riding in war curves, to chase the supposed enemy, whom I did not see, if they existed. Among these Beduin Montefik, by the way, I saw no firearms, while the Affek, on the contrary, all go armed with the very long-barrelled, old-fashioned Turkish guns of the last century, or somewhat more modern double-barrelled muzzle-loading fowling-pieces.

Yokhah proved to be an extensive mound, but low and partly covered with sand. It lies among the sand-hills, or at least did so at the time of my visit, and a high wind whirled the sand over us in such quantities that we could see but a short distance, and I was unable to make out the general shape of the mounds. There were no fragments of glass or glazed pottery on the surface. We found a couple of brick walls cropping out, the bricks of which looked ancient, but were uninscribed. There were also great quantities of stone fragments, some of them showing worked surfaces; and one larger piece we found, the worked faces of which had been intentionally destroyed, as though to efface something. I found also a number of small fragments of copper. My guides could give me no information about the place, nor of antiquities which had been found there. The surface indications seemed to me rather favorable, but it would be difficult to excavate here at present on account of the distance from water, and also on account of the unsettled state of the country. The same is true of the large mound of Umm-el-Akarib (pronounced Ajarib), a few miles to the southeast, so favorably mentioned by Dr. Ward in the report of the Wolfe expedition; and of El-Hammam, which is about the same distance to the southwest. The latter place is comparatively well known on account of its conspicuous tower of unburned brick, the remains of a *ziggurat*, or stage pyramid, connected with some great temple.

Several important cities of the very earliest period must be sought, it is supposed, in this region, and among others Nisin, a sort of sister city of Nipur, where we have been excavating. Hommel has suggested the identification of Nisin with El-Hammam, but such suggestions in the present condition of our knowledge are almost without value. Tentative excavations at several of these sites would probably settle the question of identity, by bringing to light some inscribed fragments containing the name of the city. Until such excavations can be made, there seems to be little chance of determining what cities lie under the *tels* of Yokhah, Umm-el-Akarib, and El-Hammam. I have already noticed the important fact that, after passing Bismya, the Shatt-en-Nil is said to lose itself in the sand hills by these three mounds.

We spent that night as the guests of Hamud-el-Bender, as we had promised, and were entertained with princely hospitality. He and his tribe belonged to the Sunnite or orthodox Mussulmans, while all the other Arabs whom I had met in Irak were Shiites, or adherents of the Persian schism. The latter are more fanatical, and cannot eat with Christian infidels, or even drink from the same jug from which they have drunk. The Sunnites have no such prejudices, and are perfectly willing to dip their hands in the same dish with Christians. Our host appeared to be a very rich and powerful chief. His camp had more tents than any I have ever seen, and his camels and sheep were beyond number. At the time of our visit wool-peddlers were there buying for Baghdad and Bassorah merchants. The price paid for each

sheep was said to be four piastres, or sixteen cents, ten sheep out of every hundred being given for nothing. I was also informed that the annual Government tax on each sheep was four piastres, on each camel ten piastres, or forty cents, and on the land, which is claimed as public domain, 50 per cent.

Our return route after leaving Hamud-el-Bender's hospitable tents was for the most part over ground already traversed. The only other mound of very large size which we saw was Tuweyhis, almost due east from Niffer, about in the place assigned on Kiepert's map to Serasoubli. This mound was said by our guide to be larger than Bismya; it should, therefore, be a mound of the first importance. I was unable, however, to check his statements by personal observation, as large canals full of water intervened, and I could not spare the extra day needed to visit it. We reached Niffer Friday, April 5, after an absence of six days.

JOHN P. PETERS.

Correspondence.

THE MARBLE FAUN.

TO THE EDITOR OF THE NATION:

SIR: The mistake of your correspondent who writes in the *Nation* of July 11 and 18 concerning 'The Marble Faun,' to my thinking, lies in a misapprehension of the book as a whole, and is indicated whenever it is called a "novel." That is exactly what it is *not:* Hawthorne himself, on the title-page, calls it a Romance, and the distinction must be borne in mind; it was never intended as a delineation of actual life in any country, or at any time, and must not be judged from that point of view. The Italy of tradition and poetry, the Italy of those who have never visited it, is a land of dreams and memories, whose long past is ever present, and whose brief present is insignificant. There is abundant evidence that Hawthorne carried with him during his Italian travels this atmosphere of unreality. In the preface to the very book in question he says, "Italy was chiefly valuable to him [the author] as affording a sort of poetic or fairy precinct, where actualities would not be so terribly insisted upon as they are, and needs must be, in America"; and elsewhere in the same preface he says, "The author proposed to himself merely to write a fanciful story, evolving a thoughtful moral, and did not purpose attempting a portraiture of Italian manners and character." Again, he expresses surprise that so much of description should have crept into his story, and explains it by the strong hold of one's mind that artistic and imaginative Italy always takes.

But Hawthorne is too subjective to be held rigidly to local color: in his own way, and of objects that appealed to his peculiar sensibility, he was a keen observer; but of the actual, every-day life of the people around him, he knew less than most men. He does not belong to the modern school of story-writers, and must not be judged by their canons. Had Donatello been an Italian, the criticism that his characteristics are incompatible might be correct—to the Italian of Donatello's nature before his sin, a "New England conscience" is an impossibility; but the answer to all such criticism is, that he was not an Italian, and the mistake lies in seeking an actual prototype for a fanciful character. In the story he is spoken of as belonging to Italy in much the same way that the merchants in the 'Arabian Nights' are assigned to Bagdad: some local habitation is a necessary part of the stage setting, and Italy does better than any other country.

Donatello is not a portrait of any one man, or any dozen men; he is an ideal creation, the embodiment of Hawthorne's speculations as to the purpose of evil. The philosophical motive of the book, in my estimation, is the development of the human mind through the arousing of conscience; it is the use of sin as an educational force. In Donatello the whole drama is portrayed; the other characters of the romance furnish the side-lights. Since the literary form chosen is that of a story, the philosophical ideas must be clothed in human attributes; but that the development of the philosophy may not be hindered by the demands of probability, Donatello is portrayed as just that slightly unreal, faun-like creature, who is human enough to be the hero of a story, and fanciful enough to be untrammelled by the laws of logical development. That he has also the possibility of the Puritanic horror of sin is simply a part of the premise of the argument, and not itself open to discussion. The question of probability Hawthorne has waived by slightly removing his hero from the race of men, by leaving his pointed ears a matter of doubt, by dwelling upon his communion with the birds and the innocent animal life around him; and by so doing he has purposely placed him beyond the reach of our tape-line, and the book of 'The Marble Faun' must be judged as a whole, not as a congregation of characters.

That fanciful blending of the actual and visible world with the unreal, personified images of the imagination is precisely Hawthorne's distinctive gift. To attempt to explain it to one who does not appreciate its charm without an explanation, is as futile as to undertake to elucidate a witticism. There is nothing that I know of in literature, outside the realm of fairy tales, with which to compare 'The Marble Faun'; and perhaps, after all, it is an exquisite kind of fairy-tale adapted to grown-up children, and clothing in fanciful forms the deepest philosophical speculations. Some one has said that Hawthorne never escaped from his inherited Puritanic consciousness of sin: he only succeeded in giving it literary expression; but in no other one of his books is it so vital a part of the work—nowhere else has he treated it so completely or so profoundly.

CHICAGO, July 21, 1889.

THE DESCENT OF ANNE HATHAWAY.

TO THE EDITOR OF THE NATION:

SIR: If the late Mr. Halliwell-Phillipps had regained comparative health, he had promised me to devote more time to the question of the descent of Anne Hathaway. When I began to correspond with him, he was positive that she did not belong to Shottery, and I agreed with him. Since that time I have wholly changed my opinion, and he modified his before he published the seventh edition of the 'Outlines.'

We have two clues to Anne's history, and, so far as I know, only two. The first is, the will of Richard Hathaway of Shottery, dated 1581, which mentions no daughter *Anne*, only a daughter Agnes. Mr. Phillipps tells us that the names Agnes and Anne were interchangeable. Why? Because, under the Norman pronunciation, the *g* was a silent letter, and we find the same person mentioned as Agnes, Annes, or Annis, and often in one instrument. The change from Annes to Anne was very easy, and very likely to be made if there were two of the same name in contiguity. In Richard's will mention is made of a daughter Agnes and a son Thomas, and he then leaves to Agnes and Elizabeth Hathaway "a sheepe apeace of theme." "Daughters of Thomas Hathaway" he calls these, and this could not have been his son Thomas, not yet twenty years of age. Of his own children, only two were grown, namely, Agnes and Bartholomew. This Anne and Elizabeth, daughters of Thomas, seem to have been older, since no condition is attached to his bequest of a "sheepe apeace." May they not have been wards or children of a brother for whom the son was named?

Of this will Fulke Sandells was one of the executors and John Richardson one of the witnesses. The names of these two persons, resident at Shottery, soon appear as Shakespeare's bondsmen in the marriage bond executed November 28, 1582. What more natural, if Anne were really under the care of Richard Hathaway? Two seals were used upon this bond, but only one was lettered. Under the circumstances, may not the R. H. upon this seal be supposed to stand for the Richard Hathaway whose executor Fulke Sandells was at the moment? But why, when Fulke Sandells is named as Fulke Sandells of *Shottery*, is "Anne" called Anne Hathaway of *Stratford?* Is it not possible that, although in some way under the care of Richard Hathaway, she was and had been for some time in the employ of John Shakspere at Henly Street?

There is still another clue to Anne Shakespeare in this will. Richard Hathaway desires that a debt of four pounds, six shillings and eight-pence be paid to his shepherd, Thomas Whittington. Ten years after, in April, 1601, this same shepherd of the Shottery farm died and left in his will to the poor people of Stratford forty shillings "that were in the hande of Anne Shaxspere, wife to Mr. William Shaxspere." So Anne at least had not then lost sight of Shottery.

Now for Lady Barnard's will. In January, 1570, she leaves handsome legacies to the daughters of her "kinsman Thomas Hathaway," a joiner, then living at Stratford. Of the five Hathaways mentioned, two are named Elisabeth and Joan. Joan was the name of Richard's wife at Shottery, and he had a daughter Elisabeth. A third is named Rose, and the Register of Burials at Stratford enters "Rose, daughter to Thomas Hathaway, buried November 1, 1582." Not too creditable a person, this Rose, to judge by other entries. Lady Barnard applies the word "kinsman" to the Hartts as well as to this Thomas Hathaway. The Hartts were the grandchildren of her grandfather's sister. Why may not Hathaway have been the grandson of her grandmother's brother, all of them being cousins to herself "twice removed"?

Mr. Phillipps thinks there was no connection between the Thomas mentioned in Richard's will and Richard's own family. He gives no reason, and it seems to me an arbitrary decision. No one of the above suggestions would have any value of itself, but, taken together, they seem to me to have weight.

CAROLINE HEALEY DALL.

WILLIAMSTOWN, MASS., July 20, 1889.

THE EXCAVATIONS AT DELPHI.

TO THE EDITOR OF THE NATION:

SIR: I have just seen the letter of Dr. Waldstein in reply to mine on the excavations at Delphi. I have no intention to enter into a controversy on the subject, but will simply say that I showed my letter in the *Nation* to M. Foucart and to the French Minister at Athens, M. Montholon, and they both declared it to be absolutely exact. It was, indeed, written on the information of the former gentleman, and

did not pretend to go further than the statement of the French side of the question, and for this there was no need to go to Dr. Tarbell or even Dr. Waldstein.

Dr. Waldstein seems to have accepted the assurances of the Greek Government with a naïveté which, to those who know it, is amusing, but he was distinctly informed that the French School and Government had not withdrawn, and did not mean to withdraw, their claims to the concession of the excavation of Delphi. Moreover, the Greek Government has granted the concession to the French School on condition of the conclusion of a treaty of commerce, which condition was accepted by the French Government; and though the present Chamber of Deputies has refused the law, it remains only in abeyance until another Chamber is elected, which will be before long. It is nonsense, then, to talk of the French being excluded. The French Minister has made the interference of Mr. Fearn, our Minister, the subject of a formal representation to his own Government, requesting it to ascertain from the Government at Washington if it has the intention of entering into the competition for the work at Delphi against the French School.

As to the terms, I can state another fact, which Dr. Waldstein seems to be ignorant of, which is that, when the concession was offered to the French School, it was with the condition that the Greek Government was to pay for the expropriation up to a certain amount, but that when Mr. Fearn came in to ask for the concession the Greek Government informed Foucart that they had now a better offer, and that if the French wanted it, they must pay also the expropriation, and must, moreover, purchase the entire village (of which a part, being founded on rock, was not required for the excavations), and, when the excavation was finished, must make over the site to the Greek Government besides the entire product. That part of the site which it is known contains the temple is worth, according to the estimate of Foucart, about the sum I stated. The condition that the French Government should acquire the entire village, with compensation for all the improvements which the inhabitants have been rushing up since they heard that the American millions were coming into the affair, is the result of the American intervention, and shows that the Greek Government has a good eye to business; but I am much mistaken if the flagrant dishonesty of the proceeding will meet American ideas of fair dealing or finance.

The only reason why "these excavations ought to be undertaken soon" is that the Greeks are trying to make as much as they can out of them by additional constructions on the site, which they expect the Americans or the French will have to pay for in addition to what was there when the negotiations commenced. It is now many years since the French began to urge the work, and they have always been ready to undertake it on terms which would have been considered most liberal by any people which had not been accustomed to consider its archæology as a matter for speculation and money-making. The Archæological Society of Athens, which comprises all there is in Greece of real devotion to the archæology of the country, has always opposed the concession of Delphi to anybody but itself, and it has always made its views prevail. If, in the interest of science, it is necessary that the excavation of Delphi should be done at once, the best course would be to intrust the funds for it to that Society, which will do the work for the half of what it would cost the American School, and do it without any heartburnings, while the concession to the American School, even if there were a chance of its being so given, would involve our being implicated in what I must consider the disgraceful conduct of the Greek Government towards the French School, which has merited the gratitude of Greece by its disinterested labors on the archæology of Greece for many years, and to a greater extent than all other agencies combined, except, perhaps, the Archæological Society.

If Dr. Waldstein, before writing his letter to the *Nation*, had gone to M. Foucart and ascertained the position of the French School in the matter, he would, I think, have been spared the letter, for he would have found that the Greek Government had concealed the true state of the matter, and that it would not have been possible for our school to accept the concession without a violation of international courtesy. It was of M. Foucart, as head of the French School, and M. Montholon, as the representative of the French Government, that he was bound to ascertain the position of the French claim, and not of the Greek Government, which was simply using the Americans to extort better terms from the French. In proof of this I could state facts which would not be as pleasant as those I have stated, and which would show that the American School has really no chance of getting the concession under circumstances which would permit us in common decency to accept it, if at all. Scientific morality absolutely forbids us to move any further in this matter until the French are out of the way.

I could say more, but I think that ought to be enough. I was perfectly aware of all the facts that Dr. Waldstein thinks I ought to know, and some that he evidently does not.

Yours truly, W. J. Stillman.

Venice, July 12, 1889.

THE GRAND RAPIDS POST-OFFICE.

To the Editor of The Nation:

Sir: Unintentionally, no doubt, the Civil-Service Commission, and you, following, hardly with your usual care, the report of the Commission, in your comments on "charges of violation of the Civil-Service Law in the Post-office at Grand Rapids, Mich.," in your issue of July 25, do the Postmaster here, Mr. James Blair, a great injustice. No fault certainly can be found with the action of the Commission in regard to the case of F. A. Hudson, Chief Clerk of the Railway Mail Service for this district of the Ninth Division of that service. It was certainly impartial, and all that the Commission, with its too limited powers, could do. But the report of the Commission leaves the impression on the average reader that the case is quite directly and necessarily connected with the management of the Post-office here, and that Postmaster Blair is therefore responsible for it. In the published report of the Commission it says:

"The only affidavit affecting Mr. Blair is that of McConville, which asserts that Mr. Blair was present in the Government building at Grand Rapids one day in October, 1888, and assisted Clerk Hudson in attempting to extort from him (McConville) a contribution of money for political purposes. On this point his affidavit is unsupported by any others, while it is explicitly contradicted by the affidavits of both Mr. Blair and Mr. Hudson, and the Commissioners do not consider that it is in itself sufficient to warrant their asking action to be taken thereon."

Even if this part of the report of the Commission had stated that Mr. Blair in his affidavit declared that he did not know McConville even by sight, had never met him or seen him, and never had such a conversation with Mr. Hudson as McConville swore to, in the presence of McConville or any one else, the paragraph would still carry to the mind of the reader the idea that it was the Grand Rapids Post-office and Mr. Blair that were being investigated. And in your comments on the case you not only speak of "charges of violation of the Civil-Service Law in the Post-office at Grand Rapids, Mich., under the present Democratic Postmaster," but you add, "Half-a-dozen clerks in the office have made affidavit that F. A. Hudson, the Chief Clerk during the campaign of 1888, demanded contributions to the Democratic campaign fund."

This is said clearly under a total misapprehension of the case. The facts briefly are these: The Grand Rapids Post-office was not, until after the recent visit of the Civil Service Commission, at which time a local examining board was appointed, in any way under the control of the Civil-Service Commission. The Commission therefore made no pretence of examining the management of the office. The Railway Mail Service is under the control of the Commission, and the charges against Mr. Hudson, Chief Clerk of the Railway Mail Service, were investigated, as they should have been. Mr. Hudson, as Chief Clerk of the Railway Mail Service, is in no sense an attaché of the Grand Rapids Post-office, and the Postmaster here has no more to do with his official acts, good or bad, with his performance or violation of duties or rules or laws, than the Postmaster at Kalamazoo or Detroit has. The two branches of the service are entirely distinct. None of the "clerks in the office" made affidavits regarding the case. The affidavits were made by postal clerks and ex-postal clerks in the Railway Mail Service, who are in no way connected with the Post-office here. It seems to me that the Commission, in its report, should have made this fact clear, instead of leaving it to be inferred that the civil-service laws had been violated in the management of the Grand Rapids Post-office.

That this error should have been made, I think, is to be especially regretted because Mr. Blair, since he became Postmaster in November, 1885, has scrupulously followed the letter and spirit of our civil-service laws, as an appointee of ex-President Cleveland, although there is no such public feeling here or anywhere in the West regarding the importance of the civil-service laws as there is in the East. That this is so is shown by the fact that of the thirty-six employees in the office when Mr. Blair became Postmaster, eighteen are still in the employ of the office. Changes have only been made to fill vacancies caused by resignations or removals for cause. Not a single change has been made in the personnel of the office for political reasons. I do not believe any post-office in the country can give a better record, from a civil-service-reform standpoint, than can the Grand Rapids Post-office under the management of Mr. Blair, and I regret very much that the Commission, in making a report upon alleged violations of law in the Railway Mail Service, should have made it appear, unintentionally, no doubt, but to the great delight of some local Republicans who are anxious to have a change made at once in the Postmastership, that there has been something wrong or questionable in the management of the Grand Rapids Post-office, when such is not the case. And of this fact the Commissioners themselves were, I have good reason to believe, fully satisfied from what they learned during their visit here. Very truly yours, F. W. Ball.

Grand Rapids, Mich., July 26.

THE NEW ENGLAND BURNINGS.

To the Editor of The Nation:

Sir: "J. C. N.," in his interesting letter on witch-burning in the *Nation* of July 25, commenting upon the negro-burnings cited by you in your note on the same subject in the *Nation* of July 11, says that "those old Puritans showed a ghastly gallantry, sending the women to the flames, the men to the gallows." This was a gallantry, however, by no means peculiar to our Puritans. It was a part of the English law which they brought to this country with them. "In treasons of every kind," says Blackstone in his 'Commentaries' (vol. iv., p. 93), "the punishment of women is the same, and different from that of men. For as the decency due to the sex forbids the exposing and publicly mangling their bodies, their sentence (which is to the full as terrible to sensation as the other) is to be drawn to the gallows and there to be burned alive." And he might have remarked in this connection quite as well as in any other, "So great a favourite is the female sex of the laws of England."

The last of the two negro-burnings which you mentioned, namely, that at Cambridge, Mass., on September 18, 1755, was clearly for the crime of petit treason, committed when a servant kills his master (25 Edw. III., c. 2). Of the punishment for this crime Blackstone again says (vol. iv, p. 204): "The punishment of petit treason in a man is to be drawn and hanged, and in a woman to be drawn and burned, the idea of which latter punishment seems to have been handed down to us by the laws of the antient Druids, which condemned a woman to be burned for murdering her husband [another form of petit treason], and it is now the usual punishment for all sorts of treasons committed by those of the female sex." It was not till 30 Geo. III. c. 48 that mercy tempered the delicate but cruel justice of the old law, and the punishment of women in all cases of high and petit treason was changed to simple drawing and hanging.

In regard to the case of the two negroes executed for arson September 22, 1681, it may be that the life destroyed by the woman was her master's, in which case her crime would have amounted to petit treason, and burning would have been the appropriate punishment according to the rule above stated. If, as "G. L. B." suggests, it was "a rude attempt to suit the penalty to the crime," it is difficult to see why a distinction should have been made in favor of the male negro. Burning was equally well suited to his crime. Perhaps, by some confusion of ideas, the rule prescribing different punishments for the sexes in cases of high and petit treason was extended to these two cases of arson.

But even if this burning was only a rude attempt to suit the punishment to the crime, it would not stand without precedent and authority. To quote from Blackstone a third time (vol. iv., p. 222): "The punishment of arson was death by our antient Saxon laws, and in the reign of Edward the First this sentence was executed by a kind of *lex talionis;* for the incendiaries were burned to death; as they were also by the Gothic constitutions."

It would seem that the aspersions which have been cast on the Puritans for their burnings ought rather to fall on the laws of England.

R. D. Weston-Smith.

Boston, July 27, 1889.

SHORT TERMS OF OFFICE DANGEROUS TO PRIVATE RIGHT.

To the Editor of The Nation:

Sir: Under the above heading you published an article from Mr. C. C. Binney which, as a criticism upon the opinion of Judge Holt of the Court of Appeals of Kentucky, in City of Covington vs. Hoadley, 83 Ky. 444, "misses the ford," as we say in the State. The action was to recover taxes erroneously assessed and collected, and, as the charter of the city of Covington contained a clause limiting the time in which such an action could be brought to six months, the court simply held, Judge Holt delivering the opinion, that the Legislature could constitutionally enact such a statute.

Mr. Binney seems to think that a claim based upon a contract *or tort* can be asserted within five years in this State; yet this is not true, as all actions for injury to the person, malicious prosecution, libel, slander, etc., must be brought within one year. This same clause of our statute of limitations prescribes the same time as that within which an action for killing stock by railroads shall be moved; yet, by a provision of the charter of the Louisville and Nashville Railroad Company, for such killing the limitation as to that company is six months, and this has been upheld as a proper and constitutional exercise of legislative power, with probably a fairer field of criticism than that chosen by Mr. Binney.

Mr. Binney says, contrasting the different times prescribed as against a private person and the city of Covington: "A valid claim against an individual or corporation cannot stand upon any really higher ground than one against a municipality; yet *Judge Holt would apply* a wholly different rule in the two cases." This is not true. It was not Judge Holt's province to make the law; that belonged to the Legislature. He simply decided upon the power of the Legislature to make such a law or not. He may be in error as to the reasons moving the Legislature to act. More likely his error, if any, consists in guessing out only a part of those reasons. But he may be pardoned if he failed to give the whole of them, since there are many acts of the various Legislatures—and some of them touching the very question of limitations of actions—to find any reason for which one ought to be considered fortunate. William L. Dulaney.

Bowling Green, Ky., July 22, 1889.

WORKS ON HUMAN ANATOMY.

To the Editor of The Nation:

Sir: In the review of Prof. Leidy's 'Anatomy' in the *Nation* of last week, while full justice is done to that work and its author, there occurs an oversight in regard to his predecessors, when it is said that his first edition, appearing twenty-eight years ago, "then formed the only original American compendium of human anatomy."

The library of the Pennsylvania Hospital contains, as shown by its catalogue, the following works: 'A System of Anatomy,' 2 vols., by Caspar Wistar, M.D., three editions, 1811, 1814, and 1825; 'A Treatise on Special and General Anatomy,' 2 vols., by William E. Horner, M.D., 1826; 'An Illustrated System of Human Anatomy, Special, General, and Microscopic,' by Samuel George Morton, M.D., 1849.

Caspar Wistar, M.D., was Professor of Anatomy in the University of Pennsylvania from 1809 to 1818. Dr. William E. Horner followed him in the same chair, though not immediately, occupying it from 1831 to 1853. Dr. Samuel G. Morton was Professor of Anatomy in the Pennsylvania Medical College from 1839 to 1843. Wistar contributed at least one original observation to anatomical science, that of the before undescribed triangular processes on the posterior part of the ethmoid bone of the head, sometimes called, after him, the pyramids of Wistar. Horner discovered the *tensor tarsi* muscle of the eye, which facilitates the flow of tears from the eye to the nose. Wistar's most important work was his elaborately illustrated 'Crania Americana,' a very valuable contribution to American ethnology.

Respectfully, H. Hartshorne.

Philadelphia, July 23, 1889.

[The works named should certainly not have been ignored, although, perhaps, even that of Morton had become somewhat out of date at the time Dr. Leidy's treatise was published.—Ed. Nation.]

RUINOUS FREE TRADE.

To the Editor of The Nation:

Sir: I read in *Engineering* (London), for July 12, p. 46, col. 2, as follows:

"The wages of the northern steelworkers have been advanced another 2½ per cent., in accordance with the report of the accountants for the past three months. This will make 7½ per cent. above what is called the standard rate, and will remain in force, as the price to be paid, during July, August, and September.

"In the Midlands the price of iron has still an upward tendency, the prices having been advanced 10s. per ton during the past week. This advance in price will affect the wages of the work-people, who, like the steelworkers, will reap some advantage from the rise in the market price of iron."

In your issue of July 18, 1889, I find that Carnegie's men have had *their* wages *reduced* 20 per cent. I leave you to make the comments. Low-Tariff Democrat.

Washington, D. C., July 26, 1889.

Notes.

In enumerating, last week, the works of the late Prof. Alexander Johnston, it seems we did not exhaust the list. Henry Holt & Co. announce that he left in their hands, ready for the press, a second 'History of the United States,' written on a plan somewhat similar to that of his text-book bearing the same title, "but suited to a shorter course, and perhaps to less mature minds."

D. C. Heath & Co. will shortly publish 'Modern Facts and Ancient Fancies in Geography, a Handbook for Teachers,' by Jacques W. Redway; and 'Topics in Geography,' in seven grades, by W. F. Nichols.

Ginn & Co. publish in August a 'General History,' by P. V. N. Myers, President of Belmont College—a condensation into 700 pages of his well-known 'Ancient History' and 'Mediæval and Modern History.'

A compilation of articles by Susan Coolidge, Arlo Bates, and other writers will form a handsome volume, called 'The Coast of Maine,' to be published by Henry G. Peabody, Boston. It will be illustrated by fifty photogravures of scenery.

A special product of the Maine coast comes to us in the 'Annual Index to Periodicals for 1888 [brought down to July, 1889]' (Bangor: W. M. Griswold). It is the seventh of the compact "Cumulative Indexes," subsidiary to Poole, invented by Mr. Griswold, and embraces thirty-four periodicals, mostly American.

The London *Publishers' Circular* states that of Bryce's 'American Commonwealth' the first English edition of 2,500 copies is nearly exhausted, and that 10,000 copies of the American edition have been sold in this country. "We understand," it adds, "that a second and revised

edition of the book may be looked for in the early autumn."

The New England Historic-Genealogical Society have just reissued separately Mr. Henry F. Waters's more recent 'Genealogical Gleanings in England,' as part 3 of vol. i. Miss Susan B. Kidder has equipped it with indices of persons and of places, thus perfecting the usefulness and heightening the fascination of the 'Gleanings' for whoever is interested in this kind of research, or, we will add, in the friendly drawing together of Englishmen and Americans which it promotes. Mr. Waters is now, by reason of his brilliant discoveries in the case of John Harvard, Roger Williams, and Washington, conspicuous as the very wizard of genealogical divination; but one who runs through the pages before us must be struck with the ever-broadening base of solid induction which he builds incidentally, for the future elucidation of much humbler pedigrees. The fund for the support of Mr. Waters's arduous explorations still needs to be fed by public-spirited contributions, and these may be made through the Society.

A fourth edition of J. J. Bond's standard 'Handy Book of Rules and Tables for Verifying Dates with the Christian Era' has recently been added to Bohn's Reference Series (New York: Scribner & Welford).

We learn from the *Athenæum* that a small collection of memorial records of the late Prof. Sheldon Amos has been privately printed for circulation among his friends.

'A Dictionary of American Politics, Comprising Accounts of Political Parties, Measures and Men, etc.,' by Everit Brown and Albert Strauss (New York: A. L. Burt), deserves mention, even if long delayed, for the good faith of the undertaking; but the compilers were in no sense qualified for selection, definition, or accurate statement. The very first page (Abolitionists) is full of error and misleading suggestion. In one paragraph on page 233 four out of six dates are wrongly given. The faults of the scheme are many. The book is perhaps not worthless, but it is absolutely untrustworthy.

The preface to Prof. A. N. Van Daell's 'Pages Choisies des Mémoires du Duc de Saint-Simon' (Ginn & Co.) will conciliate many readers. He addresses it not only to teachers of French, but to "others also, who, as principals or in any different capacity, have something to do with the choice of text-books." "The study of a foreign language," he says, "ought to bring students in contact with the master-minds of foreign nations. Students ought to grasp ideas and feelings with which the writers of their own nationality cannot make them acquainted. Unless this result is obtained, it seems to me that the time given to French or German is wasted." He thinks the French and English literatures "particularly well-fitted to balance each other." The annotations are in French.

A monograph on the Cathedral of Milan and the designs for the façade ('Il Duomo di Milano, e i Disegni per la sua Facciata') has been prepared by Camillo Boito, with an extensive pictorial accompaniment in lithography and photogravure, and a trial bibliography by F. Salveraglio (Milan: L. De Marchi). Boito argues for the amalgamation of foreign and Italian design in the building, rejecting its derivation from Lombard architecture.

"English Culture in Virginia" is the attractive title of a double number in the seventh series of the Johns Hopkins University Studies in Historical and Political Science. The writer, Prof. W. P. Trent, does not awaken curiosity for nothing. He has to tell of the founding of the University of Virginia by Jefferson, and of the efforts to procure professors from abroad. The particular sources are the letters and papers of Francis Walker Gilmer, Jefferson's emissary for this purpose. Prof. Trent notices with amusement the outcry raised against the unpatriotic neglect of home talent. The Boston *Courier* applauded the proper remark of the *Connecticut Journal*, that no American could read of it without indignation. The Philadelphia *Gazette* was of the same mind, and thought "this sending of a Commission to Europe to engage professors for a new university is, we think, one of the greatest insults the American people have received." We manage this thing much better nowadays, under the joint rule of Protection and Labor: we keep these interlopers from landing by law, or send them back if they are detected.

The *Library* for June gives an interesting account of the library of Ralph Thoresby, the topographer; and an article on "American Books with English Title-pages" criticises severely the common custom of importing books printed and published in America, and issuing them with title-pages which bear only the London imprint and the name of an English publisher. The writer thinks it strange that, in this protest against a sham, he should have to arraign, as one of the earliest offenders, that arch-antagonist of shams, Thomas Carlyle, who writes to Emerson in 1838, with reference to the 'Miscellanies' of the latter, "Why not have 200 or 300 of the American edition struck off, with 'London: Saunders & Ottley,' on the title-page, and sent over hither in sheets?" This reprehensible custom, however, is not confined to English publishers, for American firms are also in the habit of importing English books and issuing them with only an American imprint on the title-page. In the July number of the *Library* the most important paper by far is Mr. Blades's article on "Paper and Paper-marks," which should be read and digested by every bibliographer. Mr. Pollard calls the attention of English librarians to Miss Hapgood's entertaining account of her experiences in the St. Petersburg Library, narrated in the *Nation*, No. 1238, and gives a long extract from her description of Russian library methods. In the notes the editors remark that they have received more than one plaintive letter from young librarians, appealing for help in the shape of papers on methods of work, and wonder why American librarians should have almost a monopoly of that kind of writing.

The greater portion of the June and July numbers of the *Centralblatt für Bibliothekswesen* is taken up by the continuation of Schultze's paper on the influence of the Scotch-Irish monks on mediæval culture, and the first two instalments of Ortroy's Belgian military bibliography for the year 1887. In the June number, however, Dr. Falk gives some interesting facts concerning Ivo Wittig, and declares that there is no foundation for Hessels's confident assertion that Wittig was a relative of Gutenberg, which was put forth as a reason for discrediting his testimony in favor of Gutenberg. Those librarians who are fortunate enough to possess a copy of the catalogue of MSS. on vellum from the Hamilton Palace collection, described in the *Nation* No. 1242, will be glad to know that the July number of the *Centralblatt* contains a complete list of the purchasers and the prices obtained at the recent sale of the collection in London. The ninety-one lots brought a little over $75,000, Quaritch carrying off the lion's share. He purchased twenty-seven manuscripts at a cost of over $33,000; of the four lots which ran up to $5,000, or above that, he secured three, one of them being the famous Anglo-Saxon MS. of the Gospels, on purple vellum, for which he paid $7,500 and now asks $12,500. Karl Trübner of Strassburg appears as the purchaser of a number of valuable specimens, and Dr. Goldschmidt of Frankfort carried off six at a cost of about $15,000, among them the beautiful MS. of Boccaccio's 'Les Illustres Malheureux,' for which he paid $8,500. The Royal Library of Berlin made an effort to secure 'Der Wälsche Gast' of Thomasin von Zirclaria, but was outbid by Quaritch, who gave $1,700 for it.

The extraordinary engineering of the new toothed railway up Mt. Pilatus is described, with effective cuts, in the latest number of *Vom Fels zum Meer* (*Heft* 11, 1888-89) we have received from F. W. Christern. Its maximum gradient (25° 39') is alleged to be the steepest yet attempted with this sort of road. The ascent takes an hour and twenty minutes, and involves the passage of several tunnels and one arched viaduct over a frightful gorge between two tunnels. The cost of constructing the nearly three miles amounted to some $380,000.

—*Scribner's* for August presents two portraits of Tennyson and also a brief and discreet account of the poet's first venture, in company with his brother Charles, into the world of letters. Prof. Lounsbury concludes these Tennysoniana by a criticism, or rather comparison, of the two "Locksley Halls," in which he sustains those who think that the last of these is a poem quite the peer of the earlier verses, though necessarily inferior to it in public interest. Prof. Lounsbury, in our judgment, might well have said more than he ventured on in praise of the art, the dignity, the power, and especially of the wiser temper and doctrine of the last utterance of the poet upon his times. The remainder of the magazine contains two prominent sporting articles, one upon lawn-tennis and one upon tarpon-fishing in Florida, each of which has its especial readers. The paper upon electric lighting, with its multiplicity of illustrations, is also prominent and useful to a wider circle. The rest of the number is occupied with fiction, in which Mr. Stevenson holds his own, and Mr. Brander Matthews gives a romance on a common motive, and artistically frames the Rome of a young man's first love in the setting of a Dakota blizzard on Christmas, with its necessity to go search for the lost "kids" as a finale to the soldier lover's buried life. "A Pagan Incantation," by Boyesen, is too uncanny, and, being mere fancy—almost a ghost story—racks the reader's sensibilities in an utterly merciless manner. The other stories sink into commonplace.

—The midsummer *Century* is adorned, as is usual, with a large number of woodcuts, but the most beautiful of them are those which seem to be given as a sort of challenge by the group of "painter-engravers" who, in a series of short articles—"Originality in Wood-Engraving," by Kingsley; "Painter-Engraving," by Closson, and "The New School of Engraving," by J. P. Davis—plead for the rights of wood-engraving as an art for its own sake, and not merely for reproduction and commercial purposes. These papers, with their evidence of enjoyment in the artist's life, show plainly enough the sensibilities of the artistic temperament; and if wood-engraving is to be employed in the way indicated, it could not have better friends than men so strongly endowed with feeling and with technical skill as are these masters of the art. The success which they have obtained is sufficient proof of what they can do to accomplish their ambition, and the effects are marvels; but if we read rightly

what they say, it is to the proof upon Japan paper that they specially point in claiming wood-engraving as a painter-art. Their contention has, in so far, more relation to the arts of luxury than to that popular art which wood-engraving is commonly engrossed with; but even if the best results are thus limited to the few, comparatively speaking, those which can be rendered on the magazine page are also delightful to the eye. These landscapes and the fine portraits of French's preceding article, together with the three engravings after Fra Angelico by Cole, and the portrait of Tennyson by Johnson, taken together, represent the art at its best, and illustrate its excellence in whatever way it turns its graver. We have left space only to mention the text. The papers upon the poison of serpents, the Biblical element in Tennyson, Mr. Kennan's distressing account of the Kara prison, relieved by a tribute to one humane and heroic Russian official; "Artist Wanderings among the Cheyennes," with some unfavorable comment upon the present mode of educating a few boys to relapse into savagery, and also a word in favor of placing the Indians under the War Department, are the most noticeable in a number of unusual interest.

—*Harper's* continues its Russian articles with an elaborately illustrated account of the Kremlin, in which the cuts usefully exhibit objects of Russian art to the eye; and Abbey and Parsons make up a second picture-article in their marked style, to which some well-timed verses by Austin Dobson are attached. The remainder of the number affords a variety of commonplace of the usual sort, in which the most interesting piece of information is the brief description of Mexican lustred pottery, and the hope held out that the lost art of the Italian workers of the sixteenth century, and their brothers, the Saracens, may be recovered. The secret of this lustre has been sought for without success by the moderns. Mr. Warner, however, found by chance something resembling the old art in a shop in Mexico, and a friend whom he put upon the scent discovered the village and the kiln whence it came, and learned the nature of the process from the Indians who were at work upon it. The writer attributes this success in winning the confidence of the shy and secretive native potters to their mistaking her for a nun. The process, at all events, affords hints for European experiment. The other prominent papers are a panorama of court-day in Kentucky, the history of the Fan, and a labored analysis of the movement of religious thought in Germany, with special attention to the present state of theology, church parties, and materialism and the empire. Photography also receives attention in two papers, and gives occasion for an admirable centennial portrait of Daguerre, as authentic as any in existence, being from a daguerreotype.

—Mr. Lowell opens the August *Atlantic* with a long philosophical poem, in which he makes the memory of his sister's gold-fishes in his boyhood an occasion for drawing a pleasing analogy between the world outside their watery horizon as it appears to them, and that beyond our senses as we sometimes fancy it appears to us. The conceit is sketched out partly in a thoughtful, partly in a reminiscential vein, and no other poetry is allowed to mar the effect. The classical papers to which we have so often had the pleasure of calling attention are continued by an admirable account of the localities which make the background of Virgil in the landings of Æneas on Italian soil and in the Latin War—an article so entertaining in itself, and marked by such refined sensibility to the qualities of Virgil, as to renew in our minds for the hundredth time the wonder why the secret of this poet is so seldom disclosed until after school and college days are over. The common lack of appreciation of Virgil is the capital instance of the sterilizing power of pedagogy, and a lamentable one it is too. Mrs. Wyman, in "From Generation to Generation," gives an interior view of the home-life of a Garrisonian Quaker family, which is remarkable for its success, not only in detailing little incidents, but especially in giving the atmosphere and tone—that impalpable, pervasive, and constant element in an humble family life which can be caught and rendered only by rare good-fortune. She writes her story as an illustration of changes in New England life, not egoistically, and as such it has historical value. The remainder of the magazine offers a critical and appreciative account of the Canadian poet, Louis Honoré Fréchette; a careful paper upon the theory of sovereignty in our Constitution, and legal decisions and public opinion under it, and instalments of Bynner's and James's serials.

—The opening notice in the eighteenth volume of Stephen's 'Dictionary of National Biography' (Macmillan) is a good instance of the readability of this work. James Esdaile (1808-1859) was a Scotch physician who went to Hooghly, India, for hospital work, and there practised mesmerism in painful operations with a success which led to Government's placing him in charge of a small hospital for further experiment, and finally promoting him. The appearance of ether and chloroform on the scene in 1848 put an end to the more laborious method of producing anæsthesia, and, for the rest, he found the process too exhausting when applied to the less susceptible Scotchmen at home. A few pages further on, in the notice of John Bishop Estlin, an eminent surgeon of Bristol, uncle by marriage to the economist Walter Bagehot, we read of his 'Remarks on Mesmerism' in 1845, "a lucid exposition of the scientific method of investigating phenomena said to be due to hidden forces of nature." Such glimpses of past opinion abound in this admirable work. Faraday is most honored by allotted space in this volume, having twelve pages from the hand of Tyndall, whose skill is striking. Mr. Stephen himself returns to familiar themes in writing on Fielding in upwards of seven pages, and in condensing his Life of Fawcett into four and a half. Guy Fawkes seems liberally supplied with three. In the nineteenth volume, which ends with Forman, the astronomer Flamsteed gets seven pages, John Fletcher a little more, and Flaxman five. At the other extreme, there is a brief account of Margarie Fleming, with a suggestion that her life was probably the shortest of any commemorated in this Dictionary; and Fleta is inserted, for the sake of saying that it is the name of a book and not of a person. Under Mrs. Fitzherbert we are told that the Messrs. Coutts have a strong-box confided to them in 1833, containing her certificate of marriage to the Prince of Wales (George IV.), and other interesting documents which the public may not yet view. We miss under Capt. Robert Fitzroy a citation of Darwin's very condensed character of this able officer and scientist (in the Autobiography)—all the more because it furnishes the key to his failure as an administrator in New Zealand. Fitzroy, by the way, was the first who devised storm-signals and put them in practice. Matthew Flinders, another naval captain, was perhaps the first to investigate the error of compasses caused by iron in the ship. Ralph Fitch, a contemporary of Shakspere, was the first Englishman known to have made the overland journey to India by the Euphrates. The first line of the narrative of his voyage in Hakluyt is so closely echoed in "Macbeth" (Act 1, 3) that it is clear Shakspere must have used Hakluyt. Among pioneers we remark, finally, Lieut.-Col. Patrick Ferguson, inventor of the first breechloaders used in the British army. He tried them with effect on the American rebels at Brandywine, but Sir William Howe broke up his rifle corps, and made them exchange their arms for the old muzzle-loaders.

—The French have always been a home-keeping race, partly from their national or parochial belief that France is the true celestial empire, of which Paris is the New Jerusalem, and partly also, perhaps, from a dislike of the sea or of water. A census of Frenchmen living abroad was taken in 1861, and the number reported was only 316,000. This number was almost certainly less than the true one, for the census was roughly and imperfectly taken. In consequence, French consuls all over the world were instructed to report again upon the subject, and the result of their inquiries and their estimates has just been published. This shows that of Frenchmen abroad there were in 1886: in Europe, 200,000; Africa, 30,000; Asia, 15,000; North America, 120,000; South America, 40,000; Oceania, 3,000—in all 408,000. Of those in Europe 54,000 are in Switzerland, 51,000 in Belgium, 26,000 in England, 17,000 in Spain, and 10,000 in Italy. Scarcely any of these emigrants came from central France. Flanders, the Pyrenees, and the Midi furnish most of them. A large number belong to the priesthood, or to the religious orders of men and women.

LODGE'S WASHINGTON.—I.

George Washington. By Henry Cabot Lodge. [American Statesmen Series.] Boston: Houghton, Mifflin & Co. 1889. 2 vols.

THE serious fact surviving our centennial celebrations is that, though the plaudits were for the traditional Washington, it is with a new Washington that historians must now deal. Research has transformed the most conventionalized of figures into a singularly fresh subject of study, interest in which increases with the perception that, in recovering "the real Washington," the nation is exhuming and deciphering lost or neglected facts and factors of its own history. The valuable work of Dr. Hale; the new data published in the centennial numbers of the magazines and journals; above all, the surprises contained in Mr. Worthington Ford's first two volumes of Washington's writings, have confirmed a growing conviction that, notwithstanding the library of works concerning him, a critical Life of Washington is the desideratum of American history. It would have been unreasonable to expect in Mr. Lodge's work a satisfaction of this need. The subject is too new, too large, the data too incomplete—perhaps, we should add, the popular sentiment too tenacious of traditions—for the appearance of such full and critical treatment in any near future. The most that could be fairly expected from a writer of even Mr. Lodge's ability and opportunities was a large contribution in the direction pointed by historical studies; and by this utilitarian standard his success is to be measured.

It is unfortunate for Mr. Lodge's reputation with students of the period that his task was not limited to Washington's military and political career. Or, if he could have devised a novel method by which history should begin with the later and end with the earlier events,

the task of criticising him would be less embarrassing. We must adopt that method so far as to enter a caveat against any assumption that the whole book is to be judged by its treatment of Washington's early life and the persons and places related thereto. In old Virginia Mr. Lodge is helplessly out of his habitat. What knowledge of the Northern Neck he could obtain by running old Parson Weems to earth, and returning in triumph with his brush, is nearly all that can be conceded our author. He appears ready to accept almost any story—provided it is not in Weems—or any statement found in a book, without attempting verification. The errors in this part of the work are small, so far as the character of Washington is concerned, but they are grave by reason of the mistrust raised that our new guide is ready to leave us now and then in the hands of other guides, whose superannuation or incompetency are the *raison d'être* of his enterprise.

When he writes historic names wrong—Ashley's for Ashby's (Gap), Carey for Cary, Grimes for Grymes—one would gladly conclude that he is some proof-reader's victim; but it is too plain that he is following Washington Irving's mistakes. He repeatedly falls into the Custis and Lossing ruts. Concerning the Westmoreland birthplace we are told, "Three years after George Washington's birth it was burned, and the family removed to another estate in Stafford County" (I, pp. 37, 38). The estate referred to, now in Stafford, was in King George County; the fire is a tradition unknown to Dr. McGuire (in 1836), who says "the change of residence was probably induced by considerations of health" ('Religious Opinions and Character of Washington,' Introduction, p. xv). The same writer, who married Washington's grandniece, dates the removal to the farm near Fredericksburg "about the year 1739." We are further told by Mr. Lodge that "the 'Lowland Beauty,' Mary Bland, married Henry Lee, and became the mother of 'Legion Harry,' a favorite officer and friend of Washington, and the grandmother of Robert E. Lee, the great soldier of the Southern Confederacy" (I, p. 93). The wife and grandmother referred to was Lucy Grymes—who, by the way, was not "of Westmoreland," as is stated on the previous page. We are happy in finding that Mr. Lodge's familiarity with the *New England Historical and Genealogical Register* saved him from following the traditional pedigree of Washington, which Colonel Chester "broke beyond repair" in that publication (vol. xxi, p. 25); but apparently he learned this too late to alter his pages, which proceed on the assumption that Washington was by birth an aristocrat, and connected with the disproved family. When Mr. Lodge assumes an "identity of arms" between the immigrants and the Sulgrave family (I, p. 31) we again find ourselves delivered to the modern traditionalist. So far as is known, Washington himself was the first to adopt those arms.

Poor Parson Weems is poetically avenged by the facility with which Mr. Lodge is misled by later Weemses. The "Rules of Civility," written in Washington's youngest handwriting, which have long puzzled historians, are approached by Mr. Lodge with a rhetorical "Eureka":

> "It has always been supposed that these rules were copied, but it was reserved apparently for the storms of a mighty civil war to lay bare the original source. At that time a little volume was found in Virginia bearing the name of George Washington in a boyish hand on the flyleaf. The book was entitled 'The Young Man's Companion.' It was an English work . . . by W. Mather, . . . and at the end it contained the rules for behavior found in manuscript among Washington's papers" (I, pp. 49, 50).

"An account of this volume," it is added in a footnote, "was given in the New York *Tribune* in 1866, and also in the *Historical Magazine* (X, 47). It is stated that the book was presented to Gen. Grant, and, if so, it has now passed into the keeping of the Government."

These apparently separate authorities are one, the magazine having copied from the newspaper. The "account" is vague enough, and the point interesting enough, to merit some inquiry. Had this latest biographer of Washington considered that even the New York *Tribune* may occasionally be fallible—had he given due weight to Dr. Toner's edition of the "Rules," in which that well-informed editor states, twenty-two years after the *Tribune's* "account," that he has searched in vain to find these rules in print—he would at least have examined Mather's well-known book and saved himself the mortification, and his readers the disappointment, of discovering that it contains nothing of the kind.

We should be glad to add, were it possible, that the inattentiveness to details and inexactness, of which we have given some examples, are confined to matters of local and antiquarian interest. But the many brilliant qualities of this book, its certainty of popularity, render it the more necessary to warn its readers that, even when in our author's own hands instead of those of his misleaders, and in grave matters, they must not feel perfectly secure. This spirited, fluent, always interesting book is at the same time subtly theoretical. In most instances Mr. Lodge gives us the facts on which he generalizes, but we note one instance in which the substitution of a version for a quotation is unfortunate. In early life, Washington, writing to his brother concerning his first skirmish, says: "I heard the bullets whistle, and, believe me, there is something charming in the sound." Mr. Lodge says Washington wrote "that he loved to hear the bullets whistle" (I, p. 75). The connotations of the sentences are different. Washington's words may have meant only to reassure his brother as to his courage under fire, or no more than the melodious note made by a bullet; but the airy phrase substituted compels the letter to support Mr. Lodge's theory that "Washington had the fierce, fighting temper of the Northmen. He loved battle and danger, and he never ceased to love them and to give way to their excitement," etc. This is said of a man who wrote: "I am led to reflect how much more delightful to an undebauched mind is the task of making improvements on earth, than all the vain glory which can be acquired from ravaging it by the most uninterrupted career of conquests." In the same vein Mr. Lodge writes, "In this Second Congress he appeared habitually on the floor in his blue-and-buff uniform of a Virginia colonel. It was his way of saying that the hour for action had come," etc. If our author has grounds for believing that Washington wore a dress different from what he had been accustomed to wear as a member of the Virginia House of Burgesses (which John Adams, in mentioning the dress, does not suggest), those grounds should surely have been given. Readers not enamoured of the "fierce fighting temper" may draw from such an individual dress-parade conclusions unfavorable to the modesty and moderation generally supposed to be characteristic of Washington.

Erroneous as Mr. Lodge's theory of Washington's temper appears to us, we probably owe to it the admirable summary of Washington's career in the Revolution to which two-thirds of his first volume are devoted. We would almost advise a reader to begin the first volume on page 131, where the incomprehensible Virginian disappears and the American General comes into view. The very style becomes more free, and at times is even felicitous; the marshalling of facts is skilful, and interest distributed in fair proportion between the military and political aspects of the Revolution. The relation between these aspects, and the governmental evolution which proceeded *pari passu* with the Revolution, are lucidly set forth, and the field of constitutional study somewhat extended.

Mr. Lodge's brain is a fine loom: give it the threads, it will weave them bravely and substantially; but, for selecting or proving the threads, no adequate apparatus is provided him. The wrong thread, or the rotten, is thus sometimes visible in the woof. Mr. Lodge tells the significant story of the General's refusing to open Lord Howe's letter addressed to "George Washington Esq., etc., etc.," as follows: "The bearer was courteously received, but the letter was declined. 'The etc., etc., may mean anything,' said the Englishman. 'It may also mean nothing,' Washington replied." What the messenger said was, "The etc., etc., implies everything." "And anything," said Washington.

A more serious fault appears in Mr. Lodge's scroll where he undertakes to relate the Asgill affair. Capt. Huddy having been hanged by a party of Tories, headed by the British Capt. Lippencott (not Lippincott, as Mr. Lodge spells the name), Washington and his generals determined on retaliation. From among his prisoners Washington caused one to be selected by lot to suffer death unless Lippencott should be delivered up.

> "The fatal lot," says Mr. Lodge, "had fallen upon a mere boy, Capt. Asgill, who was both amiable and popular, and Washington was beset with appeals in his behalf, for Lady Asgill moved heaven and earth to save her son. She interested the French court, and Vergennes made a special request that Asgill should be released. Even Washington's own officers, notably Hamilton, sought to influence him, and begged him to recede. In these difficult circumstances he hesitated, and asked instructions from Congress. . . . It was difficult to refuse Vergennes, and Congress, glad of the excuse and anxious to oblige their allies, ordered the release of Asgill."

Mr. Lodge speaks of this as a "petty" incident, and such it is in his page; but the pivot of the whole affair is omitted. Asgill had been among the officers surrendered with Cornwallis under terms which excluded him from liability to be used as a hostage in any subsequent reprisals. This fact has, indeed, been omitted by Washington's biographers, and we must suppose that the papers relating to it have escaped their attention. We have before us the copy of a correspondence now in possession of a descendant of Gen. Lincoln which shows the incident to have been by no means petty in the eyes of Washington. The officer with the British prisoners, Maj. Gordon, under date of May 27, 1782, writes to Washington, calling his attention to the Fourteenth Article of the Cornwallis capitulation, which "expressly says that no articles of capitulation are to be infringed on pretext of reprisals," etc. Washington, in a letter marked "Private," writes to the Secretary of War (Lincoln) as follows:

> "5th June, 1782.
>
> "My Dear Sir,—Col. Hazen's sending me an officer under the capitulation of Yorktown for the purpose of retaliation has distressed me exceedingly. Be so good as to give me your opinion of the propriety of doing this upon Captain Asgill, if we should be driven to it for want of an unconditional prisoner. Presuming

that this matter has been a subject of much conversation, pray with your own let me know the opinions of the most sensible of those with whom you have conversed. Congress by their resolve has unanimously approved of my determination to retaliate. The army have advised it, and the country look for it. But how far is it justifiable upon an officer under the faith of a capitulation, if none other can be had, is the question? Hazen's sending Capt'n Asgill on for this purpose makes the matter more distressing, as the whole business will have the appearance of a farce, if some person is not sacraficed to the mains [*sic*] of poor Huddy; which will be the case if an unconditional prisoner cannot be found, and Asgill escapes. I write you in exceeding great haste; but beg your sentiments may be transmitted as soon as possible (by express), as I may be forced to a decision in the course of a few days.—I am most sincerely and affectionately, D'r Sir, yr obed't, G. WASHINGTON."

Birds through an Opera-Glass. By Florence A. Merriam. [No. 3. The Riverside Library for Young People.] Boston: Houghton, Mifflin & Co. 1889.

IT is undoubtedly true that in this country anything approaching an accurate knowledge of birds and their ways is confined to the few, and these chiefly professional naturalists and writers. Even the farmers, whose lives are spent among birds, and whose interests are much concerned with their habits, know little about them. When asked by inquiring city cousins to name their feathered friends, the list is a short one, and usually comprises only the most common, as the robin, bluebird, meadow-lark, high-hole, chewink, barn-swallow, and "chippy," by which latter term they usually know, or rather fail to know, all the brown-colored sparrows. The chicken-hawk closes the list, and under that name the farmer's boy is taught to exterminate ruthlessly all the birds of prey, regardless of the fact that nearly all of them perform useful service to agriculture, while but one or two are destructive to poultry.

It is difficult to say how far this general ignorance of the most beautiful and useful part of animated creation is to be attributed to the rather unattractive form which ornithological treatises are wont to assume, to their technical descriptions and repellent names. It is certain that writers like John Burroughs, Bradford Torrey, and others address a larger circle of readers than do professional ornithologists, and that they, and not the professional ornithologists, are the successful educators of the masses. A new writer now steps to the front and gives us the little book called 'Birds through an Opera-Glass.' Its title sufficiently reveals its purpose, which is to invite laymen, and laywomen as well, to the woods and pastures, where, glass in hand, they are to seek an introduction to the birds, study their habits, and by so doing gain at once a knowledge of bird life which books cannot supply, and reap the sure rewards which Nature always confers on her votaries.

The plan of the book is happily conceived. It is intended to be suggestive, as the preface frankly tells us, nothing more. Evidently the writer thinks that they who require to be told all they want to know of Nature and her doings are not worth troubling herself about. The circle she addresses includes those who are willing to take a little pains to acquire the information they desire, and able to find pleasure in the task. She takes her readers into her confidence, invites them to a stroll in the woods, glass and notebook in hand, and presses her eyes and methods into their service. The object of the excursion is to discover just how the birds appear as they busy themselves about their daily avocations, and what they say in response to kindly questionings. For her the dried skin, the table of measurements, and the technical description have no existence, as, indeed, why should they? All know the robin, and, by taking it as the unit of measure, other birds are easily subjected to a comparative diagnosis, while the colors and habits of each species are pleasantly described and made to reveal its identity.

The author has a happy knack of seizing upon the salient peculiarities most likely to strike the average untrained observer. Now the locality is pointed out where such and such birds are most likely to be met with; now it is the method of capturing its prey, a characteristic attitude or a peculiar jerking of the tail, or what not, that is depended upon to lead the inquirer in the right direction. As she herself says: "It was my good fortune when in college to be able to study the perplexities of nearly forty young observers, and this book is virtually the result of what I learned of their wants and the best way to supply them." Besides the acquaintance with the needs of her audience, gained in the way described, the author brings to her task far more important qualifications. She has good eyes, and especially a stock of patience which, when associated and added to a true love of nature, never fails to make a good observer.

The bits of philosophy she weaves into her stories, and the likeness to human actions and human nature which she discerns in her bird friends, are very pleasantly told. The poets are frequently taxed to contribute their share to the bird stories, and the quotations are apt and well selected. The space devoted to the several species is, as a rule, when the intent of the book is considered, judiciously apportioned, though such birds as the cuckoo, meadow-lark, whippoorwill, and some others are perhaps dismissed with scantier mention than their interest and merits deserve. In addition to the descriptive matter in the text under each species, the author has added an appendix which the tyro will find of decided advantage. The family characteristics of the birds treated are given in untechnical language, and the birds are then classified according to the localities they most frequent, their size as compared with the robin, their colors, their songs, shape of bill, nesting habits, etc.

Altogether, we have in 'Birds through an Opera-Glass' a book wisely planned, well written, and sure to please its readers, even if it should not accomplish all its author intended in taking them out of doors as observers and as readers of the book of nature wherein the author has found her own inspiration. It is to be hoped that the reception given to the present volume will accord with its merits, and so encourage the production of others like it.

Memorial of Sarah Pugh: A Tribute of Respect from her Cousins. Philadelphia: J. B. Lippincott Co.

THIS little volume is in the nature of an autobiography, being mainly composed of extracts from Miss Pugh's diaries and letters. It should have had a portrait of her in default of any clear intimation of her personal appearance, which had all the charm of the best type of Quakeress, joined to a breadth and liberality and strength of mind not always discernible in the physiognomy of Friends; a dignity of carriage that caused her diminutive figure to be forgotten; and an immaculate gentility of attire. Miss Pugh was born on the slave-cursed soil of Virginia in 1800, but was taken to Pennsylvania before she was old enough to retain any impressions of her surroundings, and found her life-work and ended her days in Philadelphia. She had outgrown the trammels of her sect when George Thompson came to this country on his first anti-slavery mission in 1834, and his eloquence drew her at once into the ranks of the working abolitionists. In 1840 she was one of the local delegates to the London World's Anti-Slavery Convention, and shared the fate of all her colleagues of her own sex in being excluded from membership in that body, which was under the control of Orthodox Friends of a very bigoted stripe. She made a protracted European tour in 1851-'53, being in Paris during the Coup d'État, though she appears to have seen nothing of the street conflict, or any disorder approaching that of which she had been a witness in her own city at the burning of Pennsylvania Hall in 1838, or the Rynders mob in this city in 1850.

These are the salient features of Miss Pugh's experience as revealed in the Memorial, which might have been made much more valuable if the editor had been conversant with the history of the anti-slavery struggle. The 'Life of Garrison' alone, so far as published, would have guided him in his selections from the diaries, and enabled him to elucidate passages now left obscure. The account, on p. 18, of the causes of the schism among the abolitionists in 1836-1840 is anachronistic and wholly inadequate. On p. 19 "the [Clerical] Appeal" of 1837 is referred to by Miss Pugh, and needs explanation. And we ought to have had the allusion, on p. 39, to Miss Bremer's deviation from anti-slavery fidelity cleared up. On p. 31, C. *K.* Whipple is misprinted C. *H.* On the whole, we are left with the feeling that the diaries contain a great deal more that deserved to see the light than the Quaker cousins have detected.

A few personal glimpses are noteworthy, as of Lord John Russell and George Cruikshank speaking together at a Mechanics' Institute (p. 68), the caricaturist not failing to bear his temperance testimony. Miss Pugh also attended an anti-slavery reception by the Duchess of Sutherland at Stafford House (p. 73); and in London—

"I met by appointment a Miss Evans, translator of Strauss, at present assistant editor of the *Westminster Review*, and tried to interest her in our anti-slavery movement, as she is a clear thinker, and may have much in her power. . . . The evening was spent at Mrs. [Eliza Lee] Follen's. George Thompson, Mr. [Victor] Schoelcher, Miss Evans, and Miss Murray. There was some anti-slavery talk, but the evening was principally occupied with the rappings" (p. 53).

Miss Pugh afterwards visited Miss Martineau, but of this meeting we are given no details. Of Miss Martineau's most intimate friend and biographer Miss Pugh cites this characteristic bon-mot: "M. W. Chapman used to say in anti-slavery days, 'Of course we want all the virtues on board, but Prudence is the one we can best spare'" (p. 128). The subject of this memoir lived to the ripe old age of eighty-four. At fifty-two she was conversing with a venerable English lady regarding the talk about the poor showing made by the Americans at the World's Fair of 1851. By way of apology—

"I said, 'You must remember that America is young—that I, a woman now living, remember when we used to ask for *the return of a pin* that had been borrowed, and one of our school mottoes was,

'To see a pin and let it lie,
You'll come to want before you die.'"

Zwei Jahrzehnte deutscher Politik, und die gegenwärtige Weltlage. Von Eduard von Hartmann. Leipzig: Wilhelm Friedrich.

FEW writers could venture to reprint newspaper and magazine articles, fifteen or twenty years old, more particularly when the articles

in question treat of politics and are written in German. The author of the 'Philosophy of the Unconscious' is perhaps the only living German writer whose style possesses enough intrinsic attraction to make almost any subject readable. The essays he has collected in this volume originally appeared in the *Gegenwart*, *Grenzboten*, *Im Neuen Reich*, and other periodicals. Next to the wonderful flexibility and grace of its language, the most striking feature of the book is found in the remarkable perversions of logic and morals imposed upon one who endeavors, on high philosophic grounds, to justify the ways of Bismarck to Germany, and to defend his protectionist and socialistic vagaries. Even when not concerned as a champion of the German Chancellor, Hartmann seems impelled, by innate "cussedness," to proclaim doctrines that run directly counter to the generally received principles of justice and honor. Thus, he sets up as an historic law, that written treaties are valid only as long as the circumstances under which they were made have not changed—in other words, that no nation is bound to abide by its own solemn obligations except when it cannot help itself. As an actual fact, it is no doubt true that the path of history is strewn with the fragments of broken treaties; but nations and statesmen, however ruthlessly they have trampled upon their troth, have always sedulously cultivated at least the appearance of good faith, and have endeavored, by special pleading, to show in each instance that it was not they, but the other party, that broke the engagement. It was reserved for a German ideologue of the nineteenth century to formulate the convenient doctrine that "the logic of historical development forces the rising party to a formal breaking of the written law, in order to afford validity to the higher law of the actual historical facts."

But the author goes to the most surprising lengths in his chapters on protection and free trade. He sets out with the apparently candid admission that "no protectionist of any intellectual significance will deny that free trade is an ideal whose realization must be aimed at, as soon as the conditions of its possibility are given; that all protectionist theories claim only provisional validity. The ideal condition of commerce is, of course, that in which every country exchanges the products in which it has an advantage for the peculiar products of other countries without hindrance." This frank avowal promises well and has a familiar sound; but to American protectionists, who have now abandoned the ground they used to take, it will seem a weak concession to the enemy. Hartmann, however, goes on to say that all commerce depends on reciprocity, that each country must not only receive, but also give, and that this condition can only be satisfied permanently when both countries stand on an approximately equal level of economic development.

"Even when an industrial state," he says, "exchanges its manufactures for the cereals of an agricultural state, this relation can only end in exhausting the soil of the latter and impoverishing it, unless it employs the money received for its products, at least in part, in establishing manufactures of its own before its soil is utterly drained."

This peculiar sentence has the true protectionist ring, and nobody but a throroughbred protectionist could evolve it. One is at a loss whether most to admire the idea that a farmer who has sold his grain to a foreign country is to invest the proceeds in building cotton and woollen mills, or the other equally original idea that the agricultural country will go on selling its grain until its soil is exhausted and the people are starving. Further on we also meet that old friend of ours, the theory that the doctrine of free trade is only a cunning device of England for draining other countries of their wealth. We are informed that, in contradistinction to this false kind of free trade, there is a genuine kind, based on reciprocity, and to be established by a gradual extension of the German Zollverein, which shall ultimately embrace all the European states except England; but what the untrained intellect of a free-trader cannot understand is, how or why there should be any commerce at all between nations all of which have reached the same level of economic development, and all of which are consequently capable of producing all the commodities which their citizens require. Such is the heaven that protectionists dream of, and its most perfect realization will have been attained when every village is entirely self-sufficing and independent of every other.

"All other civilized states," says our author, "surround themselves with protective tariffs out of aversion to free trade, but Germany does it out of love for free trade, and for the purpose of promoting it; just as France, Russia, and Italy maintain great armies from an inclination for war and from a lust for the gains to be hoped from offensive wars, while Germany maintains its immense army from a love of peace, and to hold in check the warlike desires of its neighbors."

Although this sounds like one of Artemus Ward's pleasantries, it is intended quite seriously, and there is much other equally edifying matter in this book. The only work in the English language that can match it for consistent wrongheadedness and perverted ingenuity is Henry C. Carey's 'Letters on International Copyright,' first published in 1852, and of which a second edition appeared in 1868. Whether a mental affinity between these two able writers has landed them both in the protectionist camp, or whether their devotion to the doctrine of protection has in both cases produced the same mental warp, may be open to discussion; probably the latter supposition is the correct one, for it is more than likely that if Bismarck's necessities had impelled him in the direction of free trade, Hartmann would have displayed his brilliant dialectics on that side of the controversy. It is difficult to be greatly moved by the eloquence of a lawyer who would have been equally eloquent on the other side if the other side had retained him.

Tier- und Pflanzenbilder auf Münzen und Gemmen des Klassischen Altertums. Von Imhoof-Blumer und Otto Keller. Leipzig: B. G. Teubner. 1889.

Two years ago we spoke of Prof. Keller's book entitled 'Thiere des Classischen Alterthums.' This was a work in a field not often traversed, and its purpose was to point out the parts played by animals in all the various scenes of ancient civilization. Under the bear, for instance, were discussed the localities in Europe, Asia, and Egypt in which he was found, his position in mythology and religion, how he was hunted, baited in the amphitheatre, or tamed, and how his skin, fat, and meat were used. There were also collected the speculations of the ancient writers on his nature, together with the names of different species, representations of them in art, and, finally, remarks on his apotheosis, as it were, into a constellation. About thirty animals and birds were treated in this fashion, and the whole was conceived in the scholarly style familiar to those acquainted with the author's work in the domain of Horatian criticism.

In the course of this book Prof. Keller remarked that the place of animals in the civilization of antiquity would probably be best understood and illustrated after a study of contemporary coins and gems. The new work before us bears out fully the truth of that observation, and is an indispensable supplement to its predecessor. A series of twenty-six plates, containing phototypes of over thirteen hundred coins and gems, certainly affords an unique opportunity for the study of this particular branch of philology. In the place of the thirty animals and birds above mentioned, we have noted here nearly three hundred, including mammals, birds, amphibia, reptiles, fishes, insects, and crustacea, together with many of those products of the Greek fancy—creatures that never were on sea or land. To these must be added a large collection of plants and trees, interesting from the point of view of agriculture, religion, or in other connections.

The plates are preceded by a full description of every coin and gem, together with an excellent quintuple index. The intention is to present not a complete illustrated catalogue of all the varying types of the different plants and animals, but merely the best and most interesting examples of each. The more important variations from the normal type are briefly mentioned, however, and, in the case of the rarest, all the examples known to the authors are either pictured or mentioned.

The selection and description of the coins has fallen to the share of Prof. Imhoof-Blumer, whose work in Greek numismatics is well known. Nearly all the coins chosen are of the period of Greek independence; those of a later date, as well as Roman coinage, are used only when the earlier sources were deficient. The gems, arranged by Prof. Keller, are not mere repetitions of those found in our common handbooks. Most of them have not hitherto been published in a trustworthy form, and not a few are real *inedita*. They are gathered from all the principal collections of Europe. Both gems and coins are reproduced in natural size, except those on one plate, which, for a special reason, have been one-and-a-half times enlarged. The phototypes are finely executed, and in only a few instances have we been obliged to use a magnifying glass.

Given a collection of animals varying in size from the elephant to the parasitic crab found on the thunny fish, the scholar will be difficult indeed who does not find something to excite his interest and attention, while the reviewer may well be at a loss what to select for particular commendation. Even Mr. Sandys might find here additional material for his already richly illustrated edition of the 'Bacchæ.' The coins and gems offer many Dionysiac scenes, one of the most beautiful being a large coin of Ephesus, bearing on the obverse a snake issuing from the half-open *cista mystica*, the whole enclosed in an ivy wreath. A rhinoceros driven by a man with a goad, on a Berlin gem, might have been the one exhibited by Augustus in the Septa. A dekadrachmon of Syracuse presents what might be called a lovely picture of the little ivory chariot and horses with which Nero used to amuse himself, while even Domitian's fly finds its appropriate representation. When we are so generously treated, it is perhaps invidious to speak of omissions; but among the pictures of the Sphinx we miss the scene of her killing by Œdipus. This is represented in Lippert (Dact. 1, 2, 79), and we have seen it also on a carnelian scarab, one of a collection belonging to Mr. J. R. Lowell. In the same collection is another, interesting for its antiquity, as shown by the marks of the drill, and for the reason that it probably represents Heracles returning from the Erymanthian hunt.

He leans on a staff, and staggers under the burden of the boar, slung over his shoulder. We have not seen this published, either in the present work or elsewhere.

By the way, this book is dedicated—rather an unusual thing in a German book—to two Americans, Dr. George M. Lane of Cambridge and Mr. Stephen Salisbury of Worcester. We learn from the preface that Prof. Keller has received a call to the new Clark University.

Eli and Sibyl Jones: Their Life and Work. By Rufus M. Jones. Philadelphia: Porter & Coates.

ELI JONES is still living, or was when this book was written. Sibyl, his wife, died in 1873. Together they presented an aspect somewhat unusual in our time. They were missionary Friends. They felt themselves "called by the spirit" to go hither and thither and proclaim what to them were tidings of great joy. Except for this reliance on the spirit, which was as simple and sincere as it was with George Fox or any of the early Friends, their modes of thought and speech and life are more suggestive of Methodism or some other form of sentimental evangelical piety than of Quakerism. While looking to the spirit for direction as to the missionary journeys they should make, and while holding very distinctly to the original doctrine of the spirit as a supernatural voice, their dependence on the written Word and the personal Jesus was quite other than that of the early Friends, and perfectly in keeping with the average orthodoxy of the present time.

Eli Jones was the first of eleven children born to his parents in the course of twenty-one years. Children were then regarded as a blessing from the Lord, and the blessing was frequently invoked. The boy's earliest and life-long home was in China, Maine, a recent settlement at the time of his birth in 1807. Sibyl, a Jones before marriage, was presumably a relative of her husband; in what degree we are not told. Eli claimed descent from the Jones who steered the *Mayflower;* on his mother's side from Robinson of Leyden. Eli and Sibyl were married in 1833. Their first missionary excursion was to Canada in 1840. This was followed by others to the South and West. In 1851 it was "laid upon them" that they should go to Liberia. There is a suggestion here, and there are others elsewhere, that, while anti-slavery, as all Friends were supposed to be, as such, they were more in sympathy with the Colonizationists than with the Abolitionists. We find Eli at a Colonization meeting and consorting with Colonization leaders, but never in any Abolition meeting. In general, the religion of this worthy couple was of the other-worldly kind, though the interests of temperance and peace were dear to them. All of their missionary effort was singularly touch-and-go. Their sense of moral exigency was satisfied by making in one place an address, generally brief, setting forth the most familiar doctrines of a conventional orthodoxy, and then passing to another place to do the same.

After all their trouble in getting to Liberia in a sailing vessel, with rough passengers and a rougher crew, they remained only a few weeks, and the advantages claimed for their activity by their biographer are not easily made out. After their return, they soon set out again, and went to England, Ireland, Norway, Switzerland, and Southern France. An account, by Elihu Burritt, of their speaking in London gives us almost our only impression of their peculiar power. Eli's voice is set down as dreadfully nasal, even for an American. Sibyl's was low and sweet and clear, and it is evident that her lips were touched with persuasion. John Bright was much delighted with her speaking. It is a very serious defect of this biography that we nowhere have the substance of their message. With almost algebraic conciseness, we are told of their speaking here and there, and of the deep impression they made, but what they said is hidden from us, probably because of its extemporaneous character. It would appear that they spoke English only, and had recourse to an interpreter everywhere upon the European continent and in Syria, whither they went in 1867 and again in 1869. This must have been a serious limitation. Twice after his wife's death Eli Jones returned to Syria, where something more was done in the way of organized work than elsewhere. The unearthing of a Quaker community in Southern France was the most interesting episode of the travels of the two in that region.

The only speech we have of Eli Jones's was not delivered *in partibus infidelium*, unless the Maine Legislature comes under that designation. He was elected to the Legislature, and it was thought a good joke by his fellow-legislators to elect him, a Quaker and peace man, Major-General of Militia. But he was entirely equal to the situation, and told them frankly how he should proceed in case he took command. It was probably another joke that made him, an ardent temperance man and total abstainer, salesman of liquors in his native town. For the year of his service the Maine Law was strictly enforced.

Eli and Sibyl Jones had many noble friends. Whittier sang them away to Palestine, and in his poem, "The Meeting," Sibyl is easily descried. The ungodly may suggest that a passion for extensive travel may have had something to do with their missionary zeal, but a very simple and sufficient answer is at hand: Sibyl Jones was so much of an invalid that travel was to her generally a painful exercise. The wisdom of their methods may be subject to some doubt; but to read their biography is to be certain of the simplicity and goodness of their hearts.

On Parliamentary Government in England, its Origin, Development, and Practical Operation. By Alpheus Todd, LL.D., C.M.G., Librarian of the Canadian Parliament, etc. Second edition by his son. Longmans, Green & Co. 2 vols. 8vo.

AN exhaustive manual of the methods of practical government in England must be an invaluable help to the British officer in every department of the civil service. But its use is not limited to Great Britain. Statesmen in every nation in the globe will have constant use for a book of reference which has systematized for them the English governmental organization in all its machinery with a completeness not before approached. Everybody has at times occasion to seek the explanation of administrative methods, or the law of official responsibility, the history of the Cabinet, or the relation of its members to each other, to the Prime Minister, to the Queen, to Parliament. On every such topic Mr. Todd's book is an authority, with its precedents well digested and its contents so well arranged and indexed as to make it an excellent manual for ready reference. For all who are interested in administrative politics, either for the sake of comprehending in detail the complex machinery of England's Government or for the study of civil-service questions as a matter of comparative politics, the book is unique in its completeness even to minutest details. The author is one of those benefactors to the busy or the studious man who bestow unbounded and ungrudging labor and no little historical and literary ability upon reference-books which the world cannot afford to be without, but for which the author finds little recompense except in the consciousness of having well performed a most difficult and valuable task.

Taken in connection with Mr. Todd's other work, 'Parliamentary Government in the Colonies,' these volumes give us the complete organization and business working of the British Empire, in a way which leaves little to desire.

BOOKS OF THE WEEK.

Allen, Grant. The Tents of Shem. Chicago: Rand, McNally & Co.
Argyll, Duke of. What is Truth? A. D. F. Randolph & Co. 25 cents.
Griswold, W. M. Annual Index to Periodicals for 1888. Bangor: W. M. Griswold.

CARL SCHOENHOF, Importer, 144 Tremont St., Boston.

School Trustees,
Principals,
Teachers,

And others interested, are invited to consider the advantages offered by the *Nation* as an advertising medium. School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especially ordered displayed on other pages.

The *Nation*, in its special field of political and literary criticism, is unlike any other periodical, American or foreign. About 9,000 copies are circulated weekly, but these figures do not accurately represent the number of its readers. It is taken by reading-clubs and literary associations in a large number of places, and may be found on file in every library of importance in the country. There are probably few weekly periodicals whose columns offer so favorable an opportunity for reaching an audience interested in educational matters.

Rate per year for 3 lines, $23.40; 4 lines, $31.20; 5 lines, $39.00, etc. Any term less than one year at same rates —15 cents per line per week.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

THE NATION, 208 Broadway, N. Y.

The Mother's Register.

*In any family, whether large or small, but es-*pecially where the number of children is large, a record of the constitutional peculiarities of each one, and the whole course of its physical development in sickness and in health, is certain to be instructive and may prove invaluable. Such a record is Prof. J. B. Fonssagrives's 'Mother Register,' consisting of a series of tables scientifically arranged for brief and convenient entries. A separate volume for boys and for girls. Price, post-paid, 75 cents per volume, or $1.25 for two volumes.

"By far the most practical record for the period of childhood that I have seen, . . . a separate part being devoted to the girl, in which are points of great importance as references in her after life. The completeness of its items and its convenient arrangement insure the entry of important events."—*C. E. Warren, M.D., in Babyhood.*

For sale at the office of the *Nation*.

Reading Case for the Nation,

To receive the current numbers in a convenient (temporary) form. Substantially made, bound in cloth, with *The Nation* stamped on the side in gold. Holds about one volume. Papers easily and neatly adjusted. Sent, postpaid, on receipt of 75 cents.

Claude.

A B C of Gothic Architecture.

By J. H. Parker. 100 Illustrations. 16mo, $1.25.

A Concise Glossary of Terms Used in Grecian, Roman, Italian, and Gothic Architecture.

By J. H. Parker. A new edition, revised. Fcap. 8vo, with nearly 500 Illustrations. Cloth, $3.00.

An Introduction to the Study of Gothic Architecture.

By J. H. Parker. With 200 Illustrations, and a Topographical and Glossarial Index. Sixth edition, with additions. Fcap 8vo, cloth, $2.00.

Rankine's (W. J. M.) Works.

12mo volumes, viz.:

—— *APPLIED MECHANICS.* Comprising statics, structures, cinematics, mechanism, dynamics, machines. Tables and illustrations. $5.00.

—— *CIVIL ENGINEERING.* Comprising engineering field-work, materials and structures, combined structures. Tables and Illustrations. $6.50.

—— *MACHINERY AND MILL WORK.* Comprising geometry, dynamics, materials, and strength of machinery. Tables and Illustrations. $5.00.

—— *MECHANICAL TEXT-BOOK;* or, Introduction to the Study of Mechanics. Tables and Illustrations. $3.75.

—— *STEAM ENGINE AND OTHER PRIME MOVERS.* Tables and Illustrations. $5.00.

SCRIBNER & WELFORD *also supply the entire series of* BOHN'S LIBRARIES, *including the Classical, Collegiate, Scientific, etc., etc., containing the Best Edited Editions of Standard Works for Educational and other purposes. Complete detailed lists of these and our other publications supplied on application.*

SCRIBNER & WELFORD,

NEW YORK.

The History of the Roman Republic.

Abridged from the History by Prof. Mommsen. By C. Bryans and F. G. R. Hendy. One volume, 12mo, $1.75.

The merits of Professor Mommsen's History are well known. The need of an abridgment of this great work—a book that should present the salient points of the original in a form suitable for use in schools and colleges—is well met in this condensation by two competent English scholars.

"I have examined it with care and find the work skilfully done. It will be a very welcome book, I am sure, to teachers and students. I shall be glad to use it with my classes and believe it will be widely adopted as a text-book in our schools and colleges."—*Prof William A. Packard, Princeton College.*

Important Works by Prof. G. P. Fisher, D.D., LL.D.

History of the Christian Church.

8vo, with numerous maps. $3.50.

"I have to tell you of the pride and delight with which I have examined your rich and most instructive volume. As an American, let me thank you for producing a work so honorable to the country."—*Hon. George Bancroft.*

Manual of Christian Evidences.

12mo, 75 cents.

"By all odds, the best treatise on the evidences of Christianity that we know."—*The Examiner.*

"It touches every leading point of Christian evidence, and meets every important objection."—*The Churchman.*

First and Fundamental Truths.

Being a Treatise on Metaphysics. By ex-President James McCosh, D.D., LL.D. 12mo, $2.00.

Dr. McCosh regards this work as the copestone of what he has been able to do in philosophy. It is destined to rank as the most important of all his works.

"The things noticeable in this book, are its fulness of form, its simplicity of diction, its frequent and happy use of illustration, and its steady flow of clear and ample thought."—*N. Y. Evangelist.*

Important Works on Mental and Moral Science.

An Outline Study of Man.

Or, THE BODY AND MIND IN ONE SYSTEM. With illustrative diagrams. By Mark Hopkins, D.D., LL.D., late President Williams College. Revised edition. 12mo, $1.75.

"For over ten years I have made it a text-book in the senior class of this school. It is, I think, the greatest and most useful of the books of the greatest of our American educators, and is destined to do a great work in forming not only the ideas but the character of youth everywhere."—*Gen. A.C. Armstrong, Principal of Hampton Institute.*

Elements of Intellectual Science.

A Manual for Schools and Colleges. By Noah Porter, D.D., LL.D. 8vo, $3.00.

This is an abridgment of the author's 'Human Intellect,' containing all the matter necessary for use in the class-room, and has been introduced as a text-book in Yale, Dartmouth, Bowdoin, Oberlin, Bates, Hamilton, Vassar, and Smith Colleges; Wesleyan, Ohio, Lehigh, and Wooster Universities, and many other colleges, academies, normal and high schools.

The Law of Love, and Love as a Law.

Or, CHRISTIAN ETHICS. By Mark Hopkins, D.D., LL.D., late President Williams College. 12mo, $1.75.

This is designed to follow the author's 'Outline Study of Man.' As its title indicates, it is entirely an exposition of the cardinal precept of Christian philosophy in harmony with nature and on the basis of reason. Like the treatise on mental philosophy, it is adapted with unusual skill to educational uses.

Elements of Moral Science.

THEORETICAL AND PRACTICAL. By Noah Porter, D.D., LL.D. 8vo, $3.00.

Julius H. Seelye, President Amherst College: "Like all the writings of its distinguished author it is copious and clear, with ample scholarship and remarkable insight, and I am sure that all teachers of moral science will find it a valuable aid in their instructions."

An Introductory New Testament Greek Method.

By William R. Harper, Ph.D., and Revere F. Weidner, D.D. 8vo, $2.50 net.

CONTENTS: I. Fifty Inductive Lessons based on the Gospel of St. John. II.—1. A Critical Text of the Gospel of St. John—2. A Literal Translation of John i-iv—3. A Vocabulary of the Gospel and Epistles of St. John—4. Lists of words occurring most frequently—III. Elements of New Testament Greek Grammar.

"I thoroughly believe in the inductive method which has shaped the work and anticipate for it large usefulness and success. It is carefully edited and printed, and supplies an evident lack among the rudimentary text-books for the study of the Greek Testament."—*Prof. J. H. Thayer, Harvard University.*

*** *The above books will be supplied to teachers at* SPECIAL NET RATES. *Terms given on application.*

The Nation.

NEW YORK, THURSDAY, AUGUST 8, 1889.

The Week.

THE reply of Postmaster-General Wanamaker to the President of the Western Union Telegraph Co. begins with a statement of what he considers the special services rendered by the Government to that company as justifying a reduction of the rate of tolls from one cent to one mill per word. The only such service mentioned is the granting of the right of way to the company for the erection and operation of its lines on all post-roads of the United States. By way of emphasis, Mr. Wanamaker mentions a decision of the Supreme Court in the Pensacola case, in which it was held that the Western Union Telegraph Company had rights under this act which not even the sovereign State of Florida could annul. The inference might be drawn from this presentation of the case that the Government had conferred some exclusive right or franchise on the Western Union Telegraph Company, for which compensation in some form might be fairly claimed. But such is not the fact. The act of 1866, cited by the Postmaster-General, grants this right of way to "any telegraph company now organized, or which may hereafter be organized, under the laws of any State." It opened the way to the Bankers' and Merchants' Telegraph Company, the National, the Atlantic and Pacific, the Mutual, the United Lines, the Rapid, the Postal, the Baltimore and Ohio, and a score of other companies in the past. Most of these have been absorbed by the Western Union, but one of them, at least, is still an independent and competing line. The door is open, however, to any other company to enter the field, from this time onward.

This right of way, so far from securing any special advantages to the Western Union Company, took away what it had acquired before by reason of first occupancy and its superior capital and plant. This was the very object of the act. As originally reported by Senator Sherman, it was a bill to incorporate the National Telegraph Company, and to give to that particular company the right of way on all post-roads of the United States, in order that it might compete successfully with the Western Union Company. On motion of Senator Grimes of Iowa, the bill was amended so as to confer this power on "any telegraph company" (*Congressional Globe*, 1st session 39th Congress, vol. iv, p. 3427). The whole debate shows that this was the purpose of the measure. Therefore this part of Mr. Wanamaker's argument falls to the ground, so far as it seeks to erect a claim on the Western Union Company for special gratitude and consideration.

Mr. Wanamaker next says that the law has at least imposed upon the Postmaster-General the duty of fixing the rate for Government telegraphing and maintaining it "until in a court of inquiry the rate has been shown to be unjust." The only courts of inquiry known to the law are military or naval. The act of Congress says that "telegrams between the several departments of the Government . . . shall have priority over all other business at such rates as the Postmaster-General shall annually fix." The Postmaster-General is himself the only court of inquiry in this case. The court has already acted, and now asks the defendant to furnish reasons or excuses for reopening the decree. This is better than adhering to an untenable position, but the affair has served to take the measure of Mr. Wanamaker for high office, as he has often taken other folks' measure for clothing. He advances the theory that this is the right way to transact public business, namely, to do a certain thing to-day, and then ask the persons affected by his action to show why it should not be done, so that he, or "a court of inquiry," may do something different. A person who would avoid making himself ridiculous would hold his court of inquiry beforehand.

The arrival of the Canadian sealing vessel *Black Diamond* at Victoria, in charge of her own officers and crew, after her capture by our revenue cutter *Rush*, shows pretty conclusively that the commander of the *Rush* did not intend to bring her into an American port for adjudication. He put one sailor on board of her and then sent her off. He might, if he had been so disposed, have taken all of her crew on his own ship and put an equal number of his own men on the *Black Diamond*, in which case she would have been sailed into the port of Sitka and placed in charge of the customs officers at that place, and proceedings for condemnation would have followed. It is a very queer proceeding from every point of view.

Secretary Blaine was seen last week at Bangor by a newspaper reporter, and, although he refused to be interviewed, he took occasion to say that "everything done on the fur-seal question since March 4 last was in literal compliance with the directions contained in the act of Congress which was approved by President Cleveland on the last day of his term." This statement is characteristically misleading. The act of Congress referred to is in these words:

"No person shall kill any otter, mink, marten, sable or fur-seal, or other fur-bearing animal *within the limit of Alaska Territory or in the waters thereof;* and every person guilty thereof shall, for each offence, be fined not less than $200 or more than $1,000, or imprisoned not more than six months, or both; and all vessels, their tackle, apparel, furniture, and cargo, found engaged in violation of this section, shall be forfeited; but the Secretary of the Treasury shall have power to authorize the killing of any such mink, marten, sable, or other fur-bearing animals, except fur-seals, under such regulations as he may prescribe. It shall be the duty of the Secretary to prevent the killing of any fur-seal, and to provide for the execution of the provisions of this section until it is otherwise provided by law, nor shall he grant any special privileges under this section."

The act does not help anybody to decide what are the waters of Alaska Territory. The powers and duties of the Executive of the United States as regards the capture of seals in Behring Sea are exactly what they were before the act was passed. The waters of Alaska Territory, unless that Territory differs from other countries more or less civilized, are the space of three miles next adjoining any of the land, plus any land-locked water surrounded entirely by said Territory, with channels of communication so narrow that they may be commanded by guns on the shore. The Gulf of St. Lawrence *is* entirely surrounded by British territory. Behring Sea is *not* entirely surrounded by our territory. The channel between the southwestern corner of Newfoundland and Cape Breton, Nova Scotia, is only 50 miles wide, as against one of 183 miles between our westernmost Aleutian island and the nearest Russian territory. We have always insisted on our right under international law to sail through and into the Gulf of St. Lawrence, and to fish in said gulf at any place more than three miles from the land, and this right we now enjoy. We have even claimed the right to pass through the Gut of Canso, which is only half-a-mile wide, for fishing purposes. Mr. Blaine will have to explain himself more fully before long.

The President appears to have decided to restore life to the old Louisiana Carpet-Bag Ring. He has offered the appointment of Collector of the Port of New Orleans to ex-Gov. Warmoth, and the mission to the Argentine Republic to ex-Marshal J. R. C. Pitkin. It is a long time since these names have occupied much attention in the public mind, but ten or fifteen years ago there was scarcely a day in which they did not figure in some new form of political rascality in Louisiana. Of Warmoth's appointment, possibly the worst thing that can be said of it is that ex-Senator Kellogg of Louisiana thinks it a "good one." The Republican newspapers, including the *Tribune*, are silent about both appointments, but the time has been when the *Tribune* was able to speak its mind freely about both men. Its views of Warmoth were especially unfavorable, and will be found in great profusion in its files during the years of that eminent carpet-bag Governor's career. Of Pitkin it was rather contemptuous than otherwise, as in a leading article entitled, "The Too-Frequent Pitkin," published on July 12, 1877. Now will the *Tribune* tell us what it thinks of the political wisdom — we waive all higher views of the matter as not germane—of the President's attempt to breathe fresh life into the "Louisiana gang" who, a dozen years ago, were "brought into prominence by the fact that they were charged with being great rascals"?

Under the reforming hand of Mr. Manning the Cleveland Administration, so says the Hartford *Times*, reduced the incidental consular fees at London, Bradford, and other places, and cut down Gov. Waller's fees at London, as compared with the previous fees, at the rate of $14,000 a year; but now Mr. Harrison's Administration has restored the fees, "so that Mr. New at London, Col. Tibbits at Bradford, and others can get the old fat rates." The strain of the situation thus produced by "the old fat rates" is in the diplomatic misunderstanding thus created, which has been formally brought to the attention of the British House of Commons. Mr. Manning could not, during his brief term of office, accomplish all the reforms in taxation that he began, to say nothing of the others that he meditated. His wish and purpose were, as is clearly to be seen in the reports that he sent to Congress, to cut out this notarial scandal by the roots; but so great was the resistance encountered in the Special Agents' Bureau of his own Department, and in the Consular Bureau of the State Department, that in a year he could only bring about so much of that reform as is described by the Hartford *Times*.

What the country now needs is to be told the whole truth about consular salaries, tips, perquisites, and "incidental fees," and in that behalf Gov. Waller can render a most valuable service if he will. Having recently been Consul-General at London, he knows the inside of the business, not only at London, but elsewhere in what was his consular jurisdiction. If his "incidental fees" were by Mr. Manning's efforts made $14,000 a year less than those of his predecessor, how did it come about? We all know what the salaries are of our consuls in Great Britain, but Gov. Waller can tell us the annual sum of legitimate consular fees received for notarial work not prescribed by Congress, and then can describe the notarial fees for oaths on invoices, and tell how much of the total sum not reported to the Treasury enriches the consular officer. What was the source of the $14,000 a year of which he was deprived? What are the figures of "the old fat fees" for Bradford and other English consulates, and can it be that a former American consul in England sued, or threatened otherwise, to compel a British notary to make a "square divide" of these notarial fees according to the terms of his selection to be the consular notary? If an American consular officer compels a shipper to appear before a designated British notary, cannot he, if so minded, exact an unreasonable fee unless restrained by the Consul, and is the intervention of the latter likely to be exerted on the side of the notary or of the shipper if the Consul shares the swag?

The process of "whitewashing" Tanner has begun. A preliminary statement has been sent out through the Associated Press, obviously prepared by the Committee which is conducting its investigation in secret, in which the valuable information is imparted to the public that Tanner has done very little more rerating than his predecessor did in the same period of time. This information, the statement says, "is learned from parties believed to have a knowledge of the work of the Committee," which is a very clumsy and insufficient disguise of the obvious fact that the statement is furnished by the Committee itself, for it contains exact figures and other data which nobody else would be able to supply. The statement closes with the following forecast of the final report: "The investigation, so far as it has gone, is believed to have convinced the Committee that there has been a gradual increase in the number of pensions rerated since late in the summer or early fall of last year. It is confidently asserted that the Committee has discovered nothing whatever of a sensational character either in the number of reratings or the amount of money involved." Can it be possible that Secretary Noble and the President believe that a report like that from a committee which has done its work in secret will have the slightest influence upon anybody? As the Philadelphia *Inquirer* has remarked, "an attempt to vindicate any official by such process would be manifestly incomplete and unsatisfactory," and "will not answer the public demand."

Wade's Fibre and Fabric, a protectionist organ of note, is out for free wool. At all events, that is the way we read an article of some length in its latest issue. Perhaps it has been assisted to this conclusion by the failure, now generally acknowledged, of the recent worsted decision of the Treasury Department to improve the worsted industry. The worsted-mills have not reaped a penny of advantage from the decision. In fact, the down-hill course of that industry has not been checked by it. Some people are very angry because the importers of worsted coatings and suitings have not advanced their prices. It seems that these importers have so much confidence that the courts will upset the decision and pay back the excess of duties, together with interest at a higher rate than they have to pay for borrowed money, that they have continued selling their goods at the old prices. There are but two ways out of this dilemma for the worsted-manufacturers. One is to have the importers sent to prison, and the other is to get wool on as good terms as foreign manufacturers get it. The latter seems to be the more feasible undertaking.

Henry George has returned from a triumphal tour in Europe to find his single-tax Anti-Poverty party in this country divided as nearly in the middle as was possible without rending one of the "leaders" in twain. There are three "leaders" in one faction and four in the other. It is not easy to say precisely what has caused the split, but the chief source of trouble appears to have been that there was not enough notoriety in the business to go around. A formal banquet had been arranged to welcome Mr. George on his return, and the trouble came to a head in arranging the list of speakers for this. The faction of three, in whom the single-tax idea is suspected of overshadowing the anti-poverty idea, objected to having a speech from the Reverend Pentecost, who had left his pulpit and renounced all orthodox preaching in order to expound anti-poverty. In order to prevent a scene at the banquet, Mr. Pentecost and his three fellow-leaders withdrew his name from the list. He attended the banquet, but sat silent while the complete single-tax faction of three occupied the floor for an almost unlimited period of time. This was naturally a hardship for a man of Mr. Pentecost's "gifts," and he is going to relieve himself by setting forth his case in a paper which he has started in opposition to the regular George paper. The other faction will reply, and there will be war. As publishing a newspaper with no visible means of support is an expensive business, the work of abolishing poverty from the world, together with that of reforming existing methods of taxation, will have to wait awhile.

Not only was Mr. Pentecost refused the privilege of making a speech at the recent banquet, but he has since been formally repudiated by Mr. George, who has written a letter saying it would have been "extremely disagreeable" to him to have had to listen to a speech by a man who had been "giving currency to misrepresentations." Thus Pentecost follows McGlynn out of the George party, and henceforth the organization will have to go ahead without the benefit of any of the clergy which it ever had. It is somewhat heartless in Mr. George to throw over the two clergymen who were persuaded by his doctrine to leave their pulpits and devote their lives henceforth to his cause. They have been on the cold world from the moment they took this step, depending mainly upon the collections which they were able to take up at the meetings in which they undertook to drive poverty from the face of the earth by means of talk. Dr. McGlynn succeeded in driving away his personal poverty in this way, but the Reverend Pentecost was not even so successful as that. There was evidently not enough in the cause to give a comfortable living to more than one man.

The high-license and local-option principle has been adopted by the Rhode Island Legislature as the basis of the law just passed to take the place of the discarded prohibition system. A vote may be taken each spring on the question of granting licenses in cities and town, so that, if there are any places where public sentiment will sustain local prohibition, those places may prohibit the liquor traffic entirely. Wholesale license fees are not to be less than $500 nor more than $1,000, while retail licenses are to be $400 in Providence, $350 in the other cities, and from $200 to $300 in the smaller towns. There is no distinction as to kinds of liquors, so that a man must pay at least $200 to open a beer saloon.

The *Manufacturer* of Philadelphia, which considers New York the most unsuitable of

all the greater cities in the Union as a place for the world's fair of 1892, and Philadelphia the most suitable, claims in another article, or rather in three articles in the same issue, that Philadelphia has the most abominable water supply in the world and the worst city government, and that the bad water is a consequence of the bad government. Competitive examination in bad streets is also challenged. Chicago, on the other hand, claims that she has the worst sewerage system on the continent. Her claims to bad government are not equal to Philadelphia's, but in the matter of bad streets she is not behind any city. Now, can we conceive of any two things more requisite and indispensable for a world's fair than a good water supply and a good sewerage system? New York has both. Her present water supply is excellent as to quality, and long before 1892 the quantity will be trebled. Her sewerage system is by far better than the average of American or European cities of the same class. It is not likely that either Philadelphia or Chicago will accomplish the great engineering reforms that are conceded to be necessary before the summer of 1892. In fact, no plans have been adopted in either case. In Philadelphia the manufacturers' organ tells us that although the people are drinking sewage diluted with Schuylkill water on one side and Delaware River water on the other, and are getting typhoid fever in consequence, the badness of the city government forbids any hope of improvement. "We shall never," it says, "have good water, or good streets, or good government until the people make up their mind to dethrone their bosses." It will take three years, at the least calculation, to perform this job—that is, to get ready to begin work on the new water system.

The Rev. J. Francis Robinson, a Baptist preacher of good character, has been visiting in the city of Auburn, N. Y. The day after his arrival he wished to get shaved, and went to a barber-shop, but was refused attention. He went in succession to several other barber-shops, but received the same treatment at each. The Rev. F. D. Penny, pastor of the Second Baptist Church in Auburn, accompanied the Rev. Mr. Robinson to a number of shops, and offered the proprietors a dollar to shave his friend, but his cooperation was of no use. The trouble was that the Rev. Mr. Robinson has a black skin, and, as one of the barbers said, "I refused to shave him because it is against the rules of the trade to shave a colored man." Auburn last fall gave Harrison 3,122 votes to 2,214 for Cleveland, and doubtless the Republicans of Auburn have often been filled with indignation at the idea that negroes do not enjoy equal rights with white people in the South.

A radical change in the law regarding the investment of trust funds is in progress in England, having already passed the House of Commons. Under former practice a trustee holding funds for investment—for instance, the executor of a decedent estate—could invest only in bond and mortgage within the United Kingdom, or in British consols. If he invested in other things, he was personally responsible for any loss. The same law prevails in the State of New York, except that there is liberty of investment in the bonds of both State and national Governments. The bill now pending in the House of Lords extends the list of statutory trust investments to stock of the Bank of England and the Bank of Ireland, to India stocks issued under authority of Parliament, to any securities guaranteed by Parliament, to stocks of the Metropolitan Board of Works, or of the London County Council, to the debentures and preference and guaranteed stocks of any railway in the United Kingdom which has paid not less than 3 per cent. dividends on its ordinary stock for ten years consecutively, to the securities of any railway in India guaranteed by the Government of India, to the stock and bonds of water commissioners and of water-supply companies incorporated by Parliament which have paid 5 per cent. dividends for ten consecutive years, and to the stock of any municipal borough of not less than 50,000 inhabitants, if such stock has been issued under authority of Parliament. Colonial securities not authorized by Parliament are not included in the list of lawful trust investments.

A curious political comedy has just been enacted in Norway. The pseudo-Liberal Sverdrup Ministry has been overthrown by tactics which the Premier was himself instrumental in devising. Mr. Sverdrup had pledged himself to introduce trial by jury in criminal cases, and an improved system of popular education; but his Conservative allies, without whose aid he could not remain in power, demanded of him a "masterly inactivity" in regard to these and other reforms which stand foremost on the programme of the Left. For more than two years, accordingly, Mr. Sverdrup has played the double part of reformer and frustrater of reform; but he was evidently beginning to tire of it, and there were signs, of late, that he meant to carry the jury law (which was passed a year ago) into effect. The members of the Right, taking alarm at this, promptly deserted him, and on July 2 their leader, Mr. Stang, moved in the Storthing a resolution expressing want of confidence in the Government. Although it was a foregone conclusion that this motion would be lost, Mr. Sverdrup surprised the Storthing by tendering the resignation of the entire Ministry. The Liberal press regarded this as a clever manœuvre for getting rid of the troublesome Conservative alliance, and took it for granted that Sverdrup would retain the Premiership, throwing overboard those of his colleagues who were commonly believed to be disguised Conservatives. That this was really his intention, there can be no doubt; but he reckoned without his host. He failed to take into account the disgust which his double-dealing had aroused in his party. The two factions of the Left are apparently united in nothing except their distrust of the man who split their party and converted a large majority into two hostile minorities.

When Sverdrup began his negotiations for the formation of a new government, he, therefore, encountered unforeseen obstacles. The leaders of the Pure Left, without whose coöperation no Liberal Ministry could be possible, were unconciliatory. They declared that it was the spirit of compromise which had wrecked the party, and now they would have none of it. In order to secure a government truly representative of Norse Liberalism, they demanded the admission to the Cabinet of the two ablest and most prominent chieftains of the Pure Left, Wullert Konow and Rector Steen. But the admission of these men would have meant the practical extinction of Sverdrup; and as regards Steen, his attitude during the impeachment trial of the Selmer Ministry had made him personally distasteful to the King, who still has the constitutional right of appointing as well as rejecting a Minister. It was thus obvious that the leaders of the Left who made these demands meant to have the negotiations fail. After a good deal of futile intrigue, Sverdrup found himself unable to form a government. It would have been quite feasible for the King to delegate the task to some eminent Liberal, but Oscar II. solved the difficulty, or rather complicated it further, by summoning Mr. Stang, the leader of the Right. The Cabinet which the latter has succeeded in forming consists largely of bureaucratic officials, who are without sympathy with or understanding of the needs and aspirations of the Norwegian people. Being, moreover, a minority government, and reactionary in its tendencies, the Stang Ministry is scarcely destined for a long or brilliant career.

Gen. Grenfell's victory has disposed of the third Mahdi, but, in spite of its completeness and the great slaughter of the dervishes, there is no likelihood that it will pacify the Sudan as long as Khartum remains in the hands of the Arabs. It is the capital of the Upper Nile region, and its possession is a sign of power and independence. Moreover, there is no reason for supposing that another Mahdi will not speedily appear. It is even truer of Mohammedans than of Christians that the blood of the martyrs is the seed of the church. There is probably not the smallest doubt among the Sudanese that the late Mahdi has joined the other two in heaven, and all over the desert there are hundreds of dervishes, any one of whom may any day announce himself as the latest prophet and be accepted as such. But Grenfell's victories have the immense value of showing that the native troops—that is, the "blacks" or Nubians—are fully a match for the Arabs. When it was found that the old Egyptian army, composed mainly of Fellahs, would not stand up against the Arabs, and it began to be feared that Egypt would have to be held against the Mahdi by European troops, it produced a veritable panic in English military and financial circles. The discovery of the fighting qualities of the Nubians, therefore, puts Grenfell on a still higher pedestal than Lord Wolseley.

THE REPUBLICAN PARTY AND THE TRUSTS.

THE attack of the *American*, the protectionist weekly of Philadelphia, on the protected Trusts, is a serious menace to that class of monopolies, since the writer of the article (Prof. Robert Ellis Thompson, we suppose) does not hesitate to say, that the tariff duties behind which these combines are marshalled must be repealed as soon as Congress can reach them. It holds that the Trusts are enemies of the protective system, since they are destroying internal competition, without which the whole fabric of protection falls to the ground. "It would be intolerable," it says, "to set up a barrier against foreign-made goods and then to foster monopoly inside the barrier."

We might ask the *American* a number of questions—for example, whether the Trusts do not keep the money in the country that would otherwise be spent for foreign goods, and whether they do not bolster up wages, and whether they are not, in the words of Mr. Blaine, "largely private affairs." But these and similar queries will, no doubt, be put by the official organ of the Protective Tariff League as soon as it recovers its breath. What we are most curious to know is, how the Republican party will go to work to punish a large number of men who put up their money to elect Harrison and Morton in the last campaign. There are thirty or forty Trusts marshalled behind the tariff, and new ones are coming along every day. They represent a campaign fund of millions, actual or potential. Could the Republican party have carried the last election without the money contributed by men who are now holders of Trust certificates?

We think not. We think that the party workers, such as Quay, Dudley, and Clarkson, if taken into a private room and asked this question behind closed doors (as they will be whenever the *American's* programme is developed in Congress), will say decidedly, No. We think that when these gentlemen are taken into council, they will say: "We cannot afford to throw the Trusts over, unless we know who is to foot the bills next time. Pass as many resolutions as you please against Trusts in the abstract, denounce them to your heart's content, hold them up to scorn and contempt; but if you cut off their revenue, you will run short of money very soon." Some such programme we find in the Philadelphia *Press*, a near neighbor of the *American*, which urges the next Republican State Convention to pass a resolution like this, viz.:

> "Resolved, That we are resolutely opposed to all Trusts or combinations which seek to promote monopolies, suppress competition, limit and control production, and enhance prices; that we condemn and denounce them as antagonistic to the interests of the people, and repugnant to the principles, the aims, and the achievements of the American protective policy; and that we invoke and demand the exercise of the legitimate powers of the nation and the State for the inhibition and suppression of such Trusts."

We find here no word implying that the tariff duties on refined sugar, lead, salt, cotton bagging, binding twine, linseed oil, castor oil, or any other monopolized article, are to be repealed or reduced. It may possibly be inferred that a repeal of duties is included in "the legitimate powers of the nation and the State," but if so the timidity of the *Press* symbolizes the embarrassment of the party in dealing with the protected Trusts.

Where are you to draw the line when the repealing begins? Who is to be spared when the word goes forth to slaughter the Trusts? The *American* seeks to draw a line by limiting the havoc to the Trusts proper—the industries that have formally turned over the control of production to a "head centre" and taken certificates in Trusts. "We draw a line," it says, "between agreement among producers to avoid cutthroat competition and the organization of permanent Trusts." Such a discrimination would spare the great copper combine, which holds now and has for many years held the domestic price of copper at the figure at which their own product can be reimported from abroad with duty added. The people will not be able to draw so fine a distinction. They will look rather to results than to processes, and when Prof. Thompson says, "We want free lead because there is a Lead Trust, but we don't want free copper, since there is only a temporary copper combine," they will be apt to answer, "Since you have shown us the way to freedom, we want free everything that is monopolized or can be monopolized." Why make two bites of a cherry?

It will naturally be asked, also, what are we to do with the national Republican platform? Is it to be burned in the public square by the common hangman? Are not the duties on white lead, sheet lead, refined sugar, cotton bagging, etc., *some* part of "our protective system," and did not the platform pledge the party to resist the repeal of *any* part of said system? Can the platform be burned by the common hangman without producing a great shock among the faithful? We shall be glad to see the experiment made, but we do not expect to see it in a hurry. The Trusts are not likely to sit idle while preparations are making to put them to the torture. They are active and muscular. They know where they stand and where the party stands. It is easy to talk of cutting off the dog's tail close behind his ears, but the dog has teeth to defend his tail with, and he will not fail to use them when the time comes. We wish every success to the *American* and those who agree with it, but we cannot consider the Republican party an available instrument to deliver the country from the tariff-protected Trusts. Its efforts in this direction will be much like those of the Democratic party to figure as a war party during the rebellion. The Democrats were for war provided you did not mean to abolish slavery, or employ colored troops, or destroy State rights, or shut people up in Fort Lafayette, or procure soldiers by draft, or grant negro suffrage. The people agreed with Mr. Lincoln that every question should be subordinate to the saving of the Union, and they gave their support to the party which held this doctrine, and was not at cross purposes with itself on that question. The Republican party is at cross purposes with itself on the question of tariff-protected Trusts, and therefore is not likely to be chosen as the fittest instrument to uproot them.

UTILIZING THE POWER OF NIAGARA.

A RECENT despatch from Buffalo states that an association of that city some time since made an offer of $100,000 for any device which should utilize the Niagara torrent, and adds that one Palmer, a practical mechanic, had entered a claim for the prize. The alleged device is too silly to merit attention, amounting to little more than a Keely motor shorn of its mystery; but the fact that such an offer should have been made is of interest, as showing how ill the conditions of the problem are understood.

The question of utilizing Niagara is one for the skill of the engineer and not for the ingenuity of the inventor. A "device" for attaining the end is no more possible than a device for building a city in a place very difficult of access. It is true that, after the engineer has decided upon his system, an inventor may assist him in the details of his machinery, the sewing of his belts, and the shape of his cogs. But his own system will necessarily come first of all. We have an immense volume of water falling through a height of 160 feet, or of 200 feet and more, if we reckon from a point a short distance above the falls. At present, this fall takes place over the rocks or through the air, and all the power it generates is wasted in pounding the rocks. The problem is to so make the water act upon machinery, either during the act of falling or while it still embodies the power generated by its fall, that the power now wasted shall be spent in turning dynamos and thus generating electricity. There are only two possible systems of doing this. We must either make the falling water act upon the blades or buckets of water-wheels, or we must establish what engineers call a "head."

The first system is the simplest in conception, and so most easily disposed of. It might be easy to try it on a small scale at several points on the American side of the river, especially near the inclined railway. But the first conclusion an engineer would reach—we might probably say the conclusion which a hundred engineers have already reached—is, that a water-wheel so placed, if it could be made to work at all, would have no advantage over an ordinary one, and would be subject to many disadvantages. In view of the inaccessibility of the bottom of the Horseshoe Falls, the problem of erecting the works necessary to utilize their power in this way would be one before which even a De Lesseps would shrink; and even if such works could be constructed, the cost of using the power would probably exceed its value.

The second system is therefore the only practicable one. It requires a communication between the water above the falls and that below them through a tunnel below the ground or through pipes on or near the surface. Here again we reach a question of which the difficulty inheres, not in its conception, but in its details. If the tunnel be adopted, the engineer must determine

the cost of erecting a crib in the rapids above the falls, and then boring a tunnel first vertically and then horizontally to some point below the falls where the necessary machinery could be erected. The cost of a ten-foot tunnel would probably be a million, possibly several million dollars. Then at the outlet of the tunnel we need a complex system of conduits for controlling the enormous volume of water and distributing it to the wheels. The works necessary at this point might cost another million, but they would have to be devised before their cost could be determined; and the work of devising them would involve primarily the careful calculations of the experienced mechanical engineer.

Then, granting that the works are completed, what power should we get out of them? This must be known approximately before we can decide whether the enterprise would pay; and happily the calculation is not beyond the skill of the hydraulic engineer. Granting a head of 200 feet, the conclusion would probably be that all the water that could practically be passed through a ten-foot tunnel a mile in length would not yield more than 20,000, or perhaps 30,000 horse-power when utilized in the best way. When conveyed to a considerable distance by electricity, one-half the power would be wasted. If we are correct in our rough estimates, the whole amount of power finally utilized would not be likely to exceed that of the engines of the *Etruria* and *Umbria* combined. Would the project pay?

The plan of securing the head of water by surface pipes has the advantage that the experiment could be tried on a small scale and at little expense. An expert may see difficulties which we do not; but the idea of carrying an iron pipe two or three feet in diameter from the bottom of the river bed above the American falls to the ground at their base seems quite feasible to the eye of the layman. Still, after the work was done, we could hardly expect to utilize, finally, more than 1,000 horse-power. Whether it would pay to spend a few hundred thousand dollars to do this, is a question for the financier.

The three plans we have described exhaust the possibilities of the case. The great question each of them involves is whether it will pay. Nor must we be surprised if this question has to be answered in the negative until the interest on invested capital falls much below its present rate, or the price of coal rises far above what it now is. That the problem of utilizing the power of Niagara fills so large a place in the public mind must be attributed to the impressive form in which it is presented rather than to its intrinsic importance. The cataract comes far short of affording the best example of wasted power. On every clear day the power wasted by the sun's rays upon the streets, roofs, and lands of New York city is many fold greater than that of Niagara. Whenever the sun shines upon an ocean steamship, it radiates upon her deck and sides heat enough to drive her at rates varying from five to ten knots an hour, could it only be applied to that purpose. It is but a few years since the late Capt. Ericsson devised a little engine to be run by the heat of the sun; but the rays which cost nothing in the air cost more than coal when they were collected and applied. In all these questions of utilizing wasted power the practical difficulty does not consist in any want of devices or difficulty of invention, but in the cost of the best device that could be conceived.

THE POLITICS OF ENGLISHWOMEN.

The discussion over woman suffrage in England, which has been going on in the shape of protest and counter protest between women of the highest standing in the social and intellectual world, has excited a good deal of interest among the friends of the movement here, as an illustration of the stronger hold on the public mind which the question possesses in that country. They argue that the agitation must be a deep and serious one which brings into the political arena such women as have recently appeared, pro and con, in the columns of the *Nineteenth Century* and *Fortnightly Review*. The corresponding class of women in the United States, for the most part, let the subject severely alone, or manifest but a very languid interest in it, and leave it to be debated at conventions or before the Legislatures chiefly by women who, if not professional agitators, are at least already well known as agitators.

Various reasons have been assigned for the cause of this difference, among them the higher place in social life occupied in America by women as women, and their resulting indifference to legislative attempts to improve their condition or increase their influence. Some of the difference may, perhaps, be accounted for in this way, but by far the greater part of it is undoubtedly due to the fact that the women of the upper (or what may be called the educated) class in England, are in far closer contact with practical politics than the women of the corresponding social grade in this country. As a general rule the fathers, husbands, and brothers of such women in England carry on the Government, sit in the House of Commons, and manage elections. As a general rule the fathers, husbands, and brothers of such women in this country have nothing to do with politics beyond casting their votes on election day. One of the most striking phenomena of English social life, to an American, is the extent to which he comes into contact with practical politicians at dinner-tables, and country-houses, and other resorts of the well-to-do and cultivated classes. Every one knows what a rare bird the "gentleman in politics," or the "scholar in politics," is in this country, and how precarious his footing is among politicians, and how sternly he is required to keep his gentility and his culture in the background.

The result is, that in England women of the upper class are far more familiar than ours with the political work of the day, with the influences which govern the political world, and with the probable outcome of political struggles. They are in daily social intercourse with the leaders of every degree. They know what such men are thinking, saying, and planning, and have serious opinions, and can make them tell. That a very powerful part of the opposition to Home Rule is at this moment the social part and comes from women, few question. A concrete illustration of this is to be found in the current belief of London society that it is to "the duchesses" that Mr. Chamberlain's conversion from Radicalism to Toryism is to be ascribed. The same thing is said of a great many other Liberal Unionists. This being so, it is not surprising that a great body, if not by far the larger proportion, of women of high social and intellectual standing are ready to publish their hostility or indifference to any extension of the suffrage to their own sex. They do not see what they should gain by it, and do see plainly enough that, with every extension of the suffrage, their individual influence would decline. As matters stand today, they are in close communion with the political managers. A further extension of the suffrage would, by making management more difficult, end in putting it into the hands of men who, whatever their merits as managers might be, would certainly cease to be persons such as "one meets in society." In other words, management would probably pass, as it has passed here, to men who consider a college graduate a species of nincompoop, and a "literary fellow" the last person to intrust with the conduct of a campaign. To such men, the opinions of American women like Lady Stanley, Mrs. Mundella, Mrs. Huxley, and Mrs. Humphry Ward, would count, as they do count, for very little. In England they still count among practical men for a good deal.

HOT-WEATHER OPERA.

It is beginning to attract the notice of lovers of the fine arts that, coincidently with the warm summer weather in New York, there has arisen a new kind of entertainment. Buckle long ago attempted to trace the connection between climate and the arts, but the great historian never had the advantage of seeing New York, or even the United States, and his speculations were confined to arts brought to their perfection under the influence of the isothermal lines of Europe. It is obvious that his speculations were narrow, and that for the latitude and longitude of New York it is necessary to examine closely what we are actually doing in the way of musical or other art before we make any generalizations as to the influence of our climate in producing it. Without assuming at the outset that there is any causal connection between it and the heat, we beg to call our readers' attention to a particular branch of art which, for want of a better term, we may call hot-weather opera, inasmuch as it comes to its highest maturity and perfection in the summer.

Fashionable people think that the winter is the season of opera in New York, but in this, as in so many other things, fashionable people only show their extreme folly. Wagnerian opera or Italian opera there may

be in the winter, or comic opera, or even opéra-bouffe; but it is only when the thermometer is at 90 and humidity at 101, when all the fashionable people have gone away, and in the "close season" of the theatre, that opera really becomes popular, and the true characteristics of a genuinely local school of opera make themselves felt.

Hot-weather opera has now been for a long time in full blast at three theatres. At one "The Brigands" is given, at another "Clover," and at a third the "Oolah"—all tremendously successful. The "Oolah" we will refrain from criticising, not so much because we have not seen it—for the published accounts of it, and our familiarity with the histrionic method of the principal personage in it, would amply justify us in analyzing it without ever going near the theatre—but because the other two are quite enough. In them the hot-weather school is seen in perfection.

The original feature in hot-weather opera does not consist in the opera itself. This is, generally speaking, a foreign product, or, to be more accurate, there is a foreign product which is used as the basis of hot-weather opera. In the case of "The Brigands," the basis or substratum of the performance is an opera the music of which was written a good many years ago by a composer named Offenbach, and, if we are to believe the programme, the words of the English libretto are by Gilbert. It was in French one of the funniest of *opéras bouffes*. A band of brigands get possession of the clothes of the marriage escort of a princess, substitute the daughter of their chief for the princess, and then undertake to secure the latter's dowry. It is, however, a case of Greek meeting Greek, as the dowry has already been dissipated by the official having charge of the revenues. The music is pretty and abounds in good songs, such as the

"C'est le son de les bottes, de les bottes, de les bottes, de les bottes du premier Carabanier,"

and the very amusing ballad in which the finance minister describes how his unfortunate character has compelled him to steal all the money in the Treasury. But Offenbach is not funny enough for hot-weather opera. In its hot-weather English form, there is, in fact, about as much resemblance between the humor of "The Brigands" and that of his "Brigands" as there is between the wit of the horse-opera of Barnum and Bailey and that of a Wagner trilogy. The music and the libretto are both subordinated to antics and buffoonery which are really not those of the stage, but of the circus. To anybody who expected to see simply an English version of Offenbach's opera this is, at first, a little distracting. Instead of a song, we have a series of grins and grimaces; instead of the dialogue of the original, we have an abundance of what is so appropriately termed "gag"; instead of opéra-bouffe, we have an enormous amount of contortion and tumbling business. In fact, we very soon get the impression that the interest expected to be aroused is physical rather than dramatic.

"Clover" is perhaps more perfect in its way than "The Brigands." The original was written by Suppé, and, if produced a few years since, would have been given, like "Fatinitza" or "Boccaccio," as nearly like the original as possible. But, as produced now, it is as a vehicle for Mr. De Wolf Hopper, one of the best-trained clowns of the hot-weather stage. The opera is full of pretty music, but the centre of interest as it is now put on the stage is not the music, but Mr. Hopper, whose antics beggar description. Mr. Hopper can jump higher, fall flatter, roll faster, grin broader, and whoop and shriek louder than any leading operatic performer in the world; and the applause and laughter of the audience show that he knows what he is about. There are long scenes in "Clover" where Mr. Hopper absorbs the attention intended by Suppé to be divided among half-a-dozen different performers. One of his marked accomplishments is that of the old clown in the pantomime—he can be beaten and bruised to a jelly without injury. He is undoubtedly well padded—he could not sing in this species of opera if he were not. He is a strong and athletic man, or he could not perform such feats on the stage as he does. He literally fills the stage. It must be admitted that what we see and hear is not Suppé, but Hopper.

It is not our intention to complain of hot-weather opera at all. The audience likes it, and, however trying, it apparently agrees with the performers. There are a good many curious points for speculation concerning it. One is, why some of the other characters of the old pantomime are not introduced—Harlequin, for instance, and Columbine. Why should we only have the clown? Another is, why so many of the characters attempt to sing; another, why they do not introduce the old mirth-provoking appliances of the pantomime—the door that lets the pursued through, and suddenly turns into a brick wall in the pursuer's face; the mysterious and elusive luncheon-basket, the ubiquitous trap? Are not these full of wit too? Again, to recur to the first question of all, what is the connection between the "heated term" and this kind of opera? Perhaps it is that, at the season when physical exertion is most difficult, violent horse-play on the stage is most appreciated. Anybody can sing, even though the weather be warm. But there are only a few persons so endowed by nature that, after padding their bodies all over with thick cotton for safety of life and limb, they can make active gymnasts of themselves for three hours and keep their fellow-men laughing all the time. The audience appreciates the difficulty of playing the fool, and feels that it is more difficult, and therefore more honorable and laughable, to be a hot-weather fool than a winter fool.

Hot-weather opera is an established institution, and bids fair to drive out every other form of summer entertainment. The public likes it, and, what the public likes, it always will have. It is not a beautiful form of art, but it is our own, and as different from anything Offenbach or Suppé ever dreamt of as it is possible to be. It is just as Anglo-Saxon as grinning through horse-collars in Queen Elizabeth's time was; and a genuine New York hot-weather comedian could give "points" to any Elizabethan humorist that ever grinned.

LAND AND SOCIETY IN ENGLAND.

LONDON, July 23.

THE land panic in England—that is, the fear that English agriculture was definitively ruined by foreign competition—has greatly abated. The weather has been extremely fine this summer, so that the hay crop has not only been very great, but has been saved in perfect condition; and although wheat has been virtually given up as an English product, other things have done very well. The dairy farmers, in fact, have suffered very little if at all, in spite of the outcry raised a few years ago about the ruin wrought by American cheese. In counties like Cheshire, where I passed a few days, the effect of this competition, I was told, had been to improve greatly the process of manufacture by introducing creameries, to which the farmers contributed their milk to a common stock, and had the cheese made wholesale by the latest methods. The culture of fruit, too, has everywhere within easy reach of the great cities much increased, and the cheap sugar which has been the result of free trade, intensified by the ridiculous bounties paid by Continental governments to domestic refiners, has enormously stimulated the popular consumption of what the English call "jam," and we preserves. The gain of this for the poor in the towns, as far as enjoyment is concerned, whatever be the effect on their health, has been very great. Tens of thousands now are able to sweeten their heavy bread with marmalade, that most beloved of English delicacies, who never got a chance at it before. Curiously enough, too, the wide diffusion of oleomargarine has not only given the poor for the first time a really savory and wholesome substitute for butter, but has greatly improved the butter of the well-to-do. There used to be a good market for poorly made and even rancid butter, among people who had to have cheap butter or none at all; but oleomargarine has destroyed or greatly diminished it, and the producers have consequently been driven into making good butter, or, at all events, greatly improved butter, in order to find any market whatever.

These things, combined with considerable improvement in business among the manufacturers and miners, have done a good deal to revive the hopes of the agriculturists, but I cannot learn that there had been much more than a revival of hopefulness. Absolute improvement I could not hear of. The price of land has not risen except in the pretty region to the south of London, within fifty to one hundred miles of the city, where it is being largely held for what may be called building lots—that is, for villas with five to fifty acres of ground for ornamental purposes. Everywhere else it is either unsalable or only salable at an immense sacrifice. Rents have been reduced on the average 25 per cent., but this does not prevent a large number of farms being thrown on the landlord's hands. The English farmer, unlike his Irish brother, does not cling to the soil or wait to be evicted when he finds rents too high; he leaves incontinently. This difference, however, is partly to be accounted for by the fact that he puts nothing into permanent improvements on the farm. The English landlord, as a rule, does the fencing and draining, and keeps the buildings in repair, very much as the landlord of a city house does; while the Irish landlord, as a rule, does nothing at all but fix the rent and get it, if he can. But I am told that since the bad times began, a class of

farmers has grown up in England who approach more nearly to the Irish type—that is, who take or keep farms without capital and without much expectation of employing any labor on them except that of themselves and their families, and who will, therefore, probably cling to them as long as they can make a bare living out of them.

The exceptionally high price of land for villa residences in the neighborhood of London is an indirect result of the decline in the value of agricultural land, or, in other words, of the great fall of rents. The number of people who can afford to keep open house on a large place in the country and have large parties of friends staying with them during the shooting season, has greatly fallen off. But the love of country life among the English (and it is nowhere anything like so great as in England) has not fallen off, and the country place to which he cannot ask people freely to visit him is something to which an Englishman only reconciles himself under the pressure of stern necessity. The small place near London at which no shooting is expected, and to which people can be got to come from London for a day or two, generally "from Saturday to Monday," has come into the field as a very welcome compromise. It is possible at any time, by asking them long enough ahead, for a man who has a pleasant house within fifty miles of London to fill it for two nights at least with agreeable people, who will amuse each other and find enjoyment in the open air and the scenery, without taxing the host to find pleasures for them. Consequently, this sort of place is in great demand, particularly along the southern coast. In fact, great places are now what every lover of the picturesque must consider lamentably cheap; for being cheap and unsalable means that they are not lived in or cared for, and are destined in a large number of cases to go the way of so many old manor houses of an earlier date, and become the tumble-down and somewhat squalid abodes of hard-working farmers. People will not live in the country any longer without society, and society as it is enjoyed in great country houses is a terribly expensive thing.

That the county councils will in the long run probably affect the value of land, through making country life either more or less attractive, there is little doubt. Formerly the magistrates of the county who were able to put "J. P." to their names, governed the county as well as administered its smaller justice. This left the management of local affairs wholly in the hands of the local gentry, or "county families," as they are called, and they liked the work, and took a good deal of pride in it, and did it well, and it added to their local consideration. Now they have lost their administrative powers entirely, and retain only the prerogative of administering petty criminal justice. What will be the effect on their position? Sanguine people say that the traditional respect of the English people for the country gentleman is so strong that they will be sure to elect country gentlemen to the county councils whenever they can be got to serve, and that they will exercise in the councils a predominating influence, and will continue, therefore, to like being country gentleman as much as ever. But people who are not sanguine, and see the way universal suffrage is organized and managed in America, say that this is not true; that the "local manager" will begin to show himself in English county politics in due course of time without doubt, and that he will not be by any means a "nice man" in England any more than in America, and that he will make it his business to disgust the country gentleman with politics and get him out of it, as soon as he can; and that the country gentleman, when he finds himself completely excluded from the management of local affairs, will care less and less for land and live more and more in the city, or, in other words, become more and more like the Italian and French gentry, to whom the country is a social waste. If this should prove all true, of course land would soon everywhere get down to its purely agricultural value, to what it would rent for, or to what a man who worked it could make out of it.

But, even if true, it is still a good way off. A fine place in the country which can be crowded with guests, and which can possibly supply them with plenty of game, is still what nine Englishmen out of ten in professional or commercial life are striving for. It is the great sign in this country of having "arrived," as the French say; and as long as this lasts, hundreds of thousands of pounds of new money will every year go into land. I cannot, in fact, see what is to stop this process except the disappearance of beauty from the English landscape, or of good household servants from the English labor markets. It is the want of the latter which will probably always prevent any real reproduction of English country life on a great scale in America, no matter how numerous our great fortunes may be. No Englishman or Englishwoman would encounter the cares of a great country house if so many of them devolved as directly on the master or mistress as they would in America. In fact, English social life, with its matchless comforts, if not its matchless splendor, depends for its perpetuation to an extraordinary degree on the excellence of its servant class.

PHYSICAL EXERCISE IN FRENCH EDUCATION.

PARIS, July 17, 1889.

THE idea of introducing athletic sports into education is of quite recent growth in France. Yet scarcely had the "Committee for the Propagation of Physical Exercise in Education" taken the initiative a year ago, when another society, under the title of "National League of Physical Education," followed on its heels. They differ widely in theory, however. The National League proposes to introduce physical exercise *officially* into all the schools, colleges, and *lycées;* the Committee propose nothing short of remodelling, through the medium of *voluntary* athletic exercises, the system of French education. The former sees in physical exercise but a physical result; the latter, a means of emancipating the school-boy.

The emancipation of the French school-boy may seem innocent enough to those who inhabit countries where the pedagogic system is based on liberty and independence. In France the motto is authority and respect: authority on the part of the masters in enforcing discipline; on the part of the pupil, respect for the never-to-be questioned rules. And this motto does not apply alone to the education received in religious establishments, but to that imparted in the *lycées* of the University. A foreigner cannot form an idea of the typical old French scholastic life—of its *ennui*, its monotony, its austerity. No idea of it can be given in words. One needs to have experienced it, upheld by the thought that it had a limit, to know what it means. Tasks that would stupefy an adult brain, meals eaten in silence, recreation spent in vague wanderings through the yard, hours of study and respite, were governed alike by a rigid discipline partaking of the cloister and the prison. And this life lasted for years, with a week's holiday at Easter and two months after August. Then, when the full programme of the baccalaureate had been crammed into the young student, his education was declared complete, and he received his diploma from the University. Who considered that, during all those years of preparation which had brought him to man's estate, he had not been allowed to assert his individuality or to act for himself in a single instance?

Since Napoleon I. this régime of education has been going on *sostenuto* up to the present time, when the model scholastic system is publicly suspected of not being quite what it should be. Mothers—they play a great part in French education—were the first to remark that boys were overworked. Even their hot-house-plant appearance was alarming; a remedy was imperative. Then gymnastics were imposed a little more energetically than in the preceding generations, when twice a week pupils were called to order by some bullying ex-fireman to flourish dumb-bells in measure and to jump methodically from a spring-board.

In this awakened interest in favor of physical exercise with classic tuition, the chief recommendation that made it at the outset acceptable was that it would serve as a continued preparation for military service, which every Frenchman must bear in mind. It would make him stronger and more accustomed to discipline. The National League, official intermediary of the movement in question, bases its campaign on this consideration. Doing away in a measure with gymnastics, recognized as almost useless as now practised in schools, it advocates, like its predecessor, coöperative diversion. Only, the prescribed games are enforced in a Spartan-like spirit: the boy is reminded that care of his physique is necessary to the worthy fulfilment of his duty to his country. If he has more opportunity to offset the fatigue of mental training than before, he is also more *enrégimenté* than ever. So far as his moral education is benefited, he might as well be in the *Bataillon Scholaire*, playing soldier with a reduced copy of the regulation gun. It was remarked by several independent spectators who were present at the athletic festival given by the National League in the Tuileries Garden this summer, that the character of the sports was too official to pass as a manifestation from a generation that has turned over a new leaf. The performance of the boys seemed much more that of some *fête de la raison*, with Biceps as the occult deity, than a summer day's recreation to celebrate a step made towards idyllic vigor and manliness. One forgives the somewhat biting sarcasms of the English when, on such occasions, they declare that, apart from military exercises, the French are unfit for the sports which have made the English what they boast of being.

It is, however, by the imitation of this part of English school life that the Committee for the Propagation of Physical Exercise intend to begin the metamorphosis of French education. The introduction of English games, with all their freedom, understood in a broad and liberal spirit, is the starting-point of the reformation. It must be accomplished little by little; the edifice cannot be demolished all at once. It is not only a matter of emancipating pupils, but their masters as well. Until the former collaborate with the latter, and until the relations of the higher authorities with professors cease to be mandatory, a great deal has to be done. For it is well to repeat that the religious educational establishments, so often pointed out as suffering from what is called centralization, are not a whit more cramped by it than the

University itself. Will the religious establishments ever consent to accept the educational motto of M. Jules Simon, President of the Committee—"*Dieu, Liberté, Patrie*"? My opinion is that they will have recourse to many shifts to disguise from themselves the ugliness of the middle word. The University will reject one, and that will not be the second word of the motto; for already, judging by a speech I heard M. Jules Simon make the other day, liberty would not be so objectionable to the University if routine had not put it out of the question.

As this speech was delivered in the amphitheatre of the Sorbonne, the effect was impressive. The occasion was a distribution of prizes and medals awarded to pupils of schools, Parisian, provincial, and colonial, who had taken part in the first athletic competition instituted by the Committee for the Propagation of Physical Exercises. Instead of a Platonic development of the theorem "Mens sana in corpore sano," the smilingly subversive orator, despite the presence of the rector of the Academy by his side, passed in review the old French scholastic life, offered it as prey to the laughter of his auditors, even made light of the baccalaureate, likened the candidate to a horse performing a long and tedious journey, upon whose back a fresh burden is placed at every mile-stone, and who no sooner reaches the goal than he shakes off the load, rolls himself in the sand, and, with a neigh of relief, forgets all about it. Neither did the young athletes receive their Sèvres cup or their silver medal with simple words of commendation for having acquitted themselves well in the new programme. The President did not mince matters; he told the boys that the physical debility remarked in schools was nothing compared to their negativeness of character, and that henceforth, instead of being simple catalogues of mixed lore, they would be on the road to become responsible beings.

As might be supposed, none but an independent lay school could have taken the lead in the move projected by the Committee for the Propagation of Physical Exercise in Education. M. Pierre de Coubertin, who is chief instigator of it, and who spent several months in England studying the school system, found in the principal of the École Monge—noted for innovations in teaching—an able ally. M. Godart had the courage to undertake what other superintendents had not the courage to listen to. He proceeded with practical discretion; one point only of English education was adopted at first—games and exercises as practised across the Channel. These, he considered, created the wanted enthusiasm, and laid the foundations of that social hierarchy peculiar to English schools. The fact that the École Monge is situated in Paris and not surrounded by green fields, was not to be a hindrance to the experiments. So, during the past year, the boys have been taken twice a week to the playgrounds, riding-school, or river for boating, choosing themselves what the sport shall be for the day. Out of the nine hundred pupils of the school, not more than three hundred prefer to remain at work rather than enjoy the opportunities thus offered them. So far, the experiments towards freedom have proved successful. Already in several forms the *maître d'étude*, or usher, is replaced by a delegate or monitor elected by the boys. In the field, the captains, if not yet armed with the absolute authority they are to have, are respectfully listened to, and frequently consulted by their schoolmates gathered under them. It is noticeable that the intriguing spirit of the French school-boy, so apparent in his behavior towards the ushers, quite ceases to exist when having to account to a companion whose own merit has raised him to a superior. He understands that hierarchy is indispensable where liberty exists, just as his principal conceded that sport cannot exist if the boy is held too tight. The École Monge, with its younger sister, the École Alsatienne (founded after the war for children of Alsatian families who adopted France as their country), are the two pillars of the reform.

Some dissatisfied minds have made the discovery that the plan of reform in education applies only to the favored classes. Not at all. It begins, it is true, with a superior public—if one may so express it; but the revolution could not well have begun otherwise. In a work where example is all-important, it is good to convert first those who are to set it. In course of time each class is expected to feel in its measure the influence of what to-day is inoculated in those who are favorably disposed. There is another great obstacle to the initiation being general at the outset—namely, the label of the imported example. The term English education does not please everybody, spite of apparent Anglomania in France. Certainly in the spheres of high life nothing will be said against it, but in the middle classes the spirit of cosmopolitan tolerance has not extended to England. An innovation coming thence will be received with resentment. In the reasoning of these people, English games will have the objectionable appearance of a fashion stinging to their national pride. Not fully grasping the mechanism of the reform in view, they will not understand why cricket or foot-ball should take the place of prisoner's base. Needless to answer them that they cannot challenge a foreign team to play against them prisoner's base; the label is English, and that is sufficient. On the other hand, coming from America, it is quite another thing. The borrowed institution will pass under a recommendation of scientific practicality. That will make the French quite overlook the fact that it is not indigenous to the soil. I may be betraying a secret (if so, let it bear testimony to the ever-increasing sympathy of France for America), but I am told that when the moment comes, the inspirers of the movement, excellent augurs that they are, will announce to the recalcitrant neophytes: "We are going to play as they play in America!"

Preparatory to the Congress for the Propagation of Physical Exercises in Education, held last month, the Committee addressed a circular letter containing a series of questions to the principals of colleges and institutes in the United States, Canada, England, and her colonies. Ninety schools, colleges, and universities of the Union sent in their quota of information. Two principals only were of the opinion that athletic games were unfavorable, though they did not assign reasons for such a belief. It would have been interesting to know if it was based on a consideration that has seldom been broached in America—whether a high measure of physical activity tends to postpone the period of mental maturity. In France the athletic problem has been viewed in this light, but as the subjects on whom experiments are to be made generally show an exaggerated precociousness instead of a tardy development, and as the uproar raised over what was considered an undue forcing of the youthful mind is still very recent, general opinion does not seem very apprehensive of boys becoming boys once more, and of a risk being incurred that the coming generation will turn out overgrown children of twenty as the penalty of too well cultivated muscle. A period of exaggeration is frequently followed by an exaggerated reaction, and we need not be surprised if, after the long neglect of the physical in education during a period in which the only aim was to stock minds after a university conception, the pursuit of physical development should be run into the ground. Nothing can be better if physical development is left optional and all form of militarism in its manifestations religiously avoided. The key to emancipation will then be in the hands of youth itself. "I defy any one to prevent a boy who is physically active and sound from having ideas of his own," said M. Jules Simon. And such is the desideratum: a little more personal judgment and individual initiative. If the "atrophy of will" in this generation has been pointed out, it was not meant to imply that patriotic feeling is lukewarm, or the spirit of duty rarer, but, what is very unflattering to a generation that prides itself on being *dans le mouvement*, that there is a lack of ambition for action.

The system of education is held responsible for this passiveness; yet, how could it be otherwise when all the anticipations of the [illegible] that follows school days are compassed by generic titles—the army, the law, the administration? Add to this the habitual desire of parents, as some one so well expressed it, to push their sons from one harness into another, and it is clear how the young man chooses his career with a degree of passiveness that looks like fatalistic resignation. But it is just to say that in many instances education is not solely responsible for this apathy. In France as in several other countries of Europe, the creeds of caste exert a strong pressure. Progressivism has not yet taught "the family" that careers are no longer to be classed as noble and non-noble.

When new principles of liberty and hierarchy shall have been introduced, through the medium of games, in the life of pupils, and when there shall be established a closer and more intimate relation between these and their masters, then there will have been created a social atmosphere hitherto unknown in French colleges. The boy will learn to measure his own level, and to decide for himself what he is best fitted for in life. Then the "atrophy of will" will tend to disappear. Of the young men of wealth, more will choose a path where less is expected of convenient opportunities. In other branches, if the army of Government officials does not grow less, less numerous will be the dissatisfied abstainers whose grievance is that the Government is not to their liking. On the other hand, if we do not presume to say that debating societies—a complement of the school reform—will prove a training-ground for patriots more tolerant and liberal, at least it is to be hoped that in the field of sport may be accomplished what no reform of party could bring about—the hearty fusion between the elements of a young generation heretofore ignorant of and ignoring each other.

LE COCQ DE LAUTREPPE.

THE TOMB OF PHARIS.

ATHENS, July 5, 1889.

THE great tomb of Pharis near Spata, at the opening of which I had hoped to assist, has proved to be one of the most fortunate discoveries of late years; but I was unfortunately called to Crete by political disturbances, and missed the *première* of it. It has been found to contain objects of gold and silver as well as of bronze, the importance of which can hardly be estimated at once, but which will, I believe, revolutionize the current ideas of early Greek art. A first examination of the find in the restoring room of the Museum, prior to the arrangement of the objects in their cases, and on the eve of my quitting Athens, leaves me

still a little confused on certain points; but the minute and exact relation of the excavator, Mr. Tsoundas, will soon be published, and I must be contented with the pleasure of giving publicity to the main facts.

The tomb is one of the class of Spata, and like the more important of the Achaian series at Mycenæ, with the exception that, as I am told by Tsoundas, the great chamber is, contrary to the practice in most of those tombs, surrounded by a series of loculi in which there had been interments. But I will give the note in which Tsoundas replies to my inquiry as to the manner of burial, a point almost as important as the nature of the contents of the graves:

"The tomb of Pharis has, like those of Mycenæ, the form of a tholos [commonly called bee-hive tombs], and contains, exceptionally, a grave dug in the soil a little to the left of the centre, and similar in form and size to the ordinary Greek tombs and to those of to-day. In this grave, in which I found the vases of gold and the greater part of the other objects, there were neither ashes nor bones. I believe that the dead was not burned, but that the bones have been reduced to dust by the lapse of time. Outside of the grave thus dug, the earth [floor] of the tomb was covered with ashes and charcoal, which may have been the remains of the funeral piles on which the bodies of the dead were burned; but it is also probable that they came from the victims which they offered up in honor of the dead. The question would be answered if I had been able to determine the presence of human bones so burned; but I found only fragments of bones utterly insufficient to determine it. It may be, then, that the dead buried outside of the grave were burned, but it cannot be proved."

The contents of the grave and the loculi comprise many objects of bronze, some implements of familiar form and some new: a knife of peculiar and puzzling form; a lance of most admirable workmanship and mounted in a manner quite unique with bone; weapons of more than usual elaborateness of make and finish; a large number of amethyst beads; some rings, of which one is like the gold rings found in the Schliemann graves, with engraving in gold of designs of Eastern character, and some evidently worn by women, of which one has a gem set in it, and one or more of bronze; other objects in ivory, etc., of the kind already made familiar to us from Spata; the remains of silver cups mounted in gold, of most exquisite workmanship, but of which the silver is almost entirely corroded away; fifty "island stones," some of which show the most delicate and elaborate engraving, but do not otherwise differ from those found in the other tombs described in my last; and, finally and of the highest importance, a sword of the peculiar gold-encrusted workmanship of which the only examples hitherto found were in the Schliemann graves, and two cups of pure gold, of the workmanship of the best of those found in the same collection, of riveted work, but with designs in repoussé of a character of which we have, so far as I know, no other example. The cups are evidently intended as a pair, and one is surrounded with a scene of wild-cattle hunting, in which the cattle are designed and executed in a manner unlike anything in known Greek archaic art for freedom and spirit of action as well as truthfulness to nature, and the other contains a pendant of the cattle reduced to domestication. The pictorial qualities of the two designs are thus, it will be seen, at variance in the very conception with all archaic art of the range which has been seen to come into the horizon of Greece, because this pictorial and naturalistic character is opposed to the hieratic traditions and all the borrowed conventionalism which enter so largely into the composition of the earliest art we know as properly Greek. The very idea of the making two designs as pendants—one all action and combat, full of energy, a bull goring one of the hunters and another tossing a second into the air, and a third bull plunging into a net of ropes; with the other tranquil and peaceful, the cattle grouped in an almost Dutch composition, with the herdsman tying one of them by the foot; landscape backgrounds, trees, etc.—is unlike anything we know of the tendencies of any ancient art, except as it may be indicated by the designs on Cretan coins, and there only to a very limited extent. These designs have nothing in common with the heraldic designs of the most of the engraved stones found with them and in the other tombs about Mycenæ, to which I have alluded as the island stones, but there are two or three among the magnificent collection now in the Athens Museum which show the elements of the same pictorial design, while the delineation of the animals and the commonly visible difference in the treatment of the human figure, in comparison with that of the animals so much inferior (as is the case, for the rest, in most archaic art), sufficiently point out the relationship of the two. The common source of the two was indicated in what I had to say of the great relief of the Lion Gate, and here we can see additional confirmation.

I have not gone through the list of objects found, for many merely serve to establish community of epoch and technique with other deposits. There are also some remains of iron implements, but so corroded as only to serve as evidence of the presence of that metal. It will be remembered that the absence of iron in the Schliemann graves has led to conjectures of the most contradictory character, some considering it as proof that the interment was prior to the knowledge of iron, others that it was so late that iron was of no value to the diggers of those graves. I think we can now solve the entire problem with greater conclusiveness than I had ever hoped to arrive at. The discovery in this tomb, and in a relation which must be considered as demonstrating the fact of its being their original interment, of the objects which have most puzzled the archæological world, viz., the gold-encrusted swords and the cups of gold of that peculiar primitive technique which have been found only hitherto in the Schliemann tombs, must, I think, be accepted as conclusive of their being of an art familiar to the Achaians, to whom these graves belonged.

But the Schliemann graves are not Achaian graves, either in the manner of construction or interment; and the finding in the former of objects which are neither Achaian nor archaic, such as the masks of gold and certain barbaric gold work which is akin to that found at Hallstadt in the Danube Valley (v. Collignon,' Arch. Grecque'), or to that found by Stefani in the Crimea; the vases of alabaster of a form and workmanship so modern that it is difficult to believe them of a provenance anterior to the Christian era, though they probably are of the Macedonian; the medley of work of various types, and evidently of various later epochs with that which is identical with what is now found in the oldest Greek tombs we know of, and nowhere else, are strong indications that the deposit of Mycenæ is a late one. Long ago I pointed out that the structures around the graves, unmistakably houses of a rude and barbarous character, were made up with the aid of the débris of the ancient and the classical cities, and must therefore be subsequent to the ruin of Mycenæ by the Argives. I was met by the unquestionable fact that the objects buried were of a great and unassignable antiquity, as if that were any reply to the undeniable lateness of the structures indicated. The condition of the skeletons and the manner of burial showed that it clearly was not Greek; the miniature Druidical circle above the graves was an indication of Celtic agency; the nature of the grave was an indication that concealment was the object; the fact that the principal personage, as indicated by the distinction of the burial (Schliemann's "Agamemnon"), was a woman, is *pro tanto* suggestive of a northern barbarism; the fact that there was no iron in a deposit so largely composed of weapons as to refute the hypothesis that this could have been the burial of a warrior with his personal armory (had it not been a woman), pointed to its being merely a treasure deposit, since we find iron with the same objects in their undoubtedly original interment; while the entirely non-Greek character of all the objects found in the graves which are necessarily referred to the authors of the burial, compels us to seek a foreign attribution for it. Add to this that in all the Achaian tombs which have been found to contain the objects buried with the dead, there have been found island stones, and none in the Schliemann graves, though they were found in the earth outside of the graves, together with the fragments of the so-called Mycenæ pottery and other articles originally contained in the earth in which the graves were dug, but not in the graves (the stones having no value to a barbarian eye), and we can form the opinion that the people whose graves these were had no care for art, but had collected what had an intrinsic value in their estimation.

Among the objects, either of gold or pottery, in the entire series of graves which can be certainly assigned to the authors of these interments, there is not one which has any relation to any Greek art of any epoch, while there are analogies with several barbaric finds; but the difficulty of placing the swords of bronze inlaid with gold and the gold cups found in such profusion, and which so well illustrate the epithet of "golden Mycenæ," has always prevented an assignment to any epoch within the limits of the prehistoric. This difficulty the Pharis discovery at length enables us to overcome, and to my mind it completes the demonstration that the Schliemann graves are the work of a barbaric tribe who had, in the time between the fall of Mycenæ and the establishment of the Roman rule, invaded the Peloponnesus, and temporarily established themselves in the always strong fortifications of Mycenæ, where they met some fatal disaster by defeat or pestilence, which caused the death of several of their ruling family, who were buried, according to the custom of more than one barbaric people, with their treasures, derived mainly from the pillage of temple and other treasure and (now I add) tombs, which I did not formerly suspect, because the puzzling objects had not to a satisfactory extent been found in tombs. This theory is the only one which will account for all the facts, and I hope to be enabled at no distant time to demonstrate its validity fully, and with the aid of illustrations which I cannot attempt here.

The historic clue is given us in the passage of Diodorus which tells us that Pyrrhus employed as mercenaries the Galatians; that these mercenaries, discovering that the royal tombs in Greece contained treasures, set about pillaging them, and that the King, not being able to dispense with their services, was unable to stop the sacrilege. We know that these Galatians (Gauls) invaded Greece on their own account, and when the treasure-hunting mania was on them, they were not likely to be ignorant of the fact that Mycenæ had many great tombs. That the robbery of these huge structures had

never before been practised, at least in an open way, is clear from the fact that the Gauls of Pyrrhus found their treasure intact, and on the other hand we find all the great tombs in the neighborhood of Mycenæ plundered as well as the greater part of the less conspicuous ones, which are, unlike the great ones, carefully concealed under the earth, burrowed in the side of the mountain, and apparently planned for concealment, or at least not for display, while the great tombs are conspicuous and always partly above ground. That the Pharis tomb escaped is due probably to its position in a remote province and its isolation amidst a warlike population. Pharis had, moreover, disappeared as a city before the epoch of Pyrrhus, and has left no renown.

We know that the robbing of Greek tombs was practised down into the time of the Roman occupation; and a very curious confirmation of the hypothesis that the late inhabitants of Mycenæ were tomb-robbers, is found in the fact that Tsoundas discovered in one of the most miserable of the mortar and rubble houses of the lower part of the city a small collection of the least valuable objects which are found in the tombs about the city; while in the ruins of the palace which I described in my former letter on Mycenæ no object of that epoch was met with. It is to be hoped that the deliberations of the Archæological Society of Athens will result in the decision to clear entirely the site of Mycenæ from the débris of its repeated demolitions, and give us what is left of the fragments of the most glorious epoch of Greek existence, though the least known to history. W. J. Stillman.

Correspondence.

THE TEMPLES AT AGRIGENTUM.

To the Editor of The Nation:

Sir: I have no theory as to the placing of Greek temples, and much of the reasoning of "N. J. B.," in his communication in the *Nation* of June 27, seems very strong. My visit to Agrigentum (1885) is more recent than his, however, and I must call in question the accuracy of his memory in some particulars. The description of the site of the city as "built on one long hillside sloping up about eight feet in one hundred from the Mediterranean, the nearest point of the old city having been about a mile and a half from the sea," is not at all in accordance with my recollection; nor that the temples of Concord and Lacinian Juno were "on a slight elevation, the scarped face of which forms the wall in that place." As I sat in my room in the Hôtel des Temples, I looked over the lower slopes of the city, with their temples, to the sea, I should have said six or eight miles away, but the Cyclopædia says three miles. But that is not the important point. The elevation upon which the temples stand may almost be called a ridge, falling away slightly, if I remember aright, towards the city, and towards the sea very steep and abrupt, nearly perpendicular to a depth of at least fifty feet, and then sloping down into a somewhat deep valley, separating it from the higher land beyond.

I remember this with great distinctness because, while we were in the temple of Concord, our attention was attracted by a pleasing warbling sound, and, looking down the cliff, we saw a shepherd boy standing with his legs crossed, just as in ancient representations, leaning on his crook and piping to his sheep—a genuine bit of antiquity. The scene fixed itself vividly upon my memory, and I am sure that no position could more completely support Mr. Stillman's thesis that the temples were located with a view to defence. I remember thinking at the time how strong for defence the city was on that side. The assertion that there was "nothing like an acropolis" at the upper part of the city, is equally conflicting with my memory. The most striking object, as one approaches the city by the railway, and on the way from the station, is the acropolis (called, I think, *Empedocle*), considerably elevated above the modern city, and quite steep towards the outside, although not so much so as the place where the temples stand, along the southern wall. William F. Allen.

Madison, Wis., July 28, 1889.

[Prof. Allen's recollection is confirmed by the plan of Agrigentum on page 78, vol. i, of Smith's 'Dictionary of Greek and Roman Geography.'—Ed. Nation.]

THE SOUTH AND ITS BARBARIANS.

To the Editor of The Nation:

Sir: In the *Nation* of July 18 I find a letter from "A Southern Pastor," who, though a minister of the Gospel of Peace, calmly defends lynch law, as applied to his colored "brethren in Christ Jesus." He says: "But with regard to lynching for rape, it is indeed a desperate remedy; but what other can be used for so desperate a disease?" And again: "It does, indeed, reveal a state of civilization but little removed from barbarism, but it is the barbarism of a race forced into contact with civilization, and civilization must protect itself by methods which would not be needed if the barbarism were not there."

That is to say, civilized Southerners, having formerly imported barbarism into their midst under pretence of Christianizing it (while, of course, utilizing its brute strength in the service of their own laziness), and finding that barbarians, when treated as barbarians, remain barbarians still, now endeavor to protect their own precious civilization by methods which are absolute barbarism. The logic of the worthy pastor is certainly very strange. Did it never occur to him that, as civilized Christians, it is the Southerners' duty to elevate this barbarism by at least Christian and civilized methods? How can they expect to teach the "brutal savages" a respect for law and justice by a systematic violation of this same law and justice? It is as though one should attempt to teach honesty to a thief by stealing from him what little he might honestly possess.

Wm. Schuyler.

Webster Grove, Mo., July 31.

Notes.

A. Lovell & Co. will publish next month 'The Honors of the Empire State in the War of the Rebellion,' by Thomas S. Townsend.

In October, Ginn & Co. will bring out a 'History of the Roman People,' by Prof. William F. Allen of the University of Wisconsin, as a substitute for the second part of Myers's 'Outlines of Ancient History.'

Thomas Whittaker will shortly have ready a second edition of King's 'Classical and Foreign Quotations.'

The Rev. Henry C. McCook, Vice-President of the Academy of Natural Sciences, Philadelphia, is prepared to issue his natural history of the habits and industry of our orb-weaving spider fauna, under the title 'American Spiders and their Spinningwork.' It will be profusely illustrated—mostly from pen-and-ink designs, to judge from the prospectus, but also, in the third and last volume, by tinted lithography. Five hundred copies will be the limit of the edition, to be sold by subscription by the author himself (Philadelphia, 19th and Race Streets).

The Dean of Salisbury has performed a real service in extracting 'Characters and Episodes of the Great Rebellion' from Clarendon's History and Autobiography (Oxford: Clarendon Press; New York: Macmillan). The characters, as may be supposed, greatly outnumber the episodes, and for this reason an index was especially called for, but one must hunt what he seeks in the table of contents. We judge from a comparison of the texts that Dean Boyle has had the advantage of Macray's fine edition of the 'History of the Rebellion,' issued from the same press last year, but he makes no mention of it, which is all the stranger because he ought to have invited his readers to drink more deeply at the original fountain. He might well, too, have numbered his extracts in accordance with that edition, whereas he simply acknowledges the book and not the section or paragraph. These trifling drawbacks seem to us to bear a psychological relation to the Dean's Introduction of four pages without a breathing-space. The volume is beautifully printed, and is admirably calculated for private enjoyment or for reading in our higher schools.

It is of good omen that 'Caspar's Directory of the American Book, News and Stationery Trade' (Milwaukee: C. N. Caspar) has for a frontispiece a likeness of the late Frederick Leypoldt. The execution is up to the standard implied in this homage to an unwearied bibliographer. The Directory proper fills 570 pages in well-chosen type with a bold face. There follows a digest of trade-lists of the American book-publishers—*i. e.*, "an index according to subjects, with cross-references"; a similar guide to the stationers, etc.; a gazetteer of the trade, or "geographical classification"—about 400 pages; an alphabetical directory of the trade by classes—200 pages in close triple columns; a classification of the periodical literature of the United States and Canada; a long list of practical bibliographies; and finally a technical vocabulary in English, French, German, Italian, Dutch, Latin, Greek, etc., under one alphabet. We feel certain that so much well-directed and intelligent labor will find its reward among those immediately interested in such a compilation.

E. J. Brill of Leyden has published Part III. of 'A Classified List of all simple and compound Cuneiform Ideographs occuring in the texts hitherto published, with their Assyro-Babylonian equivalents, phonetic values, etc.,' compiled by Rudolph E. Brunnow, Ph.D. The work thus brought to a completion is a monument of patience and industry. It is furnished with a number of valuable indices, among them a list of non-Semitic verbal forms, which shows that Dr. Brunnow is not smitten with the unbelief, now so fashionable, in the existence of the Sumero-Akkadian language. It is a pity that the author did not push his index-making a little further, and furnish a list of meanings to the Assyrian and Akkadian words quoted in his book; such a list would have been welcomed by all Assyrologists. The work is a standard one, and must be in the hands of all scholars engaged in cuneiform research.

The Bureau of Education is issuing in rapid succession its histories of education in the several States. That on Georgia, the last noticed by us, is now followed up by one on South Carolina, by Colyer Meriwether; Florida, by

George Cary Bush; and Wisconsin, by Wm. F. Allen and David E. Spencer. They are illustrated like the rest of the series.

Mr. John Fiske, in his 'Beginnings of New England,' has reopened the old sore between Massachusetts and Rhode Island. Mr. S. S. Rider, in his Providence *Book Notes* for August 3, comes to the defence of Samuel Gorton in his customary trenchant manner.

A meritorious piece of work is Mr. George C. Wilson's brochure on 'Town and City Government in Providence' (Providence: Tibbitts & Preston), well fortified by authorities. We may mention in connection with it 'The River Towns of Connecticut: A Study of Wethersfield, Hartford, and Windsor,' by Charles M. Andrews, in the seventh series of the Johns Hopkins University Studies in Historical and Political Science.

We ought some weeks ago to have called attention to Mr. Samuel Thurber's paper in the Syracuse *Academy* for May, on the "Annotation of Texts for School Use," a forcible protest against this practice as being an impediment to the enjoyment of literature for its own sake. "Annotation, at its best," says Mr. Thurber, "contemplates erudition. The school does not contemplate erudition. This is the fatal incompatibility. In the high court of pedagogy it should be ground for a divorce. . . . The teacher's function is not erudition, and he should not dally with it, that is, *as teacher*, or allow its aims and methods to be in the least degree his aims and methods." If we are not mistaken, this principle has a wider application than the writer contemplates in his paper. The highest improvement in collegiate instruction in the future seems to us to lie in the direction of a division between learning for the sake of culture and learning for the sake of erudition. The elective system makes such a division both possible and easy.

In the sixty-eighth annual report of the Mercantile Library of this city, we read not only that 140 copies of 'Robert Elsmere' and 62 copies of 'John Ward, Preacher' were necessary to supply the demand, but that 35 copies of Bryce's 'American Commonwealth' and 26 of Motley's 'Correspondence' had to be purchased.

Apropos of the recent erection by the city of Paris of a monument to Étienne Dolet, *Le Livre* for July has a paper describing a rare book, Dolet's translation and own master-printer edition of Cicero's 'Familiar Epistles' (Lyons, 1542). Dolet's body was, four years later, after execution, consumed by fire, and his books with it. This one has also been through the flames, though not fatally damaged. M. Vingtrinier, however, does not regard it as a brand plucked from the Paris bonfire of 1546, but connects it with the library of Jean II. de Tournes, which was burned in a Catholic outbreak at Lyons in September, 1567.

A novel publication, a Spanish children's monthly magazine, *La Edad de Oro*, has just been started by José Martí and A. Da Costa Comez, at No. 77 William Street. It is illustrated.

The recent return of M. Jules Borelli to France leads the *Indépendance Belge* to give a concise account of his four years' journey of exploration in Eastern Africa. His starting-point was Obock, a French dependency on the Gulf of Aden, whence he made his way with some difficulty to Shoa, the southernmost of the petty States formerly subject to the King of Abyssinia. There he turned southward to gain the source of the river Omo, whose course it was the principal object of his journey to trace. He claims to have found this in a forest called Babbia, at the junction of several mountain-drains, and to have followed it to the Lake Schambara, or Samburu, in the Galla country. This lake, doubtless the one recently visited by Graf Teleki and named by him Lake Rudolf, he describes as very shallow, surrounded by reedy banks, and without an outlet. He also states that it is below the level of the Victoria Nyanza, into which a stream from Samburu has been said to flow. If M. Borelli's observations should prove to be correct (and it must be said that they do not agree with those of other travellers), another of the disputed questions of African geography will have been settled, for the river Omo has been claimed by some as one of the sources of the Nile, while others have represented it as flowing into the Indian Ocean under the name of Jub.

An obvious slip of the pen on the part of Dr. Hartshorne, and oversight in proof-reading, led to the attribution of Morton's 'Crania Americana' to Dr. Caspar Wistar, in the last paragraph of the letter on p. 94 of last week's *Nation*, entitled "Works on Human Anatomy."

—Volumes 7 and 8 of Stedman and Hutchinson's 'Library of American Literature' (Chas. L. Webster & Co.) are still occupied with Part iii. of the "Literature of the Republic." Leading off with Dr. O. W. Holmes, who was born in 1809, they close with writers born as late as 1832—the arrangement being as heretofore by seniority. As will be inferred, both the period of the anti-slavery agitation and that of the civil war tinge the present series of extracts, from the mistaken and falsified "Cotton is King" calculations of J. H. Hammond and A. T. Bledsoe, through Sumner's "Crime against Kansas," Sanborn's characterization of John Brown, Phillips's ranging himself under the hitherto pro-slavery flag of the Union, Alexander Stephens's making slavery the corner-stone of the Confederacy, Sheridan's account of his Winchester ride, Sherman's picture of the march to the sea, Grant's simple tale of the surrender at Appomattox, and Beecher's sermon on the death of Lincoln, to Greeley's manful standing by his action for the release of Jeff Davis. There is, perhaps, quite as much history as literature in all this, but it is the merit of the 'Library' that so much of the national life has designedly been caught up in it—preserved, but not mummified, for it will quicken the next generation of readers if not our own. If we should complain of any defect in representation, it would be in the case of Stephen A. Douglas, who is allowed only one extract, and that from his loyal utterances in the face of the rebellion. Some specimen of his Jacksonian vulgarity, his squatter-sovereignty sophistry, his debates with Lincoln, would have been useful. There is a relatively small amount of biographic portraiture, as in Schurz's summing up of Clay, Dana's estimate of Greeley, etc. A fresh instalment of "Noted Sayings" is given, chiefly political; there is a brief anthology consisting of negro "spirituals" in addition to S. C. Foster's household songs, and another of songs and ballads of the civil war. The tariff cuts but a slender figure in these volumes, yet we are glad that the editors have embalmed Mr. Isaac Edwards Clarke's wonderful tirade against British policy as opposed to American industry, under cover of a public document on "Industrial and High Art Education in the United States," now four years old.

—Much the most space assigned to anybody (37 pages) is put at Mr. Lowell's disposal, and here, while the selections in prose and verse are fairly representative, it is to be noticed that his elder muse is drawn upon far more extensively than his later. Walt Whitman is certainly given the benefit of the doubt when displayed in 13 pages, of which the greater part resembles rhythmical prose renderings of foreign original poetry. There is a happy selection from Cabot's 'Emerson' as to the sage's reading and use of books and consciously scrappy style, and that from Judd's 'Margaret' could hardly be bettered. Dr. Hale's 'Man Without a Country' is cleverly epitomized. Miss Delia Bacon's fatal hobby finds a place. The sole extract from the writings of Prof. W. D. Whitney relates to spelling reform—to his perfect content, we do not doubt. The late Michael Heilprin is commemorated by a passage from his 'Historical Poetry of the Ancient Hebrews' touching the authorship of the Psalms. This section of the 'Library' contains, besides, a great many names well forgotten and obscure, with such examples as justify their fate. One is struck, too, with the number who wrote poetry while known altogether or principally for their prose. Thus, a poem by Gen. Frémont seems almost a sport. The portraits, as heretofore, are very unequal in merit; some appear to be here reproduced for the first time.

—In connection with the review of Edward Fizgerald's Life which we print this week, it is proper to refer to the lines which Browning, in a moment of passion, has addressed to him. Browning thought himself aggrieved by a passage in these Letters in which Fitzgerald said that the death of Mrs. Browning was "rather a relief," and thanked God that there were to be "no more Aurora Leighs." The editor of the volume, Mr. Wright, has humbly apologized, in the *Athenæum*, for his oversight in allowing these words to stand in the text. Of Browning's verses, it is enough to say that their vulgarity would have been inexcusable had he been justly incensed, and that their publication for the purpose of insulting a fellow-poet in his grave displays a spirit but faintly characterized when it is called unchristian. As to the offence itself, we must confess that we see no occasion for the editor's humble apology. If Browning, in a fit of passion, misunderstood the meaning of the words, and supposed that Fitzgerald had been "glad of Mrs. Browning's death," there was no reason why the editor and representative of Fitzgerald should have set the seal of truth on this meaning, and so seem to convict his friend of inhuman insensibility and ungentlemanly expression. Fitzgerald was sufficiently a gentleman not to permit himself to say in private, even in the inconsiderateness of a letter, anything to be ashamed of; and Browning's objection is not to the publication, be it noted, but to the sentiment itself. Fitzgerald was a man of the most refined taste in poetry, and he was glad that there were to be "no more Aurora Leighs." This is a very different thing from being glad that Mrs. Browning was dead. The one is a literary opinion, and no more; the other would have been a moral offence. Fitzgerald's expression was limited by the context to Mrs. Browning's literary career; *its* end was "rather a relief"—that is the plain sense. Whether he was right or not, contemporary opinion about literature has much value, and, coming from a critic like him, this strong disapproval of "Aurora Leighs" was worth having. Is it necessary that there should be only praise of distinguished writers by their contemporaries? Must we have only parlor-biographies? It seems to us that sensitiveness has gone quite far enough in this direction. Fitzgerald had a right to be glad that a certain sort of poetry was at an end without being accused of inhumanity of a gross sort; if his opinions were to be published,

the public were as much interested to know what he thought of Mrs. Browning's verse as of any other subject of common public discussion. From whatever point of view the matter be regarded, Browning's brutally expressed insult to one whose character could not have been unknown to him, is the only offence that we can find.

—One topic leading to another, we are now asked by some of our Southern readers whether, when we lately expressed our belief that not a decade had passed since 1755, down to 1861, without a slave-burning in some part of the United States, we meant to state that such burnings *at the South* were "under form or color of law," *i. e.*, "legal executions for crimes." No such implication was in our mind, but merely that, wherever slavery lasted, the population—and we will now add, high and low—were in the "slave-burning stage." The two Massachusetts burnings of negro women in 1681 and 1755 were outdone by the burning of fourteen negroes (accused of a plot to burn this city) in New York in the summer of 1741, and of two more at Hackensack, New Jersey, during the same panic. These were all, we believe, legal executions—certainly those in New York were—and it may be impossible to match them at the South, just as the North furnishes no parallel to the witch-burning which Drake, in his 'Annals of Witchcraft' (p. 215), alleges to have taken place in South Carolina in 1712 by order of a local vigilance committee. Whether legal or extra-legal or illegal, matters nothing; the stage of civilization (or barbarism) was the same.

—A typical illustration of our meaning is afforded by the burning of the negro McIntosh at St. Louis on April 28, 1836—for denouncing which in his *Observer* E. P. Lovejoy prepared the way for his own martyrdom (almost by fire). McIntosh was indeed not a slave, being cook on a steamboat from Pittsburgh; but he was black and a rough character, and he fatally stabbed an officer who was taking him to jail. On the night of the same day a mob took him forcibly from prison, chained him to a tree, and burned him alive. Lovejoy expressly denied that this atrocity was fairly representative of the moral condition of the people of St. Louis. Nevertheless, it met with general approval, and Judge Lawless charged the Grand Jury that the question of indicting the perpetrators hinged upon the action being "of the many or of the few." He pronounced it not that "of numerable and ascertainable malefactors, but of congregated thousands," seized by a "mysterious metaphysical and almost electric phrenzy." This was the phrenzy which seized the citizens of Charleston when they burnt the abolition mail in 1835, with the approval of Amos Kendall, Postmaster-General. Any black man guilty of killing a white man or of rape on a white woman was liable, under slavery at the South, to be lynched at the stake, with the sanction of the community, which was as good as law (*salus populi suprema lex*). Of this nature was probably the case we referred to at Tuskogee, Ga., on October 9, 1860, when some one hundred and fifty citizens tried and sentenced and burnt a slave between morning and evening. Our correspondents will find the details in a letter of that date to the Columbus (Ga.) *Enquirer*. If we are not greatly in error, there has been at least one burning of a black man at the South since the war—of course by a mob.

—The glaciers at the foot of Mt. St. Elias are the subject of a paper in the July Proceedings of the Royal Geographical Society. The author, H. W. Topham, spent nearly a month in exploring them, and succeeds in giving a very clear idea of their position and peculiar characteristics. He was able to reach the so-called crater, the bottom of which he found to be full of ice. As no rocks of volcanic origin could be discovered, he doubted if it could be regarded as a crater in the true sense of the word. The summit of the mountain, some 8,000 feet above this point, was inaccessible on account of the loose débris of which this side was composed, which is continually falling, so that no step was quite safe; and the clouds of dust which his party raised as they climbed was such that "the last man had great difficulty to see where to walk." At one point they came to the edge of a "couloir about 3,000 feet in height, down which stones are continually falling, owing to the rapid disintegration of the mountain. They never cease falling, and a pillar of dust ascends high into the air, giving the appearance, when seen from a distance, of steam or smoke, and the wind plays upon the dust just as it plays upon the Staubbach and other high waterfalls, wafting it to and fro, and sporting with it as it likes. As we approached the mountain from the Tyndall Glacier, we had been under the impression that the pillar of dust was smoke or steam due to volcanic agency, and although we had examined the phenomenon through a powerful telescope, we continued of the same opinion until we arrived close to it and discovered its true nature." It is not impossible that this phenomenon may have caused Mt. St. Elias to be described as an active volcano—for example, in the article on Alaska in the last edition of the 'Encyclopædia Britannica.' Species of phlox and harebell were found in one sunny spot at a height of 4,500 feet above the sea; but all vegetation, exclusive of lichens, generally ceased at a line of 3,000 feet. An excellent map, and a fine view of the mountain from a photograph taken on the Malaspina glacier, accompany the paper. The question as to whether the summit is on American or British territory was discussed by the Society at its meeting in April.

— We are indebted to a correspondent, "F. H.," for the following account of a Hindoo notability lately deceased:

"Out of the host of Americans who, during the last half-century, have visited Calcutta, there must be a good number, among the living, to whom mention of the name of Baboo Rajinder Dutt will revive the memory of a man that no one knew but to esteem. At the time when I made his acquaintance, as long ago as 1846, the fame which he enjoyed to the close of his career was already established. To be equally respected by his own countrymen and by foreigners is seldom the fortune of a native of India; but such was his fortune, and on the most unquestionable grounds. Nor were his efforts in behalf of his fellow-men confined to the limit of so few years as were allotted to those other memorable Hindoos of this century, Rammohun Roy, Dwarkanath Tagore, Dr. Bhan Daji, and Keshub Chunder Sen, inasmuch as he had reached the age of seventy-one when he died on the 5th of last June.

"Very few, comparatively, among Bengalees, were the coevals of Rajinder Dutt who, like him, were carefully instructed in our language in childhood, and, as the result of acquiring a taste for English literature and science, ended with becoming virtually deorientalized. Born to opulence, and with leisure at will, he devoted himself indefatigably to study while still a youth, and also began to accumulate books of almost every description. Even before he was thirty, his library was by far the largest and the most valuable of any private person in Calcutta, and it went on growing to the last. And he added nothing to it merely for display. Every volume that he purchased he dipped into for at least an hour or two before consigning it to his shelves, in prelibation, generally (if it was not a work of reference), of early deliberate perusal. And very deliberate was that perusal as well as critical.

"To give an illustration, some six months after he had received the first collective edition of Landor's works, the arrival of which he hailed with the warmth of an enthusiast, we agreed to discuss it, as we had both read it in the meantime. Without exaggeration, he seemed to have it all but by heart. Many were the long sittings which our discussion occupied; and I was thus afforded ample opportunity for observing his familiarity with biography and history. Its range and its exactness were surprising.

"But his chief title to admiration is still behind. In every fibre of his soul he was a philanthropist. Creed or social position was to him indifferent; it was enough that he knew of the existence of suffering, and he was ready with brain and purse. And his helpfulness in countless instances was manifested not only by his personal attendance in the character of a physician, but by his relieving need of every kind. His bearing, in doing good, was not so much that of one conferring, as that of one receiving, an obligation. The thought of any sort of return for his benefactions seemed never to enter his mind. That his boundless generosity impaired his fortune most materially was inevitable, but it caused him no disquiet to be no longer wealthy. His single aim was, at whatever self-sacrifice, to be of service to his fellow-men. In fact, he was an ayatar of altruism.

"Physically he was in no way remarkable. He was of medium height, lithe of figure, purely Caucasian as to features, and rather dark for a Bengalee of good family. His expression was one of marked intelligence; yet, what with his vivacity, his abruptness of manner, and his entire freedom from solemnity of aspect, he altogether belied the notions which are ordinarily associated with an Asiatic. For the rest, depressed by no adversity, fertile of resource, perpetually alert, strenuous in endeavor, and good-natured, he would, but for his complexion and dress, have been indistinguishable in most essentials from the typical American.

"Considering his antecedents, seconded by a keen appreciation of evidence, and fearlessness as a logician, it is no wonder that he sat loose to the religion of his forefathers. Having once clearly defined the inscrutable to himself, he calmly set it on one side, and devoted himself thenceforward to matters indisputably intelligible—the offices of humanity. Righteous in all his instincts, he translated them into practice to the best of his power. His, through long years, were the actions that alone 'smell sweet and blossom in the dust.' Never can the Ganges have borne in its bosom, to their ocean tomb, the ashes of a man richer in every virtue that merits to be recorded with reverence."

THE TRANSLATOR OF OMAR KHAYYAM.

Letters and Literary Remains of Edward Fitzgerald. Edited by William Aldis Wright. Macmillan & Co. 1889. 3 vols.

Edward Fitzgerald, without being essential to the literary history of his time, has made to it the very real contribution of a pleasant memory. If these letters had unfortunately perished, his name would have allured the imagination of lovers of literature eager to know more of this shy, eccentric, modest man, the writer in his youth of a poem that Lamb envied him, and in age of a translation that added almost an original classic to English, the life-long friend of Tennyson, Thackeray, and Spedding. The publication of his correspondence, however, has dispelled the mystery and disclosed the man in his tastes, friendships, peculiarities—the whole range of his "innocent *far-niente* life" as it seemed to Carlyle. One recurs after reading these pages to Tennyson's dedicatory poem addressed to Fitzgerald—perhaps the poet's most masterly piece of light verse—only to be surprised at the truth of the characterization there given. There is nothing in these letters so fine as the picture in those opening stanzas of "Old Fitz" in his "suburb-grange," with the rosy-footed doves flying about and perching upon him; but there

are many touches that bring his temperament and life before us with a similar vividness and felicity. And the rest of Tennyson's poem—the vegetarianism of his friend, "that large infidel, your Omar," and even the discontent of Fitzgerald with the work of the Laureate, after 1842, so deftly glanced at in the last lines:

> "When, in our younger London days,
> You found some merit in my rhymes,
> And I more pleasure in your praise"—

all this is amplified and illustrated, with much besides, just as the leisurely reader of Tennyson might wish it. The memoir has this poetical atmosphere; the life itself, an English country life, reminds one of what Fitzgerald writes of the County of Suffolk—"Now I say that all this shows that we in this Suffolk are not so completely given over to prose and turnips as some would have us. I always said that, being near the sea, and being able to catch a glimpse of it from the tops of hills and of houses, redeemed Suffolk from dulness, and at all events that our turnip fields, dull in themselves, were at least set all round with an undeniably poetic element."

Tennyson does not touch at all upon Fitzgerald's most marked trait. He was an Englishman of the closest attachment to things English. He never went out of the country but once, and then to the Netherlands, where he had a miserable sojourn, and he was thankful beyond most travellers when he got home again. He began life with this strong prepossession in an acute form. It breaks out early in life, when he excepts only Raphael for admiration among foreign artists, and he sums up the matter on the side of art at once—"To depict the true old English gentleman is as great a work as to depict a Saint John, and I think in my heart I would rather have the former than the latter." The most complete expression of his patriotic feeling is a real British burst, as characteristic as American spread-eagleism: "Well, say as you will, there is not and never was such a country as old England—never were there such a Gentry as the English. They will be the distinguishing Mark and Glory of England in History, as the Arts were of Greece, and War of Rome. I am sure no travel would carry me to any land so beautiful as the good sense, justice, and liberality of my good countrymen make this." He even writes to Frederick Tennyson abroad that he hopes the English travellers are "as proud and disagreeable as ever." He naturally thought the country was going to the dogs. He was not a Jingoist: he thinks, on the contrary, that the world may justly resent British interference "all over the Globe," and piously wishes that England were a "little, peaceful, unambitious, trading nation like—the Dutch!" Even his taste in music was affected: "I grow every day more and more to love only the old God Save the King style."

The point must be insisted upon because this British instinct lay at the roots of his content with a voluntarily restricted life. He had, besides, a bent for eccentricity. He early declares that he has made a discovery for himself and is going to be "a great bear." Used though the phrase is with youthful exaggeration and humor, it marks the turn of his nature, and in a sense he fulfilled the prediction. Of his boyhood we learn nothing, as he was well out of college when he began the congenial habit of writing these friendly letters, which from the first are remarkable for literary judgment and are warm with true feeling. He was then, however, no more than a reader of books and a collector of fine poems from the best writers for his private Parnassus. One confidential passage gives a strangely vivid sense of how the young of each generation start together. He has been writing of Tennyson, who had been visiting him and keeping him laughing with his "droll" little humors and "grumpinesses," and he goes on to say that he felt a "sense of depression at times from the overshadowing of a so much more lofty intellect than my own; this (though it may seem vain to say so) I never experienced before, though I have often been with much greater intellects; but I could not be mistaken in the universality of his mind; and perhaps I have derived some benefit in the now more distinct consciousness of my dwarfishness." He was then twenty-six and Tennyson was his junior by a year. Most of what is told of his younger days comes in the way of reminiscence in after life. Among these anecdotes one, drawn out by Spedding's death, is very lifelike. He and Tennyson visited Spedding at his father's house, and the elder Spedding is described as not altogether pleased at the sight of his son consulting with the poet over the "Morte d'Arthur," "Lord of Burleigh," and other pieces then in MS. Unfortunately he had known Shelley, Wordsworth, Coleridge, and other "poets" without esteeming them, and as Fitzgerald played chess with Mrs. Spedding, and the daffodils danced outside the hall-door—"Well, Mr. F.," he would say, "Mr. Tennyson reads and Jem criticises; is that it?" But, notwithstanding the banter, he was kind enough to his son's friends. Such little pictures are one of the traits of the book.

It was not long before these friends submitted to the common fate and were separated by the different tenor of their lives. They met occasionally, but they did not live together; Fitzgerald was the only one who liked to send friendly letters, and so communication lessened to one epistle a year, and died out altogether. He went to live in the country, in a damp lodge outside his father's park, and he always had such bachelor quarters. He was intimate at first with old Bernard Barton, the Quaker poet, whom, we believe, Lamb advised to throw himself over a precipice rather than cultivate the muse; and afterwards he liked to visit with the parson, a son of the poet Crabbe. Fitzgerald is described then as being a grave man, middle-aged at thirty-six, not seemingly very happy, though amusing at times in conversation. He rose early, read or wrote standing at a desk, had his dinner of vegetables and pudding, walked with his Skye terrier, and ended the evening with the Bartons or the Crabbes, singing glees with the children at the latter house and joining the parson over his cigar. He did not visit with the neighboring gentry. He describes it all himself: "A little Bedfordshire—a little Northampton—a little more folding of the hands—the same faces—the same fields—the same thoughts occurring at the same turns of road—this is all I have to tell of; nothing at all added—but the summer gone." As for "Alfred," he adds, "hydropathy has done its worst; he writes the names of his friends in water."

But this was not as empty a life as it seems; vegetarian though he was, "none could say that Lenten fare made Lenten thought." He had many interests of the cultivated man. He had been fond of the theatre and concert in London, and he was still devoted to music; he was a buyer of pictures, and full of enthusiasm for those he liked, and he cultivated the acquaintance of Lawrence. The stream of some friendship never ceased to brighten the ways he walked in; and in books and nature he had as large a liberty as is often conferred on a man. The touches of nature are not infrequent in these jottings down of his moments, and they are often exquisite in feeling: "I am going this evening to eat toasted cheese with that celebrated poet, Bernard Barton. . . . It blows a harrico, as Theodore Hook used to say, and will rain before I get to Woodbridge. Those poor, mistaken lilac-buds there out of the window! and an old robin, ruffled up to his thickest, sitting mournfully under them, quite disheartened!" Or again, in London, he writes: "I feel pleasure in dipping down into the country and rubbing my hand over the cool dew of the pastures, as it were." But such tender directness of description or felicity in phrase is a constant quantity, and belonged so much to his mind that he could not help blabbing out his delight. We quote a few more lines, less for the picture than the style; he had put away all books except Omar, but this, he says, "I could not help looking over in a paddock covered with buttercups and brushed by a delicious breeze, while a dainty racing filly of W. Browne's came startling up to wonder and snuff about me." For feeling like this expressed so well, one goes back far in literary taste, and in such passages we recognize the English that Tennyson praised so highly in speaking of the boat-race in 'Euphranor'; it is—what so little description of nature now is—free from self-consciousness, and not by design, but by the character of the writer.

It would be an endless task to enter upon the judgments of books which are strewn through the pages. One is prepared to hear that Fitzgerald's tastes were not those of his generation in the case of many of the more notable authors. The most striking instance is that of Tennyson. He did not like "The Princess," nor "In Memoriam," nor the "Idyls," nor the dramas; he wished that there had been nothing after the 1842 volume, or he seems to fancy that he wished it; the poems after that date were below their author's destiny—that is apparently the feeling which underlies his judgment. But he expressed himself with great freedom: "'In Memoriam,'" he says, "has the air of being evolved by a Poetical Machine of the highest order; . . . the Impetus, the Lyrical oestrus, is gone." He asks what it can do except make all of us "sentimental." His last word almost is that Tennyson's genius has been injured by over-elaboration. It made no difference to him that other friends told him that this was perverseness, and that no one agreed with him. One part of the secret has just been hinted at: he worshipped—it is hardly too strong a word—Tennyson's power; he thought it was wasted on inadequate objects. This is the one human enthusiasm of the book. If he reads of Thucydides at Amphipolis, it is to burst out with, "Fancy old Hallam sticking to his gun at a Martello Tower! This was the way to write well; and the way to make literature respectable. Oh, Alfred Tennyson, could you but have the luck to be put to such employment! No man would do it better; a more heroic figure to head the defenders of his country could not be." He wishes for Tennyson's voice to awake "Marathonian men" instead of "mumbling" over "The Princess" and "In Memoriam." He longs "to take twenty years off Alfred's shoulders, and set him up in his youthful glory. . . . He is the same magnanimous, kindly, delightful fellow as ever, uttering by far the finest prose sayings of any one." There is no cooling of loyalty, one perceives, only the feeling that the performance is less than it should have been, the man more than his work.

This, no doubt, counts in analyzing the unfavorable criticism of Fitzgerald; but it was also the fact (and here lies the other half of the secret), that Fitzgerald's literary taste was distinctly old-fashioned—not modern, not contemporary at all, but in a strict sense was clas-

sical, and proceeded upon the universal canon of literature. It is not meant, of course, that he was confined to Latin and Greek standards as expressed in ancient literature, but to the universal standard common to all great literature. Tennyson met his simple and pure taste and his unromantic (but not unpoetic) nature, in much; but in his later and pronounced manner he offended Fitzgerald's taste, both in matter and style. Other poets yet more strictly bound to their times and themselves than Tennyson naturally meet with no mercy at Fitzgerald's bar. He swept them—left nameless in these letters—to the namelessness that these blanks foretell, with as absolute a fiat as Carlyle ever used in similar cases. There is, too, one is compelled to think, something of truth in his friend's frank statement that he was "perverse." He set up for a man of taste—it was the only claim he put forward. He was not a genius, but he had taste, which, according to his aphorism, is the feminine of genius, and, being thus in his own eyes a critic by self-calling, he was, as Tennyson objects in his poem, "overnice." He was too much affected by the hair's-breadth lack of perfection in comparison with what was done. This is somewhat overstated, but it expresses well enough the element of error. After all, the main point is that modern poetry did not appeal to him.

This case of Tennyson is dwelt upon because it is illustrative of the unfavorable criticism to be found here and of its sources. It is criticism that well deserves to be understood and to be laid to heart, for it will help any one of real perception to a simpler and purer taste in poetry. The criticism which is favorable, however, far outweighs the fault-finding. Fitzgerald liked to write about what he enjoyed, and he enjoyed the best. The classics he read all his life with evident zest, and was so seized by Æschylus and Sophocles that he could only free himself by translating them. He fell into a study of Spanish which resulted also in translation from Calderon, of course in his peculiar style of rendering; and then he began with Persian, out of which he gave us the Omar and other pieces of interest. This was a considerable amount of work, and, in connection with the editing of Crabbe and the delightful dialogue of "Euphranor," not to speak of minor matters, they show that he was far from being an idler in his leisure. His readings in English were constant, also; and his taste was that which requires for itself "the best books." He found the tradition of the past as to the value of these great works in harmony with his own judgment; and at the end of his life he was more and more deeply sworn to Cervantes and Sir Walter Scott, Shakspere, Boccaccio, and in general those authors who have best drawn human life with laughter as well as tears. It is interesting, finally, to note in a man so attached to the great works of literature that, though the friend of Thackeray, he was also delighted with Dickens and with other prose-writers of his own time; but in poetry he admitted only Tennyson and his two brothers, Frederick and Charles.

Our space has become exhausted all too soon. Nothing can be said of the interesting episode of his exploration of Naseby field (where he found a skull with a bit of the iron heel of the conqueror in it), with its sequel in Carlyle's friendly regard, which remained unbroken to the end. The veering of his judgment in respect to Carlyle is also noticeable, for at first he had no good words for him. Something, too, should be said of his less-known friends, and especially of the captain of his lugger, whom he generously assisted, and whom he thought so much of as to get Lawrence to do his head—"with that complexion which Montaigne calls 'vif, mâle et flamboyant,' blue eyes and strictly auburn hair, . . . head of the large type, . . . a Gentleman of Nature's grandest Type, . . . made in the mould of what a Humanity should be, Body and Soul, a poor Fisherman. . . . This is altogether the Greatest Man I have known." Such are some of the phrases which he showered upon his Viking. There are traces, too, of a sympathy with the poor in their work and their suffering, and of a true sense of humble life. He was much touched by reality wherever he came near it. His letters are just and beautiful in expression when he mentions any matter of real sorrow, any bereavement or misfortune. His heart remained tender, and he was loyal to his friends. When Spedding died, they had been separated twenty years, and the genuineness of his feeling of loss which comes to the surface in two or three letters, is a remarkable illustration of the vitality of silent affection. When Tennyson came to see him after an equal interval of time, it was as if time had not been. His isolation from these old friends is somewhat pathetic, but he was without reproach, since the neglect to write was on their part. Tennyson never would write letters, and Spedding was a positive man given to a utilitarian rule of life, who would only write when there was some definite question to be answered.

Notwithstanding this, Fitzgerald had friends who came as others went, as is the way of the world, and they were always scholars and gentlemen, the best of their kind. Naturally, however, the tribute which will be most observed in his memory is that of the famous literary men who found him companionable in early and middle life. Tennyson wrote of him: "I had no truer friend; he was one of the kindliest of men, and I have never known one of so fine and delicate a wit." Thackeray, being asked not long before he died which of his old friends he loved most, told his daughter: "Why, dear old Fitz, to be sure; and Brookfield"; and there is among these letters one from Thackeray asking Fitzgerald to attend to his literary affairs if he should meet with accident in America, which would be a treasure coming from any man. Of the wit which Tennyson mentions there is little in the correspondence, but the character which won and merited the regard and affection of friends shines upon every page. The modesty with which he withdrew his name from the public eye was probably a congenital trait, and it affected his whole way of life. He grew more unwilling even to go to London, finding only cleverness there, and the theatre or opera was less able to attract him as years went on. The exhibitions, in which at one time he took great interest, became a bore. We regret being unable to extract some illustrations of his usual comment upon the great musicians and the artists whom he loved, with which his letters are enriched in a variety of topics. Reynolds, Constable, and Gainsborough are the leading subjects in art, and in music Handel seems to have been most congenial, though he writes of the others with just judgment. His life, taken altogether, was a gratification of refined tastes and a simple exercise of unpretending virtues among his friends and acquaintances.

His works, which fill the last two volumes, do not fall within the scope of this notice. They are well known in the circle that cares for literature of the highest order. Original genius he did not possess, but his appreciativeness of excellence was sound and true; whenever he praises, one is compelled to assent. He spent the most of his energy in endeavoring to render foreign classics into English in such a way as to make them effective to modern taste. He did not write for those who could read the originals. He professed only to make adaptations rather than translations, and he cut and modified with a free hand. Scholars have praised his work for what it strove to accomplish, accepting the limitations which his taste imposed upon it. Taste, however developed and refined, is still not genius, and it must be frankly acknowledged that he has not given us just what Calderon, Æschylus, and Sophocles created. His Persian translations vary even more widely from the originals. 'Omar Khayyám' is a celebrated work in his version, but it is largely his own work, and it may be hoped that the other translations will become better known, for, without having the commanding qualities of Omar, they are studded with charming stories in verse, and not encumbered with Eastern moods of thought so much as to disturb a Western mind; to us they are more pleasing. The two poetical speeches of the English and Roman generals, with their fine movement, are also a kind of translation—from prose to verse, though nearer to original composition. The dialogue of 'Euphranor' is the most considerable work of his own hand, and reaches what seems to be his ideal of writing—fine feeling in fine English. His name, however, is linked indissolubly with literature, in all probability, only in one work, the Omar; his memory will always be associated with the Tennyson group; besides, and by virtue of it, he will long be remembered by those who prize simplicity, refinement, and moral worth above the more vulgar quality of distinction.

LODGE'S WASHINGTON.—II.

George Washington. By Henry Cabot Lodge. [American Statesmen Series.] Boston: Houghton, Mifflin & Co. 1889. 2 vols.

IN dealing with Washington's political career, Mr. Lodge is on his own borders. Remote from the local annals among which he tripped so sadly, he has wisely disembarrassed himself of the individual Washington by collecting some fifty pages of Washingtoniana at the end of the book. The President he follows with the courage of conscious equipment. Our military similitude is suggested by the polemical note which summons us from any repose with the weary soldier at Mount Vernon. According to our author, "Washington passed at a single step from being a Virginian to being an American," and he here passes almost as swiftly from the Revolution to the Presidency. We reflect, however, that the work does not profess to be a biography, and that a selection of the more salient features of a subject so vast was imperative. The selection seems judicious, but the necessary omission of many details, each with its significance, renders it important to follow so theoretical an author with the cautious respect due to his literary art. The pathology of prepossessions proves their danger to lie in their eloquence.

Mr. Lodge's theory that "Washington had the fierce fighting temper of the Northmen," which looks as if suggested by Albert Welles's genealogical derivation of Washington from Odin, is contradicted, as we have intimated, by many utterances of the General against war. Under its inspiration, Mr. Lodge has, we think, done justice to Washington's military career. When, however, we pass from the General confronting Great Britain to the President invading Indian tribes, the "fierce Northman" theory warps the narrative. When, in youth, Washington went on a peaceful mis-

sion to the Indians, he found himself already known among them as "Conotocarius," or "town-destroyer." This red shirt had descended from his great-grandfather, Col. John Washington, who ordered a massacre of chiefs during a parley, but whose party "stupidly," Mr. Lodge says, "allowed the Indians to escape," etc. A writer so decked with war-paint cannot be expected to consider how utterly unimportant are the miserable Indian skirmishes of 1790 compared with the honor of Washington. The President here appears determining on and planning those inglorious raids as if he were all branches of government rolled in one. In fact, Washington was only fierce against the land-jobbing borderers, "indifferent as to the killing of an Indian," and fought the Indians only because of the panic into which patriotic men were thrown by intrigues of England and Spain with those tribes, which threatened to turn into an army against the United States.

When we reach Washington's political career, we are met by another theory. "No man of that time, with the exception of Hamilton, ever grasped and realized as he did the imperial future which stretched before the United States." Among born colonists, which Hamilton was not, Washington "stood alone" in this national sentiment, to which first Franklin, then others, came gradually (II, pp. 7, 8). The generalization is misleading. Washington's remarkable "American" feeling, shown even in early life by his protest against the superior rank of officers holding royal commissions, had little relation to the "national" sentiment of Hamilton, which made him the representative of English ideas of government and the confidant of English ministers. Washington had no theories. He desired a strong government, but Mr. Lodge might be puzzled to prove even that he preferred a single rather than a plural Executive, as proposed by Gov. Randolph and George Mason. Oppressed by the weakness of the Confederation, Washington was yet but a follower in the reform. He thought the Annapolis Convention premature. and was with difficulty persuaded to attend that of 1787. He wrote to a friend that his consciousness of a lack of "political competencies" made his way to inauguration seem like that of a culprit to his execution. With the exception of his apathy concerning slavery, Washington was as free from provincialism and sectionalism as Mr. Lodge affirms; but it was largely owing to the very fact that this American character was not attached to any political schemes, Hamiltonian or Jeffersonian, that he preserved such ascendancy over the whole country.

A collection of extracts might be made from Mr. Lodge's work, and labelled, "Washington considered as a Hamilton." Our author is wroth with those who, a hundred years ago, scented monarchy in the pomp of what John Randolph called Washington's "coronation," and in the survivals of court etiquette urged by John Adams, whose court plumage so amused us at the Centennial Loan Exhibition; but the radicals of that period are justified by Mr. Lodge's interpretation of those ceremonies. They are symbols, it seems, of "sovereignty." "The people of the United States to-day surround the first office in the land with a respect and dignity which they deem equal to the mighty sovereignty that it represents, and in this is to be found the genuine American feeling that Washington expressed by the plain and simple ceremonial which he adopted for his meetings with the Congress" (II, p. 78). Here is the high Hamiltonian absolutism which, our author needs to be reminded, was *not* successful in its efforts to enter the Constitution. It must have been an oversight by which Mr. Lodge includes among the "sound lawyers" of the Supreme Court appointed by Washington, that Justice Wilson who called the country to remember that no such word or thing as sovereignty is known to the Constitution. Detaching "sovereignty" from its connotations, it means only supreme power; but how can this be described as represented by an office of defined powers and limited functions?

The king can do no wrong. The moral law is easily accommodated to Washington and his "double"—Hamilton. In his account of the assumption of State debts (II, p. 105) Mr. Lodge describes the main argument against it as "sectional," without giving his reader the means of judging whether it was so. By assumption of State debts by the general Government, those States which had nearly paid off their debts were taxed to pay the debts of other States which had not so paid. The measure was carried by a bribe offered to Jefferson by Hamilton, the former inducing his friends in Congress to vote for assumption on condition that the Federal city should be located on the Potomac. To this "famous arrangement," as Mr. Lodge euphemizes, but which Jefferson felt to be infamous, and repented in dust and ashes, Washington is apparently made a party:

> "Washington was more than satisfied with this solution, for both sides of the agreement pleased him, and there was nothing in the compromise which meant sacrifice on his part. He rejoiced in the successful adoption of the great financial policy of his Administration, and he was much pleased to have the capital, in which he was intensely interested, placed near to his own Mount Vernon, in the very region he would have selected if he had had the power of fixing it" (II, p. 106).

This almost cynical suggestion of private motives for public action is inferential. If Washington was the personal ruler Mr. Lodge sometimes seems to imagine, he might be involved in the intrigue; but the whole history of Washington's Administration convinces us that he would never dream of questioning the honesty of any policy on which the two party leaders, Jefferson and Hamilton, had agreed. Washington's self-distrust, arising from lack of scholastic education, led him to place a perilous amount of faith in learned men; nor had he that knowledge of men which our author ascribes to him. Calamities came of his confidence in Charles Lee, Arnold, St. Clair, and in Pickering, who secretly disparaged him while controlling his Administration. No doubt Washington regarded assumption as just; but that the corrupt bargain was known to him is as little probable as that his sanction looked to a rise in the value of his lands.

Although Washington generally followed the policy approved by a majority of his Cabinet, his own judgment was felt in matters affecting the military situation of the country or its independence. This was especially shown in the most critical question which arose during his tenure of office—the British Treaty. Despite certain odious features of that treaty, the Senate advised its ratification, with reservation of one article. The Cabinet unanimously agreed. But before Washington had affixed his signature, news came of the Provision Order, directing seizure of all vessels carrying provisions to France, and Washington refused to ratify until the order was revoked. His letter to Randolph of July 22, 1795, speaks of this as his "determination," and Mr. Lodge can only escape its force by suppressing in his argument (II, p. 194) part of what he had printed in his narrative (p. 186). Washington left the matter to be determined by the English answer to his protest, and went off to Mount Vernon, in the latter part of July, intending, as his private letters show, to remain through the summer. In this determination—in which, by the way, he was supported by Hamilton, a fact omitted by Mr. Lodge—Washington stood out against three of his four ministers. He yielded only when it seemed a question of war. The right of search and of impressment had been tacitly conceded under the treaty, simply because, as Mr. Lodge points out, we were not ready to fight, and war now appeared the alternative of refusing to swallow the Provision Order. In this case the war would have had to be undertaken by an administration divided against itself.

To this menacing side of the situation was now added a decisive weight. The President suddenly found himself compromised by an intercepted despatch of the French Minister, boasting of state secrets confided to him by the Secretary of State, and reporting suggestions from the same high quarter that French gold might be effective against the "British party." Other despatches of M. Fauchet, intercepted at the same time, were received by the British Minister, and would have neutralized the one revealed had they not been suppressed. The charges against the Secretary of State are discredited by Mr. Lodge, and also, as he says, by Washington (II, p. 201). The incident, so fully discussed by Randolph's biographer, with whom, so far as the unfortunate Secretary is concerned, Mr. Lodge does not very seriously disagree, is too large and intricate to be pursued in the present paper. But we cannot think that any historian has sufficiently considered the degree to which Washington was influenced in this matter, and throughout his second term, by anxieties arising from the English possession of the northwestern posts. That for the thirteen years following the Revolution those commanding positions should be held by a Power hostile and humiliated, and that in the later of those years our coast was at the mercy of its ships, are weighty facts.

We have before us a letter written from Mount Vernon, December 11, 1785, to Gen. Knox, in which Washington says:

> "It has always been my opinion, you know, that our affairs with respect to the Indians would never be in good train whilst British Garrisons remained on the American side of the territorial line—and that these Posts would not be evacuated by them as long as any pretext could be found to withhold them. They know the importance of these Posts too well to give them up soon or quietly. Their trade with the Indians depend[s] upon the possession of them, knowing full well that all the assertions of our Commrs. with respect to the articles of Peace, and their obligation to surrender them is no more than chaff before the wind when opposed by the scale of possession."

As events more important than the Indian trade advanced, such as the war with France, the posts and the Indians together became a formidable menace. The abandonment of those posts was Great Britain's offer for Washington's signature to the treaty. The offer was accompanied by ordered and ominous menaces. We were not in a condition to fight, and Lord Grenville became master of the situation. Among his Lordship's demands, secretly written to Washington, was, probably, the dismission of Randolph. This may be inferred from a letter of Gouverneur Morris, printed in his recently published 'Diary and Letters,' written to Washington after an interview with Lord Grenville in which is an allusion to a letter of his Lordship concerning Randolph, sent through Mr. Jay. Mr. Lodge, while admitting Randolph's honor, vaguely alleges that he was not without fault in the matter, but he does not say what the fault was.

By signing the treaty Washington entirely alienated its opponents, and had few political friends except so-called "Federalists." The denunciations of the "anti-Federalists" tended to drive him more and more to their antagonists. Mr. Lodge, in his chapter on "Washington as a Party Man," points out that, after Jefferson's resignation (at the close of 1793), the President appointed only "Federalists" to his Cabinet (II, p. 242); but it must be remembered that the division of parties was not yet theoretical. The Opposition was French and revolutionary. Nor can any political partisanship be inferred from his partial approval of the Alien and Sedition Acts. The British Treaty was made a *casus belli* by France, and Washington regarded those laws with the feeling of a soldier. Mr. Lodge, we regret to find, is, in emergencies, apt to answer inconvenient arguments by saying they are attacks on Washington; but we venture to remind him that in the letter on which he mainly relies (II, p. 264) to prove Washington's animosity to the "Democrats" (written to Gov. Trumbull, July 21, 1799), Washington says: "Although I have abundant cause to be thankful for the good health with which I am blessed, yet I am not insensible to my declination in other respects."

We regret that Mr. Lodge's controversial method has rendered it necessary to devote our notice so largely to adverse criticism. We would gladly have occupied our space with homage to his various fine qualities, did not these add all the more weight to what we regard as errors. We are satisfied that so adequate a writer has dealt with Washington from the Hamiltonian point of view. We can commend the book for its charms of style and treatment. It is certainly a valuable contribution to the work which still awaits some master-hand—the Life of George Washington.

THE HEIMSKRINGLA.

The Heimskringla; or, The Sagas of the Norse Kings. From the Icelandic of Snorre Sturlason. By Samuel Laing, Esq. 2d edition, revised, with notes, by Rasmus B. Anderson, LL.D. 4 vols. Scribner & Welford.

THE history of Iceland during the first three centuries and a half after its settlement from Norway is, in the main, the history of a few families. True at the beginning, as a natural result of the circumstances of the settlement, it was the characteristic fact through the 300-odd years of the Icelandic commonwealth which Laing very aptly calls "an aristocratic republic." During the twelfth century, but particularly in its latter half, and in the first half of the thirteenth century, the whole country was torn apart by the jealous feuds of the chieftains, who were obliged to maintain an armed force about them, and not seldom to assert their supremacy by means of it. The last years of the republic were little better than a condition of civil war, in which violence was done to life and property, and all law and order were at an end—a condition which surely paved the way to the loss of autonomy and to subjection to Norway.

In the period last mentioned one family, the Sturlungs, stands out prominently for the power it held and the part it played in the political life of the time; so much was this the case that the epoch has received in Icelandic history the name of "the time of the Sturlungs." As a noteworthy concomitant of this political activity and social unrest, the time of the Sturlungs appears also as the golden age of Icelandic literature. In it many of the most important sagas current only as oral tradition are written down, old legends of the gods are collected, histories are compiled, and the art of literary expression reaches the most perfect development that it ever exhibited in the old day in the whole Scandinavian North. More noteworthy still, it is in this very family of the Sturlungs that the art of authorship attains its highest exemplification, and Snorri Sturlason, in the 'Heimskringla,' has given us not only the best piece of independent prose literature, but in its bearing incalculably the most important series of sagas of all the number that attest the phenomenal literary activity of the Icelanders.

Snorri Sturlason, both from the place he filled in national politics in his day and the literary legacy that has come down from him to the present, is the most remarkable man in the history of Iceland. His career is not a record free from stain, but it reflects, as in a glass, the conditions of his time, and the lights and shadows of his life are throughout the intelligible results of his environment. Ambitious, bold, and unscrupulous as to the means of attaining an end, he achieved an almost unprecedented wealth and power, held the highest office in the gift of the commonwealth, and enjoyed distinction at the court of the Norwegian king, but was, at last, miserably murdered in a family feud, and will for ever lie under an imputation, that cannot be satisfactorily cleared away, of having endeavored to betray his country to Norway for the sake of his own selfish gain.

Snorri was born in 1178. In accordance with the custom of the time, he was sent away from home to be fostered, and when still an infant came into the family of Jon Loptsson at Oddi. It was here that he received the literary bent that subsequently distinguished him, and the 'Heimskringla' no doubt owes its ultimate origin to these early associations. The grandfather of Jon Loptsson, Sæmund the Wise, the reputed compiler of the Elder Edda, had founded a school at Oddi and made it the seat of the highest learning in Iceland—a reputation which, together with the manuscript materials that Sæmund doubtless collected, had been inherited by the succeeding generations. There was here, too, a special reason for a knowledge of Norwegian history, for Jon Loptsson's father had lived in Norway, where he had married a natural daughter of King Magnus Barefoot, so that the sagas of the Norse kings were in reality, to no small extent, the family history of the people of Oddi. Certain descriptions in the 'Heimskringla,' moreover, are thought to have been directly founded upon Jon Loptsson's own narrative of them as an eye witness.

Snorri entered upon an active life with but little, if anything, more material than his own ambition to further him, but by a lucky marriage laid the foundation of his power, which thereafter steadily grew. In 1215 he was elected "Speaker of the Law" for the Commonwealth. At the expiration of his term of service, three years later, he went to Norway, where he was received with extraordinary hospitality, both by King Hakon and the King's father-in-law, Earl Skuli. The King made him his liegeman, and Snorri gained Skuli's friendship, which, in the subsequent conflict between Hakon and Skuli, stood him in far from good stead. To Skuli he is said to have promised, at this time, to use his influence to bring Iceland under the dominion of Norway. Two years later Snorri returned to Iceland. For the next few years both his wealth and his influence continued to increase, until he became the most important man in the island. His unscrupulous conduct of certain family affairs had, however, aroused a bitter hostility among his own relatives, which finally resulted in a regular battle, in which Snorri's faction was, nevertheless, victorious, and established more firmly than ever his position of predominance.

Snorri was in Norway at this time with Skuli, to whom he had unwisely given his adherence, and thereby incurred the active displeasure of the King. The latter, evidently fearing the use of Snorri's power against him, forbade him by letter to return to Iceland, but the command was disregarded. The following year, 1240, Skuli was slain, and, shortly after, Hakon seems to have resolved upon Snorri's death, for he sent a letter to Gissur, a son-in-law of Snorri, with whom, in the meantime, a new feud had arisen, demanding that he send his father-in-law a prisoner to Norway, or, in case that were impossible, to kill him. Gissur, accordingly, with seventy men at his back, came to Reykjaholt on the night of the 22d of September, 1241, when the old chieftain was mercilessly hunted out of the place where he had taken refuge, and slain by an unknown member of Gissur's band.

About Snorri's literary work, with the exception of his career of a skald at home and abroad, contemporary records are singularly silent. The account of his life in the history of his family, the Sturlunga Saga, does not mention the books he wrote, but the Icelandic Annals, written in 1400, say specifically that Snorri "compiled the Edda, and many other books of historical learning, and Icelandic sagas." Of these works the so-called Younger, or Prose, Edda (a commentary in prose and verse on the old poetry, and the principal source of our knowledge of the mythology of the Teutonic race), and the 'Heimskringla,' are all that have come down to us. The time of origin of the 'Heimskringla,' from internal evidence, was after the return of Snorri from his first journey to Norway, when he dwelt in comparative quiet on his own farmstead at Reykjaholt.

The title given in the seventeenth century to Snorri's sagas of the Norse kings, and the one by which it is now generally known, is a compound formed of the opening words of the oldest manuscript: *Kringla heimsins*, the circle of the earth. The work, to use a strikingly apt collocation by Carlyle in the preface to his 'Early Kings of Norway,' whose source is this very book, is a history of the "old tragedies, crimes, and heroisms" of the Norse kings. It begins with the story of Odin, and the half-fabulous history of the Swedish dynasty of the Ynglings, from whom Harald the Fairhaired reckoned his descent. From Halfdan the Black, in the middle of the ninth century, down to the reign of Magnus Erlingsson in his own day, Snorri gives a continuous history of Norway under her successive kings. His work is not a mere chronicle of names and dates, coupled at greater or less length with the events that made them memorable. It is the record of real people who live and act, and are moved by impulses human and fallible, though often great and kingly. As Laing points out in his preliminary dissertation, some of the sagas, like those of Harald the Fairhaired, Olaf Tryggvason, or Olaf the Saint, are great historical dramas, in which the characters work, and act, and speak. Often it is possible to reconstruct from Snorri's pages an incidental, but unmistakably true and vivid, characterization of the whole social life of the time; for Snorri does not concern himself solely with the court and army of the king, but gives many a picture, with abundant details, both of the sturdy yeoman at home on his farmstead, and the viking in his long-ship on a wild foray upon some neighboring coast. Some of the descriptions of battles on land and sea are unsurpassed

in all historical literature. There is no account in history of a sea fight at all to parallel the description of the battle of Svold, in the saga of Olaf Tryggvason, from the blast of the war-horns at the departure of the King's ships to the dramatic assurance at the end that "King Olaf Tryggvason never came back again to his kingdom of Norway."

In view of the minuteness and range of Snorri's assumed knowledge of men and events long before his own day, the question as to where he obtained it and its claim to credence as history lies very near the surface. Snorri's service is most admirably summarized by Laing when he says that "Snorri Sturlason has done for the history of the Northmen what Livy did for the history of the Romans." Snorri's own account of the source of his material in his preface to the 'Heimskringla' ascribes it to records of Ari the Wise, who died in 1148, "the first man in this country who wrote down in the Norse language narratives of events both old and new," and to the poems of the skalds. The latter he considers wholly trustworthy.

"There were skalds," he says, "in Harald's court whose poems the people know by heart even at the present day, together with all the songs about the kings who have ruled in Norway since his time; and we rest the foundations of our history principally upon the songs which were sung in the presence of the chiefs themselves or of their sons, and take all to be true that is found in such poems about their feats and battles."

Many of these skaldic strophes corroboratory of his statements are incorporated in his work, and are found scattered through it from the beginning almost to the end. Another undoubted source which he does not mention was the narratives of his contemporaries. The nearer Snorri comes down to his own time, as has been intimated, the less does he cite the strophes of the skalds, his authority being undoubtedly the oral accounts of living men. His narrative, besides, is frequently helped out by his own knowledge of the scene of action gained by an apparently careful inspection, during his first journey abroad, of these very localities. Snorri had all the characteristics of a great historian in the collection, arrangement, and use of his material. If the important mass of it was ready made to his hand, it was he who first had the genius to gather and assort it, and make out of disjointed episodes a chronologically connected and literary whole.

The first and, prior to the appearance of the present edition, the only English translation of the 'Heimskringla' was that of Samuel Laing, published in London in 1844. In many respects Laing's translation is an admirable one, and fairly represents, at least in England, in this direction, the scholarship of his day. The present version Mr. Anderson calls upon his title-page a second, revised edition of Laing's. The older translation still forms the great body of the work, which has, however, by additions and eliminations, been made to correspond with Unger's edition of the original text published in Christiania in 1868. Laing's preliminary dissertation has been retained intact, but many of his footnotes, considered by the editor irrelevant or obsolete, have been omitted; many new notes, however, principally from the Swedish translation of Hildebrand, together with indexes of names and places, maps, and a chronological table, have been added, all of which materially increase the value and utility of the book. As much, unfortunately, cannot be said of the revision of the orthography of proper names throughout the work, with which, it must be acknowledged, the editor in his introduction declares himself not entirely satisfied. What possible advantage is gained by writing Fin for Finn, Hal for Hall, and the like is not apparent; on the same plan he would write in English history of Wiliam the Conqueror, Cromwel, or the Earl of Esex. Olafson for Olafsson, too, does not represent the true pronunciation. In such names as Snorri, Skuli, Tryggvi, final "i" (it would seem) might at last be allowed to take the place of the "e" that has mistakenly come into the English orthography of these words from Danish, and has no counterpart in the original Norse. No point is gained by instancing Vigfusson, since his usage in just this particular is peculiarly vicious and inconsistent.

By far the most serious error in judgment in the present edition is the retention of the earlier version of the skaldic strophes which Snorri from time to time cites as corroboratory testimony. Laing, with a diligence utterly misapplied, made over these verses into modern jingles that bear no sort of relationship, except assumed community of topic, to the originals, which they only serve to make ridiculous. Mr. Anderson assures his reader that he will lose nothing if he skips them; he might have gone further with the assurance that he will certainly lose a great deal if he does not. In one or two cases the editor has given, in addition to Laing's easy versions—free-and-easy would be more correctly applied—Vigfusson's paraphrases as contained in the 'Corpus Poeticum Boreale.' The way out of the difficulty would have been to eliminate them all, and either to have put Vigfusson's versions in their place (the better course), or, what seems to have suggested itself, to have omitted them altogether.

Mr. Anderson's 'Heimskringla' is a limited edition, of which only 520 numbered copies in all have been printed for England and America. The four sumptuous volumes in letter-press and paper bear witness to the perfection of modern book-making, and its publishers have spared no pains to make the whole external appearance of the work correspond to the rank it holds in the history and literature of the North. Laing's original translation is long since out of print. In making the 'Heimskringla' again accessible to English readers, Mr. Anderson has done a real and important service. In its new form it will come appreciably nearer to the desert claimed for it, under these conditions, by Carlyle, "to be reckoned among the great history-books of the world."

Studies in the South and West, with Comments on Canada. By Charles Dudley Warner. Harper & Bros. 1889.

THIS book is a collection of articles which appeared between the spring of 1885 and the beginning of 1889 in *Harper's Monthly*, with the exception of one short chapter reprinted from the *Princeton Review*. A sort of appendix, under the name "Comments on Canada," is the least attractive part of the work. The author knows nothing of Canada but what he has learned from books open to everybody, or in a flying trip of two or three months, a time hardly sufficient to study the institutions and mode of life of a neighboring country.

The first four hundred pages, giving the writer's impressions in the West (for his South is mainly the Southwest), have a higher and much more artistic value. They are, almost throughout, good reading, and many of them are, to the careful and intelligent reader, full of suggestion and instruction. The chapters on New Orleans and its surroundings, including that on "A Vaudoo Dance," are the most picturesque; but the works of Cable have made the reading public so thoroughly familiar with the Africanized fragments of old France to the south of Canal Street, that it is difficult to tell us here anything new. Mr. Warner, however, tells us much else about the South which is not picturesque, and which Cable in his sketches and novels has no use for. He speaks to us of the new and forceful industrial life that has taken hold of the whole South, though it has touched most lightly yet upon the habitat of the Creole:

"When the Northerner finds great foundries in Virginia using only the products of Virginia iron and coal mines; when he finds Alabama and Tennessee making iron so good and so cheap that it finds ready market in Pennsylvania, and foundries multiplying near the great furnaces for supplying Northern markets; when he finds cotton-mills running to full capacity on grades of cheap cottons universally in demand throughout the South and Southwest; when he finds small industries, such as paper-box factories and wooden bucket and tub factories, sending all they can make into the North and widely over the West, etc., etc.; and when he sees Roanoke iron cast in Richmond into car irons and returned into a car factory in Roanoke which last year sold 300 cars to the New York and New England Railroad—he begins to open his eyes" (p. 111).

The chapters on the Northwest teem with statistics of material growth. This is unavoidable. When you come to a large city, full of wealth and of all the latest results of science and industry, built on a spot which thirty or forty years ago was browsed over by herds of buffaloes, you cannot help counting and comparing. The effort of our writer is to point out that St. Paul and Minneapolis and Kansas City and Chicago are not all made up of lumber and flour and pork and Boards of Trade and bank clearings; that there is also a higher intellectual life; that men who have grown rich rapidly, may learn to be refined; that one Chicago millionaire can found the greatest reference library of the country by his will, and another Chicago millionaire—Gunther, the candy-maker—can collect in his lifetime, for public inspection, the largest museum of autographs and curiosities; and that the teaching methods of Chicago schools are worthy of imitation by cities far east of it. In Germany the provincial people have a terse expression with which they meet such condescension of the visiting Berliner, and which would often have been a good reply to Mr. Warner's bursts of astonishment: "Did you think that we eat soap?" As far as this volume helps New Yorkers and Northeastern men and women generally to understand that the people of the South and West "do not eat soap," it will do much good.

In his sketch of St. Paul, Mr. Warner omits to mention one great enterprise, which makes that city, for at least one intellectual purpose, the capital of the United States. It is the "West Publishing Company," with its weekly publication in nine divisions of *all* the State Supreme Court and Federal decisions, with a monthly digest, enabling the lawyer to get all his authorities from this point in the far Northwest a year or two quicker than through the regular State reports. New York and Philadelphia may smile, as Roman satirists smiled when the provincial lawyers in Gaul began to rival those of the metropolis, and threatened to spread their learning to half-savage Britain:

"Gallia causidicos docuit facunda Britannos."

But while our traveller luxuriates in the picturesque shabbiness of the Creole town and the primitive virtues of the Acadians around Abbeville, while he admires the force and success of the new South, the wealth and enterprise of the Northwest, and the art treasures

and musical culture of Cincinnati, he feels at home and happy only in Kentucky, to which State he devotes his last chapter, dwelling with fervor on Louisville, the city of "culture, taking the form of the worship of beauty and the enjoyment of life" (p. 282)—yet a city of 180,000 inhabitants which alone in all Christendom, among cities of that size, has no library worth mentioning, no observatory, no museum of art, and, were it not for Mary Anderson, not one citizen known by fame to the outer world in literature, science, or art. Mr. Warner fairly raves about the virtues of blue grass. It brings forth not only sturdy Presbyterians, but, what is more important, healthy and therefore beautiful women.

"A geologist told me that once when he was footing it over the State with a geologist from another State, as they approached the blue-grass region from the southward they were carefully examining the rock formation and studying the surface indications, which are usually marked on the border line, to determine exactly where the peculiar limestone formation began. Indications, however, were wanting. Suddenly my geologist looked up the road and exclaimed:

"'We are in the blue-grass region now.'

"'How do you know?' asked the other.

"'Why, there is a blue-grass girl.'"

"My geologist" is no other than John R. Proctor, the State Geologist, to whom Mr. Warner acknowledges himself much indebted for guidance and information. Before leaving the blue-grass country, he bears witness, not only to its well-known fair women, fast horses, and good whiskey, but also to the growth of sobriety and even abstinence, and to a gradual loss of interest in "poker."

But when from Lexington he goes eastward into the "mountains," into the country of the rifle and the shot-gun, of small cabins and large families, of sloth and illiteracy, as well as of walnut timber, coal, and iron, and new mining towns, he has to mix some darker shades with his bright colors. He thus describes a "family feud" or vendetta, in the words of a mountaineer informant:

"Was there much killing round here? Well, not much lately. Last year John Cone over on Clover Fork shot Mat Harner in a dispute over cards. Well, what became of John Cone? Oh, he was killed by Jim Blood, a friend of Harner. And what became of Blood? Well, he got shot by Elias Travers. And Travers? Oh, he was killed by a man by the name of Jacobs. That ended it. None of 'em was of much account."

Having Prof. Proctor as a guide, we wonder that Mr. Warner has not adopted the theory by which the Professor accounts for the incurably low character of many of the mountaineers in the Cumberland and Appalachian Mountains, all the way from West Virginia to northern Georgia. He traces them, in a paper read before the Filson Club of Louisville, to "bad stock" from Virginia and North Carolina tide-water counties; men and women who were transported from England as convicts, or vagabonds, or sturdy beggars, many of them the descendants of thralls from before the Norman conquest, and who before, and even for some time after, the Revolution were held in a sort of slavery as white "servants."

Our writer hopes a great deal for the elevation of this people from the influx of fresh blood—Swiss and German colonies of farmers and vine-growers; Northern men developing the coal and iron mine; railroads, and the new life begotten of the railroad. These things will bring the reign of law, and will put an end to the worse than Corsican vendetta. Among physical causes for the scraggy stock of eastern Kentucky humanity, he looks rather to their badly cooked food than to a low-bred ancestry, and therefore hopes for improvement from the introduction of better methods of cooking.

The book has no index, and, as it is easily read through in two or three sittings, it needs none.

Nature and Man: Essays Scientific and Philosophical. By William B. Carpenter, C.B., M.D., LL.D., F.R.S., with an introductory memoir by J. Estlin Carpenter, M.A. D. Appleton & Co. 1889.

MR. CARPENTER'S memoir of his father is a very modest tribute to a man of very great abilities and commanding worth. It covers only 150 pp., and yet it gives an admirably distinct impression of Dr. Carpenter's personality and various work. He was well born (October 29, 1813), being the son of Dr. Lant Carpenter, a preacher, teacher, and philanthropist, the odor of whose sanctity was in all the Unitarian churches. Mary Carpenter, a leader in the reform of prison discipline, a woman of immense vivacity and practical ability, was sister and companion of the growing boy. Dr. Lant Carpenter's school was remarkable in its day for the emphasis on scientific studies. These gave to the son's mind its life-long bent. Civil engineering attracted him, but there was no opening, and he accepted the study of medicine as a second best. He matured so rapidly that when sixteen we find him lecturing on optics before the Mechanics' Institution in Bristol, where his youth was spent. Studying first with a Bristol physician of high character, in 1834 he went to London and lived a busy life, attending thirty-five lectures a week, not counting a course in comparative anatomy, practising in the hospital, acting as clinical clerk, and studying music in his leisure hours. His interest at this time in Lyell and Herschel was prophetic of the expansion of his later studies.

His education was continued at Edinburgh. His first published paper, on "The Structure and Functions of the Organs of Respiration in the Vegetable and Animal Kingdoms," was the beginning of a series of publications seeking to bring the animal and vegetable kingdoms under a common law. Before his graduation, in 1839, he had published one of the best-known of all his works, 'Principles of General and Comparative Physiology.' Returning to Bristol, he endeavored to establish himself in practice there, but with small success. His reputation as a lecturer and author actually hindered him. A professorship was much more to his mind, but at Edinburgh, where he first applied, his Unitarianism was a fatal bar. He was forced for bread-winning to the preparation of a 'Cyclopædia of Natural Science' and a tutorship in Lady Byron's family.

In 1842 appeared his 'Principles of Human Physiology,' the book by which the general public always knew him best. His ability was soon after recognized, and honors crowded on him thick and fast. First (1845) came the Fullerian Professorship in the Royal Institution; simultaneously a lectureship in the London Hospital on General Anatomy and Physiology; in 1847, the Examinership in Anatomy and Physiology in the University of London, and in the same year a geological lectureship in the British Museum; in 1849, the chair of Medical Jurisprudence in University College; in 1852, the principalship of University Hall; in 1856, the Registrarship of the University of London. For a few years the positions in University College and University Hall were held in connection with his registrarship, but they were resigned as the former made heavier demands upon his time and strength. For twenty-three years he continued in this office, which made his a leading share in the direction of the University. His business qualities were equal to his scholarly attainments.

There are many pleasing incidents and episodes in Mr. Carpenter's memoir of his father. One of the most pleasing is the manner of his recovery from a very serious illness in 1863. There was a complete collapse of all his vital and volitional energies. He could do nothing, he cared for nothing; he seemed prematurely old and near to death. But one day a distinguished geologist brought him some specimens from the Canadian limestones. At once his interest was aroused and his recovery began. In 1868 and the two following years, Dr. Carpenter was the director of deep-sea dredging expeditions which were fertile in results, and when the *Challenger* was chartered for her famous cruise around the world, the proffered direction of the expedition was a very great temptation. Dreading absorption by a "dominant idea," he took the advice of friends and accepted their decision. It was contrary to his inclination, but he had no vain regrets as he settled down to his habitual routine. In the later years of his life he lectured very frequently to great popular audiences, but trusted wholly to the largeness of his thought and the clearness of his exposition as the means of making his lectures attractive to the multitude. After some months of failing strength, but while still in the performance of his regular duties, his death, hastened by an accident, occurred November 13, 1885.

Following the lectures and articles which make up the larger part of the present book, there is a chronological list of Dr. Carpenter's publications. It is the record of a wonderfully busy life. It is fifteen pages long, and though it contains no mention of controversial letters to newspapers, there are 293 titles, many of them indicating elaborate works. Roughly classified, they will be found to fall into three periods, corresponding to three different kinds of work. During the first period Dr. Carpenter's work was not that of an original investigator. "His mind at this time preferred to dwell on large and general conceptions, to discover analogies, to follow out principles rather than to come in close contact with actual facts." Both of his great works on physiology belong to the first period, and for the wide range of facts on which they were based he relied mainly on others. In his arrangement of these facts, and in the generalizations he built up from them, he displayed much originality and penetration. The mid period of his life and authorship was a period of original investigation, and its energy was concentrated on the study of the Foraminifera, his 'Researches' appearing in four parts, 1855–1860. It was this study which interested him so deeply in the deep-sea dredgings ten years further on.

In the third period of his authorship the relations of science and religion engrossed his interest to a remarkable degree. Against the automatism and determinism of Huxley and Clifford, he did vigorous battle for the free agency of man. He had begun life as a determinist, and his studies in automatism had been serious and prolonged. His doctrine of "unconscious cerebration" was one of the most interesting features of his 'Mental Physiology.' He could go far with Huxley and Clifford, but not to their conclusion. To harmonize evolution with theism was another task of the third period, and to show that an argument from design, if not Paley's, was still valid. A majority of the fifteen papers collected in this volume deal with the questions which interested and sometimes agitated him in his later

years. Those who are acquainted with Dr. Martineau's thought will notice many similarities to it in Dr. Carpenter's. It would be interesting to know which was the more influenced by the other. They were good friends, and frequently conferred upon the highest things.

Dr. Carpenter's relations to Darwin's hypothesis are clearly defined in both the memoir and the subsequent papers. Long before the publication of the 'Origin of Species,' Dr. Carpenter was tending to an evolutionary conception of the world, and some of his foreshadowings of this are of great interest. The 'Vestiges of the Natural History of Creation' found in him a sympathetic reader, approving and condemning much. He hailed Darwin as the inaugurator of a new era in biological science, but insisted that natural selection only expressed a general fact, and was not a *vera causa*. Dr. Carpenter's mind, too, in general was much more theological than Darwin's, and his compromise between pantheism and anthropomorphism seems little likely to sustain itself entire. The anti-scientific, who have made much of the atrophy of Darwin's love of music and poetry, will find a counter fact in Dr. Carpenter's delight in music and poetry, which never failed. For many years he played the organ in the Hampstead Unitarian Church. His home life was rarely beautiful.

Manual of Oriental Antiquities. By Ernest Babelon, Librarian of the Department of Medals and Antiques in the Bibliothèque Nationale, Paris. Translated and enlarged by B. T. A. Evetts, M.A., of the Department of Egyptian and Assyrian Antiquities, British Museum. With 241 illustrations. 12mo, pp. xix and 312. G. P. Putnam's Sons. 1889.

With the appearance of the invaluable "Bibliothèque de l'Enseignement des Beaux-Arts," France has established her claim to the first place in the popular instruction as well as in the practice of the fine arts in our time. In the preface to his 'Grammaire des arts du dessin,' Charles Blanc expressed, with his usual eloquence of style, his regret at seeing public instruction in France "muet sur les questions d'art." Taking this as their watchword, the organizers of the "Bibliothèque," stimulated by the patronage of the Government, which assured them financial success, and honored with prizes from the Académie Française and the Académie des Beaux-Arts, have produced a series of small volumes on the history and theory of the fine arts, in which one is puzzled whether to admire most the standard of authority, the simplicity of style, or the excellence of the illustrations. In such a series new theories and doctrines are naturally not to be looked for, yet the fact that the thirty-two volumes already published were written by such men as Eugène Müntz, Fr. Lenormant, Mathias Duval, Maspero, Collignon, Havard, and Delaborde (to select a few names from many), is a sufficient guarantee that they are by no means mere compilations, like most of the handbooks on matters of art to which we have hitherto been accustomed. Rejecting the doctrine that a little knowledge is a dangerous thing, these men, selected because they represent the best authority on the subjects of which they treat respectively, seek to give to the student of art or the visitor of museums such knowledge of the history and the processes of the various arts and schools of art as will enable him to appreciate intelligently the objects he sees about him—in other words, to do for art what Tyndall, Huxley, and their followers have done for science in the way of making it popular.

To this series M. Babelon's 'L'Archéologie Orientale' belongs, and it possesses many of the excellent qualities which we have attributed to the work as a whole. As the ground covered — Chaldæa, Assyria, Persia, Syria, Judæa, Phœnicia, and Carthage — occupies four volumes of MM. Perrot and Chipiez's monumental 'Histoire de l'Art dans l'Antiquité,' nothing more than a summary treatment of the subject is to be expected, and the author modestly alludes to his book as only an abridgment. This abridgment, however, is made with admirable skill, and what the author does tell is told so clearly and simply that even the reader to whom the subject is entirely new cannot fail to form a well-defined conception of the characteristics of the arts of the great Oriental monarchies, and of their relations to one another. To be sure, M. Babelon has been greatly helped in this task by the fact that the extant monuments of these countries are relatively few in number, as compared with those of Greece and Rome; but none the less does he deserve praise for the manner in which he has grouped his material so as to avoid the possibility of confusion, and, in connection with each topic, to create an impression which should be perfectly distinct in itself, and yet bear certain relations to both that which precedes and that which follows it. Had he been willing to risk taxing the patience of his readers too far by insisting more upon dates and repeating them oftener, his success in this effect would have been still greater. The relation which the art of Assur-bani-pal bore to that of Assur-nazir-pal can be appreciated by the student only when he has the relative dates of these two monarchs firmly fixed in his mind. So it is with the connection between Persian and Assyrian art; and to those to whom Oriental art is interesting chiefly because of its influence upon the beginnings of Greek art, the dates of the monuments of the former are of prime importance. These the author gives too sparingly, and as a result the reader who is not familiar with Assyrian chronology, for example, will occasionally find it difficult to follow the thread of the development of Assyrian art, with no other guide than the names of the kings under whom important changes took place.

We wish that the chapter on Hittite art had been a little more expanded, now that Hittite monuments and civilization are the subject of so much discussion; but as a recompense for what is sacrificed there, M. Babelon gives a full and detailed description of the Temple of Jerusalem which will be very acceptable to students of the Bible, as a résumé of the latest theories and investigations concerning the one great monument of Jewish art.

Mr. Evetts's translation is intelligent and satisfactory from an archæological point of view, but unskilful in the use of language, so that the grace and ease of the original are often completely sacrificed by his attempt to render his author as literally as possible. Too close fidelity to the words of the original may be a good fault, but it is a fault nevertheless, and sometimes results in such inelegances as this: "The cuneiform inscriptions themselves, while the empire founded by Nebuchadnezzar was flourishing, often point out temples and palaces falling to ruin, which the kings strive without ceasing to repair or rebuild." There are many such rough passages in the book which the alteration of a single word would have made smooth without modifying in the least the author's meaning—indeed, would have conveyed his meaning much more easily.

Of the 241 illustrations it is enough to say that they are quite up to the standard of the other volumes of the series.

Papiers et Filigranes des Archives de Gênes, 1154 à 1700. Par C. M. Briquet. Geneva. 1888. 8vo.

For nearly a century the subject of the watermarks in paper has been studied with increasing zeal, in the hope of being able thereby to approximate with some degree of certainty the date of documents and books. Vast collections of these designs have been made and classified. Sotheby, in his 'Typography of the Fifteenth Century' and 'Principia Typographica,' reproduced 1,100 of them. Longhi, in 'Le antiche Carte fabrianesi,' described 1,887 belonging to Fabriano, which was one of the oldest and most active centres of paper manufacture. M. Briquet, in the work before us, has figured 597 gathered in the archives of Genoa, where the dates of the documents enabled him to arrive with some degree of certainty at the probable age of the paper. These he has accompanied with a chronological table and a descriptive list, in which, under each design, he enumerates the other places where it has been found. The industry bestowed on the preparation of the volume is most praiseworthy, and the preliminary account of the introduction of the paper industry into Europe from China is interesting; yet one can hardly help concluding that the industry has been misapplied, and that the utility of these researches amounts to little.

In certain limited fields the study of watermarks may yield satisfactory results. The series of prints known as the Iconographia of Van Dyck presented many puzzling questions to collectors, for the "states" are numerous, the coppers passed through many hands—indeed, they are still in existence—and it was not always easy to distinguish between the different impressions. In 1877 Dr. Wibiral, after a patient examination of some 15,000 prints, published his 'L'Iconographie d'Antoine Van Dyck,' with facsimiles of nearly a hundred water-marks which he had noted in the papers employed, and he succeeded in classifying, with wonderful accuracy, the succession in the different stages of the plates during the period of about thirty years in which they have interest for collectors. We have found his results almost uniformly correct, though we have met with several water-marks which had escaped him.

When applied, however, to paper-making throughout Europe during the course of some six hundred years, the unlimited magnitude of the field and the elements of uncertainty pervading it render hopeless the effort to coördinate and systematize the infinite variety of designs. The water-mark is produced by a wire bent into a pattern and soldered on the fine laid wires of the mould with which the pulp, in hand-made papers, is dipped from the vat. This mould, M. Briquet informs us, wears out in a year or two. As every workman must have one, it is easy to see how many moulds a single paper-mill would use in ten years. It might be the intention to have the same design on all, and yet no two might be exactly alike, for many of the designs are exceedingly crude, and betray the utmost carelessness in bending the wires as they were soldered on, while, in the progress of wear, distortions and partial breaking away must have undoubtedly occurred. Thus the minute and infinite variations which are found in favorite designs, such as the pot, or the crown, or the foolscap, may have no significance, or may indicate a century difference in time and the distance between Venice and Ant-

werp, for certain designs remained in use for hundreds of years and were employed all over Europe. Besides, they frequently signified not so much the individual paper-maker as the size and quality of the paper. Then the question is still further complicated by the currents of trade. Italian papers were carried all through Europe, while each land had, besides, its own mills using virtually similar water-marks, so that a Barcelona or Nürnberg MS. on paper bearing the favorite bull's head may represent a local manufacture of one century or a Genoese or Venetian make of another. When Wibiral, in his limited field, reproduces twenty-seven varieties of the *folie* or foolscap—and we have met in the Van Dyck series three or four additional—it will be readily seen how vast is the material, and how completely absent are the factors which would enable the investigator to educe from it trustworthy principles serviceable to the archæologist or historian. In isolated cases, when some peculiar water-mark may reasonably be presumed to have been used by a single maker during a limited period, some assistance may be hoped for, as well as in the rare instances where the name of the maker was employed; but with the great mass of papers the investigation, however interesting as an amusement, will never, we fear, produce results of scientific value.

We have compared with M. Briquet's plates the water-marks of a number of fifteenth-century books and MSS., Spanish, French, Italian, and German, without being able to identify a single one, though they consisted of the bull's head, the gauntlet, the balance, and other favorite marks. Of course, a limited experiment such as this proves little, but yet a single identification would have been a satisfaction. In this investigation one fact proved the inherent impossibility of reducing the study of water-marks to a science. The Seville, 1491, edition of 'Las Siete Partidas' is printed on paper bearing the well-known mark of the gauntlet with a star. Now of two sheets gathered together in the same signature, one happens to have a star with five points and the other one with six—thus relegating them into two different types. Evidently the workmen who fashioned and soldered the wires followed their own devices, with cruel indifference to the antiquarians who, four hundred years later, were to endeavor to deduce laws from their careless vagaries.

Far Away and Long Ago. By Frances Anne Kemble. Henry Holt & Co. 1889.

THIS is a sketch of life fifty or sixty years since in Berkshire County, Massachusetts. To be more precise, we may say that it is a sketch of life in Stockbridge and Lenox at the time when Mrs. Kemble knew it well, before the period of railroads, and during the time of a democratic simplicity of life and tastes long since vanished. The characters are not altogether portraits, as some who have reviewed the book seem to imagine. Judge Selbourne and his wife were undoubtedly suggested by friends of Mrs. Kemble's, and Mumbet was the name of a servant the events of whose life make part of a family history; but Mrs. Kemble's Mumbet is of a different race, and altogether a different person, from the Mumbet of that story, and the Judge and his wife are "composite" types. This, at least, was our idea as to the Selbournes on first reading the story; others will say that they represent the late Mr. and Mrs. Charles Sedgwick, of Lenox. However this may be, the sketches, or portraits, are very agreeably done.

The question raised by the book is whether the picture of the old New England life is correct or not—a question hard for any one of the present period to answer. The old life has been blotted out. The types have been effaced, and new and different types evolved. There are railroads where there were once coaches, and wealth and poverty where there was once a remarkable equality of condition; there are a thousand other changes, moral and material. To write about the former state of society requires a long and vivid memory, and here and there Mrs. Kemble might, perhaps, be proved guilty of anachronisms. But she has succeeded in giving her story an atmosphere distinctively American. The *tone* of the people is American, their conversation and way of thinking and feeling about one another belong to no other country, and to no other part of the country than New England.

The descriptions of the country are very pretty, and the story just simple enough to serve as a background for the sketches of manners and customs. An Englishman with his two daughters are three of the principal characters of the story, and these, with an early Irishman—the Irish emigration was then just beginning—furnish a contrast to the American characters which enables Mrs. Kemble to put the American traits in relief. Those who love New England and its past will be interested in the book; it gives the impression produced upon the mind of an unusually gifted and accomplished Englishwoman by an American community which, while it existed, attracted the attention and interest of all who came in contact with it. This, foreigners said, was American democratic life. Impermanent as it was, and primitive, as compared with the civilization which has succeeded it, lovers of the past may be pardoned if they regret the disappearance of many of its features.

History of the Celebration of the One Hundredth Anniversary of the Promulgation of the Constitution of the United States. Edited by Hampton L. Carson, Secretary of the Constitutional Centennial Commission, with illustrations. Published under the direction and by the authority of the Commission. Philadelphia: J. B. Lippincott Co. 1889.

THE Constitutional Centennial Commission, of which John A. Kasson was President and Hampton L. Carson was Secretary, has published in two ponderous tomes, one of 478 pages and the other of 514 pages, a circumstantial and minute history of the celebration at Philadelphia, in September, 1887, of the one hundredth anniversary of the promulgation of the Constitution of the United States. The publication is edited by the Secretary, and leaves nothing to be desired in point of fulness, though the quality of the contents is very unequal in respect of permanent value, comprising as the volumes do not only the commemorative addresses of President Cleveland, Mr. Justice Miller, and others, but also much that relates to the mere machinery of the celebration, such as the reports of the local committees on transportation, music, medical care of the visiting troops, reception of guests, etc. To these reports are added descriptive lists of the industrial processions and military displays held in honor of the event, with an account of the ceremonies in Independence Square on the memorial day, and of the banquets which succeeded it. As of permanent value we may cite the history of the formation of the Constitution and of the causes which led to its adoption, by Mr. Kasson; the biographies of the members composing the Federal Convention, prepared by Mr. Carson; and the history of the several amendments which have been added to the Constitution.

In the 'American Museum' for 1788 the reader will find an account of the celebration which was held during that year in Philadelphia in honor of the ratification of the Constitution by a sufficient number of States to insure its adoption. A comparison of the pageant of 1788 with that of 1887 would seem to indicate that while such popular spectacles have gained immensely in volume, they have not greatly improved in point of variety as to their constituent elements. That our colored fellow-citizens should have taken little more part in the ceremonies of 1887 than in those of 1788 will certainly be matter of surprise and regret to others than the editor of these volumes. It has been pertinently said that the "nullus liber homo" clause in Magna Charta is worth all the Latin classics, and would have been worth still more if the word "liber" had not pointed to the presence of slavery in England in the time of King John. It might have been supposed that, alike from race pride and from civic ambition, our negro citizens would have been eager to bear witness, by their presence in this pageant, to the fact that the previous condition of servitude had disappeared from American political society, and that the American Magna Charta no longer gave the lie to the American Declaration of Independence.

BOOKS OF THE WEEK.

Aldrich, Anne R. The Rose of Flame, and Other Poems of Love. 2d ed. C. T. Dillingham.
Boyle, Rev. G. D. Characters and Episodes of the Great Rebellion. Oxford: Clarendon Press; New York: Macmillan & Co. $2.

WM. M. THORNTON, Chairman of the Faculty. P. O. University of Virginia, Va.

School Trustees,
Principals,
Teachers,

And others interested, are invited to consider the advantages offered by the *Nation* as an advertising medium. School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especially ordered displayed on other pages.

The *Nation*, in its special field of political and literary criticism, is unlike any other periodical, American or foreign. About 9,000 copies are circulated weekly, but these figures do not accurately represent the number of its readers. It is taken by reading-clubs and literary associations in a large number of places, and may be found on file in every library of importance in the country. There are probably few weekly periodicals whose columns offer so favorable an opportunity for reaching an audience interested in educational matters.

Rate per year for 3 lines, $23.40; 4 lines, $31.20; 5 lines, $39.00, etc. Any term less than one year at same rates —15 cents per line per week.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

THE NATION, 208 Broadway, N. Y.

SCRIBNER'S EDUCATIONAL BOOKS

Suitable for Use in High-Class Schools, Colleges, and Ladies' Schools.

An Elementary History of Art.

By N. D'Anvers. With a Preface by Prof. Roger Smith. An entirely new and enlarged edition. Architecture and Sculpture. Painting. With 360 Illustrations. Large crown 8vo, cloth, gilt top, $3.75.

For students who desire thus to train their own minds, for those who wish to prepare themselves for Continental travel, and, above all, for pupils in schools of a high class, no handbook of Art History could be more suitable than this volume.

Biographies of the Great Musicians.

Specially prepared for Schools, Amateurs, and Students of Music. Each volume strongly bound in decorated cloth. Per volume, $1.00.

HAYDN,	SCHUBERT,	BACH,	WAGNER,

SCRIBNER & WELFORD *also supply the entire series of* BOHN'S LIBRARIES, *including the Classical, Collegiate, Scientific, etc., etc., containing the Best Editions of Standard Works for Educational and other purposes. Complete detailed lists of these and our other publications supplied on application.*

SCRIBNER & WELFORD,

743-745 BROADWAY, NEW YORK.

The History of the Roman Republic.

Abridged from the History by Prof. Mommsen. By C. Bryans and F. G. R. Hendy. One volume, 12mo, $1.75.

The merits of Professor Mommsen's History are well known. The need of an abridgment of this great work—a book that should present the salient points of the original in a form suitable for use in schools and colleges—is well met in this condensation by two competent English scholars.

"I have examined it with care and find the work skilfully done. It will be a very welcome book, I am sure, to teachers and students. I shall be glad to use it with my classes and believe it will be widely adopted as a text-book in our schools and colleges."—*Prof William A. Packard, Princeton College.*

Important Works by Prof. G. P. Fisher, D.D., LL.D.

History of the Christian Church.

8vo, with numerous maps. $3.50.

"I have to tell you of the pride and delight with which I have examined your rich and most instructive volume. As an American, let me thank you for producing a work so honorable to the country."—*Hon. George Bancroft.*

Manual of Christian Evidences.

12mo, 75 cents.

"By all odds, the best treatise on the evidences of Christianity that we know."—*The Examiner.*

"It touches every leading point of Christian evidence, and meets every important objection."—*The Churchman.*

First and Fundamental Truths.

Being a Treatise on Metaphysics. By ex-President James McCosh, D.D., LL.D. 12mo, $2.00.

Dr. McCosh regards this work as the copestone of what he has been able to do in philosophy. It is destined to rank as the most important of all his works.

"The things noticeable in this book are its fulness of form, its simplicity of diction, its frequent and happy use of illustration, and its steady flow of clear and ample thought."—*N. Y. Evangelist.*

Important Works on Mental and Moral Science.

An Outline Study of Man.

Or, THE BODY AND MIND IN ONE SYSTEM. With illustrative diagrams. By Mark Hopkins, D.D., LL.D., late President Williams College. Revised edition. 12mo, $1.75.

"For over ten years I have made it a text-book in the senior class of this school. It is, I think, the greatest and most useful of the books of the greatest of our American educators, and is destined to do a great work in forming not only the ideas but the character of youth everywhere."—*Gen. A.C. Armstrong, Principal of Hampton Institute.*

The Law of Love, and Love as a Law.

Or, CHRISTIAN ETHICS. By Mark Hopkins, D.D., LL.D., late President Williams College. 12mo, $1.75.

This is designed to follow the author's 'Outline Study of Man.' As its title indicates, it is entirely an exposition of the cardinal precept of Christian philosophy in harmony with nature and on the basis of reason. Like the treatise on mental philosophy, it is adapted with unusual skill to educational uses.

Elements of Physiological Psychology.

By George T. Ladd, D.D., Professor of Mental and Moral Philosophy in Yale University. With numerous Illustrations. One vol., 8vo, $4.50.

"In giving us something vastly more exact and complete on the physiological side than those sorry writings of the Spencers, the Carpenters, the Maudsleys, and the Luyses, Prof. Ladd earns the warm gratitude of all English readers. His erudition, in short, and his broad-mindedness are on a par with each other; and his volume will probably, for many years to come, be the standard work of reference on the subject."—*Prof. William James, in The Nation.*

Elements of Intellectual Science.

A Manual for Schools and Colleges. By Noah Porter, D.D., LL.D. 8vo, $3.00.

This is an abridgment of the author's 'Human Intellect,' containing all the matter necessary for use in the class-room, and has been introduced as a text-book in Yale, Dartmouth, Bowdoin, Oberlin, Bates, Hamilton, Vassar, and Smith Colleges; Wesleyan, Ohio, Lehigh, and Wooster Universities, and many other colleges, academies, normal and high schools.

Elements of Moral Science,

THEORETICAL AND PRACTICAL. By Noah Porter, D.D., LL.D. 8vo, $3.00.

Julius H. Seelye, President Amherst College: "Like all the writings of its distinguished author, it is copious and clear, with ample scholarship and remarkable insight, and I am sure that all teachers of moral science will find it a valuable aid in their instructions."

*** The above books will be supplied to teachers at* SPECIAL NET RATES. *Terms given on application.*

CHARLES SCRIBNER'S SONS,

PUBLISHERS,

743-745 BROADWAY, NEW YORK.

The Nation.

NEW YORK, THURSDAY, AUGUST 15, 1889.

The Week.

THE meeting held at Harrisburg last week was nominally the Republican State Convention of Pennsylvania, but actually a demonstration for Matthew S. Quay. After endorsing the Chicago platform of last year, the Convention set about its business by passing two resolutions on the tremendous subject of Quay. The first of these dwells upon the "Pennsylvania leadership" of last year as the cause of the party's victory in the campaign. Not satisfied with this, another resolution follows immediately, giving particulars. "The Republicans of Pennsylvania," the platform continues, "claim especial recognition, for the reason that, in the hour of its extremity, they furnished to the national Republican organization a Chairman who, during all the anxious days of the recent national campaign, in coöperation with the honored representatives of other States, so controlled the forces at hand as to compel victory. The thanks of the Republicans of this Commonwealth are due and hereby tendered to the Hon. Matthew S. Quay for the honorable and masterful way in which he conducted that campaign." This, we think, is without precedent in our political history, as an example of arrogance in tone and blatherskite in composition, Mr. Quay not being the nominee of the Convention for any office, and therefore not properly the subject of the eulogy customarily bestowed upon candidates. The placing of these two resolutions ahead of the one which endorses the Administration of President Harrison was evidently not the result of accident. It had the clear design of affirming that Quay is the greater man of the two, and it authorizes Quay to write himself, as the Texas doorkeeper did, "a biger man than old Grant."

That such a convention should endorse the Administration because it "seeks so to adjust the burdens of taxation that those persons and interests able to bear most shall bear most, and so that those able to bear least shall bear least," was to be expected. The theory and practice of representative government require and suppose that taxes shall be laid by the legislative branch, and that the executive shall not "adjust the burdens of taxation" at all. The present executive has had no opportunity as yet to advise Congress how such burdens should be adjusted. The Convention has, therefore, given its approval to a policy unknown to the Constitution or to any form of civilized government in the world. Nor was this move made by mistake. It was a commendation of the policy of increasing taxes by Treasury decision, and substituting that method of advancing private and special interests in place of acts of Congress. We look in vain in the platform for the condemnation of Trusts and "combines" which the Philadelphia *Press* urged upon the Convention. Nothing can be found in it which implies any dissatisfaction with any monopoly whatsoever. On the other hand, there is a resolution which "heartily commends the wise and friendly liberality shown by Commissioner Tanner to his brother soldiers," such as rerating the pension of a rich man, a Senator of the United States, and lifting $4,000 cash from the public treasury into his pocket in a lump sum.

Four years ago the Ohio Republican platform declared that "the Republican party, which enacted the present Civil-Service Law, will faithfully maintain it and cheerfully aid in all needed amendments to give it full force"; that "it is committed to extend the law to all grades of service to which it is applicable," and that "ample appropriations should be made to enforce it in letter and spirit." This year the Ohio Republican platform contained no allusion to the subject of the Civil-Service Law. In like manner, four years ago the Pennsylvania Republican platform enumerated among "the live issues" "the establishment of a true system of civil service, which will give a fixed tenure of office, *and no removal during the term of office except for adequate public cause*"; at the same time arraigning the Democratic Administration for its "hypocritical avoidance of pledges touching the civil service." This year the Pennsylvania Republican platform contains no allusion to the subject of the civil service.

Elections in Kentucky had long been so terribly one-sided that nobody outside the State could take much interest in them, but two years ago the opposition developed unexpected strength, and cut down the lead of the Democratic candidate for Governor over his Republican rival to less than 17,000 votes. The only State office at issue this year was the Treasurership, and as it is an "off year," the Republicans entered the contest with unusual spirit, while the Democrats appeared to take little interest in the canvass. So apathetic, indeed, was the Democratic campaign that a fortnight ago the party managers seemed to be in a panic lest the Republicans might snatch a victory; but the result shows that there is little prospect of a political revolution in Kentucky, the latest returns indicating that the Democratic majority for Treasurer will rise to about 35,000.

The Philadelphia *Press* makes a serious blunder when it says, in explanation of this victory, that "Kentucky has the largest number of illiterates in proportion to its population of any State in the Union." The last census showed the proportion of persons ten years of age and upwards unable to read in Kentucky as but 22.2 per cent., while it was 24.1 per cent. in Texas, 27.7 per cent. in Tennessee, 28.8 per cent. in Arkansas, 34 per cent. in Virginia, 38 per cent. in Florida, 38.3 per cent. in North Carolina, 41.9 per cent. in Mississippi, 42.8 per cent. in Georgia, 43.5 per cent. in Alabama, 45.8 per cent. in Louisiana, and 48.2 per cent. in South Carolina. Indeed, the only States in which slavery existed where the percentage of illiteracy in 1880 was less than in Kentucky were Delaware, Maryland, West Virginia, and Missouri, in all of which the percentage of negroes is very small. Moreover, the proportion of illiterates in Kentucky has undoubtedly been diminished since 1880 by the development of the public-school system. The per-capita allotment from the State Treasury for this purpose has been carried up from 72 cents to $2.15, and there has been, also, a steady growth of that "local supervision and interest" which, as President Harrison said in his speech on the Blair bill, in the Senate, on March 25, 1884, are the only things that "will bring these constituencies, that are now so backward in the race of education, abreast with other States." The growth of this local interest would have been even more rapid except for the hope of Federal aid, of which Gen. Harrison, in the same speech, said: "In my judgment there could be no worse policy than to throw, in a single year, into those States $15,000,000 out of the national Treasury."

The latest issue of the *Valley Virginian*, published at Staunton, Va., appears to assure the defeat of Mahone's attempt to again seize control of the Old Dominion. The *Valley Virginian* is a newspaper of the highest character, conducted by Mr. S. M. Yost, one of the ablest and best members of the Republican party in the State. In a leading editorial article on "The Line of Duty," it says that "it is a Republican paper," that "it believes in the principles and policies of the Republican party," that "it will support its organization when it is dedicated to the maintenance of those principles," but that "it will not be the willing instrument of any faction, or the slavish apologist of methods which can have no other effect than to disintegrate and wreck the Republican party." In another article upon the "honorable compromise," as the recent "deal" ratified by the President is called by the Mahoneites, the *Valley Virginian* denounces "the arrangement which seems to have been consummated by which the full control of the patronage of the Government in Virginia is turned over to Gen. Mahone"; declares that "the President has been deceived in the promise that a full Republican vote can be secured for any ticket that may be nominated, and that the Republicans of Virginia will allow the bull ring to be placed in their noses, to be led wherever the bosses may direct"; and adds: "We believe we speak for 50,000 true, tried Republicans when we say they will not surrender their rights and their convictions at the command of any cabal or combine that would seek to prostitute the Republican organization to such base uses. They will

draw the line between the *Republican party* and the *Mahone faction*, and when the two conflict, they will support the former all the time, and place their seal of condemnation on the latter."

It is amazing that Northern Republicans should not see as clearly as a Southern Republican like Mr. Yost how fatally the party is discredited when a Republican Administration tries to make such a man as Mahone boss of a great State. Mahone is a worse man than Butler, but Massachusetts Republicans who considered their State disgraced by the elevation of Butler to its Governorship condone, if they do not commend, the attempt to saddle Mahone upon Virginia through the prostitution of the civil service of the United States in that commonwealth. There is not a Northern Republican State which would stand such rule as Warmoth gave Louisiana and Clayton gave Arkansas, in the reconstruction era, and yet Northern Republicans do not protest when a Republican Administration turns over the patronage of those States to these discredited politicians. They even profess to wonder that Southern Democrats of character and property do not turn Republicans while the Mahones and the Warmoths and the Claytons personify Republicanism in the South.

The attention of farmers is directed to the unavailing effort of Secretary Rusk of the Department of Agriculture to secure from the Treasury Department the admission free of duty of potash salts "expressly used for manure," as provided in the tariff of 1883. The Secretary's letter on this subject contains a late decision by Judge Lacombe that such salts *are* entitled to free admission; but the Treasury refuses to accede to the decision until it shall have been passed upon by the Supreme Court. Meanwhile, somebody who is making potash salts in this country will be licensed to plunder the American tobacco-grower, and eventually the importers of the salts will recover the amount unlawfully taken from them. The judgment awarded by Judge Lacombe in the case before him was $2,225.84. Interest on this sum is now running at 6 per cent.

The pressure upon the Treasury to levy a customs tax on railway cars engaged in transportation and entering the United States from a foreign country, has all along seemed to us as only a part of the protectionist "fad" which culminated in the election of Mr. Harrison. Of course, it is always open to Congress, by an appropriate law, to tax such cars on each entry. Secretary Manning suggested to the House Foreign Affairs Committee, in reply to inquiry respecting retaliation for Canadian treatment of our fishermen, that if Congress wished to be offensive against Canada, it could levy such a customs tax, but he did not intimate that the Treasury could levy the tax under existing legislation. That was the outcome of a subsequent condition of affairs in the Treasury, when, under Assistant-Secretary Maynard and Special-Agent Tichenor, there seemed to be no limit to the levy and increase of taxes by Treasury order. That these cars are brought into the United States no one can deny, nor that the tariff law of 1883 covers railway cars. Secretary Windom concedes that when he warns the Detroit Collector that the "free importation of foreign-built railway cars" is not to be permitted. If foreign-built or foreign-owned railway cars, bringing merchandise into the country, are to be taxed, then why not foreign-built or foreign-owned vessels arriving at the port of New York? And, indeed, on the basis of the Vanderbilt-portrait decision, why not every vessel or car or horse and wagon, no matter where built or by whom owned?

Secretary Windom steers clear of the main question by saying that his predecessors have held that the cars are not taxable, because engaged in the international transportation of articles in bond, and Congress has authorized such bonding contrivances for the articles. He treats the cars as vehicles, or movable coverings for the bonded articles, and as the articles are bonded, so are the cars. He says nothing of mere passenger cars not bonded, but which are stopped on the frontier in order to levy and collect taxes on taxable articles therein. Free international traffic in such articles, free trade therein, is not permitted; and why are the cars untaxed? He abstains from discussing the question *de novo*, and yet, only a few days before, his Department had decided that, if an American-built and owned steamer on the lakes received repairs in Canadian waters not required by stress of weather, the *repairs* were dutiable when the steamer entered an American port. Really, what a queer thing our protective tariff is.

The flurry in Atlanta last week over the appointment by the Postmaster of a negro to a place in the office where he would come into constant association with a young white woman, threatened on Monday to develop into a storm which might involve the two races in open warfare. The ill-feeling had been aggravated by the shooting of a negro offender by a white policeman, and the excitement grew almost uncontrollable when it was announced that the negroes proposed to burn in effigy the white woman who resigned her place in the office rather than associate with the negro, in return for the burning in effigy by the whites of the Postmaster who appointed the negro. Cool-headed leaders among the whites, notably Gov. Gordon, succeeded in averting a collision, although the ugly feeling which has been aroused will not easily subside. The whole performance appears ridiculous to outsiders. Negroes have been employed in other positions in the Atlanta Post-office without anybody's making objection, and in the present case it would seem to be a purely personal matter for the woman affected to settle herself. She settled it by resignation; but another white woman was readily found who was glad to accept the position — a lady who, the *Constitution* says, is the widow of a school principal, and "is well known throughout the city." So far as the Postmaster is concerned, he appears simply to have discharged a duty, under the Civil-Service Law, as to which he had no discretion.

The Committee on World's-Fair finance appointed by the Mayor is entirely competent to deal with the question before it if the members take hold of the subject in the same spirit that they would undertake the financing of a new railroad or any great industrial enterprise. They cannot have failed to observe the very general comment of the press in other cities, that there is no public spirit in New York. The idea is commonly entertained that either Chicago or St. Louis can raise more money for any purpose when local pride is aroused than New York can. Sarcastic inquiries are everywhere made concerning the state of the Grant Monument Fund and the Centennial Arch Fund, and it is assumed that because a million dollars have not been contributed to the one and a hundred thousand dollars to the other, New York has no public spirit and no local pride. The fact is forgotten, perhaps, that the Washington National Monument, a commemorative enterprise in which the whole nation was equally interested, lingered thirty years, although a very industrious committee had it in charge, and was finally finished by an appropriation from the public treasury, and would not have been finished in any other way to this day, if ever. The Grant Monument Committee laid out too large a programme for voluntary effort. New York gives very large sums of money every year to charitable purposes. Her contributions to the sufferers by the Johnstown flood and the Chicago fire were in proportion to her resources. Nobody has ever found fault with her for the smallness of her donations to the afflicted, either within or without her own precincts. But she has not been very liberal in the way of monuments, nor has any other city, nor have the American people in general distinguished themselves in this way. Even the monuments to Lincoln and Douglas, at Springfield and Chicago, were built by public appropriations of the State, and the fine bronze statue of Lincoln at Chicago was the gift of a single citizen.

The new schism in the Single-Tax party is not made exactly intelligible in the last number of Henry George's paper. The Rev. Pentecost, in the *Twentieth Century* (schismatic), asked Mr. George, immediately on his return from Europe, nine questions *seriatim*. He wanted to know, first, whether Mr. George "considers that the object of the *Standard*, and of all those who are working for emancipation, should be the enforcement of *a great religious truth*, or a mere readjustment of taxation, and nothing more." Also, whether he agrees with one of his fellow-editors in thinking "that the emancipation movement should be lifted 'out of the howling-dervish stage of emotional insanity, into the reign of common sense and practical action?'"—the "howling-dervish stage of emotional insanity" being a sarcastic phrase intended to be descriptive of Mr. Pentecost and his supporters. Also, whether he "approves of the editorial declarations of the *Standard* that

'the right of private property in land is not the present practical question in connection with the single tax.'" Also, several other pointed interrogatories, all implying that Mr. George is sheering away from his text and abandoning his flock to the wolves. If so, the Rev. Pentecost stands ready to become their shepherd, and has prepared himself for that function by procuring lists of a number of Mr. George's Single-Tax clubs and sending specimen copies of his own paper to them. This method of preserving the flock has, however, been stopped by orders, issued by Mr. George as soon as he arrived, not to allow Mr. Pentecost to have access to the lists.

Two different organizations of Socialists, the Possibilists and the Marxists, have just held separate congresses in Paris. Some attempts were made to fuse the two bodies, but without success. It is a little hard to make out what great difference exists between the two. Certainly none appears great enough to keep them long apart. Both agree in their main end and aim, which is the appropriation by society at large of the capital now existing in private hands. Both desire a communism — or "collectivism," as their word is—and their only difference seems to be as to the agent who shall have charge of the public goods and be in the possession of power. The Marxists would prefer a collectivism organized by the State, while the Possibilists look rather to municipal collectivism. Doubtless, if at any time, in consequence of a revolution, let us say, or of some other social upheaval, either party saw a chance of success, the other party would at once join it and march under its banners into the Promised Land.

Everybody who has—as so many have—found pleasure and profit in Prof. Mahaffy's literary and historical work, will be pained and disappointed by his treating the American public, almost as soon as he landed, to a sharp lecture on the impropriety of differing from him on one of the most burning, notorious, and much thrashed questions of British politics. It appears that those who do not agree with him about Irish Home Rule have had "their minds poisoned from Ireland by agents of the non-Unionists"; that they cannot understand it "unless they are deep scholars," and that they are ignorant of the doctrines and history of the Catholic Church, of which he was pleased to give them a brief sketch. Considering that nearly half the English people, including some of their ablest statesmen and scholars, and a majority of the Scotch, dissent from the Professor on this topic, it is difficult to know what name to give to this rebuke of his to Americans. We shall only call it at present an indiscretion which we hope he will not repeat. He will be cordially welcomed here as a clergyman and a scholar, but nobody looked for him as a party politician, or expected his political opinions to have the smallest value. That he is rather unfit to discuss questions of government publicly, his disquisition on the relations of Utah and the Southern States to the Union showed clearly, and we hope his Chautauquan friends will turn his attention into some more suitable field.

The Canadians are plunged into a fierce religious controversy, which may have important political results, by the restoration to the Jesuits by the Quebec Legislature of the property which was confiscated when they were expelled from the country in 1782. It is estimated at $300,000 now, and when accompanied, as it is or is to be, by the incorporation of the Order in Canada, it is no small gain for the Church. The fund, of course, will be at the absolute disposition of the Pope. The transaction has created a tremendous uproar among the Protestants of the other provinces of the Dominion, and they are furious with the Governor-General for allowing the act to go into force without vetoing it or "disallowing" it, as the phrase is, which he is empowered to do under the Canadian Constitution. On what ground he could have vetoed it, it is, however, hard to see. The property in question lies within the Province of Quebec. It is confessedly at the disposal of the provincial Legislature, and the only good objection to its restoration is a moral and not a legal one—namely, that the Jesuits are a bad organization, which ought not to be encouraged. It is very difficult in our day to put this argument into legal shape. The Jesuits' plea is, that the confiscation of their property was simple robbery accomplished with the strong hand, and that its restoration is restitution and not simple donation. A good many Canadians think such a thing could not be done in the United States; but it could. Nothing prevents the establishment of the Catholic Church in New York, with rich endowments from the State Treasury, but the determination of the majority of the people of the State not to permit anything of the sort. The trouble in Quebec is, that the majority is Catholic, pious, and prolific, and thinks the Jesuits estimable and ill-used men; and how this difficulty is to be got over in our day it is hard to see. It will, however, make a good many Americans think twice before letting Quebec into the Union.

A sale by auction was made in London on July 17 which in its way is as noteworthy as the sale of Millet's picture. The property disposed of was "one entire and undivided share in the Adventurer's Moiety of the estates and interests of the New River." The "Adventurer" was Hugh Myddelton, the projector of the New River, and this is the first share of that property which has been sold since the work was completed in the year 1613. The value of a share at that date was £100. There were seventy-two shares in all; half were taken by the King and half went to Sir Hugh, who was knighted by James I. in recognition of his work. The King's shares were afterwards sold by Charles I. to the second Sir Hugh Myddelton for a yearly payment to the crown of £500 in perpetuity. The net return on these 36 shares was last year £93,960, though the nominal capital of the company, as shown by Parliamentary returns, is only about three and a-half millions. The company possesses the exclusive right of supplying water to all the northern suburbs of London, to the whole of the city of London and part of Westminster, to several wealthy parishes in the West End, and to parts of Middlesex and Hertfordshire. Valuable estates also belong to it, the chief of which, the Myddelton Square property, consists of fifty acres in the very heart of London. The New River aqueduct was an object of public interest and curiosity long after it was completed. Evelyn notes in his diary a visit to it in the year 1686. The share that was sold the other day brought £122,800.

The *Times* on Saturday had an amusing letter about a certain class of American travellers in Europe, of whom the number has, under the influence of Cook's tours and the growth of wealth, or rather the spread of wealth, increased enormously during the past ten years. They pass over the European Continent no longer as single spies, but in heavy battalions, sometimes "personally conducted," in squadrons of 50 or 100, by one of Cook's captains, but oftener still in helpless little family or neighborhood groups, going they know not where to see they know not what. They are the only foreigners who now penetrate Italy during the summer months, in happy indifference to heat and malaria, but they swarm everywhere. As a general rule, one might search them in vain for the smallest knowledge not only of foreign languages or laws, manners or customs, but of history, of geography, of art, of literature, of antiquities, of any of the things which are absolutely necessary to make European travel anything more than a change of air and scene and a heavy expenditure of cash. The guide-books, even, do little for them, because every guide-book assumes a certain amount of knowledge in the above fields. The two things, as a general rule, which impress them most are the spectacle of women working in the fields and the absence of baggage-checks. What plagues and bewilders them most is the weighing of their trunks at the railroad stations, and the tedious service of dinner in courses at the tables d'hôte. It is not surprising that under these circumstances the elders at least soon get tired and homesick, and that all love to sit down and talk about "Jim Smith and Bill Jones at home." There is a pathetic story, which we believe to be authentic, of a certain general from Maine who, "doing" Europe in company with his wife and daughters a few years ago, met at the great door of St. Peter's at Rome a friend who happened to have about him a copy of Boutelle's Bangor *Whig*, which he offered him, and which came to the General, weary with the Eternal City, as manna in the wilderness. He seized it, sat down on the steps to peruse it, and let his "women-folk" inspect St. Peter's alone—probably the highest compliment the brave Boutelle, or, indeed, any other American journalist, has ever received.

THE BLACK-DIAMOND SEIZURE.

THE cable despatch received by the Montreal *Gazette* stating that "the imperial authorities have decided that British rights in Behring Sea must be protected from outrage," is probably authentic. We so consider it because it represents the sort of decision we should come to in a parallel case. Reluctant as Great Britain is, and must be, to have any difficulty with us, there are limits beyond which she cannot be pushed. The seizure of one's vessels on the high seas is very provoking to national pride. One such seizure may be regarded as accidental and unauthorized, but if followed by another and another and another, a state of public feeling may be excited which no Government can cope with. The Behring Sea controversy is in that critical state where both Governments are at the mercy of chance. A very little spilling of blood, perhaps only accidental, might bring on a deadly conflict. It is important, therefore, to know where we stand, and what our reasons are for being in danger of embroilment with our next of kin.

In the first place, let us dismiss the idea that England will allow (any more than we would) any commercial gain to outweigh the national honor. We have been told over and over again in the past two weeks that she is just as much interested in protecting the seal-fishery as we are; that if we catch the seals, the skins all go to London to be tanned, and sold, and distributed to the world; that consequently she would lose as much as we should by the extermination of the race at the hands of the "pirates." What does all this imply? That any great nation is going to allow others to decide that her subjects are pirates when they are prosecuting on the high seas under her flag a trade which she recognizes as lawful, merely because a tannery is making money? The conception is too absurd.

That England did assent to our suggestion for international policing of Behring Sea, with the express purpose of preserving the seals from destruction, is evidence of her good will, but by no means signifies her assent to our assumption of exclusive police jurisdiction in those waters. On the contrary, it presupposes that we, having put forward the idea of joint action, will stay our hand until it is carried into effect, no delay having been interposed by her meanwhile.

Why were these peaceful and proper negotiations broken off? The diplomatic correspondence does not show, but, perhaps, when the later volume, now in the Government Printing Office, comes out, we may know more. In the absence of better information, it is a fair inference that the political deadlock of the last two years frustrated this intended treaty, as it did the Fishery Treaty, the Extradition Treaty, the Chinese Treaty, and everything else that might have reflected credit upon Mr. Cleveland's Administration. The Senate was determined to reject anything that would have that political effect. Its Committee on Foreign Relations resolved, for example, that the fishery question was not a fit subject for *any* treaty or *any* negotiation, and the Senate refused to amend the treaty that was negotiated in any way whatsoever, or to say in what way it might be made satisfactory.

We allude to these things not in the way of reproach. That is all burnt powder. What we now infer is, that the impossibility of doing *anything* in the foreign department by reason of the political deadlock was the reason why a very promising beginning for the settlement of the Behring Sea question came to no conclusion at all, either satisfactory or otherwise. It is not a strained inference, also, that the present Administration has been so engrossed in the task of peddling out the offices that it could not find time to take up the threads of the suspended negotiation, but was compelled to give a general order respecting Behring Sea, and then trust to luck. Probably it is a sense of laches that inspires high officers of the Government, now that trouble is impending, to apply the term "pirates" to people who are fishing for seals, although if they were taking whales or walruses in the same waters, they would be very respectable persons.

It should be borne in mind that Russia has larger interests in those waters than England has, and that her coöperation is more needful. The seal in his wanderings does not observe the line drawn north and south from Behring Strait, midway between Alton and Copper Islands, nor the line drawn east and west along the Aleutian Islands. He is now on one side and now on the other of both lines. Russia, like ourselves, has seal-breeding islands, from which she derives a revenue. She is interested like ourselves in preserving the race from extermination. To suppose that the seal can be preserved by catching "pirates" on one side of an imaginary line and leaving them free on the other side is ridiculous. Now, Russia was an active party to the negotiation for international protection of the seal. She wanted to have the line of immunity, or non-fishing, drawn considerably south of the Aleutian group, and Mr. Bayard acquiesced in this. But here, as we know, the negotiation ended. It is due to Russia as well as to Great Britain, that it should be resumed on the original lines, and that meanwhile no chance should be left open for the embroilment of the two nations in war or serious estrangement.

THE NEW YORK PAVEMENTS.

PROF. J. S. NEWBERRY, of the Columbia College School of Mines, has been making a careful examination of the different kinds of street pavement in use in some of the principal European cities, and has thrown the result of his observations into a paper in the *School of Mines Quarterly* on "The Street Pavements of New York." These pavements are, notoriously, so bad that they have to a large extent driven out of use every mode of transportation for persons except the railways. The number even of the rich who keep carriages for pleasure either diminishes steadily, or does not increase in proportion to population, so great is the wear and tear of horses and vehicles caused by the condition of the roadway. For invalids—and especially for women invalids—carriage exercise except in the Park has become an impossibility; and to use the Park with comfort or safety they have, consequently, to live very near it. Bad pavements, too, mean insufficient sweeping and general indifference to appearances. The use of the streets to keep wagons in, and to pile up ashes and garbage in, would not be tolerated very long in a well-paved city. From all this, too, the poor are the worst sufferers. Curiously enough, considering how democratic the government is, the rich secure all the good paving and good sweeping there is. It is the quarters of the poor which are most neglected.

It is, of course, only with the material conditions of good city pavement that Prof. Newberry, as a scientific man, occupies himself. He says that "in New York a greater variety of excellent materials for street pavements can be obtained, and at a cheaper rate, than any city in the world," notably the bluestone, which is found in inexhaustible quantities at various points along the Hudson, and granite, which can be found cheap and good in the Highlands about West Point. This latter has been used in the pavement of Fifth Avenue, which he calls "really good," but says it would have been better if "the blocks had been thinner and the roadbed had been more carefully prepared." In fact, this failure to prepare the substratum properly for the pavement is one great cause, perhaps the greatest, of the bad condition of our streets. In his account of the asphalt pavement in London and elsewhere, he touches on another cause, perhaps as powerful as any—the reluctance of Americans to make any provision for the maintenance and repair of streets and roads after they have been once put in order:

> "The result of the experience of the last ten years has clearly shown that the pavement made with the Trinidad asphalt is equal to any in the world, and superior to any other kind of pavement in use. Its excellences—cleanliness, silence, and salubrity—are so apparent that no argument is now needed to enforce them. To these may be added, and placed first in the list, *economy*; for it costs as little and lasts as long as any other good pavement, and is much less trying to horses, vehicles, and human nerves. It is rapidly growing in favor, and it is not too much to say that it is the pavement of the future, and is destined in most localities to supersede all other kinds.
>
> "In a recent visit to Washington I found some of the streets in a bad condition. Even on Fourteenth Street, in front of the Treasury Building, the asphalt pavement is full of holes, and the condition of this great thoroughfare has led to an opinion which I found quite prevalent, that asphalt was only adapted to streets where the traffic was not great and the vehicles were light. This is a mistake, however. There is no street in America or elsewhere in the world that has as much traffic as Cheapside, London, and among the vehicles which pass through it are omnibuses, loaded with passengers inside and on top, carts of all descriptions, and, heaviest of all, the trucks of the great brewers with their enormous horses and tons of ale and porter. And yet Cheapside is paved with asphalt and is as smooth as a house-floor. The secret of its perfection is the thorough manner in which the pavement is laid and the incessant care given to it. In nothing is the axiom truer than in the asphalt pavements, 'that a stitch in time saves nine.' The material has little hardness, and if, from irregular settling of the roadbed or local violence, a break occurs, the passing wheels rapidly shear off the sides of the hole, and it soon assumes formidable dimensions. *In London this is prevented by constant watchfulness; persons are employed to traverse the street with a light repairing outfit, and wher-*

ever a defect is observed, this is patched at once, and so effectually that the spot cannot be distinguished. The contractors who lay the pavements agree to keep them in order for fifteen years at a price which does not average more than a few cents a square yard.

"*Our people seem to think that no pavement is a good one unless when once laid it will for ever take care of itself; but there is no such pavement.* Even our rough stone roadways would pay excellent interest on the expenditure necessary for constant inspection and repairs promptly made when needed.

"One great difficulty stands in the way of the improvement of the pavements in the city of New York, and that is the frequency with which they are torn up for the purpose of laying new lines of gas, water, or steam pipes, or for the repair of such pipes when broken or frozen. The depth to which frost penetrates the ground in our severe winters seems to make it necessary that our pavements, as at present laid, should be frequently torn up, and until more care is given to the removal and replacement of the pavement it is impossible that we should have smooth roadways. This evil could have been in a large degree obviated by sinking the pipes beyond the reach of the frost, but, from the connections already made, this would now be a matter of extreme difficulty, and it is even probable that we can never have a satisfactory system of paving until commodious subways shall be constructed to receive all the pipes, and where they may be accessible without tearing up the streets. In the new streets opened in our rapidly growing cities the construction of such subways is possible, and would prove not only a great convenience to the population, but a substantial economy. In the older streets the cost and inconvenience would be much greater, but the difficulty is not here insurmountable, and the benefits would far more than compensate for the cost."

Prof. Newberry's conclusions about asphalt are reached after an examination of the pavements of London, Paris, Brussels, and Berlin, in all of which stone and wood are also in use and have been thoroughly tried.

The greatest of all obstacles to good pavement in New York, however, Prof. Newberry does not mention, because it does not come within the province of the civil engineer; we mean what is called "politics." And yet, without the mention of this, all comparisons of our pavements with those of London, or Paris, or Berlin, must be misleading. If, for instance, a German or Frenchman were to come to the conclusion that our streets were in their present condition because we were ignorant of the merits of different kinds of paving, or had among us no experts competent to do such work in the best manner, he would make a great mistake. Our difficulty lies in the fact that the men who govern the city are not selected for their fitness for their special duties, and do not give their minds, when a great public work is undertaken, to anything but the advantage to be got out of the spending of the money for their own party. The public mind, too, has been so debauched by the spoils system that people are not shocked when they see an expert like Newton turned out to make way for a politician like Gilroy. The spoils system is fatal to efficiency or honesty in the execution of all public improvements, because it is concerned always in the filling of places, and not in the least with the quality of the result.

THE MAYBRICK CASE.

THE report from Bar Harbor that "neither President Harrison nor Mr. Blaine will consent to talk for publication on the subject of Mrs. Maybrick's fate" is probably true; but the remark which the reporter adds, that, "as Mrs. Maybrick lost her American nationality and became an Englishwoman when she married her late husband, it is difficult to see in what manner the United States Government could interfere in her behalf," is another and somewhat amusing illustration of the way in which, as the country grows, the knowledge of law, which used to be so common, seems to decline. The belief of many Republican editors that President Harrison possessed and would exercise some sort of dictatorial powers towards the Southern States, the belief of the Republican Convention of Pennsylvania that the Executive is charged with the duty of "adjusting the burden of taxation" with reference to the needs of the taxpayer, and that "the honest collection and honest disbursement of the proceeds of public taxation" are a discretionary work which the Administration is entitled to praise even for "proposing," and the confessed ignorance of the editor of so prominent a paper as the Indianapolis *Journal* that there exists any tribunal for the interpretation of the Federal Constitution—the Supreme Court being the most conspicuous feature in the American system of government—all these things are striking signs of the decay, even among politicians, of a knowledge of the machinery of their own government. Thirty years ago mistakes of this sort, when they appeared in the *Saturday Review*—as they often did—used to excite merriment here, but the number of those who would see the fun of them has sadly fallen off.

Somewhat similar ignorance seems widely prevalent among another class touching the duty of the Government towards Americans arraigned for criminal offences, before foreign tribunals, in civilized countries. There is lurking in many minds a vague notion that our Government possesses the power of revising, and if need be, of annulling, the judgments of such tribunals in the case of American citizens, and this notion, it must be admitted, got some countenance from the extraordinary conduct of Congress in the case of O'Donnell, who was convicted and executed for the murder of Carey the informer. There was no doubt of his guilt or of the fairness of his trial, but it seemed to many as if the sentence ought not to have been carried out without an examination and approval of the proceedings by our Secretary of State. The same question was raised in the Lamson case, but with less success. Lord Salisbury gave a certain sanction to such agitations by asking the Governor of Missouri to postpone the execution of Maxwell until some sort of fresh appeal could be sent to him from England.

It ought to be known even in primary schools that when an American commits murder or robbery in any foreign country of Christendom, the power of interference possessed by our Government is limited to seeing that he is brought to a speedy trial, that he is allowed full communication with his counsel and friends, that the trial is fairly conducted according to the procedure of the country, that the punishment is not cruel or unusual, and that confession is not extorted by any species of torture or persecution. This is doubly true with regard to offences committed in England, whose criminal jurisprudence and procedure are exactly like our own. We have no more right of interference with English criminal trials than England has with ours. It makes no difference whatever in Mrs. Maybrick's case whether she had or had not lost her nationality. No nationality protects any man or woman against the legal consequences of the commission of a crime on foreign soil. There is no appeal from the verdict of a British jury or the decision of a British judge, either to President Harrison or Secretary Blaine, or to Quay or Wanamaker, any more than from the verdict of an American jury and the decision of an American judge to Lord Salisbury, Mr. Matthews, Chamberlain or Randolph Churchill. If Judge Stephen has committed errors either in his rulings on the evidence or in his charge to the jury, they will be examined in the British Court of Appeal. If the verdict of the jury has been plainly given against the evidence, either it will be set aside or the prisoner will be pardoned by the Home Secretary.

The popular uproar in Liverpool is undoubtedly largely due to the unpopularity of Judge Stephen, and to the hard, uncompromising way in which he presents his arguments. Almost any other judge on the English bench might doubtless have charged as strongly against the prisoner as he did without creating so much excitement. It is not uncommon for an English judge to charge against a prisoner, provided he does not twist or ignore evidence in doing so. He has not done more in this case than Lord Campbell did in the case of Palmer, whom, it is part of the current gossip of the day, the Judge was determined to hang from the outset, so sure was he of his guilt. If, as appears to be now maintained, the opinion of the spectators in the court-room and the populace of Liverpool ought to weigh more with the Government than the opinion of the judge and the verdict of the jury, the inference would appear to be unavoidable that cases of this kind ought to be tried, in Athenian fashion, by a public meeting, and the verdict taken by a vote, on the Australian system. At this distance the presumption of Mrs. Maybrick's guilt appears to be overwhelmingly strong. Her argument that she would not have been found guilty if she had not had a lover, sounds very like a plea that the desire for the victim's money, as in Palmer's case, ought not to be admitted as corroborative proof. The first and main question in all criminal cases is the question of motive. No sane person is supposed to commit a deliberate murder for fun.

THE ANNUAL WAR ALARM.

THE annual discussion of the probabilities of "a general European war" has just taken place in England—the only country in which such a discussion can take place with any frankness. The reasons for thinking that such a war is probable, and which furnish

the journalists with a good many topics, are about the same from year to year. There is in the first place Turkey, which is always in danger of breaking up; there is Greece, which is always eager to enlarge her borders by seizing Macedonia; there is Bulgaria, which wants Rumelia, and Servia which wants a piece of Bulgaria; there is Russia, which wants to absorb or control both Rumania, Servia, and Bulgaria, and kick Austria out of the Panslavic region.

Then there is Italy, which wants to take away the Canton of Ticino from Switzerland, and a bit of Dalmatia from Austria. There is France, which wants to get at Germany, and to get the English out of Egypt, and have more colonies than she can afford to settle. There is Germany, which is determined that France shall not catch her unprepared, and also to have as many colonies as Great Britain has. Though last, not least, all the first-class Powers except England —viz., France, Germany, Austria, Russia, and Italy—have standing armies so large as to constitute an almost overwhelming burden on industry and to increase greatly the tide of emigration.

It is easy to see what an enormous number of topics such a situation affords, and what an excellent showing any one may make out of them for the view that we are on the eve of one of the most terrible conflicts the world has seen since the fall of the Roman Empire. Nevertheless it contains, we repeat, certain guarantees of peace, for the present at least, of extraordinary strength. One of them is the size of the modern armies. There is a popular view that the size of these armies tempts governments to go to war. We hold, on the contrary, that every government which possesses them shrinks from putting them in the field, partly owing to fear of the effect on the national industry and finance, and partly to the very natural doubt whether it has generals fit to handle them. A bad general at the head of a small army is a comparatively harmless person; a bad general at the head of a million of men may prove a monster of mischief. The great armies of the Napoleonic period were created by generals who had slowly learned to use them in active service. The armies now in existence, Moltke having retired, would be led by men who may possibly be geniuses, but may also be veritable dunderheads. Every government feels this and puts off the hour of trial accordingly. Moreover, the absurdity of the notion that permanent peace can be secured by one great fight is becoming clearer to the European mind. On the contrary, every great fight sows the seeds of future quarrels, because the victor is sure to seize something with a "mailed hand" which the vanquished determines to wrest from him as soon as he is able. Therefore people say, with much wisdom, that terrible as is the burden of a great army in time of peace, war would make it twice as terrible.

The Franco-German war was due to the ignorance of the French, both about their own military resources and those of their adversary. That ignorance exists no longer. Each side knows what the other can do. Moreover, the material conditions of a campaign between these two adversaries have greatly changed since 1870. The French army has been completely reorganized and much increased, but Metz has become absolutely impregnable. No hostile force can now get within nineteen miles of the old Vauban fortress which the Germans invested. On the other hand, all the ground round Paris which the Germans occupied in 1870, has been thoroughly fortified. In fact, it is estimated that the French have spent on the new defences of the city the enormous sum of $675,000,000. The outer circle is now seventy-five miles long, and on the north and south side is an entrenched camp capable of holding 150,000 men. When the works now in progress are completed, the circle will be ninety miles long. The difference this will make in the next war is obvious.

If we add to the uncertainties thus created the absolute ignorance in which the world now lives as to the results of a great naval war, with the new iron-clads and torpedoes, we have abundant reason for believing that there are more signs of war in the newspapers than in the war offices.

THE SWISS ITALIANS.

THE internal politics of Switzerland have an interest for Americans, even when intrinsically unimportant, in that they afford an opportunity of observing the working of political machinery in most respects like ours, on matters similar to those which have figured in our politics, or may do so hereafter. Indeed, the recent agitation in the canton of Ticino, and the Federal interference therein, recall vividly the Reconstruction period in the Southern States, though the usurpation of power by the central Government, with us checked by the Supreme Court, appears in Switzerland to have ridden triumphantly over the rights of the States. The disregard by the Swiss executive of the letter, if not the spirit, of the Constitution was as complete as that which occurred during the "conflict period" of 1864–5 in Prussia; but as the majority in both houses of the Swiss Parliament is of the same party as the executive, it naturally did not wish to take any action, like the bill of indemnity passed by the Prussian houses after 1866, which would imply recognition of a violation of the organic law.

The canton of Ticino, whose affairs have led to this amendment of the Constitution by legislative decision, is the only one in which Italian is the prevailing language, and, though long connected with the German cantons in a territorial relation, is the youngest of the cantons to enjoy the rights of statehood. It was abominably misgoverned during the last century—so much so, according to the account of the abuses common while Bonstetten was Governor, as related in his entertaining letters, that relatively, if not positively, the exactions of a proconsul were far exceeded. Partly from this cause, and partly from the necessary poverty of the people, it is one of the most backward districts of Europe, not only in political and religious enlightenment, but in the respect of material progress. Most of the "Italian" barbers and organ-grinders in foreign countries, not to mention great numbers of agricultural laborers who appear annually in the adjoining parts of France and Germany, attest at once the poverty of the population and their fondness for their native land, since all of them who are able to save anything return sooner or later.

Though the canton boasts of a "unity of faith" second only to that of Tyrol, there has long been a strong opposition to the clerical party, the lawyers being as active and devoted on the "Radical" side as the priests and wealthy class are on theirs. And though it is long since there has been a change of administration, yet the parties are so evenly balanced that every election is the occasion of violent agitation, and the colonization of a few hundred voters would at any time change the result—a fact of importance in view of the character of the emigration from the district. It has long been alleged by the Radicals that their opponents "colonized" in a quiet way, in spite of a law, passed with the assent of both parties, declaring non-residents not entitled to the suffrage. For the election which was held the 3d of last March the Radicals determined to do on a large scale what their opponents were said to have done on a small one. In February the newspapers announced that one of the Radical leaders was in Paris arranging for the return of a large number of natives whose domicile was in France, and 900 are said to have appeared in answer to the summons. They were prepared to assert their claims by arms, and the authorities were equally prepared to resist them. It was at this point that the Federal Government began to act.

Now, the Swiss Constitution, though amended in the direction of centralization in 1874, still retains provisions, apparently copied from that of the United States, guaranteeing the rights of the cantons, and asserting that all rights not in terms given to the Federal power are reserved to them. The Sixteenth Article also provides that "when internal disturbances exist, or when danger from another canton is threatened, the Government of a canton shall immediately inform the Federal Council [*i. e.*, the Executive], in order that the latter, so far as its powers extend, may take proper measures, *or* summon the Parliament. . . . If the cantonal Government is unable to call for help, the Federal Government *may* act on its own initiative, and if the security of the country at large is in danger, it *shall* do so." But in the Ticino affair, as is shown by Dr. Vogt, himself a Liberal, in his moderately worded pamphlet on the 'Tessiner Frage,' and as has been urged vehemently by the Conservative press, order was not disturbed—there merely was danger that it might be; the cantonal Government did not ask for aid, but, confident in its ability to put down any rising, protested against Federal interference; and there was no pretence that either of the other contingencies had arisen. In fact, not only was no blood spilt, but, in spite of the attempted colonization and the moral support given by the Federal authorities, not only through the occupation of the canton by troops, but also through a written protest to the

cantonal Government against the non-resident law, the Opposition was again unsuccessful. The whole importance of the incident, therefore, lies in the establishment of a constitutional precedent, in that the executive disregarded the written law, and the Legislature afterwards did not condone, but approved, its action. But had the Ticino Liberals studied our history, they might, confident as they were of the support of the Protestant cantons, have managed better. It appears plain enough to us that their proper course was to secure Federal interference after, instead of before, the election. They had then only to claim that their opponents' majority was an illegal one, and to set up their own Legislature and executive in a hall, after which they could have called for troops at their leisure.

THE FRENCH FOREIGN POLICY.

PARIS, July 25, 1889.

I MUST return to the book of Count Chaudordy, 'France in 1889.' I have analyzed its first part, which treats of the state of parties in France and of the interior condition of the country. The second part is an analysis of its foreign policy, which derives much interest as coming from a man who has occupied important diplomatic posts, and who is acquainted with all the most eminent diplomats of the Continent. The author begins by a rapid survey of the wars of the last centuries—Thirty Years' War, the Peace of Westphalia, the Seven Years' War, the Partition of Poland, the French Revolution. The wars of Napoleon are not narrated, but their results are rapidly shown. Let us come immediately to the year 1870. When the Empire fell, the Government born on the 4th of September ought, says M. de Chaudordy, to have felt at once the necessity of creating for itself an authority and a legitimacy which were necessary to it, not only in the eyes of the country, but in the eyes of foreign Powers. Elections for a National Assembly ought to have been held at once. But the new Government was only preoccupied with Paris; it was not really preoccupied with the great Powers. It had no right to count much on Spain, which had become more free to choose a sovereign, nor on Italy, which profited by the war and took Rome, nor on Russia, which rebuilt Sebastopol and wiped out some articles of the Treaty of Paris; but could not a regular French Government expect some help from England and from Austria? M. de Chaudordy believes that England and Austria made a mistake in not interfering in favor of France: "After having waited for some French success before pronouncing in our favor, Austria threw herself into the arms of victorious Prussia, and consecrated, in a fit of diplomatic intimacy, the new German Empire. The Austro-Hungarian Empire alienated prematurely in favor of Prussia the greater part of its liberty of action. Hungary being always in a state of uneasiness on account of Russia, and the Austrian province having German aspirations, it is easy to understand that Berlin now dictates its will to Vienna and to Pesth."

M. de Chaudordy analyzes the state of Europe, and shows that there is little foundation now for an alliance of the Latin races—an alliance which has often been considered as a safeguard for Europe and for peace. It is, in his eyes, a mere dream; on the contrary, he considers that the old alliance between Prussia and Russia is come to an end, and that there are many reasons for an understanding between France and Russia. Since the wars of the beginning of the century, Prussia and Russia had always walked hand in hand; they gave reality to what was called the "Holy Alliance"—an alliance which embodied profound analogies of ambition, of principles, of government; which represented a common defence of the old régime, a common opposition to the more liberal Occidental ideas.

Under the Emperor Nicholas, the prestige was on the side of Russia; since his death it has been on the side of Prussia. But we have seen in our time a new phenomenon, a revival of the old-Russian party. What is an old-Russian? Is he essentially an enemy of Germany? Not so much as a partisan of a Russian self-development by the systematic exclusion of all imported men or ideas; an adept of Slavism as represented by the Moscow *Gazette* and by the school of Katkoff. France has no interest in counteracting this Russian self-development, since, not being a neighbor of Russia, she cannot expect to play directly a part in her internal affairs. Germany is Russia's neighbor, and there has been a constant importation of Germans into the Russian Empire. The whole modern literature of Russia shows how deep is the enmity between the old-Russian elements and the imported German element.

Poland has long stood between France and Russia, but "we are now," says M. de Chaudordy, "unable to help the Poles, and our intervention has, in fact, always aggravated their situation. We can, therefore, only advise them to come nearer the nation with which they have such a narrow community of origin." There seems, therefore, to be no hindrance now to intimate relations between France and Russia. "All those who, in France, can exert an influence, great or small, on our foreign policy, ought to work for it; all parties, all opinions, ought to concur in this, for it is our salvation abroad. The two great Slavic and French races are admirably fitted to understand each other, and the two nations will find immense advantages in it." Peter the Great, when he came to Paris, Napoleon at Tilsit, Napoleon III. in 1856, at the time of the Treaty of Paris, all had this alliance in view.

The task of Russia in the future is immense, and, in order to accomplish it, she needs allies having no interests in contradiction with her own. The United States have sometimes seemed to be such an ally, but the United States follow a policy of non-intervention, and do not meddle with the affairs of Europe. Prussia has Slavic provinces and covets the German provinces which are a part of Russia; moreover, the Baltic, Denmark, the passages of the Sound can always become a bone of contention. As for Austria, she is the natural enemy of Russia, and we now see the Balkan Peninsula torn by factions which are nothing in reality but the Austrian faction and the Russian faction. The rivalry between England and Russia has been proverbial; M. de Chaudordy regrets it, as better relations between these two countries could only be very advantageous to France. It might, perhaps, he thinks, be possible to reconcile them. Public opinion in England on the subject of Constantinople and the Dardanelles is not what it was at the time of Lord Palmerston. Since the opening of the Suez Canal, the Eastern objective of England has been transferred from Constantinople to Egypt. The Russians have no intention of invading India, though they sometimes speak of it. Their ambition has an ample career in Asia, and they content themselves with advancing slowly, between Persia and Afghanistan, towards the Persian Gulf. At the time when Prince Alexander of Bulgaria became very popular in England, and when it was thought by some that an effort ought to be made in his favor against Russia, the British Parliament showed very clearly that it had no intention of picking a quarrel with Russia, and many articles appeared in the English press tending to prove that Egypt had become the only point in the East where England had any vital interests to defend.

The survey made of our foreign policy since 1870 by M. de Chaudordy is interesting. The Government of M. Thiers had, so to speak, no foreign policy; he treated all foreign affairs himself directly, a dangerous system, as, when the head of the State is once engaged, he has no way of repairing an error. The Government of Marshal MacMahon was conducted after the old traditional methods. M. de Chaudordy condemns in strong terms the colonial policy which was adopted by the successors of Marshal MacMahon. In old days, when a country created colonies, she opened a new field for her trade, as the colony was obliged to buy exclusively the products of the metropolis. In our time, in virtue of the treaties made with various Powers, these Powers can trade with our colonies on the same terms as ourselves. "We do not see," said a foreign diplomat, "why we should oppose your conquest of Tonquin; you will have all the expense, and we shall reap the benefit." Our war in Tonquin embroiled us with China, a Power which sooner or later will have an influence that will not be limited to the extreme East. If we had a long war, it would become very difficult for us to protect those frontiers of our colonies which touch China. Tonquin is not a popular name among our soldiers and our peasants, and the secret of the intense unpopularity of Jules Ferry (always called the "Tonkinois" by the small press) lies in the fact that he was the principal advocate of the colonial policy.

After the war of 1870, the new peace remained, so to speak, under the protection of the alliance of the three emperors. This alliance of Prussia, Austria-Hungary, and Russia is now replaced by a closer alliance of Prussia, Austria-Hungary, and Italy. Russia has been discontented ever since the Treaty of Berlin, and maintains an isolated and sullen attitude. The misunderstanding between Prussia and Russia has become every day during the past two years more acute, and Europe lives in a state of inquietude; the present triple alliance has become a danger instead of being a protection.

A document added to M. de Chaudordy's book has attracted much attention. It is a despatch from M. de Saint-Vallier, November 14, 1879, giving an account of a conversation between the French Ambassador and Prince Bismarck, on his return from Vienna, after the conclusion of the alliance with Austria. It is easy to recognize the language of the German Chancellor, always bold, forcible, sometimes very picturesque. The Prince did not conceal from M. de Saint-Vallier that the policy of Russia with regard to Germany was modified, and that the old friendship had given place to jealousy and distrust; and he explained how he was going to make of Austria an obstacle to the ambition of Russia. He always felt the necessity of keeping Austria as a bulwark; he spared her after Sadowa, he would not mutilate her. The familiarity of the conversation, the eloquence of the speaker, the richness of his images, the depth of his views, make this document the most interesting part of M. de Chaudordy's volume. There may have been official denials of the authenticity of the document; but whoever will read will see that, with the exception, perhaps, of a few words, it must be genuine. M. de Saint-Vallier is now dead,

but I believe that he read this despatch to various people of his acquaintance, on account of the clear view which it gave, in Prince Bismarck's own words, of the new state of things in Germany, and of the character of the alliance of the two empires—an alliance directed against all possible enemies of the German nationality.

THE FINE ARTS AT THE PARIS EXPOSITION.

I.—FRENCH SCULPTURE.

PARIS, July 23, 1889.

IN order to comprehend the extent of the exhibition of the fine arts at the Paris Exposition of 1889, some statistics must be given. This exhibition constitutes the first of the nine great groups of the Exposition proper, and is itself divided into five classes: first, oil paintings; second, paintings of different kinds, and drawings; third, sculpture and medallions; fourth, architectural drawings and models; fifth, engravings and lithographs. The works of art exhibited by France, and by each foreign country, are classified under these five heads in the official catalogue, and, so far as possible, the classification is marked in the placing of the works in the galleries.

As a matter of course, both because this is first of all a French exhibition, and because there is far greater production of the best work in the fine arts in Paris than in any other art centre, the French department is the most complete and the most extensive. There are 1,418 oil paintings alone; of other paintings and drawings 214, of sculptures 561, and of engravings 445—a total of 2,777 works. These are exhibited in more than thirty large galleries, without counting the hall called the Galerie Rapp, where on the ground floor a great part of the sculpture is exhibited, or the wide corridors outside the walls of the Palais des Beaux-Arts, along both sides of which sculpture is placed. Other groups of sculpture, again, are placed in the open air—on the promenades, and in the nooks of the gardens. To this total is to be added the magnificent "Retrospective Exhibition," comprising from 600 to 700 works executed by French artists from 1789 to 1889, the catalogue of which is not yet ready, and the special exhibitions of the Society of French Painters in Water Color and of the Pastel Society. These organizations have each a building of their own, and exhibiting, the "Aquarellistes" 463 works and the "Pastellistes" 153, bring up the total of the French part of the exhibition to something over 4,000 works.

The exhibits of other countries are placed in similar galleries in the northern half of the vast Palais des Beaux-Arts, the southern half being occupied by France; and, though in the main remarkably complete and varied, and coming from more than twenty-five different nations, they just about equal in their totality the number exhibited by the French. For some reason or other which I was unable to learn, the Belgian pictures and statuary were not included in the catalogue, but a note referred to the special catalogue of the Belgian exhibit, which I did not find it possible to procure. I should say, however, that the number of works from Belgium must be about the same as that sent from the United States. We have 572 works in all classes, and are closely followed by Great Britain with 552. Then come Italy with 327, Holland (*Pays-Bas*) with 288, Denmark 248, Sweden 228, Russia 205, Switzerland 168, Spain 179, Austria-Hungary 159, Norway 143, Germany (not a fully representative collection) 101; and Greece, Finland, Rumania, Servia, the South and Central American States, and the International Section, including artists from various countries not represented in the Exhibition, follow these with smaller numbers.

In an exhibition of such enormous extent it is scarcely possible to see everything; but the galleries are admirably arranged, there is room enough and to spare in many of them, lighting and installation are excellent. Perhaps it is only a question of time and of physical endurance to accomplish it. It is, however, easy to determine where to begin. We must study the French exhibition to see what progress, if any, has been made since 1878. We can then compare this with the Retrospective Exhibition; and, the position of the French as the leaders in the modern schools of art being determined, we shall find interest and instruction in comparing with their work that which is being produced in other countries. We shall thus be best able to find the reasons of certain well defined "movements" which are manifesting themselves in different places, and to judge of their value and influence on the art of the future.

Nothing shows better the strength and the activity of the French in the arts at the present day than the work of their sculptors. Though sculpture is fostered by the State, and a considerable number of commissions are annually given by the national Government and the municipalities, it is by no means patronized by individuals as painting is. The official patronage, moreover, is mostly given to the sculptors of reputation, and we are almost at a loss to understand how the younger and still struggling artists go on producing, year after year, the important works we find them constantly exhibiting. The expenses are great, even for the production of a single work, and after it is done and exhibited the artist usually has it left on his hands, or is only able to dispose of it at a price that barely covers his outlay, exclusive of living expenses, and gives him no remuneration for his time. The only explanation possible is, that devotion to his art keeps him up to his work until lasting recognition is assured, and in the meanwhile he must keep himself alive by whatever *gagne-pain* comes in his way. The production of pot-boilers, which many young painters find a means for tiding over the days of adversity, and the making of which so many unfortunately adopt as a permanent profession, may not be so readily carried on by the sculptor as by the painter. The ignorant or uncultivated buyer who relieves the dealer of his cheap and superficially painted pictures never cares for sculpture in any form, for it is not gaudy and showy enough for his taste. Even when it is bad, it is unattractive to him. The Italian sculptors of to-day, it is true, find a market for their pretentious figures, in which the imitation of stuffs in marble and the *trompe-l'œil* of a gauzy veil enveloping weakly sentimental heads of women are elements in an ensemble of mere prettiness; but this manner of belittling a noble art finds no favor in France, and the sculptor who should practise it would scarcely find a reputable place to show off such work.

In the face of popular indifference, however, and a necessarily limited Government patronage, the sculptors of France show no falling off in productiveness or excellence. The men of achieved reputation are represented in this exhibition by many of the best works that have come from their hands in the past decade. The administration has also included in the competition for prizes such works as have been placed in the museums or in public places, and cannot therefore be brought to the Champ de Mars. These works are entered in the catalogue, and the place is given where they are to be seen; but they are not numbered, and do not, of course, form a part of the 561 pieces of sculpture mentioned above. Guillaume, Delaplanche, Mercié, Aimé Millet, Saint-Marceaux, Moreau, Lemaire, Frémiet, Allar, and Barrias are well-known names among those whose exhibition at the Champ de Mars is only a partial showing of their ten years' work. Chapu is well seen in a group of nine works, including a fine figure in marble, "La Peinture," and Paul Dubois exhibits three busts, one of them of Paul Baudry, whose death since the last exhibition entitles his name to be emblazoned in the dome of the *Cour d'honneur*, where the principal works of the Retrospective Exhibition are placed.

Of younger men I find none that seem more promising than Antonin Carlès, who comes, like Mercié, from the South, and whose work began to attract attention in the salons in the commencement of the eighties. There is no more beautiful figure in the exhibition than the one by him called "La Jeunesse," a graceful and chaste young form, modelled with admirable firmness and yet with the most delicate and nervous touch. "Abel," a marble figure of a young man dead, is again a work of much strength, but of reserved strength, and with no indication of that rugged brutality which Rodin and his followers have made the fashion in many quarters. Adrien Gaudez, the author of "Le Moisonneur," that bent figure of the harvester with which he made such a brilliant début at the Salon of 1879, is another man of mark whose success is assured, and from whom much may be expected, to judge from his beautiful figure, "Echo," in the present exhibition, and his fine statue in plaster of Parmentier. To be noted also are Laoust, with excellent clothed figures of "Lully," violin in hand, and an effective rendering of an oft-treated subject, "Pierrot"; Lombard, with a delightful womanly "Diana"; Suchetet, with a charming recumbent female figure, "Byblis"; and Etcheto, Enderlin, Berteaux, Boutellier, Albert-Lefeuvre, and Lefèvre.

Auguste Rodin, of whom so much has been said and written in the past two years, since the production of his famous group of the six "Bourgeois de Calais," may be better judged at the special exhibition of his work at the gallery in the Rue de Sèze, where there are some thirty of his works, than here, where there are but five. A fragment of the group of the "Bourgeois"—a single one of the figures—three busts, and a group, which compose his exhibition, show his to be an unusual talent, and his work is strikingly vigorous and robust. One of the busts, a portrait of the sculptor Dalou, is notable for its fine, nervous construction and individuality of character. Another, that of M. Antonin Proust, the Commissioner of Fine Arts of the Exhibition, is equally fine in the quality of character seized and fixed, but the artist was less happy in his sitter than in the case of Dalou. The single figure of the "Bourgeois" is exceedingly impressive, even when thus seen detached, after one has seen the group of six. However opinions as to the talent of Rodin may differ, it is quite certain that he is the most prominent figure in the "new school"—those who seek to throw away entirely academic traditions—and, despite eccentricities, is a man of commanding power.

Delaplanche, whose charming figure "Music" is well known in America, and who was selected to do the figure of France distributing crowns to the nations come together at the Champ de Mars (a task in which he has acquitted himself well, it should be said in pass-

ing, for the great winged figure, poised on one foot, with drapery flowing in graceful lines, looks imposing at the top of the huge central dome of the Exhibition buildings; and in the small model exhibited in the galleries it is seen to be if not an original, at least, an artistic and dignified conception)—Delaplanche has done nothing better than a figure in marble called "La Danse," which was first exhibited at the Salon of last year. Sinewy and lithe, and yet voluptuous, slender of limb and finely jointed, the head poised gracefully on the lovely neck, it is an exquisite expression of the dance. Dalou's most remarkable work is a large bas-relief, representing the States-General at the sitting of June 23, 1789, a striking and dramatic composition of numerous figures. St.-Marceaux is seen at his best in a supple female figure, "La Danse Arabe," of less charm than the work of Delaplanche just mentioned, but of infinite elegance, and the woman of a handsome type. Frémiet, among nearly a dozen works, is strongest in his powerful and terrible group of a gorilla carrying off a woman, for which he received the medal of honor in sculpture at the Salon of 1887.

These are some of the most notable men and their works in this part of the French collection. There are many others of which I should like to speak, interesting both on account of the merits of the work or the fame of the artists; but enough has been said to show that there is no falling off in the excellence of French sculpture, nor any diminution of activity in producing on the part of the artists. The great art of sculpture has reached its highest development in modern times in France, and it may safely be asserted that it is better now than ever before. There is no Rude and no Houdon among the men of to-day, perhaps, as we their contemporaries view them near by; but it is quite possible that among those named posterity will find a greater than either of these. For the American who hopes for a great future for our own art, there is nothing to wish for more ardently than that a knowledge of the work being done by the French sculptors to-day may be widely spread among us. Such a knowledge would add to the dignity, the honesty, and the beauty of our art.

WILLIAM A. COFFIN.

Correspondence.

WASHINGTON AND PROTECTION.

TO THE EDITOR OF THE NATION:

SIR: When, in his spirited biography of Washington, recently contributed to the American Statesmen Series, Henry Cabot Lodge discusses the origin of the American protective system, he seems to present an excellent example of reversion to type. All through the first volume and the early pages of the second we evidently are reading the conclusions of an historian; but we turn a leaf, and, to our bewilderment, not to say disgust, we are confronted with the words of the campaign orator and Congressional special pleader. According to Mr. Lodge, Washington was a protectionist because his views of the national welfare were broad and far-seeing. After one or two preliminary remarks in this vein, our historian continues with the following candid statements:

"Washington was brought up and had lived all his life under a system which came as near as possible to the ideal of the modern free-trader. The people of Virginia were devoted almost entirely to a single interest, tobacco-growing, that being the occupation in which they could most profitably engage. No legislative artifices had been employed to enable them to diversify their industries or to establish manufactures. They bought in the cheapest market every luxury and most of the necessities of life. British merchants supplied all their wants, carried their tobacco, and advanced them money. Cheap labor, a single staple with wide fluctuations of value, a credit system, entire dependence on foreigners, and absolute free trade, according to the Manchester theories, should have produced an earthly paradise" (vol. ii, p. 114).

The intelligent mind stands appalled before such stuff as this. Is it humor? Is it satire? But even satire must contain an element of sense. In the last lines quoted, Congressman Lodge has been ingenuous enough to associate the chief features of the colonial system with modern free trade as equally ruinous from an economic point of view. Fortunately he does not stop there. Virginia, in common with the rest of the Union, soon got the advantage of all the "legislative artifices" which our early statesmen could invent. What was the result? Mr. Lodge shall tell us in his own perspicuous language. The condition of things was, he says, "bad enough in his [Washington's] time, but he did not live to see Virginia, with her wasted and exhausted lands, stand still, while her sister States to the north passed her with giant strides in the race for wealth and population. He did not live to see her become, as a result of her colonial system, a mere breeder of slaves for the plantations of the Gulf States." Can it be possible that protective taxes did not make of Virginia "an earthly paradise," despite slave labor, a speculative business, and an uneconomical credit system? Perhaps after all Washington did *not* live "all his life under a system which came as near as possible to the ideal of the modern free-trader." Perhaps not: we should like to say undoubtedly not, but Mr. Lodge is so sure; and who ever caught a protectionist Congressman in a misrepresentation or an exaggeration?

There is a little moral to all this, viz., let us have our history and our party speeches separately.—Yours respectfully, ELDRIDGE.

BOSTON, July 10, 1889.

ENGLISH WOMAN-BURNING.

TO THE EDITOR OF THE NATION:

SIR: Your correspondents who have recently discussed the question of witch-burning have not made it clear whether there is an authentic case of woman-burning for any offence in the penal records of England. While, as was pointed out by your correspondent in the issue of August 1, there were at least two crimes in Blackstone's day that were still punishable by burning alive in cases where they were committed by women, there is much doubt whether this extreme penalty was ever inflicted. Blackstone declares that there are "very few instances (and those accidental or by negligence) of any person's being embowelled or burned till previously deprived of sensation by strangling." That these persons thus "accidentally" burned alive were women is rendered highly improbable because of the existence of the same refined delicacy of feeling that forbade our forefathers publicly to expose and mangle the bodies of women culprits. This view is strengthened by the express declaration of Chitty, in his 'Criminal Law,' that "women who till lately were burned alive for high and petit treason, were always strangled at the stake before the commencement of the burning." It is, of course, possible that witchcraft, which was ranked with heresy, may have met with less mercy than treason or the killing of a husband. That under the English law women might be condemned to be burned alive for witchcraft admits of little doubt (IV. Blk., 60, 47). but is there an authentic instance where this sentence was literally carried out?

E. W. H.

MINNEAPOLIS, MINN., August 5, 1889.

SHAKESPEARE'S "MARRIAGE BOND."

TO THE EDITOR OF THE NATION:

SIR: I have been asked by letter to explain the nature of Shakespeare's "marriage bond." "What was it? and why was it given?" It was a bond for good behavior, so to speak. William Shakespeare was a minor, betrothed to a woman eight years older than himself. On the 28th of November, 1582, the Bishop of Worcester granted him a license to marry with *one* proclamation of the bans, instead of *three*, which last would have delayed the marriage a month. In return, the Bishop received Shakespeare's bond of indemnity for £40.

As a minor could not be surety for himself, and as the friends of Anne Hathaway had reason to desire the marriage to be speedily brought about, John Richardson of Shottery, witness to Richard Hathaway's will of the previous year, and Fulke Sandells, executor of that will, also of Shottery, became Shakespeare's sureties to that amount. John Shakespeare had been bondsman for Richard Hathaway in 1566, sixteen years before, so there had been long intercourse between the families.

The bond, etc., may be found in the seventh edition of Halliwell-Phillipps's 'Outlines,' but it seems to me there is a singular want of candor in admitting and explaining its true nature. CAROLINE HEALEY DALL.

Notes.

MR. PAUL LEICESTER FORD, whose address is No. 97 Clark Street, Brooklyn, N. Y., will have ready in September 'American Bibliography: A Check-List of Bibliographies, Catalogues, Reference Lists, and Lists of Authorities of American Books and Subjects,' a quarto volume printed on alternate pages, and containing 1,070 titles, arranged by subject under 19 divisions and 150 subdivisions, with a classification of contents and an author's index. At the same time Mr. Ford will bring out his 'Franklin Bibliography: A List of Books written by or relating to Benjamin Franklin,' an edition of 500 copies uniform in size with Bigelow's octavo edition of Franklin's Works. No fewer than 1,500 titles and references are promised, the list of works wholly or in part written by Franklin numbering 600, and his pseudonyms amounting to 60. There will be chronological, classical, and general indices, and mention of the libraries where the works may be consulted.

Henry Holt & Co. will issue next month a 'Handbook of Psychology: Senses and Intellect,' by James Mark Baldwin, Professor of Philosophy in Lake Forest University.

'Problems in American Society,' by the Rev. Joseph Henry Crocker, will be published in a few weeks by George H. Ellis, Boston.

Frederick Warne & Co. announce that the forthcoming volume of "The Cavendish Library" will be 'William Hazlitt, Essayist and Critic,' being selections from his writings, with a memoir, biographical and critical, by Alexander Ireland.

Mr. Richard Le Gallienne, the author of a little volume of bookish poems, is preparing 'George Meredith, Novelist and Poet: A Series of Essays,' which will be published in London

by Mr. Elkin Mathews, with a bibliography by Mr. John Lane.

'With Friend and Book,' and 'In the Study and the Fields,' are the titles of two booklets by J. Rogers Rees, author of the 'Pleasures of a Bookworm,' which will be published in very limited editions by Mr. Frank Murray, of Derby and Nottingham.

The sixth volume of the 'Henry Irving Shakspere' (Scribner & Welford) adds "Othello," "Antony and Cleopatra," "Coriolanus," and "Lear" to the edition, with the usual introductions and notes. Mr. Marshall's illness has occasioned some changes, in consequence of which Mr. Joseph Knight furnishes the stage histories of the plays, except "Othello"; the Rev. H. C. Beeching is responsible for "Coriolanus," and Mr. Arthur Symons and Mr. Verity act as substitutes in two other plays. Mr. Oscar Fay Adams is also a collaborator. The new volume maintains the same general character as its predecessors, and the near completion of this useful and cheap edition is to be hailed with much satisfaction.

M. J. J. Weiss is one of the French authors whose great repute among the best French critics it is not always easy to understand. In the case of M. Weiss the reason is perhaps that his chief labors have been as a journalist, and only those on the spot can fully appreciate the merits of journalism. He has published very few books, but the latest of them, 'Le Théâtre et les Mœurs' (Paris: Calmann Lévy; New York: F. W. Christern), is brilliant enough to justify the affectionate eulogies of MM. Sarcey and Lemaitre. Perhaps the most interesting passage is the autobiographic preface, in which M. Weiss describes his wanderings through France as a boy with his father's regiment, in which he had been enrolled as an *enfant de troupe*—just as Victor Hugo had done in his youth. It is pleasant to see that a writer as learned and as acute as M. Weiss has a good word to say for Scribe, whom the younger literary critics treat with undeserved intolerance.

The beautiful 'Almanach des Spectacles' appears for the fifteenth time, and the equally dainty 'Répertoire de la Comédie-Française' for the fifth, each with a portrait of Mlle. Muller, one etched by M. Lalauze and the other by M. Abot (Paris: Jouaust; New York: F. W. Christern).

The more or less edifying controversy over 'Christianity and Agnosticism,' begun by Dr. Henry Wace at the Manchester Church Congress last year, and prolonged in the *Nineteenth Century* and *Fortnightly Review* by Prof. Huxley, the Bishop of Peterborough, Mr. Mallock, and Mrs. Humphry Ward, has been gathered into a volume of 329 duodecimo pages by D. Appleton & Co.

Mr. Wm. C. Collar's reputation among classical teachers would insure attention to his 'Practical Latin Composition,' just published by Ginn & Co. It may be briefly described as a method of connecting immediately the reading of the Latin text with exercises upon it, using the text as the source at once of vocabulary and construction. Its very unlikeness to the disgusting and impotent older method of a generation ago (and later) is a certificate of merit.

Old New York is the title of a monthly journal relating to the history and antiquities of this city, edited and published by W. W. Pasko at 19 Park Place. The first number is dated August. It is typographically tasteful, and illustrations are promised hereafter. The hither term of "old" New York is defined as "a period within the recollection of middle-aged persons." The table of contents reads as follows: Notes on the History of Printing in New York; An Englishman's View [the Rev. Isaac Fidler, 1831]; Index to Engravings in Valentine's Manual [a serviceable performance by an unpractised hand]; Extracts from Early Newspapers; The Introduction of Methodism; Death of Dr. Alexander Anderson [extracts from the journals of "the father of American wood-engraving"]; The Claims of Nicholas Jones; Editor's Notes. The stream seems likely to run full for an indefinite time.

In the London *Academy* for July 20 there is a note from Mr. G. C. M. Smith, which gives a list of parallel passages in Fitzgerald's version of the 'Rubáiyát' of Omar Khayyám and the new prose translation by Mr. McCarthy. Fitzgerald dealt with his author as the potter deals with his clay, and one might imagine Omar's "half-obliterated tongue" protesting at his treatment of him. Nevertheless, Fitzgerald left a better Omar Khayyám than he found.

The *Academy* also publishes a list of all pensions granted during the last year, ending June 20, and charged upon the Civil List, among which, as possessing a certain literary interest, we note the following: Mrs. W. G. Palgrave, £50; Mrs. R. A. Proctor, £100; the widow of Prof. F. Guthrie, £50; Miss Emily Faithfull, £50; and two or three other grants of £50 each to the widows or daughters of men eminent in some branch of learning or science. All these are not only in recognition of service done, but also on account of the recipient's inadequate means of support. As compared with some other items in the Civil List, the ones that we have quoted seem very meagre and scanty.

The seventeenth number of the 'Complete Index to *Littell's Living Age*' (Philadelphia, No. 1135 Pine Street: Edward Roth) finishes the Geographical topics and begins on History, which is advanced into France. The divisions which now succeed the long one of Biography promise to be rapidly disposed of.

We make a somewhat tardy mention of the completion of the thirteenth volume of 'Meyer's Konversations-Lexikon' (Leipzig: Bibliographisches Institut), and of the eighth volume of the compact 'Allgemeine Weltgeschichte' issued by Grote in Berlin (New York: Westermann). The Cyclopædia is brought down to Rubinstein, and has its customary variety of excellent maps and plates in black-and-white and in color. In the 'Universal History' is concluded the story of the Middle Ages, by Julius von Pflugk-Harttung, the parts immediately before us dealing with the Lombard, Frankish, and Anglo-Saxon kingdoms, the Byzantine emperors, the Papacy and Islam. Here again the illustrations continue to be of a high order, and conspicuous among them are fine facsimiles of mediæval manuscripts.

Sun and Shade for July (New York: The Photogravure Co.) has a well-chosen group of plates after paintings and from nature—a smoothed out but otherwise characteristic portrait of Barnum, the Eiffel Tower, and the Sphinx, being most noticeable. In this last view, an American base-ball team using every coign of vantage on the front of the Sphinx serves at least to give a scale to the monument.

We have received from the University of Pennsylvania a sumptuous 'Handbook of Information' concerning the School of Biology attached to that institution. The equipment and courses are fully set forth, and the exterior and interior of the school buildings illustrated by heliotype (alias Levytype) plates which speak for themselves. The school was organized five years ago, and has a library of its own of 2,000 volumes.

We have on our table 'The Navajo Chant: A Navajo Ceremony,' by Dr. Washington Matthews, U. S. A.—a voluminous reprint from the fifth annual report of the Bureau of Ethnology, illustrated in colors and otherwise; and a 'Further Contribution to the Study of Consumption among the Indians,' by the same excellent and entertaining writer. Dr. Matthews is confirmed in his view that the Indians most in contact with civilization perish most largely from consumption, for causes some of which are certainly preventable.

A very interesting subject is attacked in Prof. A. S. Packard's memoir on the 'Cave Fauna of North America,' with remarks on the anatomy of the brain and origin of the blind species, and with numerous plates, printed in vol. iv of the Memoirs of the National Academy of Sciences. A map of the Mammoth Cave is given.

—Nearly twenty years of the life of Washington are comprised in the second volume of his Writings edited by Mr. Worthington C. Ford. It opens amid the preparations for the capture of Fort Duquesne, in 1758, and ends with the Commander-in-Chief's address to the New York Provincial Congress on his way to Boston, June 26, 1775. In this interval he marries the widow Custis, and furnishes their home with liberal orders from London, where his clothes are also "made by one Charles Lawrence, in old Fish Street," and much of his wife's attire is procured. There, too, he sends for a new stylish chariot, on which he makes bold to paint the Washington arms. He did not appear to be ashamed of this dependence on a foreign country, not being yet a full-fledged American protectionist and Harrison Republican; but he joined heartily, in 1769, in urging non-importation as a check to British oppression of the colonies.

"I have always thought," he wrote to George Mason, "that by virtue of the same power . . . which assumes the right of taxation, they may attempt to restrain our manufactories, especially those of a public nature, the same equity prevailing in the one case as the other; it being no greater hardship to forbid my manufacturing than it is to order me to buy goods of them loaded with duties, for the express purpose of raising a revenue" (p. 265).

A Life of Mason, by the way, Mr. Ford announces on p. 263 as in preparation by a descendant, Miss Kate Mason Rowland of Baltimore.

—There are many glimpses of Washington the planter in letters and diaries. On April 9, 1760, the plantation "Doctor Laurie came here, I may add, drunk." The negroes that year had the smallpox. On July 2, 1766, Washington sold to the West Indies the boy Tom, who was rogue and runaway combined, and whom the captain was enjoined to handcuff till the vessel got to sea. Tom's equivalent was to be a hogshead of molasses and another of rum, a barrel of limes, a pot of tamarinds, and two of sweetmeats. In 1770, Washington "went over to Col. Thomas Moore's sale, and purchased two negroes, to wit, Frank and James." In 1775, he sent some of his imported indented servants to the Ohio with his land-agent, whom he supplied with minute descriptions of each one in case they should run away and it should be necessary to "advertize a good reward" for them. On April 23, he had to advertise $40 reward for a Bristol joiner and a Scotch brickmaker, who thus gave him the slip "on the 19th instant at night," "in a small yawl." On another side Washington appears as guardian of the unstudious Jack Custis, and as the benefactor of William Ramsay's son, whom he offered to educate at Princeton.

—We have received from Macmillan & Co. a small 12mo of 272 pages, being a translation of

three dialogues of Plato, the Phædrus, Lysis, and Protagoras. It is by J. Wright, M.A., Trinity College, Cambridge. There is no preface or prefatory note of any kind. The title-page claims that it is a "new and literal translation chiefly from the text of Bekker." Each dialogue is preceded by a rather full and very well executed summary of its contents. Otherwise, there is no note or comment whatever. If Mr. Wright and most of the other authors of literal translations were asked to define exactly what they mean by the word "literal," they would, we think, find it somewhat difficult to answer. Mr. Wright's translation is characterized by a remarkable, not to say surprising, fidelity to the Greek text. At the same time the English is so idiomatic, so easy and flowing, that a person who did not know it was a translation might often read half-a-dozen pages without suspecting the fact. This is particularly the case where the interlocutor speaks in the manner of disquisition rather than dialogue, as for example, in the famous discourse on love which Socrates "preaches" in the 'Phædrus.' Where the dialogue assumes a really conversational form, with a more equal distribution of the amount of talk between the interlocutors, Mr. Wright seems a little less "literal" and, it appears to us, a little less happy. However, even in this case, we think the translation one of unusual merit. In its mechanical make-up the book is a gem.

—In 1881 Prof. G. A. Wentworth of Phillips-Exeter Academy published his 'Elements of Algebra,' a work very extensively used since that time in our academies and high schools. The next year he published his much larger 'Complete Algebra,' not, as the title might imply, an entirely different work from the 'Elements,' and really to be called a 'Completed Algebra.' The new 'College Algebra' (Boston: Ginn & Co.) is constructed on a different plan. Although it begins at the beginning in its development of the science, yet it practically assumes, on the part of the student, a previous acquaintance with algebra as far as quadratic equations. What the work contains up to this point is designed rather for the purpose of rendering it complete in itself, and to enable the student, by a brief review, to refresh his recollection of his former studies, than to be used by those who have never studied the subject at all. This course is very proper in a work on algebra designed especially for college use, because no student can enter college at all without having previously studied algebra to that extent. From quadratic equations on the treatment is very full. We have no space for detailed criticism, and can only mention one or two peculiarities of the work as distinguishing it from the author's previous treatises and from other works. The number of examples and problems for solution, although quite sufficient, is not so superabundant as in most of his text-books. There is throughout the work an evident attempt at novelty, an endeavor to say old things in a new way, which we do not think is in all cases an improvement. Among matters not usually treated in algebra we may mention a chapter on the "Graphical Representation of Functions," a subject which the student usually first meets with in Analytic Geometry, and a chapter on Determinants. The latter, which is very good, is, however, not by Prof. Wentworth himself, but by Prof. Sawin of Harvard University. On the whole, the book is a very good one, but we do not think it will greatly add to the reputation which Prof. Wentworth has already acquired.

—Those who wish to obtain some knowledge of Old High German at a minimum expenditure of time and money will find their reckoning in Wright's 'Primer of Old High German (Oxford: Clarendon Press; New York: Macmillan). In this little volume of 170 pages the editor gives a full and clear outline of the phonology and grammatical forms of the language, some extracts in prose and in verse, from Tatian to the 'Muspilli,' and a glossary. The grammar is based, of course, upon Braune, and is therefore trustworthy. We notice that at page 56 the pronoun *iz* (modern neuter *es*) is defined as 'it,' '*there*'! Would a grammarian of modern German define *es* in *es giebt* as 'there'? The distinction (p. 83) between *wesan* and *werdan* in forming the passive is not put very scientifically. Vowel length is marked throughout, an excellent feature in a book of the sort. We have to find fault with the glossary. It is altogether too meagre for the needs of a beginner, and is not accurate. Thus *agaleizi* is put down as feminine. How will this enable the pupil to read *in managemo agaleize* in the first line of Otfried, where the adjective shows plainly that the noun cannot be feminine? Braune's glossary gives a feminine in *-ī*, and a neuter in *-i*. The editor would have done better to follow Braune's example and enter all *gi-* compounds under the uncompounded form. His present arrangement is exasperating. And in general the vocabulary should be at least twice as large, with fuller definitions and copious references to both text and grammar. An editor can scarcely help the beginner too much in this direction. We hope to welcome the primer in a second edition, with the glossary recast as we have indicated.

—M. l'Abbé Fourrière, of whom we know only the name, has just published at Amiens a little book called 'Les Emprunts d'Homère au Livre de Judith,' acquaintance with which we have made only in a brief notice, with extracts, in the *Revue Critique*. Some of the Abbé's opinions are amusing enough. Of Homer he says: "The authors comprised under this name were of Jewish origin." "There were Jews in the Troad, especially in the country about Mount Ida, the inhabitants of which were called Idæans, a name almost identical with that of Judæans, or Jews." "When Homer says that an object bears two names, one in the language of the gods, the other in that of men, he means by the first tongue Hebrew, by the other, Greek. . . . If one compares the Æolic dialect with the Hebrew, striking resemblances are found between them." One of these is the resemblance of the Hebrew *vau* to the Æolic digamma. "Looked at from the religious point of view, the work of Homer is a battering-ram against Biblical monotheism, against the religion of the Hebrews." The author reserves all his rights of translation and reproduction. "Nothing is fair or good alone," as Emerson says, and Mr. Ignatius Donnelly may never know what argument his creed to the Abbé's book has lent.

—The national museum of Egyptian antiquities at Bulak contains a very interesting collection of plants which have been found in the catacombs and sepulchral monuments of the country. Dr. Schweinfurth was the first to study this ancient flora, which, according to the *Revue Scientifique*, contains no example of a plant that does not grow to-day in the Nile valley. Nor does the most minute examination show the least difference between the vegetation which flourished fifty centuries ago and that of the present time. In some cases the color of the flowers can be clearly distinguished, as, for instance, the purple larkspur, the red poppy, the reddish-brown saffron, and the blue lotus. "The leaves of the watermelon contain grains of chlorophyll perfectly visible in the microscope." All these were found in great numbers in the burial-places of the fifteenth dynasty, 3000 B. C., and in one tomb of the same time some ears of barley. In later monuments were discovered mustard, flax, cucumbers, lentils, pine-cones, juniper-berries, dates, hollyhocks, chrysanthemums, figs, olives, onions, and grapes. Around the necks and upon the breasts of the mummies of 1100 B. C. were garlands of celery-leaves and blue lotus-flowers. In regard to the various specimens of grain discovered, it may be added that no attempt to make them grow has ever succeeded, the plants having been subjected to great heat at the time of the embalming and burial, which, while it preserved them, destroyed their germinating power. The cases in which mummy wheat is said to have been raised are due simply to the fraudulent mixture of modern with the ancient grains.

—The tenth number of the *Goethe-Jahrbuch*, while it contains perhaps nothing which any one need feel that he positively must read before eating or sleeping, is still fairly interesting, or at least will be thought so by the votaries of the cult which it represents. The archives at Weimar have been made to yield up the usual batch of hitherto unpublished letters, the best of those given this year being some letters written by Goethe and his wife in 1808-9 to their son August, who had lately entered the University. These missives give us a pleasant glimpse of the poet in his capacity of paterfamilias, promising more money, counselling temperance, and making suggestions upon the art of living wisely in one's youth. In view of his own early disgust with academic life, such a passage as this is suggestive: "I also approve your taking but few lectures. In study, everything depends upon one's mastering, step by step, that which one purposes to acquire. As soon as the instruction offered grows over one's head, one becomes stolid or disgusted and is easily tempted to reject the whole." So, too, the bitter outburst of *Faust* upon the study of history, the "book with seven seals," and upon the futility of the efforts of the learned gentlemen to "transport themselves into the spirit of past times," is provided with a needful commentary by this passage: "I am pleased that your studies are taking an historical turn. To learn how things have come about in human, earthly fashion, what has been lost, and what has remained as a living force, is as instructive as it is delightful; and the young man whose fortune it is to lay hold of the Past in that way anticipates old age and prepares for himself a pleasant life." Of the letters of Frau Goethe one finds little more to say than that they are sensible, affectionate, and, on the whole, pretty well written. Some things in them have a strange sound to modern American ears, as where, for example, after bidding her son be at his ease with respect to money, assuring him that his father will not be close if he only spends his allowance properly, and promising to send an occasional remittance on her own account, she adds: "But I have only won 75 gulden at the lottery; with these I shall take a new chance, and this time I shall surely win."

—Of the essays contributed the most valuable is one entitled "Classiker und Romantiker," by Jacob Minor. It is really an inquiry into the origin of that far-famed antithesis. It is well known that there was an excellent understanding at first between Goethe and the Romanticists. The members of the "school"

admired him and sang his praises, and it was not until after 1805 that any breach became apparent. Minor attempts to trace the influence of the Romanticists upon Goethe's work, maintaining among other things that the First Part of "Faust" was strongly affected by the new movement, and really took on the form of a "romantic" drama in Tieck's manner. Finally, we observe that the *Jahrbuch's* eighty pages of bibliography testify abundantly to the world's—more especially Germany's—unwearied activity in the production of Goethe literature.

RECENT EDUCATIONAL LITERATURE.

The First Three Years of Childhood. By Bernard Perez. Edited and translated by Alice M. Christie. With an introduction by James Sully, M.A. Syracuse: C. W. Bardeen.

Lectures on Pedagogy, Theoretical and Practical. By Gabriel Compayré. Translated, with an introduction, notes, and an appendix by W. H. Payne, A.M. Boston: D. C. Heath & Co.

Occasional Addresses on Educational Subjects. By S. S. Laurie, A.M., LL.D., Professor of the Institutes and History of Education in the University of Edinburgh. Cambridge, Eng.: University Press; New York: Macmillan.

Notes on the Early Training of Children. By Mrs. Frank Malleson. Third edition. Boston: D. C. Heath & Co.

Sonnenschein's Cyclopœdia of Education. A Handbook of Reference on all Subjects connected with Education (its History, Theory, and Practice). Edited by Alfred Ewen Fletcher. Syracuse: C. W. Bardeen.

Two classes of books mark the progress of education: first, original contributions to pedagogy and the kindred sciences, such as psychology and ethics; second, books that recast old pedagogical truth and attempt to bring the maxims of common sense into the working consciousness of teachers. The work by M. Perez that heads our list may fairly claim a place in the former of these classes. The book is already too well known to require extended comment; but the appearance of an authorized American edition of the English translation is a sign of the interest of our teachers in the scientific study of babyhood. The author has not, like Darwin, written a biographical sketch of a single infant; but he has observed and compared the activities of many children, tracing the development of perception, the sentiments, will, memory, imagination, and the other mental activities in the early years of childhood. No one observer can see all there is in child nature, but M. Perez has seen a great deal that is of psychological interest; and, "not blushing to descend to petty details," he has recorded his observations with scientific thoroughness. Moreover, he has studied his material carefully, and presented the results of his study in the lucid French style that lends itself to intelligible translation. The translator, too, deserves praise for reproducing in English the clearness and simplicity of the original. It is a pedagogical commonplace that the art of education is a practical application of the science of psychology, and psychogenesis is now one of the most important chapters in psychology. Thoughtful teachers, then, do well to study works like this and Prof. Preyer's 'Die Seele des Kindes,' for they form the best text-books in infant psychology.

'Lectures on Pedagogy' is another good translation of the work of a well-known French writer. These lectures, originally delivered by M. Compayré at the normal schools of Fontenay-aux-Roses and Saint-Cloud, give a good résumé of the theory and practice of education. The book is enriched by judicious selections from eminent writers. It is well written, scholarly, and interesting. The part devoted to practical pedagogy is especially sound. The author is no advocate of that pedantry of method that would have every lesson taught by scholastic formulæ; nor does he deem it necessary to stuff the memory of teachers with the "pedagogic nonsense" of those writers who divide instruction into many *forms*, as the *achromatic* form, the *erotomatic*, *catechetic*, *analytic*, *synthetic*, *paralogic*, and the like; and then subdivide into a score of *processes*. Modern education is said to approach nature. "Alas!" he exclaims, "we are far from nature with these distillers of pedagogic quintessence, who split hairs, who distinguish and analyze the simplest things, and invent several barbarous terms to designate identical operations."

One criticism may be made upon this book. While the author bases the science of education upon psychology, his sections upon Will, Attention, Memory, Habit, and the like lack the emphasis and suggestiveness that modern physiological and experimental psychology has imparted to these subjects. The author, however, has handled the facts of introspective psychology unusually well, and presented their pedagogical aspects in a suggestive manner. Prof. Payne's translation of Compayré's 'Histoire de la Pédagogie' is the best history of pedagogy in English; and he has again rendered valuable service to education by this translation of the 'Cours de Pédagogie, théorique et pratique.'

The book just noticed and Prof. Laurie's 'Occasional Addresses' are none the less valuable for belonging to the second class of books mentioned above. Most pedagogical truths are commonplace; but platitudes usually contain the genuine ore of wisdom. They are like old worn coin, not valuable because old and worn, but old and worn because valuable. One who can recoin them, stamp them with his own individuality, and make their original value recognized at the world's counters, does a service well-nigh equal to that of one who makes an original contribution to science. This is, in great part, the work of Prof. Laurie in these addresses. Much of the book consists of what if said in a different way would be commonplace. But the author has caught an inspiration from his philosophical studies, and nothing to him is common. Few writers put so much life into the discussion of such subjects as "The Organization of the Curriculum of Secondary Schools," "Free Schooling," "Examinations," and the like.

The essay upon "The Respective Functions in Education of Primary, Secondary, and University Schools" is one of the best. According to Professor Laurie, the idea that should dominate instruction in all these grades is *nutrition*. But in the secondary schools there must also be the special aim of discipline. The youth are in the turbulent period of adolescence. "The chief lesson to be taught now is the lesson of law and duty, and of personal effort." The aim of the university likewise is *nutrition*—"the nutrition of ideas." The discipline, however, should be self-discipline, which is possible only through the utmost freedom. The following passage will indicate the author's radical position:

"The essence of university life is freedom for the student and freedom for the professor. It is simply because the university has become a certifying and graduating body that even the calling of class-rolls is justifiable. Even as a graduating body I doubt, after all, if it is justified in calling them. The professor offers to show the student the way to knowledge, and to teach him how to use the instruments of knowledge, whether they be books or microscopes; and there his function ends. If any parent is unwilling to send his son to the free life of a university, let him keep him at home and call in a trained nurse or a paternal tutor."

In Prof. Laurie's opinion, the curricula of universities should be entirely elective. *Boys* have no place in the higher academic halls. They should remain in the secondary schools until they receive the moral and intellectual discipline that fits them for the ideal atmosphere of the university.

Mrs. Malleson's 'Notes' are the straightforward utterances of common sense in regard to the training of children. The critical reader may pronounce them commonplace, but there are plenty of mothers who will find the advice in this little book helpful. Such books are always useful if they are read by those for whom they are written.

The last book on our list is a valuable addition to educational literature. Among the contributors are such prominent educators as Principal Donaldson, Oscar Browning, Sir Philip Magnus, Arthur Sidgwick, and James Sully. A wide range of subjects is treated, including the various branches of study, school virtues, methods of teaching, main points in the history of education, together with biographical sketches of prominent educators and explanation of pedagogical technicalities. "It has been the aim of the contributors," says the editor, "to give a telescopic rather than a microscopic view of the educational facts and questions discussed, and to bring their purely pedagogical features into clear outline." Subjects of special importance, however—such as Schools of Antiquity, The Reformation, Universities, Technical Education, School Law, and the more common branches of study—are treated at considerable length. These longer articles are very valuable, and the biographical and miscellaneous sketches are convenient. The emphasis is placed upon education in England; but, on the whole, the subjects have been judiciously chosen and ably discussed.

Some omissions, however, are to be regretted. For example, no mention is made of the Church Fathers. St. Jerome at least should be noticed on account of his letters on the education of girls. And among scholastic teachers, while Alcuin, Abelard, and Roger Bacon are noticed, there are no sketches of Capella, whose 'Satyricon' was the great text-book for a thousand years, nor of Peter Lombard and his famous 'Sentences,' nor of Thomas Aquinas, whose philosophy has dominated the higher Catholic education for the last 600 years Among women eminent in education, Jacqueline Pascal and Madame de Maintenon are noticed; but Madame Necker and Madame Guizot are slighted.

The view of American education presented is astigmatic rather than "telescopic." No adequate account of our public schools is given, and little attention is devoted to higher education in this country. There is some account of Harvard and the University of Virginia. The post-graduate work at Johns Hopkins, Yale, and other prominent universities is barely mentioned; but we learn that the Illinois Wesleyan University has established non-resident and post-graduate courses of study. Isabella Graham, Ezra Cornell, Peter Cooper, and James Garfield (*sic*) are the subjects of separate biographical sketches; but Benjamin Franklin, Alex. Dallas Bache, and Thomas Jefferson are

not mentioned. Even the proof-reading of American literature in the bibliography has not been entirely accurate. "H. *R.* Adams" stands for H. B. Adams (p. 559), and Charles Francis Adams would hardly recognize his Φ B K polemic on the Greek question by its new title, "A College Fetch" (p. 552).

When the editor turned his telescope towards the past, the images of Rome and Judea must have fallen on his mental blind-spot; for, while the long article devoted to "Schools of Antiquity" gives an interesting account of education in Assyria, Babylonia, China, Egypt, India, and Persia, there is no mention, except incidentally, of Greek, Roman, and Hebrew schools. This omission is in part supplied by separate articles devoted to Athenian and Lacedæmonian education. But one looks in vain for sketches of such men as Pythagoras, whose famous school at Crotona certainly deserves mention, and Quintilian, whose 'Institutes' presents in detail the Roman ideal of an orator's education from the cradle to the forum, and Plutarch, the first, so far as is known, to write a special treatise "On the Training of Children." In short, the account of Greek education is incomplete, and both the practical education of the Romans and the domestic and religious education of the Israelites are entirely neglected.

The book, for the most part, is written in plain English, but the author of the article on "Pedantry" (p. 258) begins with slovenly rhetoric, as follows: "Pedantry is an awkward ostentation of needless learning, or an obstinate addiction to the forms of some private life, and not regarding general things enough." The typography is generally good; but the book is cheaply bound, and the insertion of advertisements between the pages of the text is unpardonable. Teachers will be grateful, however, for so good a cyclopædia of pedagogical information in any form, and the value of the book is enhanced by an excellent bibliography of thirty-four octavo pages.

MADAME DE STAËL.—I.

Madame de Staël: her Friends and her Influence in Politics and Literature. By Lady Blennerhasset. 3 vols. 8vo. London: Chapman & Hall; Philadelphia: J. B. Lippincott Co. 1889.

Sainte-Beuve, who had a weakness for Madame de Staël, says that "the best good fortune for an immortal memory is to have, long after death, two or three of those revivals and magnificent awakenings which astonish new generations, and convince them that a great man lies dead there, still powerful in his shade and silence." Such revivals are brought about by the posthumous publication, after the lapse of many years, of autobiographic memoirs; of correspondence, published as it was written, unchanged, simply in order of dates, which can show the writer as he really was—not dressed up for the public; and more rarely by a well-written biography, especially if it be based on unknown or little known materials.

Mme. de Staël has had none of this good fortune. Unluckily for her, and for us, too, her son died childless; her only daughter married a Duc de Broglie, and one of her granddaughters a Comte d'Haussonville; and the proprieties of these noble families might suffer by allowing the public to see Mme. de Staël too closely. Not even the correspondence with Mme. Récamier has been printed, though it was read by Sainte-Beuve. Much has been written about her, but seventy-two years have elapsed since her death, and there has been no adequate biography of her. The book before us is an effort to supply this want. The authoress, though the wife of an Irish Baronet, is a German by birth (born Countess von Leyden), and the book was originally written in German. The translation acknowledges some omissions which are generally unimportant, and it is a pity there are not still more, and that the book has not been reduced in size from three volumes to one. To those who are but superficially acquainted with those times, the history of the French Revolution, the account of Necker's financial and political schemes, and the biographies of every one whom Mme. de Staël met or knew, will be instructive and interesting; but there are probably few who are really interested in Mme. de Staël, who have not read memoirs and correspondence enough to have previously made acquaintance with all these people. Full as it is, the book does not take in everything even of what is printed; and although the authoress has consulted unpublished letters of her heroine in the library of Upsala and in private hands, she has evidently not had access to the family archives at Coppet. Some points in Mme. de Staël's life are even thus left misty, and such is the wealth of extrinsic detail that it is only by picking and choosing and putting together detached bits of the book that we arrive at any idea of Mme. de Staël herself.

Born in 1766, when her father was still only a Swiss banker in Paris, Anne Louise Germaine Necker was brought up among the literary celebrities of the day who frequented her mother's salon. Her education was directed by her mother, who was herself almost a learned woman, but strict and severe, and a great believer in method and rule. She was convinced that everything could be learned, and that study was the chief thing in education. Had her daughter not possessed originality and a mind of her own, as well as a remarkably quick intelligence which replaced perseverance and application, she would have broken down under the system. As it was, her health gave way, and the great Tronchin prescribed a country life, continuous exercise, and fresh air, with the complete cessation of all mental exertion. Mme. Necker could not accustom herself to this, and lost her interest in her daughter when she found she could no longer make her as she wished. Years after, when some one was praising Mme. de Staël's extraordinary gifts, Mme. Necker characteristically replied: "They are absolutely nothing to what I intended them to be."

Her surroundings made her as a child precocious, priggish, and pedantic, and she early developed her love for conversation. From her earliest years she wrote, first, sketches of character in the fashion of the time; then verses, essays, and plays—one of which, "Montmorency," written when she was about thirteen, is said to have been clever, and she loved to read it aloud long afterwards; but, as Gouverneur Morris says, "She writes much better than she reads." Before she was fifteen she had annotated 'L'Esprit des Lois,' had written a treatise on the Edict of Nantes, when the Abbé Raynal flattered her by proposing to incorporate it in the next edition of his 'Histoire des Indes'; and at about the same time she reviewed her father's 'Compte Rendu,' pretending that it was done anonymously, although he recognized the style.

All her life Mme. de Staël had need of loving and of being loved. At first she spent this feeling on her father, whom she always admired and idolized. Morris, writing in 1789, says: "I think that in my life I never saw such exuberant vanity as that of Mme. de Staël upon the subject of her father. Speaking of the opinion of the Bishop d'Autun upon the subject of the church property, . . . she says, 'It is excellent, it is admirable, in short, there are two pages in it which are worthy of M. Necker.' Afterwards she says that wisdom is a very rare quality, and she knows of no one who possesses it in a superlative degree except her father." It was this admiration which led her into some of her political errors.

Mlle. Necker's marriage was beset with great difficulties. Both she and her parents preferred a French alliance; but, although the sons of great noble houses did not scruple to marry the daughters of financiers, Necker was a Protestant, and it was not till 1788, on the eve of the Revolution, that the ban of the law was removed from Protestants, their civil rights restored, and their children legitimized, for in the eye of the law they were all bastards. When she was seventeen, she might have married William Pitt, then twenty-four years old, whom she had met at court at Fontainebleau. The proposal was made by Pitt after his return to England, and was warmly supported by the Neckers. But their daughter refused, as she could not tear herself away for life from Paris, which to her was equivalent to France. Her mother, who was then dying, scarcely forgave her. It was only after his rejection, if at all, that Pitt said he "was already wedded to his country." The successful wooer was Baron Eric Magnus von Staël-Holstein, Secretary to the Swedish Embassy, who was already a favorite in French society. Supported by the Comtesse de Boufflers, he had for five years sought the lady's hand; but Necker's conditions, in consideration of his position and his large fortune, were very hard. They were:

"(1.) A life appointment of Staël to the French Embassy; (2) a pension of 20,000 francs, should unforeseen events deprive him of his post; (3) the title of Count—especially to obviate any confusion between Baroness de Staël and another lady of the same name who bore a doubtful reputation; (4) a solemn promise on Staël's part only to take his wife to Sweden for a short time, and then only with their consent; (5) investiture of the Order of the Polar Star for the Ambassador; (6) an explicit declaration from Marie Antoinette in favor of this marriage."

Such conditions show Necker's immense conceit with himself and his belief in his great importance. King Gustavus, however, did not seem inclined to accept them, and it was only on the personal request of Marie Antoinette, and after the island of St. Bartholomew had been ceded by Sweden to France, that he agreed to everything except the title of Count and the life appointment. He named Staël Ambassador for six years, and promised him an additional term of six years. Two other suitors had meanwhile appeared—Count Axel Fersen, who had made the proposal only to please his father, and readily gave way to his friend; and Prince George Augustus of Mecklenburg, a brother of the reigning Duke, who described himself as a posthumous son with many debts, but used as an argument that Mlle. Necker would thus become related by marriage to the King of England. Finally the marriage contract was witnessed by the King and Queen of France, and the marriage itself was celebrated in the chapel of the Swedish Embassy at Paris in January, 1786, about three months before the bride had attained her twentieth year.

In Paris, Baron de Staël was overshadowed by his brilliant wife; but his recently published letters and despatches prove that he was by no means the nonentity which her friends accounted him. He was sincerely fond of his wife, but he was unable to express his feelings in that gushing manner which seemed so necessary to her nature. She continued to live un-

der the same roof with him, though, while her parents were in Paris, the most of her evenings were spent with them, and her real salon was at their house. After some time she became entirely indifferent to her husband. In the well-known chapter in 'De l'Allemagne,' on love in marriage, she hints that he had displayed too little sentiment—or sentimentality, perhaps—in married life; and in 'Corinne,' she also hints that he could not retain her esteem because he possessed so little intellectual distinction. Bollmann heard her say one day: "With a man who is only clever I assert myself, and I do the same with a man who is only learned; but a man who is both makes me feel that I am only a woman." De Staël felt keenly this desertion, and, only three years after his marriage, when to a great extent given up to mysticism, he wrote to a friend:

"I have spent many bitter hours since your departure. If I knew how to bear my cross, my fate would be more endurable; but the old Adam prevails. . . . I have deserved my present sufferings. I am punished in my innermost feelings, but I still dare to think that, notwithstanding all my faults, my heart has remained steadfast. Pray for my wife. May she never suffer from the torment I endure."

The marital relation, however, continued, and it was not until 1798, when Mme. de Staël, by her meddling in French politics, and by the disfavor in which she was held by the Directory, threatened to wreck the Ambassador's career for a third time, that a formal separation—*de facto*, if not *de jure*—took place. Staël was at that time considerably in debt, partly through the great expenses necessitated by his position, partly through large amounts spent to carry out the orders of his sovereign, and partly from his wife's extravagance, which had needed even the Queen's warning. Some small debts were paid by Necker, who otherwise refused to have anything further to do with his son-in-law. Napoleon, we know, had his own reasons for disliking Mme. de Staël, and yet it is difficult not to agree with him in a letter written to his brother Joseph from Aosta, March 19, 1800:

"M. de Staël is in the greatest misery, and his wife gives dinners and balls. If you must continue to visit this woman, would it not be as well to persuade her to bestow a thousand or two thousand francs a month on her husband? What is to happen next if decent people allow not morals only to be trampled under foot, but duties more sacred than those that bind children to their parents? Supposing Mme. de Staël were to be judged as if she were a man, and as one who had inherited Necker's fortune, enjoying all the advantages of a distinguished position, and yet leaving his wife in a state of misery, while he was living in luxury—I ask if such a man would be received in society?"

In 1802, finding that her husband's health had entirely broken down, and willing at last to show him the kindness which she was so ready to bestow on others, she wrote to him in Sweden that she would condone the past and would return to him. They started together for Paris, but he died suddenly when only fifteen miles from Coppet.

It is to be supposed that the poor Baron had tacitly condoned the faults of his wife. She was always a believer in friendship, especially with the male sex. Wherever she was, her house was full of men—either as protégés in the paths of literature, politics, and virtue, as recipients of her bounty, as friends, as admirers, or as something more. Her first great passion was for Narbonne, who was credited with being a son of Louis XV. Their intimacy had lasted during their residence at Paris; she had saved his life in the Reign of Terror, and she had subsequently given him hospitality in England. Their relations had then ceased, and "what had been a mere episode in his life was closed with the same indifference with which he had begun it." She kept up an outward friendship, though she suffered long from the wound he had inflicted on her heart, and had many a bitter pang at his death in 1813. Next followed Benjamin Constant, who, after her husband's death, offered to marry her. This offer she refused unless she could retain her own name, as she was unwilling to confuse Europe (*désorienter l'Europe*) by changing it.

There were probably many other reasons, for their relations were not altogether happy ones, and Constant was always trying in vain to break loose from the chain which bound him to this masterful woman. He revenged himself long afterwards with his little masterpiece, 'Adolphe.' In this he had so changed all outward circumstances as to make himself think that she would not be recognized. But all near friends who had been spectators of their intimacy—especially the simple-minded Sismondi—knew at once who was meant by Ellénore. On reading the book, one has the utmost contempt for the weak and despicable character of Adolphe, in which Constant has faithfully painted himself; but one realizes that the position of a lover of Mme. de Staël must have been an Inferno. Nevertheless, even after the Restoration, Mme. de Staël lent Constant 80,000 francs, so that he could purchase property in Paris in order to qualify himself for election as a Deputy, on condition that half of it should be repaid on her daughter's marriage. When this took place, she was obliged to remind him more than once; and he wrote in his private journal, which has just been published: "Furious letter from Mme. de Staël. I am lying in wait for her, and shall crush her. I have all that is necessary for it." The threat, however, was not carried out.

When in Italy in 1805, Mme. de Staël, as is is evident from her letters, fell desperately in love with the poet Monti, but as she tried in vain to induce him to join her band at Coppet, and submit himself to her influence for his literary improvement, there was apparently nothing which could be called a *liaison*. In 1810, after she had gone through a period of mysticism, from the religious part of which she never recovered, when she was about forty-five and had said and believed, "The door of my heart is shut," she gave sympathetic and tender care to a young patrician of Geneva, Jean de Rocca, who had served with distinction in the French army in Spain, had been shot through and through by guerrillas, and whose life had been preserved almost by a miracle through the care of a pitying Andalusian girl. Rocca was so much impressed by the mistress of Coppet that he said to a friend that he "would know so well how to love her that in the end she would marry him." "When he was told that she was old enough to be his mother, he replied that he was glad to have another reason for loving her. What seemed improbable took place. The woman who had never been beautiful, and who had never awakened any lasting affection in her youth, became the object of a passionate attachment ennobled by constancy, at a period when she had renounced all hopes in that direction." Still, with her ideas of her social rank, and with the thought that the eyes of Europe were fixed upon her, she refused to change her name or drop the title of Baroness, and hated to have it known that she had had the weakness to marry a man so many years younger than herself. The marriage, therefore, was kept secret, although in Sweden, for the sake of her children, it was revealed in confidence to the King. Elsewhere, and even in England, rather than be called Mme. de Rocca, she preferred to let people suppose that she was travelling with her lover and her illegitimate daughter. It was only after her death—shortly followed by that of Rocca—that the marriage was made public.

WINSOR'S ABORIGINAL AMERICA.

Aboriginal America. [Narrative and Critical History of America, edited by Justin Winsor. Vol. I.] Boston: Houghton, Mifflin & Co. 1889.

In presence of a book like this, the seventh issue in the important series to which it belongs, the critic finds it difficult to remain faithful to his duties as a "critic." There is so much to laud and so little to animadvert upon that he feels himself exposed to the reproach of partiality. Of course, no man is ever completely satisfied by the work of any other man, and the first thing one does, in examining the doings of somebody else, is to try and find out wherein that somebody "seems" to display less knowledge, less experience, less depth, than he—the critic—might have displayed under similar circumstances and in face of the same exigencies. But it must be said of the work which Mr. Winsor has undertaken, that he has left less room for fault-finding of this narrow kind than any one who ever trod the difficult path of ancient American history.

It is natural that the bibliographical introduction should be furnished by the editor himself, since nobody was better fitted than he to give an idea of the Americana extant in libraries. It is pleasant to read the praise which he accords to Mr. H. H. Bancroft as a collector of sources. Whatever may be one's opinion in regard to the use which Mr. Bancroft has made of these sources—whether his own conclusions suit us or not—the mere fact that he has gathered and stored them should entitle him to our lasting gratitude. Nobody has ever paid a higher tribute to Mr. Bancroft on this score than Mr. Winsor, and nobody was better fitted to do it. It is somewhat regrettable, however, that the list of libraries rich in Americana does not extend beyond the United States. The libraries in Mexico, for instance, like the Biblioteca Nacional and the private libraries of Don Joaquin Garcia Icazbalceta, José Maria Agreda, and of the Cura of Amecameca, Fortino Hipolito Vera, contain rare treasures.

The paper on "The Early Descriptions of America," also by Mr. Winsor, is an admirable piece of work. Beautifully and appropriately illustrated, and supplied with bibliographic notes of the highest importance, it is without parallel as yet for fulness and careful criticism of sources. The reader is made acquainted, in a manner as scientific as it is vivid, with the development of literature pertaining to the New World in the earliest times. It is the best existing guide to preparatory studies in American history—studies which, to our great regret be it said, have been until now largely neglected.

After these two introductions follows the chapter on "The Geog raphical Knowledge of the Ancients considered in relation to the Discovery of America." Mr. W. H. Tillinghast, to whom this chapter has been committed, exhausts the subject as far as is now possible. Splendid copies of almost forgotten maps accompany the article, and the Atlantis tale, the legends of Saint Brandan and Saint McLeod or Malo, as well as the question of the mythical island Antillia, with its seven cities, are very thoroughly ventilated. It strikes us, however, that, in regard to this kind of myths and hypotheses, the author might profitably have consulted the second edition of Garcia's

"Origen de los Indios," so largely amplified and transformed by its editor, Andres Gonzalez Barcia. Not only would he have found therein references to numberless speculations concerning the origin of the Indians which are to-day lost sight of, but he would have met with notices of manuscript sources extant at the time. He, perhaps, also passes too lightly over the "montagna bruna" of Dante. It should not be forgotten that this allusion may stand in the same light as the remarkable passage,

"All' altro polo, e vidi quatro stelle";

and that, while the latter appears prophetic in regard to the subsequent discovery of the Southern Cross, the former may be equally so with respect to a geographical fact. In all these legends and myths there is probably a diminutive grain of truth, and whenever they show an exceptional persistence, it is a sign that we cannot absolutely discard them. Among the elder descriptions of the earth we miss the one given in 825 A. D., by the Irish monk Dicuil, under the title, 'De Mensura Orbis Terræ.' This little book (printed with an elaborate commentary by Letronne in 1814) is not a "first-hand" source; still, it is valuable, and the more so because it contains the positive statement that Irish monks had gone to Iceland prior to the year 800. (See cap. vii, par. i, 6.)

In "Precolumbian Explorations," Mr. Winsor gives a résumé, accompanied by the usual abundance of notes and bibliography. He, too, is silent on the subject of Dicuil, and does not mention among the sources the valuable book of Christoph Friedrich Muenter, 'Kirchengeschichte von Daenemark und Norwegen.' That author gives among other things, on p. 576 of vol. i, the text of the bull of Pope Gregory IV., wherein the words, "Gronlandan—Islandon," etc., occur. It is needless to insist upon the general excellency of Mr. Winsor's monograph, by the side of which such slight omissions are truly insignificant. The cartography of Greenland is a masterpiece.

Chapter iii, on "Mexico and Central America," is a very careful review by the editor of what has been written and suggested as to the past of the Mexican and Central American tribes. He is wisely non-committal in regard to the differences of opinion concerning the stage of culture of these tribes at the time of the conquest and previously. It is not so much an historical as a purely ethnological question. The two "schools" that have arisen since Morgan's first radical but necessary efforts are distinguished from each other especially by the methods of research. The "men of Morgan," as H. H. Bancroft calls them, claim that ethnological study will enable us to reëstablish the original condition of the Indian anywhere, and some even go so far as to assert that ethnological research will prove a very useful check on the statements of Spanish chroniclers, whose testimony they do not reject, but regard as reliable in many cases, provided a just and careful scrutiny precedes their use. In this consists the fundamental divergence of the two groups. The others separate documentary study from ethnology altogether, and even frequently fail to apply the most simple rules of criticism to the study of sources. But history can no longer be divorced from ethnology, especially in America, where the types of primitive mankind are still found, and may be investigated with comparative ease.

The monograph on "The Inca Civilization of Peru," by Mr. Clements R. Markham, suffers to some extent from want of ethnological data. Hardly any part of the American continent is so neglected by ethnologists as Peru and Bolivia, and there is no section of the western world where studies like those initiated by Morgan, Powell, and Cushing, upon existing tribes, are more needed, and would, at the same time, be more profitable. Our knowledge of ancient Peru and the adjoining regions is as yet wholly based upon books and ruins, with but the slightest sprinkling of observations casually made upon the natives.

Dr. George E. Ellis's "The Red Indian of North America in Contact with the French and English" will surprise nobody who has read his book on 'The Red Man and the White Man in North America.' Still, there is some improvement upon the latter in the short essay embodied in Mr. Winsor's volume. But lack of practical acquaintance with Indian nature is here also the great drawback.

In chapter vi, "The Prehistoric Archæology of North America," Prof. Henry W. Haynes has undertaken a very intricate, delicate, and difficult task, but the manner in which he has fulfilled it is certainly worthy of the book in which it appears. To give anything like a detailed sketch of his valuable paper would go beyond the limits of a review. Very cautious and guarded, Prof. Haynes has handled this subject with as much tact as learning, keeping aloof from any hazardous speculation of his own, giving due credit to every one for what he has said or done, and thus in each case throwing the responsibility where it properly belongs.

His monograph is a fit transition from preceding ones to the interesting essay by Mr. Winsor on "The Progress of Opinion Respecting the Origin and Antiquity of Man in America." In this the editor proceeds, in his calm, dispassionate, and objective manner, to exhibit the course taken by public and learned opinion regarding the origin of the Indians of America. It is in keeping with his previous monographs. But we fear he has done injustice to old Father Garcia when he says: "He goes over the supposed navigations of the Phœnicians, the identity of Peru with Solomon's Ophir, and the chances of African, Roman, and Jewish migrations, only to reject them all, and to favor a coming of Tartars and Chinese." By referring to chapter xxv, book 4, of the second edition, it becomes plain that Garcia favors, in fact, hardly any theory in particular, but admits that there is a likelihood in each and absolute certainty in none. In this respect the old Dominican has set an example that might have profited a great many of his successors, among whom he has had not a few detractors.

Lastly, there is again a bibliography, a sketch of archæological museums and magazines, and a condensed paper on the "Myths and Religions of the Aborigines." All three are by Mr. Winsor, and breathe the spirit of learning, research, and honest criticism which characterize his and most of the other papers. In short, sincere gratitude is due to Mr. Winsor for this valuable and in many respects model publication, which to the scientist is indispensable, to the intelligent general reader an ornament and a priceless guide. We will add but one word, in regard to the illustrations: they are all "to the point," and useful accompaniments of the text. The reproductions of title-pages are excellent, and the copies of ancient maps also. Like the preceding volumes, this one has a special index, and a general index is promised in connection with the eighth and final volume.

A Text-book of General Astronomy for Colleges and Scientific Schools. By Charles A. Young, Ph.D., LL.D. Boston: Ginn & Co.

FEW astronomers possess the marked qualifications of Prof. Young for the task of writing a general astronomy. His eminence as an original investigator in many branches of the science, his success as a popular writer and lecturer, and his wide experience as a teacher, have all, in particular the latter, contributed to his special fitness. Historical and descriptive, rather than philosophic and speculative, the book displays excellent judgment, and is a thoroughly competent exposition of the complex astronomy of to-day.

In the arrangement of his material, Prof. Young has not been less careful than in the widely varied choice of it. Everywhere there is evidence of a study of relative importance, and the whole is full, fair-minded, and judicious. Not a chapter but is written with an enthusiasm begotten of complete and accurate knowledge. To quote a few lines on the intensity of solar attraction (p. 267):

"If it were attempted to replace by bonds of steel the invisible gravitation which holds the earth to the sun, we should find the surprising result that it would be necessary to cover the whole surface of the earth with wires as large as telegraph wires, and only about half an inch apart from each other, in order to get a metallic connection that could stand the strain. This ligament of wires would be stretched almost to the breaking point."

And in the following page, of the problem of three bodies, he says:

"Its difficulty lies simply in the inadequacy of our present mathematical methods, and it is altogether probable that some time in the future this difficulty will be overcome—very possibly by the invention of new functions and numerical tables which shall bear some such relation to our present tables of logarithms, sines, etc., as these do to the old multiplication table of Pythagoras."

The book will not, however, be mistaken for mere entertainment for that sort of popular reader who must not be bothered to think while he reads. Prof. Young's literary style is well known and fully appreciated, and this text-book is easily his best work. His calm, perhaps over-judicial, way of stating things may often make it seem to the uninformed that astronomers know very little, any way, about the celestial spaces; but slight error on this side is better than on the other. If thorough instruction is attempted, the entire work will be found too exhaustive for the average elementary collegiate course; and for some teachers the necessary omission of much will prove a delicate task. But the treatise is excellent in every particular, and will be an inspiration to both teacher and taught.

No two writers would fit together such a mass of material alike—there is, in fact, no such thing as an absolute arrangement; but the general order adopted by Prof. Young seems in every way well advised. First, the practical side of the science is insisted upon. The definitions are logically developed, and must help much in precision of thought and speech. The treatment of precession is better than we remember to have seen elsewhere, and the precession in declination, usually overlooked in works of this sort, is here given proper prominence.

Prof. Young appears at his best in the chapters on the physics of the sun—where he is most at home. The treatment is clear and succinct. The so-called reversing layer is judicially dealt with, and the observations and theories of others are generously set forth, though contrary to his own. The chapter on eclipses, solar and lunar, is full and clear, though compendious. In the chapter on central forces, mathematical formulæ are freely used, and the expression of the semi-axis major in terms of the velocity from infinity is very neat. The exposition of the lunar perturba-

tions is excellent, and the phenomena and explanation of the tides are well and sufficiently elaborated. The planets' apparent motions in loops always interest the student, and it would seem wise to have made a little more of them. Planetary perturbations are briefly dwelt upon, but very clearly; and an entire chapter is reserved for the determination of the distance of the sun, wherein the various methods are carefully classified, and the precision of each is prominently brought out. This is, in fact, one of the best chapters in the book. Comets and meteors are difficult subjects to handle, and Prof. Young's success with them is the more worthy of note.

In taking up the stars in the three concluding chapters, the author remarks the entrance upon a vaster subject, and, he might have added, a vastly more satisfying one. The treatment is peculiarly felicitous. In dealing with the popular notion of central suns, the solar system is contrasted with the stellar in these terms: "The *solar* system is an absolute monarchy with the sun supreme. The great *stellar* system appears to be a republic, without any such central, unique, and dominant authority." Of the triple and multiple stars known to constitute physical systems, he writes: "As, for instance in the multiple star θ Orionis, we have a number of stars not organized in pairs, but at more or less equal distances from each other, we are confronted by the problem of n bodies in its most general and unmanageable form. Nature challenges the mathematicians." Prof. Young concludes the cosmogony as follows:

"To use the technical language now usually employed, energy is unceasingly *dissipated* by the processes which maintain the present life of the universe; and this dissipation of energy can have but one ultimate result—that of absolute stagnation when a uniform temperature has everywhere been attained. If we carry our imagination backward, we reach at last a 'beginning of things' which has no intelligible antecedent; if forward, an end of things in stagnation. That by some process or other this end of things will result in 'new heavens and a new earth,' we can hardly doubt; but science has as yet no word of explanation."

For astronomical text-books, there is much that is novel both textual and illustrative. Sumner's method in navigation is lucidly set forth (p. 87); the additional matter about the achromatic objective is welcome (p. 25-6), and a few lines relative to the tests of lenses by the simple method of spectral images would here have been a further assistance; it is an excellent thing to express the masses of the planets in terms of the earth's instead of the sun's mass; star spectra are simply and effectively presented; and among other novel and helpful illustrations are the equatorial coudé (53), Pickering's meridian photometer (473), and the photographic telescope of the brothers Henry at Paris (454). Also the new methods of observing the eclipses of Jupiter's satellites, photographic and photometric, are not forgotten.

The student is now and then referred to the sort of observations he may advantageously attempt, even without instruments—variable stars for example; and occasionally there are directions for the use of the telescope in practical observation. It seems a mistake not to have made more of this, as the pupil may enter more fully into the spirit of the science by actually making observations of his own, crude though they be, than by cramming the information with which the book is so amply supplied as to be in parts encyclopædic.

Sundry fallacies receive a merited exposure. A frequent popular blunder relates to the lunar cusps, where it is only necessary to notice that "the *horns are always turned away from the sun*; so that the precise position in which they stand at any time is always predictable, and has nothing whatsoever to do with the weather. Artists are sometimes careless in the manner in which they introduce the moon into landscapes. One occasionally sees the moon near the horizon with the *horns turned downwards*, a piece of drawing fit to go with Hogarth's barrel which shows both its heads at once" (p. 158). There is little that could have been omitted, the amount of repetition is trifling, and even the professional astronomer will rarely consult the book in vain. Some notice of the method of least squares might well have been included, as also of the almucantar. In dealing with direct and retrograde motions of the bodies of the solar system, there is no need of the distinction between inferior and superior planets made in all text-books: the phenomena are simplest explained as a case of parallax, and a single rule then suffices for all the planets—that when furthest from the earth they advance, and when nearest regrade.

All matters are well brought down to the date of issue. Here and there an insignificant error is a blemish. There was no lunar eclipse in 1886, and 1884 is apparently intended; on page 439, the name of Thomsen is incorrectly printed. Occasionally the types are at fault in grammar, and a dozen or more cross-references are wrong, which a subsequent edition may well correct. On page 519, in dealing with the abandoned rings in the nebular hypothesis, they are said to be "thrown off," although three pages earlier the author has wisely cautioned the student against the use of this expression. On page 325, too, the engraver has blundered in cutting the phases of Venus in the precise way explicitly pointed out before as incorrect.

The typography is attractive. The arrangement of the pages, the variety of type, and the illustrations, well-chosen and engraved, make up an inviting book. In a few instances the engraver has been unfortunate in cutting planetary details too baldly, and a comet or a nebula is occasionally a failure. The proof-reading has been pretty thoroughly done, and the publishers have afforded a strong, serviceable binding, with ornament eschewed. Great care has been exercised in the preparation and arrangement of a most ample index, which makes the whole easy of access for reference; but slovenly alphabetization detracts appreciably from otherwise perfect workmanship.

Prof. Young's success in attempting a clear, accurate, and justly proportioned presentation of the principles, facts, and methods of his science merits the widest recognition.

Deductive Logic. By St. George Stock, M. A. Longmans, Green & Co. Pp. 356.

One of the author's friends who looked over this book in manuscript advised him not to publish it because it was too like all other Logics; another advised him to cut out a considerable amount of new matter. We cannot help being of the opinion that both of these friends were persons of a great deal of wisdom. In spite of the fact that the latter advice was followed, a good part of the new matter which is retained is, as we shall presently show, erroneous, and the old matter is, to say the least, not better set forth than in several other text-books which we could name.

This is not saying that it is not, at many points, fresh and admirably expressed and fully mastered by good sense. It would be impossible for a man who has been studying and teaching logic at Oxford for seventeen years to write a thoroughly bad book on the subject. It is merely saying that the teacher who should decide to adopt this book in his class-room instead of Bain, for instance, would be doing his pupils an injury. The trouble which the student usually has with his book on Logic is that it seems to him too much like a mixture of dry bones and sawdust. The best exposition of the subject is one which forces him, at every step, to see that there is an intimate connection between its formal rules and the trains of thought which actually go on in his own mind. Mill is still the only book for "the gentleman and the scholar" to read; but, for the young person who must be put quickly through the drill established by the schoolmen, and who must at the same time see that it has a close bearing upon the present perplexities of the scientific man and the practical thinker, hardly anything is so good as Bain. Bain, it is true, is open to plenty of objections of another kind; and there is no subject in which there is more urgent need of a new book which shall embody the recent improvements in the science, and which shall at the same time exhibit a kindly consideration for the weaknesses of immature minds.

Mr. Stock, as far as appears from his book, is wholly unacquainted with Symbolic Logic. That is a subject which throws so much light on logical theory that a brief treatment of it ought to be introduced into every text-book; but even if that is not done, no one who writes a book should be content to be ignorant of it. The conventions which Symbolic Logic finds absolutely essential are a source of very great simplicity and consistency in ordinary Logic. Mr. Stock does not mention Venn among the writers who have helped him, and he can hardly have read his persuasive plea for the thorough-going introduction of De Morgan's idea of a limited universe, and of the convention that particular propositions must imply the existence of terms, and universal must not. With this convention, it is true that we must "accept the awkward corollary" of the collapse of the time-honored jingle about opposition; but worse things than that have been lived through. If it has been shown that black swans are not found in Africa, and that they are not found anywhere else, what follows in real life is that there are no black swans; but what the old-fashioned logician wishes us to believe is that one or other of the two statements must be false. It is evident that the former is the more reasonable conclusion.

Mr. Stock calls the statement "If a is b, c is d" a complex proposition. It should be called a compound proposition, that is, a proposition about propositions, or, better still, a sequence. The term complex proposition is needed for such as have subjects or predicates that are to be broken up in the course of the reasoning, as when we infer from the statement, "Citizen-students are always revolutionists," the other statement, "All students are revolutionists, or else they are not citizens." The three things which logic considers would then be the concept, the judgment and the sequence, the last being defined to be the statement that one proposition *follows* from another or from several others, either logically (that is, as inference), or materially (that is, as matter of fact).*

Mr. Stock's introduction, on the whole, is good, though a more psychological account of the concept might have been given; and good, also, is his treatment of extension and intension. But he has a curious idea of what constitutes induction. The concluding from "All the metals which we have examined are fusi-

* The distinction between the logical and the material sequence is very much the same as that between the verbal and the real proposition.

ble" to "All metals are fusible," he gives as an example of what induction is *not*, and then he argues that it is a mistake to talk of inductive reasoning as though it were a species distinct from deductive. The above kind of reasoning he stigmatizes as a "vague instinct," but he forgets that before the days of Aristotle the strictest syllogistic reasoning was vague instinct in everybody's mind, that it is so now in the minds of all but a very few, and that it is so even in their minds in all but a very few hours of their existence. Another "curiosity of literature" Mr. Stock furnishes when he argues, under fallacies, that it is wrong to ask your opponent to grant the point under dispute, because it is violating "the first of the general rules of syllogism, inasmuch as a conclusion is derived from a single premise, to wit, itself."

But the most original part of the book is the treatment of immediate inference as applied to compound propositions, and this, unfortunately, is almost wholly erroneous. In the first place, the treatment is totally inadequate on account of the fact that it applies only to singular propositions. The denial of "No kings are tyrants" is "Some kings are tyrants," not "All kings are tyrants." "If all men are gentle, all women are brave" is the same thing as "If any women are not brave, some men are not gentle," but it is far from being the same thing as "If no women are brave, no men are gentle." But even for singular propositions, in which "The sun shines" and "The sun does not shine," for instance, contradict each other, Mr. Stock is still chock-full of error. His mistakes are due to two causes—to his ignorance of the fact that particular propositions necessarily imply the existence, real or logical, of their terms, and to his ignorance of the fact, admirably set forth by the late Prof. O. H. Mitchell, in the 'Studies in Logic,' that propositions in two dimensions are necessarily six and not four in number. The reason for this latter fact is, that "All rivers are sometimes dry" may mean either that there are times when every river is dry, or that every river is dry at one time or another; and that reasoning cannot proceed with safety until it is known which of these two things is meant. We shall not take time to set forth the effects of these two fundamental errors. It is sufficient to point out that no one but a hardened logician would suppose the statement, "Either operators must be careful, or telegrams will sometimes not be correct," to be the same thing as "Either telegrams are correct, or operators are sometimes not careful"; nor would he suppose that in order to deny the statement, "Either men fight, or tyrants reign," we say "Either men fight, or tyrants do sometimes not reign." It gives one a distinct feeling of dizziness, if not of nausea, to be told that these two statements are the denials of each other. To refute him who says, "Either corruption ceased, or the country went to the dogs," it would be necessary to establish *both* that corruption did not cease *and* that the country did not go to the dogs. It happens that statements in *either or* and in *if* are abbreviated forms for *universal* sequences, and that it is impossible to express with those words the particular sequences which are necessary for denying them. All this is as plain as daylight to any one who has been trained in Symbolic Logic, as well as to any one who has not studied Logic at all.

If this author showed greater strength than he does in plain questions of Logic, more interest would attach to the fact, which appears from an advertisement in the end of the book, that he attributes "importance to spiritualism, and gives a degree of credit to its phenomena." There is an admirable collection of examples.

Days Out of Doors. By Charles C. Abbott. D. Appleton & Co. 1889. 8vo, 323 pp.

In considering books such as those of Thoreau, John Burroughs, and other literary field-naturalists, the critic mindful of the rights of readers and the aspirations of authors will be led to inquire what is their purpose or function, and to judge any particular book by its efficiency measured in terms of this ideal standard.

It would seem impossible in adopting such a standard to omit the element of accuracy of statement in regard to the facts of nature. For us this must take its place as the essential framework, the indispensable foundation of the literary edifice. The most charming style, the most enthusiastic description of wood and vale, and all that dwell therein, when based on misconception of that Nature the author would teach us to appreciate, become little better than meretricious frippery. In proportion as error enters in, so far must the effort be deemed a failure. Fiction may hold itself untrammelled, may give a seacoast to the kingdom of Bohemia, and lions to the wood of Arden, heedless of the smiles of critics. But when an author says, "Come with me and see the hidden treasures of the pasture, the woodland, or the brook," and we follow, let him beware if he leads us astray. The hope that through his agency we may attune ourselves more truly to the music of insect wings and the clear voices of the birds; that we may read, rightly or wrongly, into the microcosmic tragedy and comedy of the lives which animate the brooks and hedges, something of the pathos or joy which gives interest to our own, and feel more keenly our relationship to the great world of nature—these desires may not be idly trifled with. The ignorance of laymen may preserve them from the disheartening recognition of tinsel among the author's gold; but with those who know the wilds and their inhabitants, wilful or careless misreading of the book of Nature will always present itself as a literary crime.

In previous reviews of Dr. Abbott's books we have endeavored to applaud his enthusiasm and recognize the merits of his style, while deprecating a carelessness of statement, and a tendency to occasional gross inaccuracy, which spoil much of his work for thorough naturalists. In the present work the pleasant diction and the hearty enthusiasm are the same, and previous criticism, though treated with audible contempt by the author, seems to have had the effect of rendering him somewhat more careful. Dr. Abbott seems to feel strongly the existence of a greater amount of intelligence and individuality among animals, even of lowly types, than they are usually given credit for. In this contention we are in sympathy with him; but he does not seem to realize the danger of loose interpretation of the action of animals to the establishment of his hypothesis. The nurse who attributes to a suckling infant reasoning and logic which belong to an adult, commits a similar error, without very serious consequences. But when the attitude of mankind in general towards the inferior creation depends largely on an accurate understanding of their respective positions, the avoidance of a *non-sequitur* has more importance. When the author boldly sets his unsupported opinion against the facts gathered by a host of observers not less careful, earnest, and devoted than himself, he may exemplify his courage, but hardly can be said to exhibit discretion. He may be right, but his point-blank refusal to use the ordinary means of proving it, in a pure matter of fact, would hardly lead an unprejudiced reader to that conclusion.

The History of Ancient Civilization. A Handbook based upon M. Gustave Ducoudray's 'Histoire sommaire de la Civilisation.' Edited by Rev. J. Verschoyle, M.A. With illustrations. D. Appleton & Co. 1889. 8vo, pp. 295.

The term "history of civilization" is used in two quite different senses. We are most familiar with it from Guizot, who designates by it a philosophical analysis of the great currents of history, with the especial aim to trace their influence upon one another and upon the fortunes and condition of humanity, in the workings of cause and effect. This is what Ozanam and Buckle, for example, have meant by the term, following Guizot. But it may be taken, as by the author of the book before us, as the equivalent of the German *Kulturgeschichte*, which is more descriptive than analytic, giving details of the life of society rather than characterizing it as a whole. This is no doubt as useful a work as the other, and, indeed, must be preliminary to it: there can be no large analysis, of any value, which does not rest upon an exhaustive study of detail. But we should prefer to reserve the term for the other and higher work—the meaning which is most familiar to us.

The present work, indeed, consists so much of detail that it does not fall far short of being a complete history: even political events and military campaigns are given at some length. It consists of three books—The Nations of the East, Greek Civilization, and The Roman World. There are fourteen chapters in all, the scope of which can be judged by the titles of the four chapters in the Greek portion, viz.: The Greek Religion, Greek Politics, Greek Literature and Art, The Diffusion of Greek Genius.

It will be seen that this treatise covers a wide ground, and must rest upon the basis of very varied and extensive scholarship. In general the scholarship is sound and accurate, but it cannot always be trusted. For example, the *princeps senatus* is called (page 230) the "President of the Senate," and is represented as presiding in that body—the duty of the consuls. On the following page the Assembly of the Tribes, presided over by the tribunes, is said to be that "where the whole people took part"; but the tribunes, officers of the plebeians, could preside only in an exclusively plebeian assembly. On page 256 we are told that Gaius Gracchus "had incautiously given up his tribuneship"; there was no more lack of "caution" about it than in Mr. Cleveland's retiring from the Presidency. On page 248 it is said that Hannibal, having expected aid from the Cisalpine Gauls and others, was "everywhere . . . disappointed"; but the Gauls gave him substantial aid—it was the people of Lower Italy that disappointed him. We believe that Otfried Müller's theory of the fundamental antagonism of the Dorian and Ionian races, with Sparta and Athens as their respective types, is not now held in so distinct a form as is presented on page 130. The elegant and luxurious Corinth was a Dorian city; the peculiarities of Sparta were rather Spartan than Dorian.

We note as misprints *Jupiter Olympus* (for *Olympius*, p. 114), and *Dracaii* (for *Diacrioi*, p. 134). Most astonishing and inexcusable of all, we have, on page 181, a hexastyle temple in a plain presented for the Parthenon! There is no index.

The Scientific Papers of the late Thomas Andrews, M.D., F.R.S., Vice-President and Professor of Chemistry in Queen's College, Belfast. With a Memoir by P. G. Tait, Sec. R.S.E., and A. Crum Brown, M.D., F.R.S., Professors in the University of Edinburgh. Macmillan & Co. 1889.

THE handsome volume before us contains a complete record of the life-work of a man who labored long and effectively in the border-land between physics and chemistry, but who is perhaps less known in this country than many who have done less valuable service. Profs. Tait and Brown have given us an interesting though somewhat colorless memoir of Dr. Andrews, who seems to have been a man of very sterling worth.

Thomas Andrews was born at Belfast on the 19th of December, 1813. He belonged to the Scotch-Irish race which has produced so many distinguished men, and appears to have been a clever and precocious boy, with an inborn taste and faculty for scientific pursuits. At the age of seventeen he went as a student to Paris, where he worked in the laboratory of Dumas. Returning to Ireland, he spent four years in Trinity College, Dublin. He then studied medicine at Edinburgh, graduating in 1835, and settled in Belfast as a physician, but during the next ten years gave instruction in chemistry, and, though in successful practice, found time for valuable investigations, chiefly on the heat of chemical combination. He soon made the acquaintance of other chemists, notably of Graham and Faraday, with both of whom he became on terms of intimate and lasting friendship. In 1845 Andrews gave up his private practice, and became Vice-President of what is now Queen's College, Belfast. Here his really active scientific life began, and here he worked unceasingly till, in 1885, on the 26th of November, the final summons came.

The place of Thomas Andrews among scientific men, if not among the highest, is still very high. Though his papers were numerous and varied as regards subject, he will be remembered by three prominent investigations. Of these the first is on the heat evolved during chemical action, and it embraces three series of very important papers. Others had worked in the same field of study, but the work of Andrews so far surpassed what had been done before him that we can hardly hesitate to call him the founder of the new science of thermochemistry, at least from the experimental side. Subsequent investigations have shown that Andrews's work was excellent in quality. Good, says a French proverb, is the father of better, and the work of Andrews will in due time be superseded; but we doubt if that time has yet arrived, though far more elaborate and extensive investigations have since appeared.

About the year 1856 Andrews began the second great work of his life, the investigation of ozone, the beautiful discovery of Schönbein. The subject was at the time almost in its infancy. It was not known whether ozone contained only oxygen, or whether it was a higher oxide of hydrogen, or again whether there was not more than one kind of ozone. Andrews proved that ozone, from whatever source derived, is one and the same substance, having identical properties and the same constitution, and is not a compound body, but oxygen in an altered or allotropic condition. The investigation was continued in conjunction with Prof. Tait, and led directly to the true theory of the constitution of the new form of oxygen.

But the crowning work of Andrews's life was that on the continuity of the liquid and gaseous states of matter—a work which, if he had done nothing else, would alone have given him a permanent reputation. Cagniard de la Tour in 1822 observed that ether, alcohol, and water, when heated in sealed tubes, were reduced to vapor in a space between two and four times the original volume of the liquid. Faraday, in the following year, liquefied chlorine and some other gases by pressure alone. It was reserved for Andrews, by a careful study of what was then called carbonic-acid gas, to clear up the whole subject of the passage of a liquid into a vapor. For the beautiful and simple methods of investigation and for the purely scientific details of the results, we, of course, refer our readers to the original memoirs. It will be sufficient to state that these results rendered it possible to liquefy oxygen, hydrogen, and nitrogen gases, and that, without the direct experimental application of Andrews's work, the liquefaction would have been impossible.

Profs. Tait and Crum Brown have done the work of editing most carefully, and have erected a noble monument to the memory of a man of remarkable endowments, who has written his name permanently upon the history of physical science.

The Problem of the Northmen: a Letter to Judge Daly, the President of the American Geographical Society. By Eben Norton Horsford. 4to.

THIS letter appears to have been published because Prof. Horsford was "stung" (as he terms it) by the charge of "perversions" made by Mr. Justin Winsor, in the 'Narrative and Critical History of America,' in a disparaging estimate of the value of Horsford's 'Discovery of America by the Northmen.' Hence his endeavor to place his critic in a ridiculous light. To accomplish this he institutes a comparison between the fruits of his own researches, enumerated under nineteen heads, and the results derived from Mr. Winsor's methods, of which he gives a single illustration, accompanied with his reasons for supposing the result to be erroneous. The Professor's methods are epigrammatically described by himself in the words "Prediction and Fulfilment." The most striking instances upon his list are the discovery of Fort Norumbega (No. 15) and the identification of the remains of Norse houses, huts, fish-pits, etc. (No. 19). Both of these sites are on the Charles River, the former being in Waltham, and the latter just below Mt. Auburn, in Cambridge. Mr. Winsor's conjecture that the ditch at Waltham might possibly mark the site of an early attempt to found the town of Boston, is first contrasted with results like those we have selected above, then characterized as a guess, then demolished in an argument abundantly fortified with italics.

The Massachusetts Historical Society comes in for a share of the Professor's satire. A committee of that society ventured to dissent from some of his conclusions. He alludes to a "tone of conscious infallibility" and "an undertone of recognized authority" in their report, and buries them under the weight of the question, "Is Massachusetts a preserve?"

This is not the place to discuss the questions suggested by the weighty claims made by Prof. Horsford, nor can we at this time attempt to measure the relative values of the methods of research pursued by himself and Mr. Winsor. Mr. Winsor's history is fitly described by Prof. Horsford as a monumental work, and he himself can rest assured that his name will become famous if but a small part of the nineteen results which he enumerates shall be accepted by students of American history (or, as he, perhaps, would prefer to put it, American geography). Before leaving the subject, however, we wish to call attention to some points to which the Professor has briefly alluded, but which he may perhaps treat more fully in the forthcoming papers which he promises.

And, first, is he not in error in seeking to identify Verrazano's C. St. Margarita through the abundance of the daisies in a neighboring field? Bigelow thinks this weed was introduced here from Europe. Reliance upon Thevet and an analysis of the alleged Indian word Norumbega lie at the foundation of the discovery of Fort Norumbega. Yet we are told that Thevet was in error in supposing that the fort was the work of the French; and the argument (formerly advanced by J. R. Forster, see 'Nar. and Crit. Hist. of America,' vol. i., page 98, note 13), that Norvegia and Norumbega are different forms of the same word, is held to contain the solution of the problem of the Northmen.

The photographs of the Norse canals with which the letter is illustrated, do not give a clear idea of their character; but such a system as is described seems to militate against Horsford's fort almost as much as against Winsor's conjecture of the intended site for Boston. The minute identification of the site of Leif's house, of Thorfinn's house, of the huts and of the fish pits, on a spot continuously occupied since the day when Saltonstall landed near there, can readily be proved by archæologists. If Prof. Horsford's confidence is as great as it seems to be, he can afford to wait for the triumph which will follow this proof. The more severe the language of his critics, the greater will be their discomfiture. Meantime, those who do not blindly accept his conclusions will prefer to wait for this proof.

BOOKS OF THE WEEK.

Anderson, Dr. W. G. Light Gymnastics. Effingham Maynard & Co.
Autobiography of Froebel. Syracuse: C. W. Bardeen.
Boyesen, Prof. H. H. The Light of Her Countenance. D. Appleton & Co. 75 cents.
Campbell, W. W. Lake Lyrics, and Other Poems. St. John, N. B.: J. & A. McMillan.
Christianity and Agnosticism: A Controversy. Papers by Huxley, Mallock, Mrs. Humphry Ward, etc. D. Appleton & Co. $1.

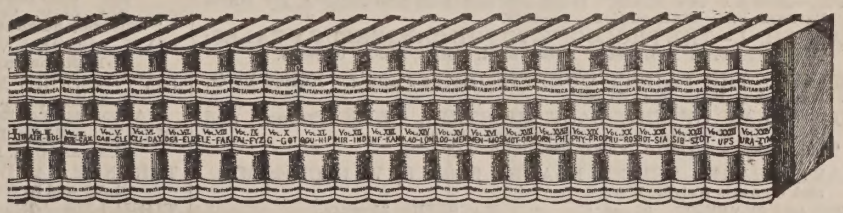
A LITERARY MARVEL—$2.50 Per Volume.



We are publishing a reprint of the ENCYCLOPÆDIA BRITANNICA, at $2.50 per vol., being less than one third the price of the latest English edition, which we reproduce page for page, map for map, volume for volume.

The same number of volumes (24) completes our set, as does the original, and at half the price of the Scribner or Stoddard editions.

No such book has ever been put upon the market of such size and quality of binding for so low a price. It contains the highest character of knowledge and literature in the world, written by the most eminent living authors and specialists. It is the greatest work of its kind ever published in the English language.

The Encyclopædia Britannica is a library in itself, and stands ready on the shelves to answer every question in Physics, History, Politics, Trade, Art, Geography, and Philosophy; to furnish the latest information wanted on every subject.

We specially desire to obtain as subscribers all those who ever entertained an idea of owning the Encyclopædia Britannica, but hesitated on account of the high price. We are now ready to deliver the set complete. Agents wanted.

THE HENRY G. ALLEN COMPANY, Publishers,
126 Washington St., Chicago. 739 and 741 Broadway, New York.

WE have unexcelled facilities for the manufacture, introduction, and sale of BOOKS of all kinds.

FRED'K WARNE & CO.'S LIST

Just ready, in the "Cavendish Library," in 1 vol., crown 8vo, cloth, gilt top, $1.50.

Leigh Hunt as Poet and Essayist:

Being the choicest passages from his works, selected and edited, with a biographical introduction, by Charles Kent.

"In the charming grace and learning of his essays, Leigh Hunt occupies a sunny spot midway between Addison and Lang. . . . No writer of his day was more steeped in modern and ancient lore. In all he finds sweetness, soundness, and sunniness."—*The Critic.*

Also, uniform with above.

Southey's Life of Wesley, and the Rise and Progress of Methodism.

Edited by Rev. J. A. Atkinson, M.A., D.C.L., Hon. Canon of Manchester. A new edition, with steel portrait, full notes and contents. $1.50.

*** Every work of value relating to Wesley and Methodism published since Southey has been consulted and drawn upon for note and illustration.

Two new volumes in 'The Chandos Classics.' In dark blue cloth, white label, 12mo size, 75 cents; or, in the new "Roxburgh" style, cloth, gilt top, leather label, $1.00.

Horace: The Odes, Epodes, Satires, and Epistles.

Translated by the most eminent English Scholars and Poets, including Ben Jonson, Milton, Dryden, Lytton, Conington, Sir Theodore Martin, and others.

"The idea of the volume is a capital one, and the execution a literary success. . . . We recommend it to our readers as in every way worthy of reading and study."—*The Churchman.*

Uniform with above in size and price.

The Ingoldsby Legends of Mirth and Marvels.

By R. H. Barham. With Life, Preface, etc., and with eighteen illustrations by Cruikshank, Leech, &c.

Now ready, the sixteenth edition, revised and re-edited, of

How We are Governed:

A Handbook of the Constitution, Government, Laws, and Power of the British Empire. By Albany De Fonblanque, revised and reëdited by W. J. Gordon, author of 'The Realm of Victoria,' etc. In 12mo, cloth, limp, 75 cents.

"It contains more, and more accurate, information about the practical working of the English system than any other book of equal size, and the information is just such as a foreigner needs and finds most difficult to obtain."—*Prof. Wheeler, Yale College.*

Now ready in 16mo, pocket size, neat red cloth, novel design, 35 cents. The first volumes of a new series to be called the "VICTORIA LIBRARY." The series will comprise selected works in Poetry and Prose from Classic Literature, Biographies of Famous Men and Women, etc., etc., Histories of Important Events and Epochs, Descriptions of Places of Note and Interest, with occasional volumes of approved Fiction.

The series commences with a volume of

British Oratory,

comprising six famous speeches, by Grattan, Pitt, Peel, Bright, Jones, and Gladstone.

"No better manual of direct and forcible speech could be put into the hands of the youth in our public schools; and Senators and members of Congress would find here excellent pabulum."—*Public Opinion.*

Also ready (Vol. II.)

Old British Dramas:

The Birth of Merlin and Thomas Lord Cromwell. To be followed by (Vol. 3) "On the Study and Use of History." By Lord Bolingbroke.

In 12mo, cloth, price reduced to $1.00.

The Popular Elocutionist and Reciter.

Classified, arranged, and edited by J. E. Carpenter, M.A., Ph.D. A new edition thoroughly revised with additions, and an introductory chapter on the art of elocution.

Of all booksellers, or mailed free, on receipt of price, by the publishers.

3 COOPER UNION, 4TH AVE., NEW YORK.

LONGMANS, GREEN & CO.—New York and London.

Epochs of Modern History

(New Volume). AUTHOR'S EDITION.

THE ENGLISH RESTORATION AND LOUIS XIV.,

1648–1678. By Osmund Airy. Fcp. 8vo. Maps. $1.00.

*** Full list of this Series on application.

ELEMENTARY HISTORY OF ENGLAND.

(Epochs of English History.) Edited by Rev. Mandell Creighton, M.A. 27 Tables and Pedigrees and 23 Maps. Fcp. 8vo, $1.50.

FREEMAN S HISTORICAL GEOGRAPHY OF EUROPE.

By E. A. Freeman, D.C.L. With 65 Maps. 2 vols., 8vo. $10.50.

LONGMANS' SCHOOL GRAMMAR.

By David Salmon. Crown 8vo, 272 pages, 75 cents.

"This is a better book by far than any in common use in this country. One of the best working grammars we have ever seen, and this applies to all its parts. It is excellently arranged and perfectly graded. Part four, on 'History and Derivation,' is as beautiful and interesting as it is valuable—but this might be said of the whole book."—*Teacher, N. Y.*

LONGMANS' JUNIOR SCHOOL GRAMMAR.

By David Salmon. Crown 8vo, 128 pages, 30 cents.

The Junior School Grammar is an adaptation of the first half of the author's School Grammar, with some of the explanations simplified, with many of the exercises amplified, and with a few of the difficulties omitted.

The characteristics of the book are, in addition to its inductive method, the number and variety of its exercises, and the omission of all the minor distinctions of grammar. It thus provides much to do and not much to remember.

LONGMANS' JUNIOR SCHOOL COMPOSITION.

By David Salmon. A Companion volume to the Junior School Grammar. With Notes for Teachers. Crown 8vo, 100 pages, 30 cents.

LONGMANS' DRAWING SERIES.

1. DRAWING BOOKS (1 to 15 ready), comprising two complete series, one in Freehand and the other in Geometry.

Books 1, 2, 3 (Freehand), each 5 cents.
Book 4 (Design) 5 cents,
Books 5, 6, 9, 11 (Freehand) each 8 cents.
Book 7 (Drawing to Scale), 5 cents.
Book 8 (Practical Geometry), 8 cents.
Book 10 (Solid Geometry), 10 cents.
Book 12 (Blank Book), 8 cents.
Book 13.
Book 14 (Plane Geometry), 10 cents.
Book 15 (Solid Geometry) 15 cents.

2. DRAWING SHEETS, for Classroom use, showing method of Construction, etc. Size 30 in. by 22 in.; mounted on rollers for hanging before a class. Price, $1.50 a set on paper; $1.75 a set on strong cloth.

3. DRAWING CARDS, FREEHAND.—Twenty-five cards, containing 50 copies. In cloth case, price 30 cents.

These cards are to be given to the scholars to copy into a blank book (see Book 12). The proper constructions are shown and directions given for the use of the ruler and set squares.

*** Descriptive List on application.

TEXT BOOKS OF SCIENCE.

A Series of Elementary Works on Science, adapted for the Use of Students in Public and Science Schools. 12mo. Fully illustrated with Woodcuts.

Abney's Photography. $1.25.
Anderson's Strength of Materials. $1.25.
Armstrong's Organic Chemistry. $1.25.
Ball's Elements of Astronomy. $2.00.
Bauerman's Systematic Mineralogy. $2.00.
Bauerman's Descriptive Mineralogy. $2.00.
Bloxam and Huntingdon's Metals. $1.75.
Glazebrook and Shaw's Practical Physics. $2.00.
Glazebrook's Physical Optics. $2.00.
Gore's Electro-Metallurgy. $2.00.
Holmes' The Steam Engine. $2.00.
Jenkin's Electricity and Magnetism. $1.25.
Maxwell's Theory of Heat. $1.25.
Miller's Inorganic Chemistry. $1.25.
Rutley's Study of Rocks. $1.50.
Shelley's Workshop Appliances. $1.50.
Thorpe and Muir's Qualitative Chemical Analysis. $1.25.
Tilden's Chemical Philosophy. $1.50.
Unwin's Elements of Machine Design. $2.00.

*** A full list of this series on application.

LONGMANS' ELEMENTARY SCIENCE MANUALS.

A Series of Works in General Science for School and College Use. New Volumes in Active Preparation.

Goodeve's Applied Mechanics. 80 cents.

THE COMPLETION OF A GREAT UNDERTAKING.

An Encyclopædia and Dictionary in One Work.

"Undoubtedly the most important and complete work of its kind ever presented to the public."—*New York Star.*

THE

ENCYCLOPÆDIC DICTIONARY:

An Entirely New and Exhaustive Work of Reference to all the Words in the English Language, with a Full Account of their Origin, Meaning, Pronunciation and Use. Edited by Robert Hunter, M.A., F.G.S., Mem. Bibl. Archæl. Soc., etc., assisted by John A. Williams, M.A. Trinity College, Oxford, and S. J. Herrtage, B.A.

Now complete in 14 Volumes, with numerous Illustrations.

CONCEIVED more than fifteen years ago, this great work has received the most mature care and the best thought in its preparation. Its great utility is found in the fact that it completely covers the ground of both an encyclopædia and a dictionary—an undertaking for the first time carried out in this work. The distinctive features of THE ENCYCLOPÆDIC DICTIONARY are more numerous than those claimed for any other similar work.

WHAT THE WORK IS AND CONTAINS:

It is a reference to every word in the English language.

It is a complete encyclopædia to every branch of knowledge.

It gives the full origin, meaning, and pronunciation of every word.

It includes not only every word in use, but all the obsolete words and phrases met with in the writings of ancient authors.

It traces the history and development of words by illustrative quotations.

Its pronunciation of words is both simple and clear.

It contains 180,000 words, a larger number than any dictionary at present published or in preparation.

Its illustrations are descriptive of the text and helpful, and are not mere embellishments.

It is peculiarly a work of value, at once comprehensive, easy of reference, and singularly broad in its scope.

Its utility can scarcely be overestimated, combining, as it does, all the features of an encyclopædia and a dictionary.

"Not only are *more* words defined in this new Dictionary *than in any other*, but its definitions are more exhaustive; its title is no misnomer."—*Chicago Tribune, March 2, 1889.*

"It is a great work."—*Philadelphia Record, Jan. 27, 1889.*

"This Dictionary is undoubtedly the most important and complete of the kind ever presented to the public."—*N. Y. Star, Feb. 14, 1889.*

"As its title shows, it is professedly *both an encyclopædia and a dictionary;* it explains *things* as well as *words*, and thus the author has ample scope to produce *a work of immense utility.* To judge from the first volume, the 'Encyclopædic Dictionary' promises to take a high place as a reference book. The author has had the assistance of specialists in the technical part of the work, and the authorities he has obtained to assist him have almost always been the best obtainable. The illustrations are always appropriate and clear."—*The London Times.*

*** *A full description of this work, with specimen pages, has been prepared, and will be sent to any address upon application.*

CASSELL AND COMPANY, LIMITED,

104 and 106 4th Avenue, New York City.

CASSELL & COMPANY'S PUBLICATIONS.

The Cheapest and Most Complete French Dictionary Published.

Cassell's French Dictionary.

(FRENCH-ENGLISH AND ENGLISH-FRENCH.)

New and Enlarged Edition. 262d Thousand. 1,150 pages. Price, $1.50.

Among the special features of the new and enlarged edition are the following:

It has been enlarged by the addition of 200 pages. New words to the number of 3,000 have been added. It has been revised by the latest edition of the Dictionary of the French Academy. It has been entirely reset in new type. It has been corrected by Professor Roubaud, B.A. (Paris). It contains many new features. It is the cheapest, the most complete and extensive, and, so far as modern spelling is concerned, the only accurate Dictionary of the French language published in this country. *Specimen pages sent free on application.*

The Young Idea;

Or, Common-School Culture.

By Caroline B. LeRow, compiler of 'English as She is Taught,' etc. Boards, new style, 50 cents. Extra cloth, $1.00.

"One of the brightest and most amusing of educational arguments."—*Commercial Gazette, Cincinnati.*

"Should have the widest circulation, and the attention of every parent and school-teacher."—*The New York World.*

The Coming School.

By Ellen E. Kenyon. A Sequel to 'The Young Idea,' by Caroline B. LeRow. Boards, new style, 50 cents. Extra Cloth, $1.00.

"We heartily commend the book as a most valuable contribution to the cause of educational reform."—*The School Journal.*

Cassell's New German Dictionary.

In Two Parts. German-English—English-German. By Elizabeth Weir. 1 volume, about 1,120 pages, 8vo. Price, $1.50.

Specimen pages sent free on application.

Cassell's Latin-English Dictionary.

Revised, enlarged, and in part rewritten by J. R. V. Marchant, M.A., formerly Scholar of Wadham College, Oxford. 12mo, cloth, 896 pages. Price, $1.50.

John Bull, Junior;

Or, French as She is Traduced.

By Max O'Rell, author of 'John Bull and His Island,' 'Jonathan and His Continent,' etc., etc. Boards, 50 cents; cloth, $1.00.

"The whole theory of education is to be extracted from these humorous sketches."—*Baltimore American.*

MARK TWAIN says: "*It is a darling literary curiosity.*"

English as She is Taught.

General Answers to Examination Questions in our Public Schools. By one who has had many years' experience. Boards, flexible, new style, price, 50 cents; cloth, gilt top, uncut edges, price, $1.00.

Dictionary of Phrase and Fable.

By the Rev. Dr. Brewer. Giving the Derivation, Source, or Origin of about 20,000 Common Phrases, Allusions, and Words that have a Tale to Tell. Extra crown 8vo, 1,070 pages, one-half morocco, gilt top. Price, $2.25.

The Reader's Handbook of Facts, Characters, Plots, and References.

By the Rev. Dr. Brewer. Extra crown 8vo, nearly 1,200 pages, one-half morocco, gilt top. Price, $3.50.

Dictionary of English Literature.

Being a Comprehensive Guide to English Authors and their Works. By W. Davenport Adams. 776 pages, extra f-cap, 4to, cloth. Price, $2.50.

The Dictionary of English History.

Edited by Sidney J. Low, B.A., late Scholar of Baliol College, Oxford; Lecturer on Modern History, King's College, London; and F. S. Pulling, M. A., late Professor of History, Yorkshire College, Leeds. In one large octavo volume of 1,119 pages, bound in extra cloth. Price, $6.00.

"A cheapness hardly to be matched on such a scale."—*The Nation, New York.*

Cassell's National Library.

Edited by Henry Morley, LL.D., Professor of English Literature at the University College, London. A series of weekly volumes, each containing nearly 200 pages, small 16mo, clear, readable type, printed on good paper, at the very low price of 10 cents per volume. Or in extra cloth binding at 25 cents per volume.

This Library includes selections from the works of Shakespeare, Byron, Scott, Walton, Plutarch, Macaulay, Steele, Addison, Knowles, Bacon, Keble, Dickens, Johnson, Smith, Milton, Goethe, Bunyan, Crabbe, Herodotus, Burke, Luther, Goldsmith, Walpole, Mandeville, Latimer, Sheridan, Mackenzie, etc., etc.

Send for complete list of volumes issued to date.

English Writers.

Being an attempt towards a

History of English Literature.

By Henry Morley, LL.D. Now ready.

Vol. I., new edition now ready, contains from the Earliest Times to Beowulf.

Vol. II., from Cædmon to the Conquest.

Vol. III., from the Conquest to Chaucer.

Vol. IV., the Fourteenth Century.

Each in one vol., 12mo. Price, $1.50.

Now Ready. { CASSELL & COMPANY'S *Complete Catalogue of Illustrated and Fine Art Books, Juvenile and Educational Works, etc., which will be sent* FREE *to any address on application.* } Sent Free.

SELECTED FROM THE CATALOGUE OF THE

OXFORD CLARENDON PRESS.

Agents for the United States, MACMILLAN & Co., 112 Fourth Ave., NEW YORK.

PHYSICAL SCIENCE, ETC.

A TEXT-BOOK OF ALGEBRA, with Answers to the Examples. By W. S. Aldis, M.A. 12mo, $1.90.

EUCLID REVISED. Containing the Essentials of the Elements of Plane Geometry as given by Euclid in his first Six Books. Edited by R. C. J. Nixon, M.A. 12mo, $1.50.

Book 1, 25 cents. Books 1-4, 75 cents.
Books 1-2, 40 cents. Books 5-6, 75 cents.

EUCLID.—GEOMETRY IN SPACE. Containing parts of Euclid's Eleventh and Twelfth Books. By the same Editor. 12mo, 90 cents.

COMPARATIVE ANATOMY OF THE VEGETATIVE ORGANS OF THE PHANEROGAMS AND FERNS. By Dr. A. De Bary. Translated and Annotated by F. O. Bower, M.A., and D. H. Scott, M.A. Royal 8vo, $5.50.

OUTLINES OF CLASSIFICATION AND SPECIAL MORPHOLOGY OF PLANTS. A New Edition of Sachs' Text-Book of Botany, Book 2. By Dr. K. Goebel. Translated by H. E. F. Gurnsey, M.A., and Revised by Isaac Bayley Balfour, M.A. Royal 8vo, $5.25.

LECTURES ON THE PHYSIOLOGY OF PLANTS. By Julius Von Sachs. Translated by H. Marshall Ward, M.A. Royal 8vo, $8.00.

COMPARATIVE MORPHOLOGY AND BIOLOGY OF FUNGI, MYCETOZON, AND BACTERIA. By Dr. A. De Bary. Translated by H. E. F. Gurnsey, M.A. Revised by Isaac Bayley Balfour, M.A., M.D. Royal 8vo, $5.50.

A HANDBOOK OF DESCRIPTIVE ASTRONOMY. By G. F. Chambers, F.R.A.S. Fourth Edition. 8vo, $7.

ACOUSTICS. By W. F. Doukin, M.A., F.R.S. 12mo, $1.90.

CLASS-BOOK OF CHEMISTRY. By W. W. Fisher, M.A. 12mo, $1.10.

EXERCISES IN PRACTICAL CHEMISTRY. Vol. 1—Elementary Exercises. By A. G. Vernon Harcourt, M.A., and H. G. Madan, M.A. 12mo, $2.60.

A TREATISE ON ELECTRICITY AND MAGNETISM. By J. Clerk Maxwell, M.A. Second Edition. 2 Vols., 8vo, $8.

AN ELEMENTARY TREATISE ON ELECTRICITY. By J. Clerk Maxwell, M.A. Edited by William Garnett, M.A. 8vo, $1.90.

GEOLOGY—CHEMICAL, PHYSICAL, AND STRATEGRAPHICAL. By Joseph Prestwich, M.A., F.R.S.
Vol. 1—Chemical and Physical. Royal 8vo, $6.25.
Vol. 2—Strategraphical and Physical. $9.

FORMS OF ANIMAL LIFE. A Manual of Comparative Anatomy, with descriptions of selected types. By George Rolleston, M.D., F.R.S. Second Edition. Revised and enlarged by W. Hatchell Jackson, M.A. 8vo, $9.00.

AN ELEMENTARY TREATISE ON HEAT, with numerous woodcuts and diagrams. By Balfour Stewart, LL.D., F.R.S. Fifth Edition. 12mo, $1.90.

THE MATHEMATICAL THEORY OF ELECTRICITY AND MAGNETISM. By H. W. Watson, D.Sc., and S. H. Busbury, M. A.
Vol. 1. Electrostatics. $2.75.
Vol. 2. Electrodynamics. In Press.

CHEMISTRY, FOR STUDENTS. With Solutions. By A. W. Williamson, Ph.D. 12mo, $2.10.

POLITICAL ECONOMY, ETC.

ELEMENTARY POLITICAL ECONOMY. By Edwin Cannan, M.A. 16mo, 25 cents.

ELEMENTARY POLITICS. By T. Raleigh, M.A. 16mo, 25 cents.

A MANUAL OF POLITICAL ECONOMY, for the use of schools. By. J. E. Thorold Rogers, M.A. 16mo, $1.10.

SMITH'S WEALTH OF NATIONS. A new edition, with Notes by J. E. Thorold Rogers, M.A. 2 vols., 8vo, $5.25.

PHILOSOPHY AND LOGIC.

LOGIC, OR THE MORPHOLOGY OF KNOWLEDGE. By B. Bosanquet, M.A. 2 Vols., 8vo. $5.25.

SELECTIONS FROM THE WORKS OF BISHOP BERKELEY. With Introduction and Notes for the use of students in the universities. By Alex. C. Fraser, LL.D. Third edition, 12mo, $1.90.

THE ELEMENTS OF DEDUCTIVE LOGIC. Designed mainly for the use of junior students in the universities. By T. Fowler, D.D., 9th edition, 16mo, 90 cents.

THE ELEMENTS OF INDUCTIVE LOGIC. Designed mainly for the use of students in the universities. By the same author. 16mo, $1.50.

THE PRINCIPLES OF MORALS. (Introductory chapters.) By T. Fowler, D.D., and J. M. Wilson, B.D. $1.25.

THE PRINCIPLES OF MORALS. Part 2. By T. Fowler, D.D. 8vo, $2.75.

PROLEGOMENA TO ETHICS. By T. H. Green, M. A. Edited by A. C. Bradley, M.A. 8vo, $2.75.

THE LOGIC OF HEGEL. Translated from the Encyclopædia of the Philosophical Sciences, with Prolegomena, by William Wallace, M.A. 8vo, $3 50.

HUME'S TREATISE OF HUMAN NATURE. Reprinted from the original edition in three volumes, and edited by L. A. Selby-Bigge, M.A. 12mo, $2.25.

LOCKE'S CONDUCT OF THE UNDERSTANDING. Edited by T. Fowler, D.D. Second edition, 16mo, 50 cents.

LOTZE'S LOGIC, in Three Books, of Thought, of Investigation, and of Knowledge. English Translation. Edited by B. Bosanquet, M.A. Second edition, 2 vols., 12mo, $3.

LOTZE'S METAPHYSIC, in Three Books, Entology, Cosmology, and Psychology. English Translation. Edited by B. Bosanquet, M.A. Second edition, 2 vols., 12mo, $3.

TYPES OF ETHICAL THEORY. By James Martineau, D.D. Second edition, 2 vols., 12mo, $4.50.

LAW.

AN INTRODUCTION TO THE PRINCIPLES OF MORALS AND LEGISLATION. By Jeremy Bentham. 12mo, $1.75.

PRINCIPLES OF THE ENGLISH LAW OF CONTRACT, and of Agency in its Relation to Contract. By Sir W. R. Anson, D.C.L. Fifth edition, 8vo, $2.60.

AN INTRODUCTION TO THE HISTORY OF THE LAW OF REAL PROPERTY. By Kenelm E. Digby, M.A. Third edition, 8vo, $2.75.

GAIUS' ELEMENTS OF ROMAN LAW. With a Translation and Commentary by Edward Poste, M.A. Second edition, 8vo, $4.50.

ELEMENTS OF JURISPRUDENCE. By T. E. Holland, D.C.L. Fourth edition, 8vo, $2.50.

JUSTINIAN.—INSTITUTES. With Introductions, Commentary, Excursus, and Translation. By J. B. Nogle, D.C.L. 2 vols. 8vo, $5.25. The Translation separate, 8vo, $2.

MACMILLAN & Co., 112 Fourth Avenue, New York.

The Nation.

NEW YORK, THURSDAY, AUGUST 22, 1889.

The Week.

THE platform upon which Gen. Harrison was elected President, declared that "the reform of the civil service, auspiciously begun under the Republican Administration, should be completed by the further extension of the reform system, already established by law, to all the grades of the service to which it is applicable." This committed the Republican party, and its candidate in case of his election, to the extension of the reform system to such grades of the service, for example, as the hundreds of clerks to be appointed in the Census Office. The Republican candidate was elected, and it is now announced from Washington that President Harrison has decided to break this pledge, by refusing to place these clerks under the civil-service rules, although such "extension of the reform system" was earnestly urged by Mr. Roosevelt and the other members of the Civil-Service Commission.

The New Albany (Ind.) *Ledger* says that Postmaster Godfrey, the Republican recently appointed, has discharged all the letter-carriers, and, upon their asking what were the charges upon which they were thus turned out in disgrace, replied: "Gentlemen, there are no charges against your official conduct. You have done your work well, performed to my entire satisfaction every duty required. You are gentlemen, and I wish you well and hope you will have success in life; but you know, boys, you are Democrats." The Indianapolis *News*, an independent journal, which, it is interesting to recall, supported the President who now appoints the Godfreys, on the ground that he was a civil-service reformer, says of this performance: "The New Albany Post-office is not under the Civil-Service Law, and hence no law was violated by this barbarous deed; but the instincts of fair play, the promptings of common sense, considerations for the public service, and the whole spreading spirit of the time are affronted by such a ruthless act. It is a plea for the extension of the civil service such as President Harrison said he would favor."

We are glad to announce that the Post-office Department has at last removed from office the burglar who was appointed Postmaster at Shushan, N. Y., about three months ago. Congressman Quackenbush, the Republican Representative for the district, was responsible for this disgraceful appointment; but the Troy *Times* says that he had no personal knowledge of the criminal, but secured his appointment "upon the advice and recommendation of many of the most prominent Republicans of Washington County, including those holding responsible positions and bearing a character for highest integrity." There is hardly any sign of the times more alarming than the readiness of men "holding responsible positions and bearing a character for highest integrity" to recommend the appointment to office of rascals.

The *American* of Philadelphia, which rather startled us the other day by demanding the repeal of all duties on articles whose producers had gone into Trusts, now has a withering blast on Boss Quay, accompanied by a side-blow at President Harrison. It declares that the recent Republican State Convention at Harrisburg was a mere mustering of the followers of Quay, men "without prominence in the party, without independence of opinion, without any such political force of character as gives a convention vitality, directed by drill-sergeants in the execution of a programme already fully prepared." This abject and humiliating condition of the party is due, it says, in the first instance to its own pusillanimity, and it has been intensified by the acts of President Harrison, who has accepted the situation as he found it, and has made of Quay a more despotic boss than he was before. "The party," says the *American*, "had accepted Mr. Quay with all his methods of tergiversation, intrigue, corruption, and barter, and had made him not only its manager, but its public representative. Gen. Harrison then bound it fast to its own iniquity by making Mr. Quay his Pennsylvania deputy. *Finding the party in evil ways, he put it in convict's dress.* It is true that this has seemed a betrayal of the principles to which he was believed to be devoted. It is true that he was expected to help carry the party's standards to higher ground. But when he did not choose to do this, he had, as we have pointed out, the plausible if immoral defence that he took Pennsylvania at her own estimate of herself, and gave her a Federal ruler in the person of the man whom she had already designated as her party leader." Under the circumstances, the action of the Convention, "its conclusions, its nominations, have practically no claim to respectful consideration."

The Washington correspondent of the New York *Times* makes a statement of the highest importance as to Secretary Windom's policy regarding changes in the Treasury Department. It is as follows: "Certain chiefs of division and a few higher officers have been marked for removal on the ground that they are inefficient. The number is very small, and, indeed, insignificant, compared with the number to be retained. The total number of such officers is forty. The intention is to retain in position, at least until Congress meets, those who are competent, without regard to party. The Secretary is not anxious to make changes even then in the personnel of the Department, but is prepared, in view of his political experience and the great pressure on him for place, to yield up a goodly number of the Democratic chiefs, who shall give way to men of the party in power." Mr. Windom's reasons are represented to be that the Department as now manned is about equally divided between the two parties; that the organization is very nearly perfect, a few men having been displaced whom the Secretary regarded as less efficient than their successors; that the great column of office-holders in the Department are faithful, trained, and able men; and that to disturb this model organization would be, in his view, to impede the free movement of a great and splendidly equipped machine.

Secretary Windom is reported as saying that he found the Treasury Department in most excellent condition, and as willing to admit that the men appointed by Mr. Manning and Mr. Fairchild were a distinct gain on the old order, and that the personnel was improved under the late Administration. Naturally, he wants to preserve the good fruits of his predecessors' work, and to leave an equally creditable record behind him, and he is shrewd enough to see that he cannot do so if he turns the Department over to the spoilsmen. It is a great satisfaction to find that the head of this important Department has such sound ideas as Mr. Windom is represented to hold. If he lives up to them, he will receive the heartiest praise of every friend of civil-service reform in the land.

The Republican State Convention of Iowa adopted two resolutions on the subject of Trusts. One of these demands of Congress "the protection of American industry when *it* does not foster Trusts or trade conspiracies." The other declares that it is "the duty of the State and Federal Governments to enact and execute laws to punish trade conspiracies, Trusts, and combines designed to limit the production of the necessaries of life, unnaturally raise prices, and interfere with the natural course of trade." The admission in the first resolution that protection does in some cases foster Trusts and trade conspiracies is valuable, and the implication that it should be withdrawn in such cases will have a good deal of influence, we judge, in shaping events in the next Congress. This is the first formal recognition in a Republican State convention that Trusts and trade conspiracies are or may be fostered by the tariff. It is also a flat contradiction of Mr. Blaine's maxim that "Trusts are largely private affairs." It is a declaration that they are public affairs, to be dealt with by public bodies, and that one way to deal with them is to abolish the tariff duties which "foster" them.

The Iowa Republicans followed the example set by their Ohio and Pennsylvania brethren in ignoring the subject of civil-service reform. Four years ago the Iowa Republican Convention adopted the following resolution:

"The Republican party inaugurated civil-service reform and enacted the present Civil-Service Law. It will faithfully maintain it, and cheerfully aid in any needed amendments to give it full force."

This year the Iowa Republican Convention says not one word about civil-service reform, while Iowa Republican organs publish without rebuke assaults upon the Civil-Service Law.

The Virginia Democrats appear to have nominated a strong ticket in their Convention on Thursday. The one issue in the campaign which attracts attention, both within and without the State, is the question whether control of the commonwealth shall again be handed over to one of the worst demagogues ever developed in this country. The platform declares that "the men who were disabled in the service of the State during the late conflict between the States, and the widows of those who lost their lives in such service, are deserving of aid and protection," and favors "liberal appropriations" for this purpose. The Philadelphia *Press* (Rep.) thinks that "the Republicans of Virginia who were Unionists during the war, can hardly be expected to view this proposed addition to their taxes with entire complacency." The *Press* apparently forgets that the Republicans of Virginia are now led by a man who was *not* a Unionist during the war; that four years ago Mahone's Republican State Convention adopted a resolution in favor of generous appropriations by the Legislature for pensions to disabled rebel soldiers, and that throughout the campaign of 1885 the Republican organ at the State capital insisted that the "Bourbons" ought to be defeated, among other reasons, because they had killed a bill to establish a home for Confederate veterans, while "the Republicans did their best to pass it."

The last summer session of a New Hampshire Legislature ended on Saturday, a constitutional amendment adopted last spring having changed the time for assembling in future to January, after the fashion which is rapidly becoming universal throughout the country. The most important action of the Legislature was the election of "Bill" Chandler to the United States Senate, and, as was to be expected after such a performance, it rejected a ballot-reform bill, this being as objectionable to the "Bill" Chandler school of Republican politicians in New Hampshire as to the "Joe" Manley school in Maine, which defeated a similar measure in that State. An unexpected degree of favor was shown to a bill licensing the liquor traffic, which at first secured a narrow majority on a test vote in the House, but was finally defeated.

The Boston *Advertiser* has been making an investigation into the workings of the local-option, restrictive, high-license law that went into effect May 1, which appears to justify its conclusion that this "is proving the most successful experiment ever entered upon by the people of Massachusetts in their endeavors to cope with the liquor traffic." Reports from sixteen cities which license the sale of liquor show that the number of such places licensed (drug-stores excluded) has been reduced from 3,022 to 1,257, or considerably more than one-half, while the revenue received from this source has been raised from $1,097,706 to $1,448,425, or nearly one-third. There is also a general agreement that the laws in regard to prompt closing, Sunday sales, sales to minors and to drunken persons are much more strictly complied with than ever before, the fear of losing so costly a privilege through misconduct proving very effective.

The recent Waterways Convention in West Superior was attended by delegates from Buffalo and all lake ports westward. Its aim was to unite the Northwest in pressure on Congress for securing a better waterway as soon as possible from the head of the lakes towards Eastern markets. Deep-water navigation is admitted to be the only competitor strong enough to keep down railroad rates, and hence is the best friend of farmers. All the commerce of Lake Superior passes through a lock at the Soo (Sault Ste. Marie). The depth of water there is properly sixteen feet, but, owing to an accident, all vessels drawing more than fourteen and one-half feet are obliged to transfer a portion of their cargoes to lighters. A lock is there in making which will receive vessels drawing eighteen feet, but the annual appropriation is so small that it is not likely to be finished for four years or more. The endeavor of the Convention is to rouse the people of the Northwest to demand of Congress money enough to finish the lock speedily. A further aim is to strive for a lock of twenty feet capacity and to improve the approaches to it, as well as to get Lake Superior harbors dredged to such a depth that all vessels which can pass the lock can enter the harbors. The appeal is in behalf of a tonnage of more than seven millions passing the Soo last year, and which will soon be doubled.

The waterways movement would have little to fear but for the abominations which make the river and harbor bills a stench in the nostrils of the public. But it is better that ten guilty escape than that one innocent perish. The Convention had nothing of a party or partisan character, but one speech at least is worth heeding by all parties. "We once," said Mr. Hill, "had an ocean commerce, but it is all gone, and now we have a commission travelling about the country to see whether we can preserve our internal commerce from the lines north of the boundary. The time was when American enterprise could feel sure that it would reap the fruits of its labor. But now it is bound and manacled. Ten years ago boats on Superior were 1,000 tons and rates five cents a bushel. Now, on boats of 3,000 tons wheat rates have dropped to three cents. These boats draw fourteen feet. Give me assurance of full eighteen feet, and I will have courage to build boats of 5,000 tons which would carry freight at half the present cost. If you shall at this Convention drive the entering-wedge for eighteen feet of water, you will serve the country better than you know."

The resolution adopted unanimously by the Electrical Convention at Niagara Falls, that the duties on copper ought to be repealed, and the appointment of a committee to prepare and circulate a petition to Congress for that purpose, constitute a very important movement towards the emancipation of industry. Most of the speakers who took part in the debate declared themselves protectionists, but said that the copper tariff was inconsistent with the principles of protection. In this they were right, if it can be said that protection has any principles. There never was any reason for putting a duty on copper or copper ore, except to promote a speculation in mining stocks, and to enable the owners of mines to hold the price of American copper at a higher figure than the price of their own copper in foreign markets. Henry Clay and all the fathers of the protective policy in this country would have stood aghast at the idea of putting a duty on an article which we habitually export. The only effect of such a duty is to enable the producers to form a combination against the consumers, and this has been done repeatedly. The last reported combination was formed in Boston last week, and it had the effect to advance the prices of mining stocks very materially both here and abroad.

If protection is an object to be sought for, then certainly the greatest good to the greatest number should govern in apportioning its gifts. The number of persons employed in the electrical industries exceeds the number employed in copper mining by ten to one, at a low calculation. Electric power is second only to steam power as a factor in the national wealth and industry, while electric lighting has probably overpassed gas lighting already in the number of lights and the number of hands employed. Copper is the prime raw material of this great and expanding industry. If the electricians will go to work systematically, and circulate their petition thoroughly among their producers, employees, and customers, they can secure the repeal of the copper tariff this winter. Public opinion, even in protectionist circles, was never much in favor of a duty on copper. Whatever toleration was accorded to it has been mainly demolished by the impudent attempt at Paris to monopolize the world's supply of this article, to which the American producers lent themselves, and from which they have reaped enormous profits, although the Paris syndicate came to grief.

A correspondent, writing to us in good faith, asks us what is the average rate of wages paid for mining coal in Pennsylvania. During the Presidential campaign we received similar questions even broader in scope and less intelligible, as, for example, what is the average rate of wages in Europe, or what is the cost of living in England, or what are the prices of the common necessaries of life in Germany? All such general interrogations are as incapable of answer as the question how many years ago the Glacial Epoch occurred. There is no more sense in coupling

anthracite and bituminous coal or eastern and western Pennsylvania together to obtain an average rate of wages than in coupling either of them with the ice trade on the Hudson River. Nor is the average daily wage a measure of the remuneration of labor unless accompanied with the average of days of active employment per annum. When the great strike took place in the Schuylkill region in the year 1888, Prof. R. W. Raymond, a perfectly competent authority, made an investigation, in which he had the help of four accountants for two weeks, to ascertain what had been the wages paid for mining during eighteen months by a single company. The rate was fixed on a sliding scale, determined, above a certain minimum, by the market price of coal. Moreover, the miners worked by contract, not by the day. For the period named the average received for every day worked by any miner, good, bad, or indifferent, was $2.72. The contract miners averaged twenty-two days' employment to the month. Outside of contracts the wages paid (with a somewhat higher average of time per month in most cases) were: Miners, $1.93; miners' assistants, $1.66; ordinary underground laborers, $1.52 per day; outside labor, $1 to $1.25—*i. e.*, the usual country rates.

Objection has been raised to New York as a suitable place for holding the world's fair on the ground that it is "a foreign city." This means that New York has a larger proportion of citizens of foreign birth or foreign descent than most American cities. Seeing that Christopher Columbus was himself a foreigner, and that the celebration is in honor of his discoveries, the objection seems to be not very well founded. But if the question is to be decided on such grounds, it is quite certain that Chicago has nothing to boast of in superiority of blood. According to the last national census the population of New York was 1,206,299, of which 727,629 were of native and 478,670 of foreign birth. Almost exactly two-fifths were foreign and three-fifths native. The population of Chicago was 503,185, of which 298,326 were native and 204,859 foreign. The proportion here was almost the same, two-fifths to three-fifths. In St. Louis the ratio of native-born to foreign-born is slightly greater, but not sufficiently so to warrant boasting. The same ratio holds good within small limits for Cincinnati, Cleveland, Detroit, Milwaukee, and St. Paul, while San Francisco has, or had in the census year, a larger foreign population in proportion to her total than any other American city, the number of natives being 129,715, and of foreigners 104,244. It is time to disown the distinction so freely bestowed upon New York, of being "a foreign city."

What *did* Mr. Bruce Ismay mean when he said on board the steamer *Teutonic* that being a member of the British Parliament was different from being a member of the American Senate or House of Representatives? Commodore Bateman pricked up his ears when this remark fell from Mr. Ismay's lips. Then the *Herald* pricked up its ears. Then the *Commercial Advertiser* and the *World* did likewise. Reporters scoured the city on Friday to interview Mr. Bateman and other passengers, and to worry Mr. Ismay as much as possible. In the latter endeavor they have met with some success, but the main question is still without a satisfactory answer. Mr. Ismay says that he was only joking, but he must now perceive that it is possible to carry a joke too far if Bateman is about. Bateman does not like jokes at the expense of Congress. Other passengers were found who thought that the incident had been greatly exaggerated. Mr. William J. Demarest was one such. He thought that "appreciation for one's country should be allied to common sense." This shows that Mr. Demarest is not a journalist, and has never been through a dry season of news. Every day brings its torment to the sensation editor, and when the crop of sexual irregularity languishes, the chance remark of some foreigner on board a steamship in mid-ocean may serve the turn till a new divorce, or prize-fight, or dog-fight cheers the hearts of our tired veterans. Who shall say that the freedom of the press is not the bulwark of our institutions?

The surrender of the British Ministry to the Opposition on the tithes question, after a division on which they were nearly beaten, must give a heavy blow to their prestige. The tithe question in England and Wales is substantially, but in a much less aggravated form, what it was in Ireland fifty years ago. In that country the bailiff or "proctor" of the Protestant parson used to go about every year and take a tenth of the Catholic farmer's produce for the support of a church to which he did not belong. The Catholics, after they had recovered a little of their independence, began to resist this as monstrous injustice, but it was only abolished after several years of furious and bloody agitation, in which Paddy's turbulence and lawlessness shocked the English public terribly. The same state of things has ever since prevailed in Wales. The Anglican Church is there established by law, but the bulk of the people are dissenters, and have to pay tithes for the support of the Anglican clergy, with whom they have nothing to do. Within the last year or two they have begun, as the Irish did, to resist by force, and, it having become evident that the question needed some sort of settlement, the Government brought in a bill mitigating the system somewhat both in England and in Wales, by taking away from the clergy the power of distraint. The Liberals thereupon demanded a radical change, on the Irish precedent, by making all tithes chargeable on the landlord in a fixed annual sum, and they have carried the day. The tenant will not much longer have to support the landlord's clergy, for in Wales as in Ireland it is only the upper classes who go to the Episcopal Church. The indignation excited among these classes by the unwillingness of the poor to support the ministers of the rich has been a marked, and somewhat comic, illustration of the power of prejudice.

One of the most striking features in the Maybrick case was Mrs. Maybrick's admission, when she came to make her "statement" to the Court at the close of her defence, that she had put the arsenic in the meat-juice which was discovered by the chemist, but had done so at her husband's request, and that she only knew it was a "white powder" which he was in the habit of taking. He told her, she said, "that it would not harm him if she put it into his food, and she consented." Unfortunately, however, she had at an earlier period of his illness spoken to several persons about the white powder which her husband was in the habit of taking, and which she was sure was injurious to him, and yet, when he wanted it again, and was desperately sick, she did not know what it was, and made no effort to keep it from him. She also told the Court of the devotion with which she had nursed him, and the agony with which she had witnessed his sufferings, and added: "In conclusion, my Lord, I have to say that for the love of our children, and for the sake of their future, a perfect reconciliation had taken place between us, and that on the day before his death I made a free confession to him of the fearful wrong I did him." Unfortunately for this, she was down to the last in correspondence with her paramour, making arrangements to cover up the traces of a trip they had made to London together, and giving him the assurance that the husband could not recover before the doctors had given him up.

Judge Stephen's remarks in his charge on "expert testimony," medical and other, were very sharp and characteristic. He warned the jury about the uncertainty of medical science, or rather art, and reminded them of the old saying which described "a doctor" as "a man who passed his time in putting drugs of which he knew little into a body of which he knew less." He also had a fling at the experts in other fields who appear before parliamentary committees and the like. He said a man going on the stand, and "calling himself this, that, or the other, by no means qualified him to receive unhesitating belief." "A great deal of what he might call scum had to be taken off the testimony of skilled witnesses, for—of course, probably insensibly to themselves—they were apt to become advocates rather than witnesses." As a matter of fact, the number of drugs which the doctors tried on Maybrick was something terrible. The list has been published by a London medical journal, with the remark that it was a disgrace to the profession. He was evidently subjected to a process of experimentation which would have been enough to bring a man in health into a very low condition, much more a man who, in addition to what the doctors were giving him, was getting little daily doses of arsenic from somebody else. What makes expert testimony unreliable is a nice question of psychology. Most experts go on the stand perfectly honest men, but the influence of their retainer on the mind, though subtle, seems in most cases to be overwhelming.

AVAILABLE SUPPLIES OF MONEY.

THE reduction of the surplus reserve of the Associated Banks to barely three and a half millions in the middle of August calls general attention to the position of our money market, and to the money locked up in the National Treasury. The movement of currency to the West, and even to the South, has begun; the past week was virtually the first in this year's movement, and it ended with a bank statement which shows a very narrow margin of reserve. At the same time, the rates for money on call ruled comparatively low, not over 3 to 4 per cent., and the rates for time loans on collateral security and for the best commercial paper were about 5 per cent. These rates are fully 1 per cent. higher than those recently current, but they indicate no anxiety as to the supply of money to lend, and, as a matter of fact, the feeling among borrowers and lenders seems to have been unusually free from anxiety so far. Higher rates are generally anticipated before long, but most bankers appear to think that an active 6 per cent. market would bring all the funds needed, and quicken the public confidence in a prosperous season by showing the substantial character of the demand for loans. But all opinions make one reservation, the familiar one of nearly a generation, namely, that much would depend on the action of the Secretary of the Treasury. And much will depend upon it, beyond a question.

At the present time the Treasury has what it calls an "available balance" of about $70,000,000, of which it has some $43,000,000 on deposit in national banks, and holds Government bonds as security for the same. Some of these deposits are for the convenience of the Treasury, a kind of working capital necessary in the prosecution of its daily business; the amount is a matter of estimate, but is known to be larger than it was a few years ago, and is probably from $20,000,000 to $30,000,000. The remainder consists of deposits virtually or actually solicited by the banks, and it has been a great help to the money market, though it has enabled speculators, individual and corporate, to carry Government bonds at artificially low rates of interest even while the Treasury itself was the chief buyer of bonds. But the total of such deposits is much less than the Treasury's available balance, and the excess is withheld from productive use, and serves chiefly to tantalize the business community.

How to get this idle hoard into circulation is the constant puzzle. Mr. Windom is reported as asking how he is to get bonds if people will not sell them to him, and other people echo the question as if it were an answer to the difficulties of the situation. If money should really become close, a useful preliminary step would be to prepay the interest on the public debt for a twelvemonth. The great bulk of the debt is now in registered form, so that, when the books are closed for the quarterly payment of interest, it would be easy for the Treasury to order the checks made out for a whole year's interest. Notice would be given at the same time to holders of coupon bonds that the Treasury would cash, without rebate, their coupons for a year's interest. The time for payment of interest on the 4½ per cents is immediately at hand, and the much larger payments on the 4 per cents are due on the 1st of October.

The Secretary might also consider the character of his deposits in the national banks. Where the deposits are made for his convenience in the transaction of public business, it may be well enough to consider the services of the banks as an equivalent for the use of the money. But where the deposits are for the convenience of the banks and their customers, he need not hesitate to demand 2 per cent. interest upon them. The law empowers him to make such deposits, with security of Government bonds and under such regulations as he may prescribe. If he will observe that these deposits without interest enable the holders of bonds to withhold them from sale, he will be in a position to judge whether the exaction of a little interest would not serve him better as a buyer of bonds.

Here are two steps, then, which it can do no harm to bring forward for consideration, both by Mr. Windom and by the business community; and the first of them, the prepayment of interest for a year, would give time for decision upon the second as a separate matter. Both are within the Secretary's own control, and in this they differ from the purchase of bonds under present conditions, since sellers are needed in the latter case. Rumors arise from time to time of a large parcel of bonds to be offered, publicly or privately, to the Treasury; but people who have blocks of bonds to offer can postpone their offers until tight money has enabled them to buy stocks in Wall Street at depressed prices, which they could certainly sell out to great advantage after disposing of their bonds, and it would be a pity if the inaction of the Treasury should thus endow Government bonds with the pecuniary advantages of loaded dice.

It seems probable that, by the methods indicated, Mr. Windom would not only give large and early relief while the crops are moving, but also make bonds more easy to buy, for the purchase of bonds is at present his only means of really reducing the surplus, and, therefore, it is to be kept in view as the aim of any expedients suggested; and in this manner the time would be well spent until Congress meets, when the business of reducing the Government's income will once more be in order.

In speaking of the present available balance in the Treasury, we have neglected the money just set aside for next month's pensions, because it is not to be disbursed until September, and by that time about as much will again have accumulated, unless there is a sudden increase in the quantity of bonds purchased.

THE KILLING OF TERRY.

DAVID S. TERRY, who was shot last week by Marshal Nagle when committing an assault of the grossest character on a judge of the United States Supreme Court, belonged to a class who all deserved sudden death by the pistol, and who generally got their deserts. Terry's long survival must be considered a piece of rare good luck. He was a desperado of thirty years' standing, who during all that period carried his life in his hand, and lived among other desperadoes as bad as himself. Their failure to murder him long ago is only explicable on the ground assigned by the Irish car-driver in *Punch* to a land-agent for the great delay in killing the agent's predecessor—that "what was everybody's business was nobody's business." Somebody ought to have killed Terry a quarter of a century ago—if not the public executioner, some friend of civilization—but the obligation was so general that nobody in particular felt bound by it. But the delay was fortunate, inasmuch as it led to his dying most suitably, when in the act of committing one of his worst offences, an assault on a judge who had decided against him. Attorney-General Miller is entitled to the thanks of the community for furnishing the Judge with proper protection, and the Marshal for doing his duty in such a manner as to save us the shame of seeing a ruffian get off with a short term of imprisonment for publicly beating a judge of our highest court. We must be thankful that Terry did not begin his violence, as he undoubtedly would have ended it, with Justice Field's murder.

Terry was really a very interesting specimen of a class which may now be considered almost extinct, even at the South, where he originated and got his notions of honor and morality—a class which we have heard admirably described by a witty member of our bar as a "regular ante-bellum blackguard." He was, as most of them were, more than a blackguard. He had force of character, great courage, and doubtless some knowledge of the law, for he was a Chief Justice in the early days of California, but a person as much out of place in our modern industrial and busy communities as a tiger in a barnyard. The whole tribe owed their existence to the inordinate value attached in the South, in the slavery days, to personal courage as one of the social virtues, and which they accordingly soon learned to use as a cover for every variety of social defect—drunkenness, quarrelsomeness, idleness, and general business untrustworthiness. They had, in fact, to be quarrelsome in order to bring their peculiar virtue into play and make it tell on their social standing; but it was a virtue which, of course, has comparatively small value in any community in which the administration of justice is efficient and the police reasonably vigilant.

Terry's death reminds us forcibly of the changes all parts of the country—New York, as well as the Southern States and the Pacific Coast—have undergone since he rose into fame by killing Broderick. Broderick, though a man of good character and considerable ability, was simply a ward politician and saloon-keeper and the foreman of a fire company when he emigrated from New York to California, and yet his death convulsed the public in New York as a great political calamity. But the community which was convulsed was not shocked by see-

ing one of the most notorious ruffians of the day—the leader of more than one riot—Isaiah Rynders, occupying the place of United States Marshal, and gave Bill Poole, a political pugilist killed in a bar-room fight, one of the most imposing funerals ever seen in the city.

Terry was, in fact, in his beginnings a man of his time, but must have felt himself ever since the war the member of a rapidly disappearing variety of the *Homo Americanus*. In the South his congeners are nearly all gone. Almost every month carries one of them off, either through wounds received in "battle," or through the action of alcohol on his mucous membrane. What their ideas of post-mortem existence were it would be interesting to know, but we have never heard that any of them published his views on a future life. They were seldom men of a speculative or meditative turn of mind, and probably occupied themselves with no subject of a metaphysical character, except the nature and requirements of "honor." But certainly heaven as a place of peace and rest, with no bars, no "difficulties," and no "code," and no "gentlemen of the old school," cannot have had much attraction for them.

The killing of Terry has called forth some, but not much, discussion of the law of the matter, owing to the fact that it was not Nagle that Terry attacked, but another man, and that therefore Nagle did not act in self-defence. But the justifiability of Nagle's act is a question for a jury, and a jury will take all the circumstances into consideration, including Terry's reputation and his threats. The question jurymen will inevitably ask themselves is, whether a Federal police officer was bound to stand by and make perfectly sure that Terry was going to murder Judge Field before drawing a weapon against him; and also whether, after becoming satisfied in his own mind that Terry did mean to commit a murder, he was bound to make an attempt to disarm him by means of a personal tussle before using his pistol. What would have happened if Nagle had waited was, that Judge Field would instinctively have risen and attempted some resistance to his assailant, and then the assailant would, as usual in such cases, have "believed" he was drawing a knife or pistol on him, and have killed him on the spot. There will not be in the mind of any juryman the smallest doubt that Terry contemplated murder, and no American juryman will hold that a United States marshal is bound to witness a murder which he has every reason to expect before interfering by the only means which he is warranted in thinking likely to be effectual. The great use of juries in our system of jurisprudence is to apply to situations of this sort the common sense of every-day life. All unpremeditated killing is surrounded by circumstances which constitute justifiability or unjustifiability, and of the weight of these jurymen are the sole judges.

APPEALS IN CRIMINAL CASES.

THERE is a great outcry just now, apropos of the Maybrick case, over the absence in England of appeal in capital cases. As a matter of fact, there is an appeal to the full bench if the judge who tries the case certifies that any points of law have been raised in the course of the trial about which there is reasonable doubt. In addition to this there is a very much more valuable appeal than we have here—to the Home Secretary, not on points of law only, but on the merits of the case; that is, an appeal against the verdict of the jury. It is a mistake to suppose that this is in practice an appeal to one man, who may or may not be a lawyer, and may or may not be fitted to pass on complicated questions either of law or fact. In the present instance the Home Secretary happens to be a lawyer of considerable experience, who would have been fully competent to try the Maybrick case himself.

But even if he were not, he would not pass on a capital case, and no Home Secretary ever does, out of his own head. He calls into consultation everybody who is likely to give him efficient help in arriving at a decision—lawyers, doctors, and chemists—and he goes over not only the law, but the evidence. He does, in fact, more than any court of appeals would do or is ever likely to do in such circumstances. As a general rule, all that our Court of Appeals does is to examine the procedure in the trial for the discovery of technical defects, and it is on technical defects that new trials are almost always ordered. We do not speak with authority, but we do speak with considerable confidence, when we say that within the last twenty years no murderer has obtained a new trial from our Court of Appeals on points directly affecting the question of guilt or innocence. If anybody convicted of murder has secured any such reëxamination of his case as Mrs. Maybrick's is now receiving, and has been accorded a fresh trial because material evidence for or against him was either excluded or slighted, we should be much obliged to anybody who will cite the case to us.

In truth, we have no veritable appeal in criminal cases. We have no court which undertakes to revise the verdict of the jury. What the Court of Appeals does is to see whether the case was put before the jury in a technically correct manner, and this is not the real appeal which the Maybrick public is clamoring for. What it seeks is a court which will protect the prisoner against the jury, and discover "reasonable doubt" where the jury could see none. Is it possible to set up such a court in this country or in England without reducing trial by jury to a mere form or abolishing it altogether? We think not. We do not see where the materials for it are to be found. It would not be possible to establish any court which would be able to withstand waves of popular excitement about a criminal trial. All such popular attacks on the verdict of a jury or the rulings of a judge are in the nature of a plébiscite or *referendum*—that is, of a withdrawal of the whole case from professional examination and its submission to a mass-meeting.

The confidence with which the Liverpool public is now demanding Mrs. Maybrick's pardon or the commutation of her sentence is based on exactly the same peculiarities of human nature which dictated one of the telegrams received by a United States Senator during the Johnson impeachment trial: "Kansas has heard the evidence, and demands the conviction of the President." If we substitute Liverpool or London for "Kansas," we get a fair idea of the value a court of criminal appeal would have if Liverpool or London took it into its head to "hear the evidence" and deliver judgment. Why should the decision of two or three or four judges have any more weight against 1,000 merchants, brokers, members of Parliament, and mothers of families, than Judge Stephen, the jury, and Mr. Matthews? We know of no reason. We are witnessing to-day on a smaller scale the same sort of *referendum* in Sullivan's case. He has been convicted on the clearest evidence of having fought a prize-fight in the State of Mississippi. There is no doubt about the facts, nor is there any about the law, but he is appealing just the same, in the belief that Mississippi, or the United States, or some other large body of people, "has heard the evidence" and demands an acquittal, and that the Court of Appeals will take this into account.

THE SUMMER BOARDER'S FUTURE.

SOME years ago we discussed in these columns the rapid expulsion, which was then going on, of the American Summer Boarder by the Cottager from nearly all the choicest resorts on the eastern coast. At the time when we wrote, the Boarder had been totally driven out of Newport, and was threatened with a similar fate in Lenox and Bar Harbor, and had sought a precarious refuge in the White Mountains, the Catskills, at Northeast Harbor, and some other points along the shore of Mt. Desert Island. Since then his disappearance from Bar Harbor may be said to be complete. There are Boarders there still, but they are only a feeble and disheartened remnant of a once powerful and jovial tribe, and try in every way to escape observation or conceal their real character. There are one or two very expensive hotels in which the guests all live in "suites" of rooms, in which they still present a bold front, and try to feel at ease, but their smiles are like light on graves. As to the large old hotels like Rodick's, in which whole armies of Boarders once led a happy and careless existence, and from which they sallied forth proudly, and even ostentatiously, on fine mornings, there are now few indeed who are willing to enter or leave them without seeing whether the street is clear of the Cottagers' wagons and victorias.

At Northeast Harbor, to which a great many Bar Harbor Boarders have retreated, their career, which for a few years was very peaceful and undisturbed, is rapidly drawing to a close. The Cottager there grows yearly in numbers and power. He has bought up nearly all the land along that portion of the coast, and holds it himself at high prices for sites, or has taught the once simple-minded, but now astute and sophisticated,

native to do so. Moreover, many Boarders there are simply Cottagers in embryo, so to speak. All Boarders are by no means ready either to submit to extermination or fly to the mountains, like the ancient Britons. Very large numbers prefer the Saxon method of letting themselves be absorbed by their conquerors. That is, as soon as they begin to perceive that the invasion of the Cottager is inevitable and not far off, they shrewdly make preparations to become Cottagers themselves by purchasing lots in the neighborhood which, as Boarders, they have learned to know and love. Many a Boarder lives for years in this status of inchoate Cottager, leading to all outward appearance a Boarder's life, and taking to his friends and to the companions of his walks and drives and picnics a Boarder's view of life, while all the while a Cottager at heart, and determined when the time comes to throw off all disguise and openly abandon his brethren and build on his lot. We do not mean to say there is anything discreditable in this. Very few of us, indeed, who are over thirty years of age have been always Cottagers. There are very few Cottagers who have never been Boarders; fewer still who were born Cottagers. Therefore, there has been in nearly every Cottager's existence a transition period, a process of evolution—so to speak—which converted him from a Boarder into a Cottager, and this process must necessarily have been in most cases a slow one, with more than one stage in it. It is not every character which could support a process of sudden conversion. Even the strongest natures are best prepared for the responsibilities of Cottage life by holding, for a longer or shorter period, a Cottage lot, with the intention, concealed or expressed, of building on it—with the *animus ædificandi*, as the jurists would say.

In Lenox, the Boarder is holding out rather longer than a few years ago seemed likely, owing to the existence there of one of the most remarkable hotels in the country, around which there has hung for half a century a tradition, now to many memories a tender one, which Mrs. Kemble's recent little book, 'Far Away and Long Ago,' will do much to freshen—the tradition of a time when any one who spoke of Lenox called up the association of simplicity with refinement, of high thinking with plain living, of good company with small outlay. As long as there is a "Curtis's" in the village, the Boarder will there probably be able to surround himself with a certain dignity, and make for himself "a season" in which the Cottager will be willing to participate; but even there his extinction cannot be far distant, because he is abusing his privileges. He now goes there, in too many cases, on the pretence of enjoying the air and the scenery, when his real aim is "to get into society" among the Cottagers. Now this has the seeds of ruin in it. The Boarder's strength lay in the simplicity of his habits, and what we may call the austerity of his mind. His chance of survival rests on the general belief that he seeks in boarding an escape from the social frivolities of city life. It is this, and this alone, which can either support his self-respect or win the respect of the Cottager. As soon as it becomes plain that he is really a social sycophant, and that he goes to the country in quest of pomps and vanities which were not within his reach in his city home, his doom is sealed; his disappearance from the saloons and dining-rooms of the Cottager is not far distant.

We have said that the Boarder has until now enjoyed comparative peace and security in the Catskills and White Mountains. Considering how great the natural charms of both these regions are, and how pure and invigorating the air, the failure of the Cottager to pursue him into his fastnesses can only be explained on the assumption that the Cottager has thus far been fascinated by the seashore, and has therefore not turned his attention to the mountains. But that this period of security is likely to come to an end before long is, we think, shown by the success of such novel combinations of cottage and boarding life as Tuxedo Park, and the proposed trial of two or three similar experiments in the Catskills—that is, the experiment of a club-house, surrounded by cottages, and supplying them, if need be, with food, in a park of its own. Should these Catskill experiments succeed, the Boarders who now in that region hold the most attractive sites without disturbance may well shake in their shoes. When the Cottager acquires a taste for the mountains, he certainly will not be satisfied with spots where there is no view, and where there are no attractive walks or drives, and he needs as much space for himself alone as would satisfy a hundred Boarders.

Moreover, the Catskill boarding-house keeper is not enamoured of the Boarder. He does not welcome him in the summer because he enjoys his society, or loves to see him consume his fresh fruit and vegetables and his pure milk, and sit under his shade trees. On the contrary, he hates him, and would, if he could, strip him of everything he possesses in the world, and, in fact, makes such vigorous attempts in that direction that, under Darwin's great law of natural selection, the Catskill Boarder now generally belongs to that race whose wits have been so sharpened by ages of oppression that they are better fitted than any other to meet the extortioner in the gate, and foil his nefarious designs on the purses of the industrious and economical. The boarding-house keeper will, therefore, be restrained by no sentimental considerations from selling houses and lots to Cottagers and clubs, and moving with the proceeds into the adjacent village to lead a life of leisure in his shirt-sleeves. Where the Boarder will then go, it is hard to say; probably further back from the river into remoter mountain ranges, after the fashion of all defeated and despondent races. His tale is the ancient tale of wrong, "chanted from an ill-used race of men."

BOULANGER'S INDICTMENT.

THE case of the Government against Gen. Boulanger, as stated by the Procureur-Général before the High Court of Justice, has reached us, and, if even half its allegations were supported by proof, it is enough to make every Frenchman hang his head for shame over the fact that such a sorry charlatan should ever have obtained a majority in any constituency whatever, much less have become a sort of popular hero.

The charges are, in brief, that when he was in command at Tunis he employed secret agents, of whom one was an old prostitute and the other a journalist several times convicted of swindling; that he shared a commission of $40,000 with a disreputable lobby agent in an army coffee contract; that he was concerned in the job of an epaulette contractor; that, while Minister of War, he maintained an advertising bureau which distributed forty-one different chromo-portraits of himself; that he spent, for the same purpose, $60,000 of the secret-service money of the War Department on the newspapers; that he took money unlawfully out of the treasury of the Department; that he spent $30,000 of the secret-service money on a military club; that just before leaving the War Department he took $6,000 for himself; that he had paid off, while in office, $12,000 of debts without any visible accession of fortune; that he furnished an apartment handsomely with the public money; that he conspired with Rochefort, Soudey, and others to get up a riot at the Lyons station when he was leaving Paris; that he came secretly to Paris from Clermont-Ferrand without leave; that he prepared a coup d'état when M. Grévy was going out of office; that he got up a plébiscitary campaign after leaving the army; and that he was in possession of large sums of money, the source of which he dared not reveal.

To some of these charges Boulanger opposes a flat denial; but he does not deny his drafts on the secret-service money: he simply says that other Ministers of War had done the same thing, and he makes the astounding explanation that part of the money was used to procure the theft by night of the private papers of the military attaché of one of the great Powers ("faire enlever, une nuit, sans qu'il s'en doutât, les papiers secrets de l'attaché militaire d'une grande puissance").

The account given by the Procureur-Général of Boulanger's principal followers is so bad as to be positively diverting. His chief lieutenant is, as everybody knows, "Count" Dillon. The popular legend about Dillon was that he was the lineal descendant of the Dillon who once commanded the Irish Brigade, and added an illustrious house to the French noblesse; that he was also a man of very large fortune, which he was spending in the most unselfish manner in promoting the General's cause. The Procureur's story is, however, and he appears to have supported it with abundant documentary and other evidence, that Dillon is no count at all, but a man of humble origin, who in 1882 married his mistress, a disreputable singer at the Grand Theatre; that he was for some years in the army, but left it in 1869, in consequence of bad repute in his regiment; that after leaving it he lived extravagantly in

Paris, but was sold out by his creditors and dismissed by his mistress, who had contributed handsomely to his support; that he tried to buy carriages on false pretences; that he returned to the army in 1870, but, having cheated several persons, including a female hotel-keeper, he was dismissed the service again. After this he had some other disgraceful adventures in London.

Dillon is not, however, the worst of the lot. The account given of some of the other agents, particularly Buret, the swindling journalist, and his female colaborer, is still worse, but too unsavory for reproduction. The Procureur dwelt strongly on the fact that Boulanger's known income was only $2,500, and yet he was spending enormous sums of money, part of which undoubtedly came from abroad, and possibly from Germany. The most crushing thing among the proofs found among his papers was letters from officers in the army, whom he had corrupted into adhesion to his plans, and one of which asked for "a Second of December." In fact, both in the means used to promote his designs and in the character of the men who surround him, Boulanger bears a striking resemblance to Louis Napoleon in 1849.

Dillon is a trifle more disreputable than St. Arnaud and Persigny or Fialin, as described by Kinglake; but the main lines in their character and career are curiously alike. In truth, the whole Boulanger movement seems to have been another attempt of a parcel of penniless adventurers to get at the public treasury, and they have achieved an amount of success which may fairly be called startling, in view of the experience the French people has already had.

SIR CHARLES RUSSELL'S OPENING SPEECH FOR THE DEFENCE.

PORT BANNATYNE, August 4, 1889.

AMID the enchanting scenery of the Clyde, in one of those pleasant hydropathic establishments which owe their success to the homogeneous and temperate character of Scotch middle-class society, and in this delightful summer weather, I have read over Sir Charles Russell's great six-day speech as published in attractive book form by Macmillan. A plain, business-like arrangement of facts and evidence, generally with little attempt at oratory, it shows what first-class human intellect is capable of when trained and tempered by a first-class forensic education. Masterly as the *speech* was, the *book* is, however, somewhat disappointing. The speech answered its purpose as an address, but it does not bear reading like one of Burke or Sheridan or John Bright. We shall be disappointed if we take it up as an exhaustive mine of information regarding contemporary Irish history, or a satisfactory commentary on the politics of our time. The field of evidence and fact Sir Charles Russell had to review was so immense that any other than his treatment of the subject would have defeated his object as an advocate. Twenty pages of notes of illustrative facts and figures drawn from the Devon, the Bessborough, the Cowper Commissions, and the Reports of the Land Commission established by the act of 1881, would have made this an invaluable handbook to current Irish history. As it is, it is merely a well-printed issue of a great speech, delivered in one of the most peculiar and important trials ever conducted before a bench of English judges. More attention to its preparation in book form was, in the middle of the Commission, doubtless out of the power of Sir Charles, and if he had waited for the termination of the case (perhaps next Christmas), it would have fallen flat on the public.

The perusal recalls vividly the long agony of the last ten years in Ireland—a period easily reviewed, but which was difficult enough to live through for those who, while acutely sympathizing with the Irish cause and understanding the necessity for and the inevitableness of the struggle, were yet impelled to measure its incidents and conduct by theories of right and wrong perhaps too narrow for the circumstances. It is easy now, surveying the battle-ground, to see the justification of the struggle in the acts of Parliament wrung from an unwilling Commons, a hostile House of Lords, and an unsympathetic sovereign, and in the work accomplished by Mr. Parnell by changing the temper of the islands towards each other, and rendering possible a settlement honorable to both, without compromising the sensibilities or historic pride of either. The Irish attitude ten years ago is fairly expressed in a manifesto then circulated in opposition to Parnell, portions of which are given at page 219 of the book before us:

"It is inconsistent with the principles of true nationality for any patriotic Irishman to accept a seat in an alien parliament, because by so doing he surrenders his rights and the rights of his country into the hands of men who are opposed to its best interests, and becomes a participator in the alien system which keeps Ireland enslaved. The Irishman who becomes a member of it is either the victim of some mental delusion, a slave, or an enemy."

The feelings of most Irish Nationalists at home and abroad were then bitter and hopeless. Without outraging these feelings or ostracizing any party, Parnell insisted upon being allowed to try the experiment of working the cause his own way; and we have the result, at least so far as sentiment is concerned, when he—the unquestioned representative of the Irish people at home and abroad—fêted a few days ago in Edinburgh, could speak of the freedom desired by Ireland being "all that Ireland can justly and legitimately claim"; "legitimate Irish freedom"; "such freedom as will enable us to promote our own prosperity, while on the other hand no danger can follow to your greater and far more important interests in this country." In the magnitude of the achievement it is unnecessary to dwell too much on the means and events which led to it. Many a man who would have given his heart's blood for the results now attained, could not fully endorse and join in the movement as it proceeded. If Ireland and England could have been drawn together as they now are by a five years' war, in which half a million of lives were sacrificed and half a million sterling added to the national debt, history would hardly have considered the cost excessive.

The impeachment of Parnell and his associates for their work is a strange paradox. Would their accusers desire to revert to the *status quo ante bellum?* Stranger still are the charges upon which they are tried—vague and unformulated charges, which Sir Charles Russell has set forth under nine heads in chapter xxii of his speech. The Attorney-General and his associates, after the labor of months, with all the powers and resources of Government at their disposal, have been unable to bring to light anything of importance with which readers of the ordinary newspapers for the past ten years were not conversant. A prominent question with unbiassed thinkers on the subject must be: How could the Conservative party, a few years ago, negotiate upon the friendliest terms with men whom they now regard as guilty of the most heinous offences, seeing that those offences preceded the negotiations? Setting aside party motives, the answer is not far to seek. The charges and allegations are the outcome of the opinions of the Irish minority regarding Parnell, his followers, and their movements. The Irish Loyal and Patriotic Union, the mouthpiece of that minority, the instigator of the whole business, was roused to life and action by the imminence of the danger, as shown by Gladstone's formulation of home rule. The Conservative coalition with the Parnellites was before that event. Conservative fears and prejudices had not then been worked upon, as they have been latterly, by the Irish minority. The English Conservatives could act in accordance with their own supposed interests at the time, considering the Irish Nationalists simply as a political party. On this question they have since been biassed by the I. L. P. U. The Nationalists, apparently within reach of their goal in the spring of 1886, were in reality, so far as English opinion was concerned, only entering on their real difficulties. They appeared at that time at the point of gaining their desire, to some extent, through having made themselves an intolerable nuisance. They have since then had to undertake the far more difficult task of argument and enlightenment. An organized Irish propaganda in Great Britain, through speakers and the dissemination of campaign literature, dates from the defeat of Mr. Gladstone's measure. The Irish minority was nowhere in England. The Parnellites the English had ever with them. The lesson in the parable of the importunate widow seemed about to be strikingly exemplified.

The bitterness shown in the conduct of the Commission is due mainly to the heartfelt convictions of the Irish minority regarding the character and intentions of the majority of their fellow-countrymen and the national leaders. The ease with which Houston and Maguire and their backers (honest and sincere men, I believe) let themselves be duped by Pigott, arose from the fact that they were already convinced that Parnell and his associates were guilty of all Pigott could lay to their charge. The letters fell in with preconceived ideas. I knew Prof. Maguire personally. The rôle he assumed was against his interests and natural instincts. One of those at least who supplied Houston with funds I know to be a fair-minded, high-principled gentleman. The acquittal as to the letters in the minds of all reasonable men has made no appreciable difference in the attitude of the Irish minority towards the Irish party. This is proof, if any were needed, that hostility depended not on the guilt or innocence of the accused regarding the letters, but on the conviction that the only chance for the maintenance of ascendancy lies in the destruction of Parnell and his movement.

Nothing more inflames the passions than the danger of losing power; nothing more inclines men to hold their opponents guilty of every crime under the sun. The surest warrant that the present struggle, be it long or short, must be fought out to a successful termination by the Irish majority, is that the minority, most of the wealthy, many of the best educated, most enlightened, and conscientious, can live with and by means of the majority in utter ignorance of their real character, proclivities, and desires. No falser estimate was ever made of a body of men than that formed by the Irish minority (and expressed in the charges

and allegations) regarding Parnell and his party. If ever a political movement was necessary, the present Irish movement is so; if ever a movement was justified by results, it has been justified. To its necessity and inevitableness the minority remain blind. They regard the majority, among whom they live, as men restrained only by coercion and bayonets from compassing the destruction of the ascendancy class. In spite of the clearest facts to the contrary, they, from year to year, conjure up the hallucination that the Irish people do not think what they profess to think, nor trust those they profess to trust; that they are not actuated by the instincts and motives of other races. If only for the sake of the minority, the fence must be removed which separates them from the majority, and which alone made it possible to cherish such unmanly conceptions regarding the mass of their fellow-countrymen. This Commission and the I. L. P. U. pamphlets and campaign in Great Britain against home rule bring before the Irish people more clearly than ever the real sentiments of the ascendancy class towards them. When conscientious and able men (like Mr. T. W. Russell, who for years devoted himself to philanthropic work for the benefit of the Irish people) can take the attitude they have assumed towards the majority, what must be the views of half-educated, ignorant Orangemen? All this has, I believe, increased an undying determination in the people not to submit to government by a suspicious and scornful minority.

The Commission has not been an unmitigated evil. It may prove an important factor in the political education of the Irish people. Ireland in the vice of British power, face to face with British stolidity, Irish society permeated and dominated by the Castle system—I do not believe effectual land reform could have been attained without a severe struggle and the perpetration of horrors; but the Commission has shown us as in a mirror the dangers of such a contest, the demoralization inevitably entailed upon a population that resorts to or tolerates outrages. Should the report of the Commission and the exertions of the I. L. P. U. so influence the English people as to secure a majority against home rule at the next elections, the resources and determination of the Irish people will not be exhausted. They must sooner or later in some way assert their wishes and accomplish their desires. Their again resorting to questionable means has, however, been rendered less likely by the sitting of the Commission and by Sir Charles Russell's masterly exposition of the Irish case. D. B.

ITALY'S ALLIES AND WAR SCARES.

LENDINARA, July 27.

EVER since the "fatal year" of 1870, rumors of "war for certain," "war inevitable," have come as regularly as swallows in the spring. With the exception of the Eastern disturbance of 1877, no wars have followed on these rumors, and this spring their echoes were fainter, further off, and lasted fewer weeks than usual. The fact that the French people were bent on making their exhibition a success left fewer idle hands for mischief; the fear that the young Emperor of Germany would prove a fire-brand was, like most prophetic fears and hopes about heirs apparent, unfulfilled.

The war cloud lifted, but the rain clouds emptied themselves, dashing the wheat, just as the ears were swelling, to the ground, where the bind-weed, serpent-like, enfolded and held it prostrate; tempests of wind and hail denuded the almond, cherry, peach, and pear trees of their flower-promise wealth of fruit, washing off the early grapes and fostering every disease to which the vine is heir. Hence the one question for the owners was: How shall we pay our taxes? and for the farmers: How shall we pay our rent? And a bad, sad harvest we have had, "more straw than corn," the hemp and flax crops ruined, fruit at a price unheard of in Italy, and polenta (the staple food of the people) a third dearer than in ordinary years, the price increasing instead of decreasing in the present wheat-harvest month. Still, the maize crops had benefited by the rains, and the vines were looking up; the year with a bad beginning might end well after all! Now, suddenly, like the hurricane that swept over Ferrara the other day, comes a war panic in midsummer—whence, none but the initiated know, but it is real and widespread, nor do people pooh-pooh it as in the springtime.

A fortnight since, the bright, stalwart young peasant who works in the orchard came in at his usual hour, five A. M., with clouded, sullen face. "I am summoned for the military exercises; I must go." "Why, you only finished your full term last year!" "Surely, or I should not have married this spring." "But Angelo is in for his three years!" (There are four brothers, so the State takes the first and the third, the second and fourth passing into the "second category.") "Yes! Angelo has just served six months and has twenty-four more to finish his term. The father is only just recovering from a dangerous illness; he can't follow the plough or carry sacks into the granary; he must take on an extra hand for a month; how shall we pay our rent?" I fancied there must be some mistake till the post brought in a letter from a young professor of natural science, a year-old husband and a month-old father—master in the Lyceum of Teramo: "Adieu, visions of home and keeping father company [the writer is of Mantua, and his father, one of Garibaldi's Benjamins, is slowly dying of a torturing disease]. August and September we are called out." The writer had done his duty as a volunteer, paying the 1,300 lire premium for the privilege of getting through his term in a year and run the risks of the "calls." "So!"—the only word expressive of the situation—"So! it looks like war," is the trite observation of every one you meet. "The King has actually left San Rossore." "Crispi has not accompanied his family to Naples, or Castellamare, but, after six months' uninterrupted work and anxiety, remains alone in Rome."

To put the popular scare clearly: Take a provincial paper of Padua whose correspondent has interviewed a personage of great weight in political circles:

"'Why has the King returned to Rome?'

"'Summoned by state duties. Most alarming news has come from Vienna. Austria has decided to put a curb on the Servian agitators egged on by Russia, and she means to take the initiative. She will not proclaim war, but, at a given moment, will cross the Servian frontier; Russia will accept the challenge by crossing the Bulgarian frontier; the rest goes of itself. In Galicia, the Austrian and Russian troops may find themselves face to face, armed to the teeth, from one minute to another.'

"'Well, what's all this to Italy?'

"'Italy is bound to place at Austria's disposal all the troops that are not necessary for the defence of her own territory—some 250,000, probably under the orders of Gen. Cosenz. Whether these troops are to fight or only to keep a portion of the enemy in check, I can't say. What is certain is, that she is bound to lend her contingent.'

"'And France: will she mix herself up in the quarrel?'

"'Who knows? If the Boulanger troubles increase, as likely as not. France is far more fully prepared than we think. For Alsace and Lorraine the war material has been kept ready on the railroad; 200,000 can at once cross the frontier. If France goes in for war, she will at once occupy the Alpine passes.'

"'Can we defend them?'

"'Yes, if we spend $20,000,000 on fortifications! I fear that the immediate occupation of the frontier towns would be inevitable, and that our camp of defence will be the classic Franco-Italian battlefield. Piedmont.'

"'Ho! he! And on sea?'

"'I believe the English fleet will be with us. The preparations for the naval manœuvres [after the passage of the Defence Bill] for inspection on the 3d of August by the German Emperor is not an ordinary naval review; the mobilization of the fleet is just the same as it would be in war time.'

"'When will the fight come off?'

"'Oh! I expect the first shot will be fired in September.'

That all sane readers on your side of the Atlantic will think the above lines an attempt to make April fools out of date, I can quite believe. Yet, even while I am writing the above, arrives from the province of Brescia a tall, pale lad, just one and twenty, the second son of the widow of one of Garibaldi's best officers, with the unwelcome news that he is "in for his three years." Now, this young follow, owing to illness, general debility, and narrowness of chest and shoulders, was considered so safe from the conscription that he declined his mother's offer to pay the deposit which would enable him to go as a one-year volunteer. Last year he drew his number, and it was a low one, but at the medical visit he was dismissed "for want of breadth in the thorax." This year, though he has not gained a hair's breadth, he is passed as "able," and must rough it as a common soldier in the ranks for the next three years, even if peace endures.

The war scare will pass, but meanwhile the normal life of peaceful citizens of every class is disturbed, and the millions on millions squandered "on calling out all the classes," on summoning and retaining all the conscripts of the year—*i. e.*, all those born in 1868—must come out of the people's pocket by hook or by crook. And if not to-day, "to-morrow" is the now universal conviction, for although the text of the Triple Alliance has never been officially published, it can no longer be doubted that if Germany be attacked by France, or Austria goes in for a war with Russia, Italy is bound to support either or both of her "allies," to offend their enemies even as to defend their actual possessions. How she drifted into the Triple Alliance is a curious psychological episode for disinterested students of national problems, but the alliance itself is a harassing fact for those who remember the fable of the earthenware and copper pots. Italy, whose greatest statesman and patriot had warned her to keep her hands free, tied them both fast, and found herself compelled to spend right and left to place her army and her navy in a condition worthy of her membership in the Triple Alliance.

Bismarck's failure to induce Russia to join the alliance proved how fallacious was the foundation on which the hopes of universal peace were built. At the expiration of the five years' term, the intense irritation on the part of France had somewhat subsided, her armaments on land and sea, brought as nearly to perfection as an unlimited budget could make them, were avowedly directed towards "revindication," and there seems to have been a hope on her part that Italy would let the alliance lapse, seeing that it had been productive of nothing but increased taxation, and that a strong minority against the alliance was visibly on the increase; that the commercial relations between France and Italy were steadily growing. The sympathies of the Italians for

the Prussian alliance, enhanced by Bismarck's earlier ecclesiastical policy, had been cooled considerably by the fact that he had induced the Pope to cast all his influence, nay, to lay his commands, on the deputies of the Centre in the Reichstag, to abstain from all opposition to the septennial military bill, and it was feared that a high price at Italy's expense would be the equivalent. But the alliance was renewed for five years—on what precise terms none but the initiated could say—the public was assured that its only aim was peace; that in case war should break out between Austria and Russia, Italy would preserve strict neutrality, not, however, in the case of a European conflagration; but that even then her position on the Mediterranean was insured, the integrity of territory guaranteed, her participation in any territorial changes in the East pledged.

The country at that time thought of nothing but of how to avenge the "glorious disaster" of Dogali. Five millions for reinforcements had been voted instantly, other twenty millions were accorded, but the Cabinet of Depretis was shaken to its foundations; his overwhelming majority reduced gradually to seventy, to thirty-four, to fifteen; Robilant, Minister of Foreign Affairs, Ricotti, Minister of War, were made scapegoats; Crispi assumed the portfolio of the Minister of the Interior, Depretis taking the Foreign Office, Bertolè-Viale the War Office. At the end of July, Depretis died, and Crispi became his natural heir. He could make no fundamental change in the situation—simply seek to make the best of it, although from the first he had disapproved of the African policy, and blamed Mancini and Depretis for declining England's second overtures for a joint policy in Egypt. He could not withdraw Italian troops from Massowah, nor could he, had he wished so to do, break up the Triple Alliance. Once assured that under no condition whatsoever would Germany assist the Pope to recover his temporal power, he flung himself heart and soul into strengthening the Triple Alliance, and in so doing embittered the relations with France, who seized on the fact that Italy was pledged to fight with Germany for the preservation of Alsace and Lorraine. From that moment to the present all her efforts have been and are directed to fetter, embarrass, and cripple Italy. The refusal to renew the commercial treaty was her first direct act of hostility, her latent threat being, "If Europe comes to blows, Italy's weak point is the temporal power, and we shall avail ourselves of it without stint or scruple."

For this state of things all are to blame, and none in particular; but the naked fact remains that Italy, a young and poor nation, is compelled to use and exhaust all her resources to keep up a standing army and navy, to the detriment of all other departments of national prosperity. From the abolition of the grinding tax, a portion of the salt tax, the renunciation of two-tenths of the land tax—measures absolutely necessary for internal peace and material progress—an equal necessity for rigid economy resulted; by the Government's cession of the railways to private companies (a measure opposed by competent technical authorities as disastrous) for a sum down, Italy's future is mortgaged; the sale of ecclesiastical property of State lands has come to an end, yet the army and navy must be kept up and increased. At the present moment Italy's deficit stands at least at forty millions of dollars. Mr. Gladstone, a competent authority, an optimist with regard to Italy, in his article in the *Nineteenth Century* of last May, puts his finger on the black point of Italy's horizon:

"The national debt of Italy [not having the original at hand, I retranslate from the Italian], which, on the 31st of December, 1861, stood at 120 millions sterling, has reached the enormous figure of 520 millions, with an annual charge of 23 millions, exceeding considerably that sustained by the debt of the United Kingdom, and forming almost two-fifths of the entire expenditure of the country. This expenditure for the present year was placed at 63 millions, but amounts, owing to the extra 5 millions voted for the army and the navy, to 68 millions—an expenditure far exceeding that of England in times of peace since 1868, exceeding considerably the charges of the Federal budget of the United States, which have a population more than double that of Italy, and the greatest amount of wealth existing in the world."

This magnitude of public debt, the increasing misery, the increasing deficit, the enormous taxation, appear to the eyes of this master of finance a terrible malady which must be cured at any cost. How can it be cured? Further taxation is impossible—the land can bear no more; the land tax, unequally distributed (as the territorial census, ever promised, is not yet forthcoming), amounts in certain portions of Italy to 87 and 90 per cent. of the estimated value. Hence small proprietors have been taxed out of existence; the larger ones, mortgaged up to their eyes, cannot spend sufficiently in manure or modern agricultural implements, still less in labor. After starving upon the impossible pittance of from fourpence to eightpence a day, rainy days and holidays excepted, the surplus agricultural population has emigrated, chiefly to Brazil and Buenos Ayres, whence come sad accounts and appeals for money to return. Every article of consumption is overtaxed at the gates of every city, so that if free trade exists, in name at least, for the produce of other nations, Italy's own produce in cattle, wine, poultry, fruit, etc., is taxed often at the rate of 20 per cent. Take, for example, wine: in the vineyards round Florence this year you could buy a hundred litres for five dollars; once within the gates, they cost seven.

As a proof that no other tax can be borne, that none of the old taxes "on a broad basis" can be renewed, you have the fact that when, during the present year, it was demonstrated to the House that fresh special, extraordinary credits must be accorded for the army and navy, Crispi, with all his energy and influence, could only extract an unwilling vote for the extra millions saddled with "a prohibition against levying any extra tax." In this lies the gist of the question. The Triple Alliance compels Italy, who, in 1879, had a standing army of some 700,000 men *on the rolls*, with a militia of other 900,000, to keep under arms permanently or temporarily nearly a million of men, her mobile and territorial militia, ready for call. Without going into tedious statistical details, it is easy to understand the cost of the equipment and maintenance of the permanent army of useless hands, of the equipment, travelling expenses, armament of the various categories called out for military exercises for from twenty days to one month or more every year. Add to this the expenses of war material, fortifications, etc., etc., and it is apparent that the country is and must remain crippled as long as such a state of things exists. I do not here allude to the navy, of which I have spoken in a former article, and which is on all hands admitted to be an absolute necessity for Italy as a defence.

As Crispi did not create the situation, he is not responsible for it, and it would be difficult to point to any person who could act differently or better than he does. If Italy's good star is still in the ascendant, and war be averted for the next three years, there can be little doubt that the wisdom gained by bitter experience will make her eager to release her hands; but the present outlook gives little hope of this. Should war break out under present circumstances, its unpopularity can hardly be estimated—I doubt whether the pledge of Trieste and Trent as a price for her services would reconcile the masses to the fact. Of course such a pledge will not be given; Austria, Germany herself, will never willingly yield Trieste, that only great seaport on the Adriatic. If, as seems certain, the Mediterranean in case of war should be manned with the Anglo-Italian fleet, a reverse is difficult to be imagined; yet the whole prospect is summed up in this: there is all to lose and nothing to gain by the participation of Italy in a European war; and, as France even to-day reminds her, her one vulnerable point is the question of the temporal power. That question touched, all Italy is one in heart, and, as the saying goes, "the very stones would rise in protest."

The last tidings are that the Czar is starting on his visit to the royal allies. If so, this will probably be the last war scare of 1889.

J. W. M.

THE FINE ARTS AT THE PARIS EXPOSITION.

II.—THE ACADEMICAL PAINTERS AND THE PORTRAITS.

PARIS, July 31, 1889.

THE first time I walked through the thirty large galleries in which the fourteen hundred pictures composing the exhibition of the French in oil painting are placed, I was struck by two things—the remarkable diversity of the subjects and the great size of most of the canvases. In subsequent visits, and on closer examination of the pictures, I find in the confirmation of my first impressions proof that the painters of to-day are active, and let nothing go unobserved, finding subjects for their pictures in the daily life about them at home and abroad, in the streets and in the fields, while mythology, history, and religion, the nude, landscape, and portraiture are as assiduously followed as ever; and as regards the effect of large canvases on the painting, I am forced to the conclusion that the increasing tendency, traceable to the exigencies of the annual Salon, where a small canvas is almost lost, to paint everything (no matter what the subject) *en grand*, is gradually eliminating the all-important element of color.

This lack of color quality, it is worth noting, is not so much felt in the portraits, which are, taking it all in all, the best part of this exhibition; and this is probably the case because one cannot make giants and giantesses of one's sitters, and the painter is obliged to make his portrait of reasonable dimensions. It is most noticeable in the landscapes, in which, in the attempt to realize effects of light and air on a colossal scale, the artist finds it well-nigh impossible to make his picture "hold together," keep it up to the high key in which he usually starts in to paint it, and get handsome effects of color at the same time. It may be accomplished on an easel canvas, as is well shown in the best works of Corot and Daubigny and Rousseau; but when a simple motive is spread over a canvas ten or twelve feet long, as we find in so many of the pictures at the Champ de Mars, little else is obtained than a general truthfulness of effect, luminosity, and good drawing and modelling. In color these big pictures incline so much to gray tones that they are at times not very far removed from simple black-and-white.

In figure-painting (by which term I mean to include all those vast pictures of war and mur-

der, of the martyrdom and apotheosis of saints, of the loves and quarrels of the gods, that crowd the Salon every year, and the best of which are to be seen in this exhibition of the work of a decade), it is scarcely to be expected that we should find any pictures which would impress principally by beauty of color, as the works of the Italian painters of the Renaissance do. It is sufficient to say of these, that the level of the art is high, very high for this day; and whether we are interested in this sort of painting or not, we must admit that it is the backbone of the school. It must be painted and it must be exhibited, and the painters must be respected and honored by their fellows. Were the academic training which precedes it to cease, the bottom would fall out of the whole system that has produced the present admirable French school. It must not be forgotten that Millet and Bastien-Lepage were thoroughly trained in the Academy, and when they threw aside its traditions and fled to the fields for inspiration from nature, they carried with them a sound foundation without which they could never have made a picture worthy of serious consideration. If they had remained Academicians, the world would never have seen "Les Glaneuses" or "Les Foins," but they might have done some of these thoroughly well painted compositions which, as I have said, command respect at the Salons and at the Champ de Mars. It was a lucky thing for art that their temperaments led them into other roads, and there need be no fear that there will not be plenty more to do as they have done, though we cannot hope that many will reach their level.

These painters of the classical, of the historical, and the like take up a good deal of space in the galleries. Here is Cormon, for instance, whose picture, "The Stone Age," is a vast, round-topped canvas, the doorway of a cave, before which sits a patriarch with his daughters and grandchildren, while his sons, returned from the chase with a bear they have killed and thrown on the ground in front of the old man, form a group of figures of heroic size in the picture. These strong young men, brawny and brown, with unkempt hair and beards, have a savage and yet a noble air. The women, hardy and healthy, are fit companions for them, and the children, lithe of limb and with eager looks at the band of hunters and the prey, seem to have both the gentleness of childhood and a touch of savagery inherent in their surroundings. All this is well done. The figures are well drawn and stand up strong and vigorous. They are broadly handled, and there is no weakness of modelling, no prettiness of expression; all is dignified, sober, and *savant*.

There is the point: it is a *scientific* reconstruction, a representation of the life of other days. It is a thoroughly good performance, such as few other men living could equal, but wherein is the interest as a work of art? It is not to be found in any beauty of color—it is simply a big brown picture. It is not in its truth to nature, for it is a reconstruction. The original *may* have been like that, it is true, but we have not seen it, and that keen pleasure which comes from recognizing things painted, and bringing back the impression we have felt in seeing them, cannot be felt before this picture. It is not even a piece of painting of models in *plein-air*, which, if it were well done, would be interesting in itself. What then? It is a good museum picture, and nothing more. It will instruct by its good side in painting one class of people who have everything to learn, and should learn all sides of the art, and it will instruct, or at least interest, another who will look at it as they read a learned book. M. Cormon, in this phase of his talent, appears as a figure of considerable importance in contemporary art. If you wish to see more of it, you will find it in the Luxembourg, where his "Cain" and his "Victors of Salamis," enormous compositions like "The Stone Age," are hung. If you look at his portraits (there are four of them in the present exhibition), you will find that he is an able painter of character and a skilful technicist.

Look now at Albert Maignan's "The Voice of the Tocsin," another great canvas, a sort of fantasy this—innumerable figures, thoughtful composition, excellent technical qualities throughout; we have here a picture by a man of incontestable ability, but we are no more interested than by Cormon. The "Saint Isidore, Laborer," by Olivier Merson, a most artistic work of its kind; "The Youth of Bacchus," by Bouguereau; "Saint Agnes, Martyr," by Gabriel Ferrier; "Sacred Music and Secular Music," by Édouard Dubufe; "The Agitator of Languedoc," by Jean Paul Laurens, may be mentioned here as belonging in a general way to that sort of painting of which I have been speaking. It is not among these, however, that we shall find the work that shows the French school at its best nor in its most interesting phases. We shall find one of these phases in the portraits. There are so many fine ones that they cannot be noted in detail, but a few will serve as examples on which to make a few general remarks.

Bonnat, who, judging by the votes given him each year by his fellow-painters at the elections of the Salon juries, and the estimation in which he is held, may be fairly said to stand at the head of the French school, is represented by nine. The portrait of Cardinal Lavigerie, an imposing work, with the figure clad in red-and-black robes, seated full-face and square in the middle of the canvas; the bust portrait of Alexander Dumas, a remarkable piece of drawing and construction, but without color qualities, as most of Bonnat's work is; another bust portrait in profile of the painter Gigoux, very luminous and very real; and a full-length figure of a lady in a blue velvet dress, are the best of these. Delaunay, than whom there is no more conscientious and serious painter in the French school, shows ten. One of these is a half-length of a lady painted in the open air, "Portrait of Mme. Toulmouche." The head is not of the most distinguished type, rather that of a vivacious young matron of the middle class—an intelligent, "bright," and attractive face. The dress is of soft material, of a yellowish light gray, and there is a bunch of red roses in the corsage. The background is a flatly treated bit of landscape, consisting of a lawn, some slender trees, a garden wall, and a church tower, and a sky with a little blue showing through gray clouds. It is a delightful piece of sober color, color of the greatest distinction from its quiet reserve. A small head of a lady, Mme. D., a marvellous little piece of drawing; a bust portrait of a lady in black, Mme. Barboue; and a portrait of Gen. Mellinet, a scarred veteran in uniform, show Delaunay's best qualities as a portrait-painter. They are in no way "striking," and do not impress at first glance, but they are admirable in their simplicity.

Doucet, a young painter, whose success dates from 1880, when he won the Prix de Rome, but who has cast aside academical compositions for modernity, exhibits an artistically treated portrait of Mme. Galli-Marié in the costume of *Carmen*, in which there is exact drawing along with the greatest dash and freedom in the painting of the dress; and an excellent picture-portrait of a lady in a gown of blue-and-gray Japanese stuff seated in a room. Raphael Collin, with six portraits, is at his best in a small canvas showing a young girl in a modest, every-day dress of black, and the "Portrait of Mlle. ——," a young lady in a light robe, painted in full length out of doors. Carolus-Duran, whose fame as a portrait-painter is world-wide, has eight portraits in the exhibition. The earliest one is the best, for none of the others is so successful in ensemble nor so agreeable in aspect as this figure of a lady of middle age, with her white satin robe and long fur mantel—"Portrait of the Countess ——," painted in 1879. His portrait of Miss Lee-Robbins, his pupil, is pretty well known in New York through reproductions. It is a picture without the brilliancy of color that distinguishes most of his work, and lacking, too, in style. The two young girls on one canvas, "Portraits of Mlles. ——," are notable for color, quality, and brilliant handling.

There are two small portraits by Dagnan-Bouveret that are remarkable for their wonderful drawing, and two others by Paul Dubois, the great sculptor, both diminutive canvases. One head of a blonde little girl is admirable in every respect. A collection of seven portraits signed by Émile Friant is of great interest. Most of these, too, are small canvases. Though not so fine as the work by Dagnan and Dubois, they are quite worthy to be mentioned with them. Near these in the group of pictures by Gervex is this artist's excellent portrait of Alfred Stevens, the painter, the figure in half light, the forehead shaded by the rim of the hat, and the shoulders covered by a loose great-coat of black. Another portrait of an artist to be noted is that of Clairin by Paul Mathey, and it may be said here that some of the best portraits in Paris exhibitions are those of artists. They are often the subjects of "exhibition portraits," where the painter tries to do his very best for the sake of the work, no considerations of time or money entering into the question. When I have mentioned further the names of Roll, Humbert, Wencker, Henner, Debat-Ponsan, Machard, Rachou, Duez, Courtois, and Besnard as the authors of remarkable portraits, the ground is about covered.

Outside of this there is not much to note, especially for our purpose, which is to insist on the one quality which above all others distinguishes the best work of this sort by the French painters. This quality is character. It is impossible to look at these portraits and not see that in every case the artist, while he may have chosen to paint his sitter under what seemed to him the most favorable conditions, has never descended to flattery, or what English art-writers express by a term of their own—"idealization." The truth is paramount to every other consideration. In looking at them one feels, indeed, that the basis of all good art is truth to nature, and that from the old masters down there has been nothing painted worth preserving that is not founded on truth. The masters have had different ways of expressing it, and where some have insisted on detail, others have summarized and selected; but the foundation is always the same. It is, moreover, plain to see that the portrait, as it is considered and as it is treated by the best artists of all the famous schools, is one of the highest forms of art, and by simply painting a man in his every-day clothes a chef d'œuvre may be produced. We have, of course, long known this, for we have seen the great works of Rembrandt and Velasquez and Titian; but it is not as well understood at home as it ought to be. The conditions under which American art is pushing its way are altogether favorable to portrait-painting. We

have some excellent painters already, and we shall have more as soon as the portrait is generally recognized, as it is here, as a work of art *per se*. Then, too, we shall see fewer bad portraits brought to New York from Paris, for there are many tares among the wheat, though they have, with few exceptions, been excluded from the Champ de Mars, and far too many of them have found their way to us in America. The increasing excellence of the home work, it is to be hoped, will soon cause this sort of importations to cease, and the more good things that come to us the better. It is gratifying to find at this international exhibition that the good influence of the French in portraiture has made itself strongly felt in every country on the Continent, and it will be to our advantage at home if the same influence can be exerted. We have a good beginning, and it only requires recognition and encouragement for full development. WILLIAM A. COFFIN.

Correspondence.

IRRIGATION AND SILVER.

TO THE EDITOR OF THE NATION:

SIR: Happening a few days since to be in the pathway of one of the Senatorial junketing expeditions, I was favored with a chance to see how nicely business and pleasure are combined by great men.

In South Dakota lies a large part of the James River Valley, a very fertile tract, containing a large area especially adapted to the growth of hard spring wheat. Scarcity of streams and timber indicates comparatively light rainfall, and, since its settlement, more suffering has come of want of moisture than from all other causes. The true valley soil is peculiar in that a very small quantity of moisture (a quantity which would leave common soils almost fruitless) will mature an abundant yield of the early cereals.

The suffering from drought has never been general through the valley until this year, during which not enough moisture has fallen at any one time (the entire snowfall included) to wet down the depth of the ploughing. An area of perhaps 75x200 miles is underlaid by a water-bearing stratum, which, when tapped, delivers water at the surface at pressure as high as 180 pounds per square inch in some instances. The conditions prevailing this year have led to the advocacy of artesian wells as a source of supply for irrigation.

The Committee of the Senate who are going about inquiring into the feasibility of irrigating the arid tracts of the West, were invited to visit points in this valley; and Senators Stewart of Nevada and Reagan of Texas, with Maj. Powell and others, passed through. They reached a smart town of 5,000 or more people about noon of Sunday, August 4, and, having been duly heralded by wire, were met by the city officers, the fire department, and citizens, who escorted them first to an exhibition by the fire department, showing the capabilities of the artesian wells in throwing streams; thence to the pumping-station, where the sewage is raised by power from another well; thence to the public hall, where the Senators were one after another introduced to the audience.

It was Senator Stewart's turn first, and he began by telling of two sorts of irrigation—the agricultural sort and a kind of financial irrigation which the great man asserted existed in the East. The audience remained mystified as to this last sort while the Senator gave a not very lucid history of common irrigation, to which I had the honor of listening for a half-hour or more. Then the Senator warmed up to a degree better worthy of the occasion, and proceeded to expound the financial irrigation from which the country is suffering. As soon as I got the drift of his argument, I had such a powerful desire to go to dinner that I found myself unable to stay longer; but from what I heard, read in the newspapers, and gathered from diligent inquiry of friends who stayed, the argument ran about thus:

The sayings of Western people, when they represented the full wisdom of their authors, were wiser than the sayings of Eastern people, because they have brought West with them the wisdom of the East and added thereto the wisdom of the West. Financial teachings originating in the East are not therefore to be relied upon, and are of necessity subject to suspicion. The West furnishes not only the best financial theories, but also the material (silver) to back them up.

Silver is a much better thing financially than people have heretofore realized. If properly handled, it is capable of unsuspected blessings. The Government should not take the trouble to coin any more, or as much as now, but should secure all it can get in the form of bullion, and cast it in great "pigs," too large to be carried off by thieves, and then cord it up in full view, shutting it out from the public by a picket fence only. This pile could be made the specie basis of more silver certificates than we ever saw before, and need only be depleted in paying off the bonds. Silver as pay for bondholders is the article that is exactly good enough without being too good for them. England is now sending all the silver she can get hold of to India to buy wheat. A movement like that outlined above would compel England, for lack of silver, to buy wheat here, instead of in India.

This last crowning argument was the one that "brought down the house"; and when the great man exhorted the audience to see to it that the Representatives to Congress from the new States were men of broad views on the silver question, he received great applause.

C.

MINNEAPOLIS, August 10, 1889.

SELF-PRESERVATION.

TO THE EDITOR OF THE NATION:

SIR: I regret to trespass further on your space, but must ask room for a brief reply to Mr. Schuyler's misrepresentation of my letter of July 18. "A minister of the Gospel of Peace calmly defends lynch law as applied to his colored 'brethren in Christ Jesus,'" says Mr. Schuyler, but I beg his pardon; that is not my standard of Christianity. There are many colored men that I rejoice to call "brethren in Christ Jesus," but none of them are guilty of the crime of rape! Nor did I unconditionally defend lynch law in any case. I stated the conditions, and asked what could be done. The remedy I abhor; but I abhor the disease more. If any one that really understands the conditions can suggest a better remedy, no one would welcome it more readily than I. Of course the "elevation of this barbarism" by Christian education is the true method, but it works a little slowly, and meanwhile must innocence and virtue be allowed to fall a prey to passion and vice? Some of us are doing all we can in that direction, and would be glad of any assistance that Mr. Schuyler or his friends can render us.

But what I do maintain, absolutely and unconditionally, is that self-defence is an inherent right of man—before all human government and above all human law. No one questions this in the case of the individual. Is it any less the right of communities? Take an illustration that is not prejudiced by coming from a Southern latitude. To fill one's premises with armed men ready to shoot down in broad daylight any one who enters without permission is not, under ordinary circumstances, a very civilized proceeding; but in the presence of an armed strike, did Northern men hesitate to preserve their *property* in that way? Is not the existence of that organization known as "Pinkerton's men," and its approval by good men (*vide* columns of the *Nation*), a recognition of the fact that when law and government are powerless to protect, corporations and communities are justified in falling back on the inherent right of self-defence? Do they stop to consider whether the barbarism that requires force to meet force has been "imported," that they may "utilize its brute force in the service of their own laziness"—or avarice? Or do they wait to call in Pinkerton until they have tried to elevate the strikers by Christian influences?

I will not discuss with Mr. Schuyler whether the South alone is responsible for "importing this barbarism." There is sin enough all around without throwing stones. But I cannot close without saying that while he may sneer at our "precious civilization," it *is* precious to us, especially that part of it that consists in the purity of our wives and daughters—so precious that we will continue to defend it even at the cost of incurring the disapproval of some Northern philanthropists.

I regret that I cannot reply to Mr. Schuyler over my own name. He has full permission to obtain it from the editor of the *Nation*. But on account of certain local allusions in my previous letter I must sign myself as before.

A SOUTHERN PASTOR.

KENTUCKY POLITICS AND ILLITERACY.

TO THE EDITOR OF THE NATION:

SIR: Regarding the recent election in Kentucky, your exposure of the ignorance of the Philadelphia *Press* upon matters statistical was a misconception. The Republican vote of Kentucky is made up very largely, if not almost entirely, of negroes and mountaineers. As a Union soldier I was fond of the old chestnut about the mountains being cradles of liberty, because our volunteers in Kentucky were mostly recruited from those cradles. It is a current belief that the mountains of Kentucky are cradles of illiteracy and lawlessness, and that deadly feuds are rife in these Republican strongholds. The negroes now have schools throughout the Democratic portions of the State; but if education improves their morals and their gullibility as little as it does those of their white political brethren, we must not wonder at Democratic majorities in Kentucky. You see the *Press* was right. The Democratic majorities in Kentucky are due to illiteracy—the illiteracy of their Republican opponents.

MUGWUMP.

FOREIGN NOTIONS OF AMERICANS.

TO THE EDITOR OF THE NATION:

SIR: In the *Nation* for July 18th, "X. Y. Z." complains of "the reputed ignorance and ambition" of the Americans among the English—that all we know is how to make money. In Germany and Austria I have found the same opinion widespread—it might even be said, almost universal. Instead of merely complaining of the fact, it seems to me better to try to

seek the reason therefor. Two causes appear to be at the bottom of the matter: (1) that the American writings most generally read by the Germans are those of Cooper and Bret Harte, which naturally convey no idea of the life of the Americans who do know something higher than how to make money; (2) that vast numbers of travelling Americans seek to make a display of their money, and certainly do display a profound ignorance of many matters a knowledge of which is here taken as a matter of course by every educated person.

For example, one day I sat before Raphael's Sistine Madonna. The little room where it hangs was full of people hushed to an adoring admiration before this possibly the most widely known of all paintings. Three women enter, and, to my horror, one asks in a loud deep voice, "What is that?" The answer escaped me. After at most three minutes, the same voice remarks: "Very pretty. Come away; you're standing before the people"; and out they went, doubtless satisfied that they had "done" the greatest thing in Dresden. That is only one of many experiences in Europe which have made me blush for my mother country.

An instance of an entirely different sort may serve to show how easily false opinions may be formed. A graduate of one of the better American universities recently insisted that all Germans are stupid—and he thoroughly believed it. Yet he was a man who had spent much time in luxuriously seeing Europe, but was too lazy to learn the languages, and had seen nothing of German society, except one or two dinner parties, where he was limited in conversation to those who could speak English. The really cultivated Americans who travel try to employ their time usefully, and attract no attention to their nationality.

The *Nation* has done its utmost within the past year to demonstrate the tremendous rôle that wealth plays even in securing the highest offices in the country. The fact of our tremendous surplus was published all over Europe. Though it is as mistaken for the European to believe that making money is all the American cares for as for the latter to believe that *all* Germans are stupid, the former has certainly much better ground for his opinion than the latter.—Respectfully yours, A. B. C.

VIENNA, August 5, 1889.

Notes.

J. B. LIPPINCOTT CO. have in press several elaborately illustrated works, viz.: Samuel Lover's 'The Low-Back'd Car,' with designs by William Magrath, in photogravure from copper plates; Tennyson's 'The Miller's Daughter,' with designs by E. H. Garrett, H. Fenn, and others; Dr. John Brown's 'Rab and his Friends,' with designs by Mr. Garrett and Hermann Simon; and 'Legend Laymone,' a poem by M. B. M. Toland, with designs by Hamilton Gibson, Church, Mowbray, and others. The same firm announce also 'Cycling Art, Energy, and Locomotion,' by Robert P. Scott, with illustrations; Pierre Paris's 'Manual of Ancient Sculpture,' edited and augmented by Jane E. Harrison, with 200 illustrations; 'Extracts from the Journal of Elizabeth Drinker,' edited by Henry D. Biddle; 'Half-Hours with Humorous Authors,' selected by Charles Morris; 'Justice and Jurisprudence,' an anonymous inquiry concerning the Constitutional limitations of the thirteenth, fourteenth, and fifteenth amendments; 'A Treatise on the Nature, Causes, Treatment, and Prevention of Crime,' by S. M. Green; 'Involuntary Idleness,' by Hugo Bilgram; 'Two Thousand Years After,' by John Darby; and the following novels: 'Gold that Did Not Glitter,' by Virginius Dabney; 'A Nameless Wrestler,' by Josephine W. Bates; and 'Rudderless,' by Julia D. Young.

D. Appleton & Co. will publish directly 'Recollections of the Court of the Tuileries,' under the Third Empire, by Mme. Carette; and later, in the "International Education Series," 'European Schools in 1888,' by Dr. L. R. Klemm, Principal of the Technical School in Cincinnati.

D. C. Heath & Co. publish at once 'The State; or, Elements of Historical and Practical Politics,' by Woodrow Wilson, author of 'Congressional Government.' It is designed to serve as a text-book for advanced classes in high-schools and colleges, and will be followed next year by 'The American State: Elements of Historical and Practical Politics in the United States,' a text-book for grammar and high-schools, by the same author.

'Literary Landmarks,' by Mary E. Burt, announced by Houghton, Mifflin & Co., has for its explanatory title: "A Guide to Good Reading for Young People, and Teachers' Assistant."

The *Library Record* of Worcester, Mass., has just concluded its first volume, and professes itself assured of its future permanence. This is a Yankee notion worth imitating. Its primary object was to print a list of new books added to the Public Library. "This," says the editor, "renders it a most excellent medium for a certain class of advertising, for the reason that it goes directly into families and is preserved and cared for, that selections may be readily made from the books in making up cards from week to week without the necessity of going to the library for that purpose; so that no advertisement is likely to be lost sight of after once reading." We ought to add that judicious selections fill the space not occupied by the list or by the advertisements, and that fifty cents a year is the subscription price.

An important announcement from Rome is made known in the *Academy* of July 27. This is no less a piece of news than the approaching publication, in photographic facsimile, of the Vatican MS., Codex B. The work is being done under the auspices of Leo XIII. and the editorship of the Abbé Cozza-Luzi. One hundred copies of the New Testament are being issued, and may be had from the Fototipia Danesi, Rome, at the price of 200 lire. The first fifty subscribers will receive also four volumes of the Old Testament at the same rate. The New Testament volume will be of about 300 pages.

We must refrain from any but the barest mention of the great enterprise undertaken by the Clarendon Press of Oxford (New York: Macmillan), under the editorship of Bishop Wordsworth, namely, a text of Jerome's 'Novum Testamentum Nostri Iesu Christi,' based upon the most scrupulous comparison of twenty-nine well-chosen codices, and the occasional employment of as many editions. Use has also been made of Bentley's unpublished comparison of the New Testament in Greek and Latin, and a long list of his readings is given in the first part (the Gospel according to Matthew) of the present collation. For the Evangelists the Brixian codex is printed in full directly beneath the Vulgate. Eleven years have been spent by Bishop Wordsworth and his assistant, Henry I. White, Fellow of St. Andrew's, on this enormous labor. The Prolegomena are deferred to the close of the work, but the introductory matter is copious, and includes Jerome's epistle to Pope Damasus and the Prologue from his Commentary. The belief is expressed that this comparative exhibition of texts may be as useful to philologists interested in the history of the Latin language as to theologians. The typography is admirable, as of course.

C. W. Bardeen, Syracuse, has made up a small but not meagre book, with the title 'Autobiography of Friedrich Froebel,' meaning by this his letter to the Duke of Meiningen, an English translation into English, and a shorter letter of a similar character to K. C. F. Krause, with other selections bearing on Froebel's career. A chronological abstract of the chief events in his life and in that of his Community, and a bibliography, complete the work.

The fourth and concluding number of the eleventh volume of the *American Journal of Mathematics*, accompanied by the title-page to the volume and an index of the titles of the papers contained in it, arranged according to the names of the authors, is before us. Throughout the volume the *Journal* adheres rigidly to its original plan of admitting only such contributions as are, either in their form or their substance, the result of original investigation. The present volume contains nineteen papers, twelve of which are in English, four in French, and three in German. As to the matters of which they treat, these papers may be classified, perhaps somewhat vaguely, as follows: three treat of subjects in the domain of mathematical physics, three of curves; six deal with the differential and integral caculus, more especially with differential equations; seven belong to those regions of the higher algebra which are closed to all except professional mathematicians, and, we suspect, to a large portion even of these. Most of these papers are so far in advance of our highest class text-books that their contents must for a long time remain inaccessible except as presented in the *Journal*, and hence the latter is indispensable to those who desire to occupy a place in the front rank of the ever-increasing army of mathematicians.

The second number of the *National Geographic Magazine* has made its appearance, consisting of the annual address of the President of the National Geographic Society, on the Past and Future of Africa, and four vice-presidential reports, called, rather fantastically, Geography of the Land, of the Sea, of the Air, of Life, respectively. Gen. Greely's paper is the most profitable of these. He tells of the discontinuance of the system of international simultaneous meteorological reports begun in 1873, and mentions a few of the results of the mass of observations. From the final editing of them he anticipates an approach to the ultimate formulating of the law of atmospheric changes, so that "from abnormal barometric departures in remote regions may be predicted the general character of seasons in countries favorably located."

The Moses King Corporation, Boston, send us a folding "annotated" pocket-map of Massachusetts, than which nothing could be more convenient to carry about the person, or cheaper in price. The back of the map is used for a great variety of historical and statistical matter.

Garden and Forest calls for the indexing of the reports of State horticultural societies, which are mostly printed as public documents and distributed gratis. It suggests that the Department of Agriculture undertake the work.

Mr. S. S. Rider, in his Providence *Book-Notes* for August 17, reviews the recent revela-

tions about Roger Williams in the *New England Historical and Genealogical Register*. He concludes that the real trail has at last been struck, and points to some corroborative circumstances, as, that Williams's being a clergyman at High Laver in the County of Essex brought him under the jurisdiction of Laud, Bishop of London, who pursued him out of the land, as Williams wrote to Mrs. Sadlier; further, that his riding "Windsor way to take ship at Bristol," which enabled him to call on Sir Edward Coke at Stoke House, shows that he left England from London and not from Wales, since Stoke House is on the direct road from London to Windsor.

The London *Athenæum* reports that "all the capital has been subscribed for the new weekly which Mr. Wemyss Reid intends to edit when he has finished his biography of Lord Houghton. The journal will in some degree be on the model of the New York *Nation*. Prof. Bryce and Mr. Morley have been giving advice as to the literary part of the paper." We believe it is intended to replace the *Spectator* with the Liberals.

—Macmillan & Co. have commenced the publication of a series of text-books in Greek under the general title "Macmillan's Greek Course," and in size "Globe 8vo." The course commences with a 'First Greek Grammar,' by W. Gunion Rutherford, the Headmaster of Westminster. It is a small book containing only 185 pages in large clear type. There are so many peculiarities about the book that we should be utterly unable within any reasonable limits to give an account of them, and it would be useless to mention one or two. We may say, however, that the author seems to have taken almost as much pains to exclude from his book what will be of no use to the beginner as to include what is indispensable. The success of the little grammar has been very remarkable in England. The second volume of the course, 'Easy Exercises in Greek Accidence,' is by H. G. Underhill, Assistant Master of St. Paul's Preparatory School. It is a companion volume to the grammar, but even smaller, containing only 126 pages. We can give it an almost unqualified approval. Although its chief object is to give practice in the forms of words, yet it really introduces the pupil to many of the fundamental principles of Greek syntax. We have noticed the retention of a few of the absurdities of the old grammars. The third volume, containing 217 pages, fifty of which are occupied by the vocabulary, is entitled 'Stories and Legends: A First Greek Reader,' by F. H. Colson, Senior Classical Master of Bradford Grammar School. We believe the practice is quite extensive in England, and we know it is almost universal in the United States, to commence the reading of Greek texts with the 'Anabasis' of Xenophon. Formerly the universal practice was to begin with a 'Greek Reader,' a book made up of short pieces taken from various writers. The work of Mr. Colson may be regarded as a "reversion" to the old plan. In his preface the author discusses the merits of the two methods at considerable length. The book is for the most part made up of very short and very simple pieces, which Mr. Colson "has freely simplified and adapted." So it may be regarded as hardly more than a book of exercises. All three volumes taken together do not form a course longer than is usually pursued in this country before beginning the 'Anabasis.'

—The Rev. J. B. Lock, formerly Master at Eton and now Senior Fellow, Assistant Tutor, and Lecturer in Gonville and Caius College, Cambridge, is the author of several mathematical text-books which, judging from their wide circulation as indicated by editions rapidly succeeding each other, must be alike satisfactory to himself, his publishers (Macmillan & Co.), and the pupils and teachers of English schools. His latest production is a small treatise on 'Elementary Statics,' a companion volume to his 'Dynamics for Beginners,' published less than two years ago, and which has already reached a second edition. The preliminary knowledge of mathematics necessary for the study of the two works seems to be reduced to the minimum. Hardly more algebra and geometry than is required to enter the freshman class of the least exacting of our colleges, as much of conic sections as is comprised in the definition of a parabola, and a little trigonometry, hardly more than is implied in a knowledge of the meaning of the terms *sine*, *tangent*, etc., of a few of the simplest formulæ, and of the use of the ordinary logarithmic tables, constitute, so far as we have been able to discover, the whole mathematical equipment necessary for the complete comprehension of both works. Indeed, by far the greater part of both books can be mastered without knowing anything at all about trigonometry. The books offer a remarkable example of how much can be done with a few tools skilfully handled. One of the most interesting features of each book, and of especial value to the professional teacher, is the addition to the Statics of twelve and to the Dynamics of sixteen examination papers. The questions contained in these papers can all be answered by means of the knowledge conveyed in the books. At the same time they are not papers constructed by the author especially for examination of students who have studied his works, but are papers composed by various professors and used in actual examinations of students in several colleges and schools in England.

—The author does not state which book should be first studied. We presume he took it for granted that the traditional order, first 'Statics,' then 'Dynamics,' would be followed, although this was not the order of publication. We believe, however, that the student, who is at liberty to choose, will find it to his advantage to begin with the 'Dynamics,' which, at least in the elementary parts, is quite as simple and comprehensive as the 'Statics,' and, having mastered the 'Dynamics,' he will find, when he attacks the 'Statics,' he has hardly anything to learn. In fact, we suspect that it would not require a great deal of argument to convince the author that the separate treatment of Statics and Dynamics is only a concession to traditional usage. Such was the opinion of Clerk Maxwell, and such is the opinion of Professor Macgregor, practically exemplified in his treatise on Kinematics and Dynamics which we reviewed a few months ago. The author coins a few new words, some of which we dislike, especially in the method of coining. He has, however, caught the disease in a very mild form and we have no space for comment.

—The mere fact that the 'Beowulf' of Harrison and Sharp has reached a third edition (Boston: Ginn & Co.) renders commendation almost superfluous. It indicates that the book is now a standard. The editors have been at pains to bring text, glossary, and notes up to date, and have succeeded, so far as was possible within their narrow limits. Just now there appears to be a lull in Beowulf articles. A few years hence, after the authorship and primitive shaping of the poem shall have got further out of the realm of the debatable, and when this third edition shall have been exhausted, we hope that the editors will give us an entirely new book, the text printed more in conformity with modern typography, and the glossary recast. The distinction between long and short vowels in the arrangement of a glossary is a hindrance rather than a help. The editors should also conform their word-entries more to the Wessex standard. To follow the Beowulf MS. spelling in the glossary is to give the beginner a false conception of the language. We have noted some slight errors. Pages 105, 106 sub *Brosinga mene*, there should be a reference to v. 1199, and the vowel lengthened, Brōsinga. To the reference *Haupt* xii. 304 add *Haupt* xxx. 221. Müllenhoff does not say that the A.-S. form is for *Breosinga*, but for Brīsinga. In treating of compounds in *eald-* it will be well to consider the advisability of regarding *eald-* as a mere intensive. The reference, p. 324*b* (sub *orud*), to v. 2524 is unintelligible, except to one who has Wülker's edition, or who knows in other ways that certain scholars have proposed to change *redes* into *oredes*. This edition gives no clue.

—To the credit of our national scholarship, it is to American missionaries that students are indebted for the two works which are indispensable for acquiring the Panjâbî, an Indian language of growing importance. We allude to the 'Panjâbî Grammar' of the Rev. John Newton, published in 1851, and to the 'Panjâbî Dictionary' of the Rev. L. Janvier, published in 1854, both of which are now difficult to procure even in India, where they were printed. On the former of these publications is based, as to its first part, the 'Simplified Grammar and Reading Book of the Panjâbî Language' of the Rev. W. St. C. Tisdall, lately issued by Trübner & Co. of London. If not elsewhere, yet in India, every one wishing to acquaint himself with Panjâbî is likely to possess already a knowledge of Urdû, with which it is in many respects nearly allied; and the author has, therefore, been well advised in referring everywhere to the equivalents of Panjâbî in the speech so much more generally current. In the Reading Lessons are included not only specimens of Panjâbî taken from a translation of the New Testament, but extracts from compositions—certainly somewhat too archaic, if we may interpose a stroke of criticism—written by natives of the Panjab. Mr. Tisdall's helpful book, which amply fulfils the purpose for which it is intended, that of assisting beginners, leaves nothing to be desired in point of typography, and is as low-priced as could be expected.

—We pass, for a moment, to the prevailing religion of the people of whom the Panjâbî is the vernacular tongue. In a lecture, entitled "Sikhism," by Mr. Frederic Pincott, lately published in London by Swan Sonnenschein & Co., will be found a succinct but lucid account of the doctrines taught by Nârnak, and modified, or, more strictly speaking, metamorphosed, by one of his spiritual successors, Govind Sinh. The lecture also sketches the lives of the ten Sikh hierarchs—of whom the two just named were the first and the last—and epitomizes the history of the Sikhs down to our own time. Sikhism, while, as being of Hindu origin, it could not but be pantheistic, was, at the outset, entirely pure of the exclusiveness which marks every orthodox sect of Brahmanism. In its second stage, its most salient characteristic was its hostile attitude as against Mahometanism. At present, owing to the influence of the cults of Vishnu and Siva, it has degenerated quite to the level of the superstitions by which it is environed. An attempt has of late been made to restore it to its pristine simplicity; but the fate that seems in-

evitably to await it is gradual extinction, and that, with some likelihood, not long to be deferred.

—The July number of *Petermann's Mitteilungen* is mainly devoted to Asia. Gen. Komaroff, an enthusiastic archæologist, gives an account of the ruins in the Transcaspian region which he examined during his campaigns against the Turkomans and the building of the railway. With the exception of several of the *kurgans*, or mounds, chiefly used as burial-places, they were not of special interest. One of these latter, however, contained, at a depth of some twelve feet below other remains, articles made of bone, a stone axe, and the bones of a cave bear. Gen. Komaroff made a large and valuable collection of ancient coins and golden ornaments, numbers of which can be found at some of the ruins after every rain. Dr. Heyfelder describes the different races inhabiting Bokhara, which has been within a short time incorporated into the Russian Empire as an *oblast*, or province. He says that the children of the Tadyiks, the aborigines, are never taken from the cradle during the whole period of their nursing, the mothers having a curious contrivance by which they can feed and care for the child without lifting it. The consequence is that the skull is flattened and drawn awry by the action of the light falling always upon one side of the head. It is singular that the Jews are handicraftsmen as well as merchants, having almost a monopoly in dyeing, while the Indians or Hindostanee are the usurers. These latter are non-producers, and live a wandering life, never bringing their families with them, but always returning to India when satisfied with their gains. Some interesting details of the gold-washing on the tributaries of the Amur in Eastern Siberia are given by N. Latkin. The washing of the gold-bearing sand began in a rude way in 1866, and up to the year 1886 the total amount of gold obtained was 3,113 puds, or 112,379 pounds (which, with gold reckoned at $16 an ounce, would amount in value to $21,576,768). Some of the sand is extraordinarily rich, but the cost of working is very great, on account of the high price of provisions and the lack of proper means of transport.

—A new volume of Russian Peasant Songs written down in the village of Nikolaevk, Government of Ufa, by Mr. N. Paltchikoff, is distinguished by a new and notable feature, viz., the music, which is noted for from six to eight voices. Mr. Paltchikoff lived for nearly thirty years in Nikolaevk, and was well acquainted with his subject, but his book cost him much time and labor. He began in the usual way, writing the music for the voice of *one* singer, and afterwards furnishing an accompaniment. Having written fifty songs in this manner, he supposed that his work was completed. But, by way of verifying his melodies, he had them all sung to him by a chorus. It then appeared that his notes were utterly unlike the songs of the peasants, the latter being fuller, better, more varied. After many vain attempts to understand the cause of this apparent contradiction, he came to the conclusion that the only proper way was to write down each voice of the chorus separately, and procure the full harmony by combining all the voices. The difficulty of the task was increased by the fact that there chanced to exist in Nikolaevk a second chorus, which differed somewhat from the first, and by the singers not all being satisfactory through indulging in vagaries. He finally contrived to attain his object. For the 142 songs in the book, 125 airs are given. The text of more than thirty songs does not enter into the chief collections of songs (a long list of which is furnished by the author); and about eighty of the airs have hitherto been utterly unknown. The book also contains a bibliographical index of its songs with references to similar texts in previous collections.

MADAME DE STAËL.—II.

Madame de Staël: her Friends and her Influence in Politics and Literature. By Lady Blennerhasset. 3 vols. 8vo. London: Chapman & Hall; Philadelphia: J. B. Lippincott Co. 1889.

It is impossible to exhaust the list of Mme. de Staël's friends. Not to speak of her circle at Paris, August Wilhelm Schlegel lived with her many years, nominally as the teacher of her children, and more particularly as her instructor in literature and criticism; Sismondi and Bonstetten were constant visitors, while Oehlenschläger and Mme. Brun stayed with her at Coppet for a long time. There was scarcely a distinguished man in Europe whom she did not in some way know and have correspondence with. Wherever she went she found old friends. Among these were several Americans — Jefferson, Gouverneur Morris, Crawford, who, on leaving his mission at Paris during the 100 days and going back to America to become Secretary of War, was her intermediary with Lord Castlereagh in her efforts made to ward off an English attack on France. There was also M. le Ray (de Chaumont), who had invested for her in American lands, which were probably situated in northern New York, where he had a large property. Morris spoke of the investment as not being so advantageous as it might be, owing to the lands being in detached portions.

Mme. de Staël's goodness of heart was exhaustless. During the Terror she saved many of her friends from certain death, and tried in vain to save others. During one season in England she kept open house for the *émigrés*, and afterwards at Coppet; besides assisting many of them with loans and gifts of money. Although Roederer accused her of being ready to sacrifice a friend rather than miss the chance of an epigram, she never ceased taking an interest in and even rendering services to those who had once been her friends, no matter how base had been their ingratitude towards her.

Even in her youth, Mme. de Staël, according to Fersen, was "the reverse of beautiful, but very clever and amiable." Count Guibert, one of her warmest friends among the older generation, wrote: "Her large black eyes sparkle with the fire of genius, and her ebon locks fall in rich profusion on her shoulders. Her features are more marked than gentle; there is something in them which promises more than the usual fate of her sex." Bollmann said: "She is tolerably well made, but her face is not beautiful. Her complexion is not good, and she has rather a protruding mouth. Her open-hearted, frank nature, and kind of honesty and truthfulness, make her very attractive." Henriette Knebel describes her first appearance at the palace at Weimar: "Very lively, good natured, and talkative, extraordinarily voluble, but clear and pleasant. She is a woman of the world, and mostly addresses herself only to the most distinguished members of society; but she is very polite and friendly to everybody. Her eyes are fine and have an intellectual expression; but her face is rather of the negro type. She is of middle height and somewhat stout, dark eyes and hair." Sir Neil Campbell, who saw her at Stockholm in 1813, says: "She speaks English almost as readily and correctly as a native, only with a slight foreign accent. She appears about fifty; of middle size, and looks strong and vigorous. Her features are large and massive, the upper row of teeth projecting; her eyes dark and eyebrows strongly marked. She wore a dark-green silk pelisse."

Rogers saw Mme. de Staël often during her stay in England in 1813, and he wrote to his sister from Lord Lansdowne's place, Bowood: "Mme. de Staël makes a bustle here, but, having arrived only yesterday, we have as yet had no shawl-dance and no recitations." This is explained by a letter from Byron in June, 1814: "The Staël out-talked Whitbread, overwhelmed his spouse, was *ironed* by Sheridan, confounded Sir Humphrey, and utterly perplexed your slave. The rest (great names in the Red book, nevertheless) were mere segments of the circle. Ma'mselle danced a Russ saraband with great vigor, grace, and expression, though not very pretty." In his memoranda Byron says: "I saw Curran presented to Mme. de Staël at Mackintosh's: it was the grand confluence between the Rhone and the Saône, and they were both so d—d ugly that I could not help wondering how the best intellects of France and Ireland could have taken up respectively such residences." And in another place: "Her figure was not bad; her legs tolerable; her arms good. Altogether, I can conceive her having been a desirable woman, allowing a little imagination for her soul and so forth. She would have made a great man." Again he writes:

"Asked for Wednesday to dine and meet the Staël—asked particularly, I believe, out of mischief; to see the first interview after the *note*, with which Corinne professes herself to be so much taken. I don't much like it; she always talks of *my*self and *her*self, and I am not (except in soliloquy, as now) much enamoured of either subject—especially one's works. What the devil shall I say about '*De l'Allemagne*'? I like it prodigiously; but unless I can twist my admiration into some fantastical expression, she won't believe; and I know, by experience, I shall be overwhelmed with fine things about rhyme, etc., etc. The lover, Mr. Rocca, was there to-night, and C. said it was the only proof *he* had of her good taste. Monsieur l'Amant is remarkably handsome."

After visiting Mme. de Staël at Coppet, in 1816, he wrote: "She was a good woman at heart, and the cleverest at bottom, but spoilt by a wish to be—she knew not what. In her own house she was amiable; in any other person's you wished her gone and in her own again."

With the help of such notices of contemporaries, we can imagine this "large leonine woman," as Morris calls her, "with few beauties and no grace of gesture; in her favorite attitude before the fire, with her hands behind her back, animating, nevertheless, the salon by her masculine attitude and powerful conversation." We can see her dressed in that low-necked, short-waisted gown of blue and orange, with a turban of the same colors, as she is represented in most of her portraits, and, as the Priestess of Apollo, twiddling in her fingers a twig of laurel. In Vienna she was reduced to a branch of poplar with two or three leaves on the end, "the rustling of which (she told the Prince de Ligne) was the necessary accompaniment to her talking." In London, according to Bollmann, she was "rolling a bit of paper in her fingers, without which she cannot exist; she gets up with it in the morning and goes to bed with it." And—can one believe it?—in her anxiety to reconcile Bollmann, with whom she had had a quarrel, she continually sang soft Italian airs to him and played to him.

Although Mme. de Staël was a great talker, all admit that she was willing to listen to the

replies of others. But, according to Sismondi, one of her most intimate friends,

"In all her judgments she too often showed hate and contempt. Power seems to give everybody the same twist of mind. Her reputation, which is always becoming greater, has made her contract some of the faults of Bonaparte; she is, like him, intolerant of all opposition, insulting in dispute, and much disposed to say sharp things to people without any angry feeling, but solely to show her superiority."

"She is sometimes in bad humor; she judges with extreme severity, and does nothing on her part to repair all this: so that I am often very much bored with her; although the way in which she talks of the ennui of others makes me angry with her. Besides, the vanity which used to be unpleasant to her is unpleasant to me also. She likes to repeat the flattering things which have been said about her, as if she had not had enough of all that; and, when there is talk about the reputation of some one else, she always takes care to recall her own in a very awkward way."

And again, "Mme. de Staël can never put herself in the place of others; and all her intelligence is not enough for her to understand anything outside of herself." This is curiously confirmed by a reminiscence of Henry Crabb Robinson, whom she had asked to assist her in understanding German literature and philosophy. She seemed utterly incapable of realizing the transcendent excellence of Goethe, and could not comprehend the finest of his epigrams. He therefore boldly said to her: "Madame, you have not understood Goethe, and you never will understand him." "Sir, I understand all that deserves to be understood. What I do not understand is worth nothing."

When Mme. de Staël first went to Weimar, Goethe was at Jena, and rather tried to avoid her, on the ground that he was not well and had a great deal to do. He, however, asked her to come to Jena. Schiller wrote to him:

"Mme. de Staël will appear to you just what you have *a priori* imagined her to be: she is charming throughout, and there is not a single strange or false or unhealthy trait in her. Thus, notwithstanding the immense difference in our natures and mode of thought, one can be quite at ease with her, and can let her say or say everything to her. She puts French culture in a pure and highly interesting light. In everything we call philosophy, therefore, in all that is highest and most important, one differs from her, and must continue to do so. . . . But her disposition and feeling are better than her metaphysics, and her fine understanding nearly resembles genius. She desires to explain, to look into, to measure everything; she will not tolerate anything dark or inaccessible; and what she cannot light up with her torch has no attraction for her. . . . Of what we call poetry she has no perception; she can only adopt what is ordinary, persuasive, passionate, in works of that description, but she will not prize anything that is false, and never fails to recognize what is good. . . . You see from these words that the clearness, decision, and clever liveliness of her nature cannot act otherwise than beneficially. Her only defect is her quite extraordinary volubility. One must be turned into a listening machine to be able to follow her."

And again: "She takes all the poetry out of me, and I only wonder how I can do anything at all." Goethe's criticism of her is too long to quote, but he evidently did not like her. What Schiller says of her lack of poetry is confirmed by Bonstetten, who, writing to Mme. Brun, says: "She is extremely good; no one has more intelligence; but the best that you have is a sealed book to her. She entirely lacks feeling for art; and beauty which is neither wit nor eloquence does not exist for her."

With a pen in hand, she was unable to express herself as well as she could with her elbow on the chimney-piece. With no visible auditors, her oratorical gifts failed her. Chênedollé, who was with her when she wrote her book 'On Literature,' and who used to discuss it with her, said that her improvisations were far more brilliant than the actual book. Out of the eighteen volumes of her published works, but three books still have a lingering existence. Of these, 'Delphine,' in spite of the impression it created in its day, is now rarely read, even by those who exhume 'La Nouvelle Héloïse' of Rousseau. 'De l'Allemagne' has grown obsolete of late years, and is only looked on now as a contemporary document written by a clever Frenchwoman, who had really made a serious attempt in the early years of the century to understand Germany and German literature. 'Corinne' is literally all that lives; and this, apart from the interest of the Italian subject, chiefly because it is what Mme. de Staël might have declaimed in her own salon. It is probably the nearest approach to her conversation. Sainte-Beuve, who ought to have known, says a curious thing with regard to her style—that, in the work on the Dictionary of the French Academy, when a word was under discussion and an example was taken from the chief writers, one from Mme. de Staël rarely passed without many objections, in consequence either of the vagueness of expression or the misuse of terms.

Chênedollé said of her: "Mme. de Staël has more intelligence than she knows how to manage." This is particularly true of her attempts at politics; and in politics, in spite of her remarkable intelligence, of occasional moments of insight and sometimes of sure instinct, she on the whole only "meddled and muddled." This was partly due to her absurd overestimate of her father, who, although a great financier, was not at all a statesman, and did on the whole more harm than good. Mme. de Staël herself was sufficiently an agitator to make herself equally disliked by each successive government from Louis XVI. to Louis XVIII., and yet all her agitation accomplished nothing, and really had very little influence one way or the other. Throughout she labored under one great error, that she was a Frenchwoman, and therefore had a natural right to guide the course of events in France. In this supposition she was utterly wrong. She was born daughter of a Swiss banker resident in Paris; but birth in France of foreign parents did not confer the rights of citizenship, and, although her father received letters of naturalization when he became Minister, she, before she had reached the age at which she could elect whether she would be Swiss or French, had changed everything by marrying De Staël and becoming a Swede. As the wife of a Swedish Ambassador she had no right whatever to intrigue in French politics, except so far as she could aid her husband in carrying out the wishes of his sovereign. Instead of that, she only got her husband into great political difficulties, not only with the French but with his own Government. In the height of the Terror she saved herself from the scaffold by claiming her rights and privileges as Swedish Ambassadress; but a few years later, when the Directory refused to allow her to live in France, on the ground that she was a foreigner obnoxious to the Government, she seemed to think that she was a Frenchwoman. This was also the basis of her complaints against Napoleon, who all along insisted that both she and her children were foreigners, and therefore by all rules of law could be treated in a way which might not answer for French subjects. Had Mme. de Staël been a man and done what she did or attempted to do, her career in Europe would probably have been much shorter.

The difficulty between Mme. de Staël and Napoleon was due chiefly to the absolute antipathy of their natures. Neither liked the other, though each to a certain extent appreciated the other. One cannot, however, help wondering what would have happened if at a certain dinner Napoleon had succeeded in sitting next to Mme. de Staël, as he had desired, instead of Cambacérès, and had given her one more opportunity to captivate him. Napoleon was perfectly frank about his reasons for exiling her, and one cannot but admit that, from his point of view, as an absolute sovereign, he was perfectly right. Auguste de Staël had an audience of Napoleon at Chambéry in 1808 without his mother's knowledge, and asked permission for her to return to France. On being told that Mme. de Staël was in Vienna, the Emperor said:

"Well, she is in the right place there, and should be content. She will learn German there. Your mother is not bad. She is a clever woman, very clever, but is quite undisciplined. . . . She would not be here six months before I should have to send her to Bicêtre or the Temple. I should be sorry for that, as the affair would make a noise and probably injure me in public estimation. Therefore you may tell her very distinctly that as long as I am alive she will never see Paris again. She would be foolish; she would see people and make fun of things; she thinks it of no importance, but I think all the more of it. I take everything in earnest. So, once for all, why should your mother set herself up against 'tyranny'? You see I am not afraid of the word. She may go to Rome, Naples, Vienna, Berlin, Milan, Lyons, even to London, if she wants to write pamphlets against me. I will see her everywhere with pleasure. But not in Paris. There I reside, and there I will only have people who like me. Did she not destroy the *Tribunat* for me? She could never prevent herself from talking politics. . . . You are young; if you were as old as I am you would be able to judge matters better, but I am pleased when a son takes up his mother's cause. Your mother has given you a difficult task, but you have acquitted yourself intelligently. I have been willing to talk with you, but you will get nothing by it. The King of Naples has spoken to me a great deal on this subject, but it was of no use. If I had put her in confinement, I would set her free; but she must remain in exile. Every one understands that imprisonment is a misfortune, but your mother alone thinks herself unfortunate for being allowed the run of Europe."

Metternich made the same request for her, and pointed out the danger of bringing a woman into celebrity by such treatment. Napoleon replied: "If Mme. de Staël wanted to be royalist or republican, I should have no objection. But she is a *machine à mouvement* that sets the salons at work. Such a woman need only be dreaded in France, and there I will not have her."

The mental suffering of Mme. de Staël during her exile was in part imaginary and in part real. The truth of the matter was, that neither at Coppet nor at Geneva—even in her best days—could she find a sufficiently large and appreciative audience to listen to her talk. Chateaubriand, who visited her at Coppet in 1805, was struck with the way in which she exaggerated her unhappiness, and says, almost in Napoleon's words: "She regards herself as the most unhappy of women in an exile that I should have been charmed with." But, as Sainte-Beuve says, "Suffering is where you feel it"—or, as we should be more apt to say, "The heart knoweth its own bitterness."

RECENT MUSICAL LITERATURE.

Musical Instruments and their Homes. By Mary E. Brown and William Adams Brown. With 270 illustrations in pen and ink by William Adams Brown, the whole forming a complete catalogue of the collection of musical instruments now in the possession of

Mrs. J. Crosby Brown of New York. Dodd, Mead & Co. 1889.

The Standard Symphonies: Their History, their Music, and their Composers. A Handbook by George P. Upton. Chicago: A. C. McClurg & Co. 1889.

New Musical Miscellanies: Historical, Critical, Philosophical, and Pedagogic. By W. S. B. Matthews. How to Understand Music. Vol. II. Philadelphia: Theodore Presser.

MRS. BROWN'S volume, a sumptuous quarto of nearly four hundred pages, is devoted to descriptions, with numerous illustrations, of the musical instruments of Oriental and savage peoples. It was originally designed as a catalogue, for private use, of the specimens which Mrs. Brown gathered during a number of years from various sources, and which she has presented to the Metropolitan Museum of Art in this city. The collection is one of remarkable variety and interest. Mrs. Brown has had facilities for obtaining specimens of rare and curious instruments in out-of-the-way parts of the world, and the collection now at the Museum (with a supplementary one since made and comprising about sixty specimens from Java, Calcutta, Burmah, and Madagascar) contains material for interesting ethnographical and musical studies. As her son, Mr. William Adams Brown, who was associated in the preparation of the book, relates, its plan was changed with the growth of the collection, and a compilation of the available authorities respecting the subject, with such additions as could be obtained from private sources, was prepared by Mr. Brown with his mother's assistance. The plan of the work is almost altogether occupied with instruments used by Oriental and barbarous peoples, and does not include those of the Assyrians, Egyptians, Hebrews, Greeks, and Romans; but it aims to give what is known of the history and present use of musical instruments in China, Japan, and Corea, India, Siam and Burmah, Persia and Turkey, Africa, North America, Central America, South America, and Oceanica.

There is good reason for taking speedy action in obtaining specimens of the instruments used by savage tribes, inasmuch as, with the progress of civilization, they are gradually being supplanted by others. The accordion, Mr. Brown tells us, is taking the place of the *marimba*, the favorite instrument of the negroes in Central Africa; the native instruments of Micronesia and Melanesia have almost entirely disappeared, and a traveller who was endeavoring to make a collection of the instruments of these islands, on asking a native where he could obtain a certain specimen, received the suggestive reply: "No more *pagolo*. *Pagolo* dead—the jew's-harp has killed him." The aptitude shown for imitation by some savages is illustrated in the chapter which Mr. Brown devotes to the instruments of North America. A stringed instrument obtained from a tribe of Alaskan Indians, seldom brought in contact with white men, was evidently fashioned in semblance of a similar instrument seen in the hands of some chance visitor.

A peculiar interest attaches to some of the more ancient instruments, which, as the nations that use them claim, date back to a period thousands of years before the Christian era, and in some of which a later generation found the germs of the perfected instruments of their class used at the present day. The Hindus maintain that the *ravanastron*, the oldest of the stringed instruments played with a bow, was invented 5,000 years ago by one of the kings of Ceylon, and, as Mr. Brown points out, the rude *hu chin* of China and the royal Stradivarius are alike derived from that common source. So too, in the *chang*, the favorite instrument of an early period, we find the progenitor, through the harpsichord, the spinet, and the virginal, of the grand pianoforte that delights us with its beauty and variety of expression.

A praiseworthy industry and enterprise are shown in the results of the author's efforts to obtain from different sources specimens of the various instruments that come within the scope of the book, and the particulars respecting them. The explanatory essays on subjects relating to the undertaking embody a good many interesting details, and some new facts have been gathered that are of value. But it must be said that Mr. Brown, who seems to be mainly responsible for this part of the work, has erred in judgment in the choice of some of the authorities on whom he chiefly depends. That untrustworthy writer Rowbotham is continually cited, and his fanciful theories seem to be adopted with unhesitating confidence. The liberal extracts that are made from that author's 'History of Music,' and the frequent deferential references to his views, have the effect of shaking the reader's confidence in Mr. Brown's discretion. Even some of his other authorities are quoted at second-hand from this doubtful source, and it seems odd to find him seriously referring to "the learned discussions of Fétis, Ambros, and Rowbotham." Of the different chapters of the book the most interesting to the general reader are those which are devoted to Chinese and Japanese music, and that which treats of the beginnings of the art among savage nations; but here also there are occasional indications of a lack of technical knowledge on the part of the writer.

The chapter in which the author undertakes to treat of the musical instruments of Central and South America and Oceanica is in some respects far from satisfactory, in view of the facts that are known respecting them. Little attention seems to have been given to this department of the subject, and but three specimens of instruments are included in the illustrations—a nose-flute from Fiji, a hand-drum from the Gulf of Papua, New Guinea, and a conch-shell trumpet. This last is from Hawaii, and is the only instrument used there, with the exception of the nose-flute, that seems to have come to the knowledge of the author, who cites at some length Ellis's 'Polynesian Researches.' But there are other authorities that would have afforded fuller information regarding the musical instruments of Hawaii. It is some years since the Princess Liliuokalani of Hawaii, the sister of King Kalakaua, began to give her attention to the subject of the ancient music and musical instruments of the Hawaiians, and the results of her investigations have been made public. The King himself has taken much interest in similar researches. Mr. S. Marques of Honolulu, in a recent monograph upon the subject, has described a number of string, wind, and percussion instruments formerly used by the natives. The *ukeke* was a flat strip of flexible wood upon which were stretched two strings of cocoanut fibre, with pegs on which to wind them up to the proper tone at an interval of a second or a fourth. Another variety had an additional string tuned to a third. The instrument probably resembled the primitive Greek lyre. The *pua* was a wind instrument made of a gourd pierced with three holes, and another variety was formed from a joint of bamboo with the nose-hole on one side and two finger-holes on the other. This was properly the nose-flute. Then there were the different sorts of drums made of cocoanut shells, calabashes, and sometimes of wood, and covered at one end with skin; and also the *kaeke* and the *puili*, both percussion instruments used to mark time. No reference to any of these is made in Mr. Brown's book.

A similar poverty of description is noticeable in the chapter devoted to the musical instruments of Mexico. A long extract is given from the inevitable Rowbotham concerning the Aztec instruments, the *teponaztlis* and tambourines, but no mention is made of the fact that the Guatemalan form of the *marimba* is popular in Mexico, as well as another variety of the instrument, a large wooden sounding-board with metal cords played upon with soft knockers. Neither is any reference made to the *guaje* or the *mimba*—the shepherd's instrument, which is made of a long reed slightly curved, with one string, which is pulled with the thumb and finger, the player holding it against the teeth.

It is unfortunate that the pen-and-ink drawings of musical instruments that are given in this elegant volume should be of such a character as to make one regret that more technical knowledge and skill, as well as a better perception of what was necessary to make the drawings useful to the reader, had not accompanied the production of them. The illustrations are 270 in number and are the work of Mr. Brown. While they reflect credit on his cleverness as an artist, they are insufficient for the purpose for which they were intended. Pictorial effect is not what is required in such illustrations, but accurate delineations of the instruments that will supplement the descriptive letter-press. Yet this is just what is lacking in the handsome pages of the book. It is impossible to determine by the illustrations the number of frets in the fretted instruments, or of strings in the stringed instruments, or of finger holes in those with flues, or of strings where these are shown. Similar inexactness is found in illustrations and descriptions of instruments belonging to Mrs. Brown's collections, but not coming within the scope of any of the chapters of their work. Among these is one of a fagott, which is described as "a kind of bassoon." The author seems not to be aware that the two instruments are identical; fagott being the German form of the Italian *fagotto*, so called from the resemblance of the bassoon to a bundle of sticks. On the same plate an old-fashioned pianoforte is called a clavichord, and in other examples the author confounds the clarinet with the oboe, whereas the one has a single and the other a double reed. A similar confusion is to be seen in the list of Chinese instruments, where the *yang kin* is called "a foreign harpsichord," and in the description is classed as an instrument of the zither family. As strips of bamboo are used to strike the strings of the *yang kin*, whereas all instruments of the harpsichord family are made to be played upon by twanging the strings with plectra, and as the zither is played with the thumb, guarded by a partially opened ring, and the three fingers of the right hand, the confusion of the description is evident. The *yang kin* really belongs to the dulcimer family.

With all its shortcomings and its errors of judgment, the work is interesting and is an instructive treatise for the general reader. A carefully prepared index and list of authorities add to its merits as a book of reference. At the same time it seems a pity that so much of the cost of producing this volume (and the cost was evidently great) should have gone into externals mainly.

The latest of Mr. Upton's musical handbooks completes the series which he has prepared for popular use, and which has

proved a welcome help to the music-loving public. In the volumes that treated of the 'Standard Operas' and the 'Standard Oratorios,' sketches were given of the more important compositions, together with short biographies of the composers, and such historical matter respecting the various works as was deemed desirable. The same plan was followed in the 'Standard Cantatas,' with the addition of an essay on the cantata in its different periods of evolution, from its simple recitative style down to its more fully developed form, which often approaches that of the opera or the oratorio. In the present volume Mr. Upton has found it necessary to make his descriptions in some instances more technical. The same general plan is followed, however, and the sketches are preceded by a chapter explanatory of the evolution of the symphony from the sonata form, and tracing its subsequent development in different directions by various composers. As the limits of the volume would not allow of detailed technical descriptions, with musical illustrations, of all the compositions referred to, the symphonies of Beethoven, Mozart, and Haydn only are so treated, while those of Mendelssohn, Schumann, Schubert, Berlioz, Spohr, Liszt, and later composers of different nationalities are carefully analyzed. Mr. Upton has performed his task with excellent judgment; much of the material given is valuable, not only to the musical student, but also to music-lovers who wish to add to their stock of information. To this rapidly increasing class of concert-goers Mr. Upton's volume, like its predecessors, will be a real help. It will be especially welcome to the great number of persons who wish better to understand, and thereby more intelligently enjoy, the highest order of orchestral music.

Mr. Matthews gives his readers a somewhat promiscuous collection of material in the form of a second volume to his earlier work, 'How to Understand Music.' The first five chapters, making about one-fourth of the book, are devoted to biographical sketches of Schubert, Berlioz, and Wagner, with some account of their works. These are followed by papers on the psychological relations of music, the theory of pianoforte teaching, the tonal system and temperament, the tonic sol-fa as an educational factor, self-culture in music, Greek music, and modern opera, and what is entitled "A Bird's-Eye View of Musical History." It will be seen that the sub-title of the book, "How to Understand Music," is made a comprehensive one. The substance of what the author has to say on some of these subjects is more satisfactory than the form in which it is offered, and there is occasion for the hope which he expresses in his preface that "supersensitive readers will not allow the literary defects of the present volume to outweigh their appreciation of the value of the information here brought together from a wide range of sources."

It does not require any "supersensitiveness" on the part of the reader to be annoyed by certain eccentricities in Mr. Matthews's style, but much of what he has to offer is so excellent that, in view of his deprecating reference, it is perhaps better to omit any mention of them. There is so much need in our musical literature of just such contributions on certain subjects as so practical a writer can furnish, that we would not seek to discourage him from continuing his labors in this field. The brief essays on Berlioz and Wagner, and the estimates and analyses of their works, are well considered, but the description of the performances at Bayreuth, which were originally written for a Chicago newspaper, are hardly in keeping with the rest of the volume. The chapters on pianoforte-teaching contain much that is valuable and suggestive, both to the teacher and the pupil, and the theories and systems adopted in the use of pianoforte studies by several eminent teachers are given, in letters from them. An intelligent statement of the facts with regard to the present state of knowledge respecting the tonal system and the theories upon the subject will interest the musical student, and in the succeeding paper the merits of the tonic-sol-fa system are clearly set forth. "Self-Culture in Music" is discussed in a sensible way, and the difficulties in the path of the student are pointed out and commented upon with excellent judgment. It is unfortunate that the pleasure of the reader is marred by the number of typographical errors in the book. The proof-reading has been wofully careless.

Elementary Physiography. An Introduction to the Study of Nature. By John Thornton, M.A., Headmaster of the Clarence-Street Higher Grade School, Bolton (England). 10 maps and 161 illustrations. 2d ed. revised. Longmans, Green & Co. 8vo, pp. 251.

A GOOD deal that has been written in England about examinations in the last year or more might find illustration in the spirit and quality of Thornton's 'Physiography.' The first lines of its preface state that it is intended to meet the requirements of the South Kensington examinations, as well as to serve as an elementary introduction to the science, and the first of these purposes is but too apparent in its pages. Something is said about everything that an examiner could ask a question upon. The book is manifestly conscientious, and every care within the author's reach has been taken to secure complete and correct statements. A number of good text-books have been consulted, and in too many cases acknowledgment is made in the text for material quoted. But in reading the book, the question continually arises: What will the scholar make out of all this? In the hands of a thoroughly competent teacher the book would hardly be satisfactory by reason of the not infrequent exceptions and corrections that it calls for; in the hands of a conventional teacher, faithful to his duty to carry his class through the book in a certain time and fit them for an examination on the subject of it, it would probably be as good as several other books that do not call for notable praise or serious censure. It is packed with matter, so much so that the author seems hardly to have lived up to his plan of giving full, instead of meagre, treatment of his topics. Indeed, in attempting to carry out this plan, it is too evident that the level of the book has been reached by working up to it from below as a compilation, instead of by coming down to it as a selection from a broad survey of the whole field. It is therefore not a text-book that will advance the treatment or understanding of physical geography in any significant way. Somewhat like Hinman's 'Eclectic Physical Geography,' published in this country last year, it touches on a great variety of subjects, and necessarily touches many of them so lightly, in spite of the attempted deliberation of statement, that a class cannot gain a serviceable knowledge of them without more help from the teacher than most teachers are able to give; but in point of precision, we think the American book decidedly the better of the two, as it certainly is in its illustrations and its adaptation to American schools.

The scheme of Thornton's book is as follows: An outline of physics; chemical action and rocks; the interior of the earth and volcanoes; the sea, the atmosphere and rain; the sculpture of the land; weather and climate; the changes of the earth's surface, magnetism and electricity of the earth, the shape and movements of the earth. There is a certain element of order in this, but it can be improved on. When we come to examine the detail of the paragraphs, there are too often passages which excite adverse comment. The illustration of longitudinal and transverse valleys (p. 160) is simply shocking. From the discussion of valleys it might be fairly inferred that the sculpture of the land stops when the valleys are made; and there is a certain inequality in a treatment that allows ten pages to glaciers without mentioning glacial lakes. The figure of the earth's orbit (p. 238) is absurdly out of drawing, apparently made to fit the page instead of the truth. Under radiation, the scholar is told "there are thus two kinds of heat rays—luminous heat rays in which rays of heat are combined with rays of light; and obscure or dark heat rays, where light is absent." So one more book perpetuates this antiquated idea, to the perplexity of all right-minded boys and girls. The citation of authorities, already referred to, gives the impression that Mr. Thornton was not quite yet willing to commit himself to some of his quotations, or as if he had not yet so fully digested them as to reproduce them in his own words. For example, "Mr. R. H. Scott gives the following statements from Professor Mohn's 'Treatise on Meteorology': The barometer stands high (1) when the air is very cold," etc. (p. 132). Again, in speaking of the barometer and weather, "In Ganot's 'Treatise on Physics,' as edited by Professor Atkinson, the following remarks are made under this head" (p. 134). One might protest that the author's own statement of these general principles ought to be more to the point than any quotation he could select. One must also wonder what a class will think when they are told on adjacent pages that the barometer is low in the polar regions, and that Mr. Scott says that Professor Mohn says that it stands high when the air is very cold. It is hardly sufficient to explain the low Antarctic pressure by the large quantity of vapor there, for there is much more vapor near the equator. Another highly confused statement, concerning temperature and altitude, is given at the bottom of page 140. This meteorological section of the book strikes us as distinctly "British," and meteorologists will probably understand what that means—though it would be hardly proper to charge the "British" school with accepting the vesicular nature of cloud particles (p. 145).

The attempt to condense an outline of geology into a few chapters is hardly more successful, though the discussion of volcanoes is decidedly better than the average. We cannot discuss all the pages, and have to conclude with an unsympathetic statement: the illustrations are not up to the times; the better paragraphs do not counterbalance the poorer or incorrect ones, and hence the book as a whole cannot be commended.

Literary Workers; or, Pilgrims to the Temple of Honor. By George Hargreaves. Longmans, Green & Co. 1889.

THIS is an old-fashioned leisurely book, in the main a collection of anecdotes about men of genius, principally writers. From the cradle to the grave the author follows the literary career, with a special regard for childhood, first manuscripts, first criticisms, first love, and marriage, and similar stages of the life so alluring to those who are born to it, and often

so disenchanting in the pursuit. The thread of easy and correct moralizing upon which these anecdotes are strung gives sufficient connection to the whole; and one who is interested in the gossip of literature will find, with some old, many fresh illustrations of literary life. It is very pleasant, almost soothing—the sort of book which reminds one of a cathedral close.

The Florida of To-day. By James Wood Davidson. D. Appleton & Co. 1889.

Home Life in Florida. By Helen Harcourt. Louisville: J. P. Morton & Co. 1889.

THESE two books, both of them intended to give an account of Florida, are written in very different ways. The first professes to be a guide for tourists and settlers. It abounds in that class of glittering generalities which rise to the magnificence of beautiful inaccuracies, and apparently attempts to cover different subjects, some of which are of very little importance. It is written by an admirer of the old Southern style of life, who sees in the changes which are now going on in Florida something which under the circumstances is to be encouraged, but which he hardly recognizes as of equal value to the civilization which would have spread over the country had the régime of thirty years ago continued.

The other book is written in an entirely different interest. It apparently gives the experience and the advice of a woman who has moved to Florida, and who thoroughly likes the climate and believes in the capacities of that sub-tropical State. Life in Florida will never have the vigorous activity which has generally characterized the growth of American civilization; but to those who prefer the restful quiet of that balmy climate to the energetic activity of less hospitable lands, this book will be both interesting and valuable.

BOOKS OF THE WEEK.

Bates, Josephine W. A Nameless Wrestler. Philadelphia: J. B. Lippincott Co. 50 cents.
Bugge, Prof. S. Studien über die Entstehung der nordischen Götter- und Heldensagen. Munich: Christian Kaiser; New York: Westermann.

Tales from *Blackwood*. White & Allen. 40 cents.

HENRY HOLT & CO.

WILL HAVE READY SOON THE FOLLOWING

EDUCATIONAL WORKS:

JOHNSTON'S (A., late Professor in Princeton) BRIEF HISTORY OF THE UNITED STATES.

MEISSNER'S AUS MEINER WELT. Edited, with Vocabulary, by Carla Wenckebach (Professor in Wellesley). 12mo.

OTIS'S (C. P., late Professor in Mass. Inst. of Technology) ELEMENTARY GERMAN. Sixth Edition. In which is incorporated the Author's Second Part. The whole arranged and edited by Horatio Stevens White (Professor in Cornell). 12mo.

PECK'S (H. T., Professor in Columbia) SUETONIUS'S LIVES OF THE CÆSARS. With Introduction and Commentary.

WALKER'S (F. A., Pres. Mass. Inst. of Technology) FIRST LESSONS IN POLITICAL ECONOMY.

REMSEN'S (IRA) LABORATORY MANUAL OF SIMPLE EXPERIMENTS, to accompany his Elements of Chemistry.

BALDWIN'S (J. M., Professor in Lake Forest) HANDBOOK OF PSYCHOLOGY. Senses and Intellect.

HAVE LATELY PUBLISHED:

HOWELL'S (W. H.) DISSECTION OF THE DOG. As a basis for the Study of Physiology. 8vo, 100 pp. Teachers' price, $1.00; by mail, $1.07.

OTIS'S (C. P.) MIDDLE HIGH GERMAN. Being an Outline of Middle High German Grammar and Selections from the Nibelungen Lied, with notes and a vocabulary. 8vo, paper, 156 pp. Teachers' price $1.00; by mail, $1.07.

PACKARD'S (A. S.) ENTOMOLOGY FOR BEGINNERS. For the use of Young Folks, Fruit-Growers, Farmers, and Gardeners. 12mo, 367 pp. Teachers' price $1.40; by mail, $1.53.

REMSEN'S (IRA) INORGANIC CHEMISTRY. 8vo, 827 pp. (American Science Series, Advanced Course). Teachers' price $2.80; by mail, $3.08.

SMITH'S (C. J.) SYNONYMS DISCRIMINATED. New Edition, with the author's latest corrections and additions. 12mo, 781 pp. Teachers' price $1.80; by mail, $1.94.

WHITNEY'S (W. D.) COMPENDIOUS GERMAN GRAMMAR. New Edition. Sixth Edition, thoroughly revised and with new exercises. 12mo, 472 pp. Teachers' price $1.30; by mail, $1.44. Key to the exercises. Teachers' price 80 cents; by mail, 86 cents.

Messrs. G. P. PUTNAM & SONS

Have the pleasure of announcing that they have arranged for the agency in the United States of the PUBLICATIONS of Messrs. WILLIAMS & NORGATE of London. These include the issues of the THEOLOGICAL TRANSLATION FUND LIBRARY, the HIBBERT LECTURES, and works by BAUR, COBBE, EWALD, KEIM, KUENEN, STRAUSS, ZELLER, and other scientific and theological writers.

Full Catalogues mailed on receipt of stamp.

G. P. PUTNAM'S SONS,

27 and 29 West 23d St., New York.

S. Davis, Jr.'s Cincinnati

Diamond Hams.

For 18 years this brand has given satisfaction for the evenness and richness of its curing. Sold by leading Grocers, from whom obtain circulars "How to Cook the Diamond Ham." *Are prepared to furnish small sizes.*

THE

Historical Reference-Book,

COMPRISING

A Chronological Table of Universal History, a Chronological Dictionary of Universal History, a Biographical Dictionary.

With Geographical Notes. For the use of Students, Teachers, and Readers. By Louis Heilprin. New Edition, crown 8vo. Half leather, $3.00.

"We miss hardly anything that we should consider desirable, and we have not been able to detect a single mistake or misprint."—*New York Nation.*

"One of the most complete, compact, and valuable works of reference yet produced."—*Troy Daily Times.*

"Unequalled in its field."—*Boston Courier.*

"A small library in itself."—*Chicago Dial.*

"The conspectus of the world's history presented in the first part of the book is as full as the wisest terseness could put within the space."—*Philadelphia American.*

"So far as we have tested the accuracy of the present work we have found it without flaw."—*Christian Union.*

LONGMANS, GREEN & CO., New York and London,

PUBLISH:

AMOS'S PRIMER OF THE ENGLISH CONSTITUTION

And Government. By Sheldon Amos, M.A. Crown 8vo, $1.75.

THE INSTITUTES OF JUSTINIAN.

Latin Text with English Introduction, Translation, Notes, and Summary. By Thomas C. Sandars, M.A. [New Edition.] 8vo, $6.00.

ARNOLD'S MANUAL OF ENGLISH LITERATURE.

By Thomas Arnold, M.A. New Edition (1888). 12mo, $2.00.

BACON'S ESSAYS.

With Introduction, Notes, and Index. By E. A. Abbott, D.D. 2 vols., fcp. 8vo, $1.75.

LONGMANS' NEW ATLAS.

Political and Physical, for the use of Schools and Private Persons. Consisting of 40 quarto and 16 octavo Maps and Diagrams, besides Insets and 16 quarto Plates of Views, etc. Engraved and lithographed by Edward Stanford. Edited by Geo. G. Chisholm, M.A., B.Sc. Imp. 8vo, price $4.00; or Imp. 4to, with Maps and Illustrations flat, $4.50.

SPECIAL FEATURES.

LONGMANS' NEW ATLAS is intended primarily for use in Schools, but it is a School Atlas and Reference Atlas in one.

The Physical Conditions of the Earth are very fully illustrated.

Maps are given dealing with Climate, Vegetation, Products, Distribution of Population, Ethnography, Religion.

Soundings are given in the Sea.

In the Political Maps, as well as in the purely Physical Maps, the greatest attention has been paid to the adequate representation of physical features.

Surface coloring is employed as well as engraving, to bring the mountains and hills into relief.

The occurrence of important Minerals is marked by their names in Maps and in districts which are not overcrowded with names.

Five different signs are used to indicate the utility of rivers for navigation.

To aid in comparing the size of different countries, all the Maps are drawn either on the same scale or on simple multiples of one scale.

Sixteen Plates are given, furnishing typical views of the Scenery, Products, Vegetation, Architecture, Animal Life, and Races of Mankind in different parts of the world.

Few names, and those very clearly printed, are given in the Maps, this being what is required for school purposes.

A large number of additional names, with their latitude and longitude, are given in the Index, the Atlas by this means serving the purpose both of a School Atlas and a Reference Atlas in one.

Any Map is more easily found than in any other Atlas, by means of the index numbers cut in the Margin.

"This atlas is specially noteworthy as being the first serious attempt, so far as maps are concerned, to carry out the programme of the Royal Geographical Society for the improvement of geographical education. We are glad, therefore, to be able to say that the Atlas is a great improvement on existing English works of this class. The selection of maps has been made with great judgment by the Editor, Mr. G. G. Chisholm."—*The Times.*

NOBLE'S HOURS WITH A THREE-INCH TELESCOPE.

By Captain William Noble, F.R.A.S., etc. With a Map of the Moon and 105 Illustrations. Crown 8vo, $1.50.

A primer of the three-inch telescope, designed to instruct the very beginner in the use of an instrument of that size.

PROCTOR'S NEW STAR ATLAS

For the Library, the School, and the Observatory. In 12 Circular Maps (with 2 Index Plates). Crown 8vo, $1.75.

TWISDEN'S PRACTICAL MECHANICS.

An Elementary Introduction to their Study. By the Rev. John F. Twisden, M.A., author of 'First Lessons in Theoretical Mechanics.' Illustrated by 184 Figures and Diagrams. With 855 Examples. Crown 8vo, $3.50.

GOODEVE'S ELEMENTS OF MECHANISM.

By T. M. Goodeve, M.A., Professor of Mechanics at the Normal School of Science and the Royal School of Mines. With 342 Woodcuts. New Edition, Revised and Enlarged. Crown 8vo, $2.00.

GOODEVE'S PRINCIPLES OF MECHANICS.

By T. M. Goodeve, M.A., Professor of Mechanics at the Normal School of Science and the Royal School of Mines. New Edition, Rewritten and Enlarged. With 253 Woodcuts. Crown 8vo, $2.00.

WARREN'S ELEMENTARY TREATISE ON MECHANICS.

By Rev. Isaac Warren, M.A., author of 'Elements of Plane Trigonometry.' Part I. Statics. Crown 8vo, $1.00.

UNWIN'S EXERCISES IN WOOD WORKING

For Handicraft Classes in Elementary and Technical Schools. By William Cawthorne Unwin, F.R.S., Mem. Inst. C. E. 28 Plates. Fcp. folio, in case, $1.50.

UNWIN'S TESTING OF MATERIALS OF CONSTRUCTION.

Embracing the Description of Testing Machinery and Apparatus Auxiliary to Mechanical Testing, and an Account of the most Important Researches on the Strength of Materials. By W. Cawthorne Unwin, B.Sc., Mem. Inst. Civil Engineers, Professor of Engineering at the Central Institution of the City and Guilds of London Institute. With 141 Woodcuts and 5 folding-out Plates. 8vo, $7.00.

SMITH'S GRAPHICS; OR, THE ART OF CALCULATION BY DRAWING LINES.

Applied Especially to Mechanical Engineering. By Robert H. Smith, Professor of Engineering, Mason College, Birmingham, etc. Part I. Arithmetic, Algebra, Trigonometry, Momento Vector Addition, Locor Addition, Machine Kinematics, and Statics of Flat and Solid Structures. With Separate Atlas of 29 Plates, containing 97 Diagrams. 8vo, price (Text and Atlas), $5.00.

LARDEN'S ELECTRICITY FOR PUBLIC SCHOOLS AND COLLEGES.

By W. Larden, M.A., author of 'A School Course in Heat,' in use at Rugby, Clifton, Cheltenham, Bedford, Birmingham, King's College, London, and in other Schools and Colleges. With 215 Illustrations and a Series of Examination Papers, with answers. 12mo, $1.75.

DAY'S EXERCISES IN ELECTRICAL AND MAGNETIC MEASUREMENTS,

With Answers. Third Edition. 12mo, $1.00.

The object of this book is to lay before the student, under the form of Problems, Numerical Illustrations of the Main Facts of Electricity and Magnetism.

CULLEY'S HANDBOOK OF PRACTICAL TELEGRAPHY.

By R. S. Culley, Member Inst. C. E., late Engineer-in-Chief of Telegraphs to the Post-office. With 135 Woodcuts and 17 Plates. 8vo, $5.50.

WHITE'S GRAMMAR-SCHOOL TEXTS.

A series of Latin and Greek Books, containing (1) Text, (2) Vocabularies (with notes).

Each TEXT is provided with a VOCABULARY of the words occurring in it. In every instance—with the exception of *Eutropius* and *Æsop*—the origin of a word, when known, is stated at the commencement of the article treating of it, if connected with another Latin or Greek word; at the end of it, if derived from any other source. Further still, the primary or etymological meaning is always given, within inverted commas, in Roman type, and so much also of each word's history as is needful to bring down its chain of meanings to the especial force or forces attaching to it in the particular "Text."

*** A full list of this series will be sent on application. These texts are handy in size, and are in strong cloth binding. Prices vary from 25 cts. to 40 cts.*

LONGMANS' GREEK COPY-BOOK.

By A. G. Grenfell. Oblong 4to, sewed, 12 cts.

YONGE'S ENGLISH-GREEK LEXICON.

Abridged from his larger 'English-Greek Lexicon,' by the author, Charles Duke Yonge. Square 12mo, $2.50.

JANAU'S FRENCH COMMERCIAL CORRESPONDENCE.

With Exercises, French-English and English-French Glossaries, Hints on Letter-Writing, and Copious Notes. By Elphege Janau, Assistant French Master, Christ's Hospital, Assistant Examiner to the University of London. Crown 8vo, 80 cents.

DANN'S GERMAN COMMERCIAL CORRESPONDENCE.

With Exercises, German-English and English-German Glossaries. Hints on Letter-Writing, German Idioms, and Copious Notes. By Joseph T. Dann, Ph.D., late Assistant Master in the University College School, London. Crown 8vo, 80 cents.

BELL'S PETIT THEATRE DES ENFANTS.

Twelve tiny French Plays for Children. By Mrs. Hugh Bell. 16mo, 50 cents.

BELL'S THEATRE DE LA JEUNESSE.

Twelve little French Plays for School-room and Drawing-room. By Mrs. Hugh Bell. 16mo, 90 cents.

CONTANSEAU'S PRACTICAL DICTIONARY OF THE FRENCH AND ENGLISH LANGUAGES.

Composed from the French Dictionaries of the Academy, Boiste, Bescherelle, etc., and from Technological and Scientific Dictionaries of both languages. Followed by Abridged Vocabularies of Geographical and Mythological names. By Léon Contanseau, French Examiner for Military and Civil Appointments. New edition. Post 8vo, 974 pages, $1.25.

BLACKLEY and FRIEDLÄNDER'S PRACTICAL DICTIONARY OF THE GERMAN AND ENGLISH LANGUAGES.

SECOND EDITION.

Christianity and Agnosticism.

A CONTROVERSY.

CONSISTING OF PAPERS BY

HENRY WACE, D.D., PROF. THOMAS H. HUXLEY, THE BISHOP OF PETERBOROUGH, W. H. MALLOCK, MRS. HUMPHRY WARD.

The interest taken in the recent controversy between the Rev. Dr. Henry Wace, Principal of King's College, London, and Prof. Huxley over the question of the true significance of agnosticism, and incidentally of the limits of natural knowledge, and the difficulty of getting at the complete discussion when scattered through different publications, have induced the publishers to bring the articles together in a single volume. To these have been added W. H. Mallock's article, "Cowardly Agnosticism," and "The New Reformation," by Mrs. Humphry Ward.

12mo, cloth, $1.00; paper cover, 50 cents.

Successful Educational Works

PUBLISHED BY

A.C. Armstrong & Son,

714 BROADWAY, NEW YORK.

New Edition—from New Plates.

REVISED BY A. L. MAYHEW, OXFORD.

SUPLÉE S TRENCH on WORDS. From the latest English Edition. With an exhaustive Analysis, Additional Words for Illustration, and Questions for Examination. By Prof. Suplée. 1 vol. net, $1.00. (Examination copies 75 cents.)

These questions were prepared not only to call forth the facts stated by the author, but also to follow up lines of thought suggested by him. To *each* lecture a list of words has been added, illustrating its various topics, and intended to encourage original research on the part of the pupil. *The new arrangement of the text, analysis, and questions, cannot fail to be of great assistance, both to teacher and pupil.*

BEGINNINGS OF ETHICS. By Rev. Carroll Cutler, D.D., ex-President Western Reserve College, Ohio. 12mo, $1.25 net. (*Sent for examination at $1.*

The subject is handled throughout in its concrete and real nature. Facts and theories are stated in a straightforward and practical way. The style is plain and clear, and the subject-matter is everywhere fresh and interesting.

INTRODUCTION to the STUDY of Philosophy. By J. H. W. Stuckenberg, D.D., Member of the Philosophical Society of Berlin. Crown 8vo, cloth, $2. (For examination, $1.35.)

"*This work must command the respect of all schools of thought. It is not a philosophy nor a psychology, nor a book to defend a particular system of metaphysics. It is simply what it purports to be, an introduction to the subject. In this respect, it supplies for teachers and students alike a much-felt want. The problems and relations of philosophy are clearly analyzed and set out before the student, so that he may gain some familiarity with its questions, without having to plod through too many original systems or their history.*"—N. Y. Nation.

WHITE'S STUDENT'S MY- thology. A compendium of Greek, Roman, Egyptian, Assyrian, Persian, Hindoo, Chinese, Thibetan, Scandinavian, Celtic, Aztec, and Peruvian Mythologies, in accordance with standard authorities. Arranged for the use of Schools and Academies. By C. A. White, author of 'White's Classical Literature,' etc.

A practical work, prepared by an experienced teacher, and designed for pupils who have not yet entered, or who, like the greater number of those attending our schools and academies, are not likely to enter, upon a regular classical course. 12mo, cloth, $1.25.

REPRESENTATIVE ENGLISH Prose and Prose Writers. By T. W. Hunt. 12mo, 540 pages: full index. Net $1.20. *Examination copies sent postpaid for 90 cts.*

Opening with a careful discussion of the leading historical periods of English prose, it proceeds to the examination of its various literary forms, and, as a third and final division of the subject, presents a critical study of representative English authors as exponents of English prose style. In subject-matter, as in method, it is thoughtful and logical, while the English in which it is expressed is clear, vigorous, and tasteful.

THE PRINCIPLES OF WRIT- ten Discourse. By T. W. Hunt, Professor of Rhetoric and English Language, Princeton College. 12mo, $1. (Examination copies, 75 cents.)

This work gives a full and philosophic discussion of the subject, with particular reference to collegiate needs.

A New Edition, with a Complete Analysis in Twenty Pages, of

THE STRUCTURE OF ENG- lish Prose. A Manual of Composition and Rhetoric. By Prof. J. G. R. McElroy of the University of Pennsylvania. 12mo, $1.20. (Examination copies 90 cts.)

"*Though theory is by no means lost sight of, the aim of the author is eminently practical, thus adapting his work for use in both College and advanced classes in High Schools and Academies.*"

Unabridged Student's Hallam.

FOR USE IN COLLEGES AND SCHOOLS.

THE MIDDLE AGES. A View of the State of Europe during the Middle Ages. Revised and corrected edition. 2 vols., crown 8vo. Price, $2.50.

CONSTITUTIONAL HISTORY OF ENGLAND, from the Accession of Henry VIII. to the Death of George II. Including Mr. Hallam's Supplemental Volume of Revision up to 1848. (Indispensable to students.) Complete in 2 vols., cr. 8vo, $2.50.

INTRODUCTION TO THE LITERATURE OF EUROPE in the 15th, 16th, and 17th Centuries. Revised and corrected edition. Complete, 2 vols., cr. 8vo, $2.50.

MAY'S CONSTITUTIONAL HISTORY OF ENGLAND, since the Accession of George III., 1760 to 1871. By T. Erskine May. 2 vols., cr. 8vo, price $2.50.

This is substantially a continuation of Hallam's great work, tracing the progress and development of the British Constitution during an entire century.

Special prices offered for use as text-books.

CONINGTON'S ÆNEID of VIR- gil. Translation, rendered into English Octosyllabic Verse, by John Conington, Professor in the University of Oxford. Cr. 8vo, *Price reduced to* $1.50. (Examination copies $1.)

"*This translation has gained preëminence by its novelty, the singular felicity of its diction, its constant animation and great variety, united with consummate scholarship in its remarkable fidelity to the nicer shades of meaning in the original.*"

Copies sent, postpaid, on receipt of price.

TWO VALUABLE BOOKS FOR CLASS-ROOM USE.

I. A HISTORY OF FRANCE. By VICTOR DURUY, Member of the French Academy. Abridged and translated from the Seventeenth French Edition, by Mrs. M. Carey, with an introductory notice, and a continuation to the year 1889, by J. Franklin Jameson, Ph D., Professor of History in Brown University. With twelve maps. 12mo, 700 pp. Cloth, $2.00.

This valuable and famous work is now made accessible to the American public and available for the use of teachers and students, by an abridged translation, and presents in one volume of about 700 pp. a compact and readable account of the events of French history with all the author's luminous generalization and a sufficient abundance of details.

By arrangements with the publishers of the French edition, the translation is accompanied with the same excellent series of historical maps as in the original work.

The work will be ready early in September, and will be found beyond question the best history of France ever published in one volume.

II. A CENTURY OF AMERICAN LITERATURE. Benjamin Franklin to James Russell Lowell. Selections from a hundred authors. Chosen and arranged by Huntington Smith. 12mo, 400 pp. $1.75.

The attention of teachers is called to this comprehensive book, which has been prepared with special reference to use in the class-room. As a reader it is unique. The selections are unhackneyed. They are taken from American authors, arranged chronologically, and they illustrate in a most attractive manner the development of American literature during the first century of its existence. In mechanical make-up as well as literary merit this is an ideal text-book, and as such it merits the attention of every progressive teacher.

T. Y. CROWELL & CO., . 13 ASTOR PLACE, NEW YORK.

A LITERARY MARVEL—$2.50 Per Volume.

We are publishing a reprint of the ENCYCLOPÆDIA BRITANNICA, at $2.50 per vol., being less than one third the price of the latest English edition, which we reproduce page for page, map for map, volume for volume.

The same number of volumes (24) completes our set, as does the original, and at half the price of the Scribner or Stoddard editions.

No such book has ever been put upon the market of such size and quality of binding for so low a price. It contains the highest character of knowledge and literature in the world, written by the most eminent living authors and specialists. It is the greatest work of its kind ever published in the English language.

The Encyclopædia Britannica is a library in itself, and stands ready on the shelves to answer every question in Physics, History, Politics, Trade, Art, Geography, and Philosophy; to furnish the latest information wanted on every subject.

We specially desire to obtain as subscribers all those who ever entertained an idea of owning the Encyclopædia Britannica, but hesitated on account of the high price. We are now ready to deliver the set complete. Agents wanted.

SCHOOL BOOKS IN FOREIGN LANGUAGES. Miscellaneous Books in Foreign Languages. Catalogues on application. Foreign Periodicals. CARL SCHOENHOF, Importer, 144 Tremont St., Boston.

COMPLETE INDEX TO LITTELL'S Living Age; No. 17 now ready, and mailed for examination to any address.
E. ROTH, 1135 Pine St., Philadelphia.

School Trustees,
Principals,
Teachers,

And others interested, are invited to consider the advantages offered by the *Nation* as an advertising medium. School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especially ordered displayed on other pages.

The *Nation*, in its special field of political and literary criticism, is unlike any other periodical, American or foreign. About 9,000 copies are circulated weekly, but these figures do not accurately represent the number of its readers. It is taken by reading-clubs and literary associations in a large number of places, and may be found on file in every library of importance in the country. There are probably few weekly periodicals whose columns offer so favorable an opportunity for reaching an audience interested in educational matters.

Rate per year for 3 lines, $23 40; 4 lines, $31.20; 5 lines, $39.00, etc. Any term less than one year at same rates—15 cents per line per week.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

THE NATION, 208 Broadway, N. Y.

HOSSFELD'S METHODS for the study of MODERN LANGUAGES.

These methods are compiled on a clear and scientific plan and basis, viz., to really teach the pupil to *speak* and *write* the foreign languages easily and quickly.

GERMAN,
FRENCH,
SPANISH,
ITALIAN,

For Schools, Colleges, and Private Instruction, Containing Grammar Exercises in Conversation, Correspondence and Reading illustrating the rules.
The new Practical German Method, $1.25, now ready. Send for descriptive catalogues and terms for introduction.

MACMILLAN & Co., 112 Fourth Ave., New York.

The Nation

VOL. XLIX.—NO. 1261. THURSDAY, AUGUST 29, 1889. PRICE 10 CENTS.

FOR GENERAL READERS AND THE CLASS-ROOM.

The History of Ancient Civilization.

A Handbook Based upon M. Gustave Ducoudray's 'Histoire Sommaire de la Civilisation.'

EDITED BY THE REV. J. VERSCHOYLE, M.A.

With Illustrations. Large 12mo, cloth. Price, $1.75. An English version, revised and extended, of Ducoudray's "Histoire Sommaire de la Civilisation" has been prepared in two parts, the one entitled "The History of Ancient Civilization," the other "The History of Modern Civilization." The first part is now ready as above. It is designed for general readers and advanced classes in schools.

"As to the world of the past, the volume under notice treats of Egypt, Assyria, the Far East, of Greece and Rome in the most comprehensive manner. It is not the arts alone which are fully illustrated, but the literature, laws, manners, and customs, the beliefs of all these countries are contrasted. If the book gave alone the history of the monuments of the past it would be valuable, but it is its all-around character which renders it so useful. A great many volumes have been produced treating of a past civilization, but we have seen none which in the same space gives such varied information. Mr. Verschoyle has a keen appreciation of exactly what the student should know, and he presents the salient traits of what were the special points of varied civilizations. This is not a book packed with dry events and dates, but presents the annals of what has gone before in an interesting manner."—*The New York Times.*

D. APPLETON & CO., Publishers, New York.

Schools.

BOOKS OF THE WEEK 180

TERMS OF SUBSCRIPTION.

Three Dollars per year, in advance, postpaid to any part of the United States or Canada; to foreign countries comprised in Postal Union, Four Dollars.

The date when the subscription expires is on the Address-Label of each paper, the change of which to a subsequent date becomes a receipt for remittance. No other receipt is sent unless requested.

The paper is stopped at expiration of the subscription, unless previously renewed.

Remittances at the risk of the subscriber, unless made by registered letter or by check, express order, or postal order, payable to "Publisher of the NATION."

When a change of address is desired, both the old and new addresses should be given.

Address THE NATION, Box 794, New York.

Publication Office, 208 Broadway.

TERMS OF ADVERTISING.

[No deviation.]

Scale of Agate lines.

On any page not specified 15 cents per line each insertion; with choice of page, 20 cents.

A column (140 lines), $20 each insertion; with choice of page, $27. — 5

A page (3 columns) $60 each insertion; with choice of position, $80.

Twenty per cent. advance for top of column or other preferred position, when specified; where positions are not specified, advertisements are classified as far as possible and arranged in order of size, the largest at the top. — 10

Twenty per cent. advance for cuts, fancy or other letters not comprised in THE NATION fonts, and all other special typography (subject to approval). Cuts are inserted only on inside pages of cover or fly-leaves, not on outside of cover, nor on pages numbered for binding. — 15

DISCOUNT on orders amounting to $100 within a year, 10 per cent.; $250, 12½ per cent.; $500, 15 per cent.; $750, 20 per cent.; $1,000, 25 per cent.; $2,500, 33⅓ per cent.

Advertisements must be acceptable in every respect. Copy received until Tuesday, 5 P. M.

THE NATION is sent free to those who advertise in it, as long as advertisement continues.

The EDITION of THE NATION this week is 8,500 copies. The Subscription List is always open to the inspection of advertisers.

The Mother's Register.

*In any family, whether large or small, but es*pecially where the number of children is large, a record of the constitutional peculiarities of each one, and the whole course of its physical development in sickness and in health, is certain to be instructive and may prove invaluable. Such a record is Prof. J. B. Fonssagrives's 'Mother Register,' consisting of a series of tables scientifically arranged for brief and convenient entries. A separate volume for boys and for girls. Price, post-paid, 75 cents per volume, or $1.25 for two volumes.

"By far the most practical record for the period of childhood that I have seen, . . . a separate part being devoted to the girl, in which are points of great importance as references in her after life. The completeness of its items and its convenient arrangement insure the entry of important events."—*C. E. Warren, M.D., in Babyhood.*

For sale at the office of the *Nation*.

MUSIC—ART—ELOCUTION and General Culture. Desirable Positions open to progressive students. All interested will receive valuable information **Free**, by addressing E. TOURJEE, Boston, Mass.

E. ROTH, 1135 Pine St., Philadelphia.

To All Who May Be Interested

IN THE

REFORM

OF

THE TARIFF.

The best time to arouse the people to an understanding of the fallacies of protection is the present. During a political campaign politicians appeal to party prejudice, and few men's minds are then open to conviction. THE WEEKLY POST, therefore, is engaged in the campaign for revenue reform now.

THE WEEKLY POST holds that any law which seeks to divert one man's earnings to another man's benefit, under whatever guise or plea, temporarily or permanently, is an act of spoliation and an infringement of human liberty. In principle it makes no difference whether such spoliation is at a high or at a low rate, whether it is 47 per cent., or 40 per cent., or 1 per cent. We are opposed to it altogether, for the same reason that we are opposed to forced loans, confiscation, slavery, and robbery. We intend to fight against it wherever we find it.

The experience of men who have been working for this reform contains the best lessons for others. THE WEEKLY POST, therefore, invites reformers in every part of the country to report the progress of popular opinion and to describe the best methods of work. Our wish is to make the paper the mouthpiece of the people who are oppressed by taxation. As soon as the people themselves become aroused they will make short work of the present tariff, and we believe that the best service a paper can render is to put its columns, as far as practicable, at their command.

We are preparing a directory of organizations of every kind that are doing, or preparing to do, work, and that will not wait for the approach of another political campaign; and the facts about every such organization are desired for this purpose.

We are preparing also a directory of the work that is in progress for the reform, which will show, by charts and maps and statistics, the results of the discussion of the subjects in the last campaign; the work that reformers are now doing; the industries of particular communities that in especial ways are affected by the tariff; the subjects that could most profitably be discussed in particular communities; and the growth of tariff-reform sentiment in every Congressional district.

The tables and maps and diagrams by which this information will be set forth, will be a chart for reformers during next year's Congressional campaign, and will do much also, it is hoped, to enable them to anticipate the usual effects of a party campaign by educational work in the meantime.

Every reader of the *Nation* who is disposed to aid in this work is requested to send for a copy of THE WEEKLY POST of July 11, containing a blank form for filling in the desired information. Sent free on request.

A special correspondent and agent is desired in every community, and correspondence with reference to such an engagement is invited. Subscription price, $1.00 per year, with liberal discounts for clubs and agencies.
